Roberts, Arthur. British actor, died Feb. 27, 1933, in London where he was born Sept. 21, 1852. He acquired his earliest fame as a comedian during the '70s at the Middlesex and other London music halls. In 1880 he made his first appearance on the legitimate stage in a *Mother Goose* pantomime at Drury Lane. After touring the provinces in *The Miller and His Men* and *Sinbad* in 1883 he returned to the London stage, appearing during the next few years in such successes as *Le Vie, Nell Gwynne*, *Black Eyed Susan*, and *The Grand Mogul*. In 1890 he became associated with Sir Augustus Harris in the management of the Royalty Theatre where he appeared in *Tra-la-la Tosca*. He also appeared that year in *Guy Fawkes, Esq.*, and the following year played the rôle of De Richemont in *Joan of Arc*. *Blue Eyed Susan* and *Too Lovely Black Eyed Susan* in 1892 were followed by *Claude Duval* (1894), *Gentleman Joe* (1895), and *Dandy Dan, the Lifeguardman* (1897). In 1900 he toured with and later appeared at the Strand Theatre, London, in *The Cruise of H. M. S. Irresponsible*. After appearing in *Bull Adams, the Hero of Waterloo* in 1903, Mr. Roberts returned to the vaudeville stage for the next 10 years. He was again a London music hall favorite during the World War period. Some of his later successes were *Society, Ltd.* (1920), *Fun of the Fayses* (1921), *Phy-Phy* (1922), and *The Veterans of Variety* (1923-29). Regarded as the dean of English comedians, he wrote *Fifty Years of Spoof* (1927).

Roberts, Brigham Henry. American congressman, died in Salt Lake City, Utah, Sept. 27, 1933. Born at Warrington, Lancashire, England, Mar. 13, 1857, he came to the United States in 1866 and was graduated from Deseret University (later the University of Utah) in 1878. Previous to his election to the 56th Congress, he had been engaged as an editor and writer. In January, 1900, however, he was excluded from his seat by action of the House of Representatives because of a charge of polygamy. During the World War he served first at Camp Kearny, Calif., and then in France as chaplain of the 145th Field Artillery. He held the office of president of the Eastern States Mission of the Church of Jesus Christ of Latter-Day Saints in 1922 and at the time of his death was head of the First Council of Seventy. One of the leading interpreters of Mormonism, Mr. Roberts wrote *The Gospel* (1888); *Life of John Taylor* (1892); *Outlines of Ecclesiastical History* (1893); *Succession in the Presidency of the Church* (1893); *New Witnesses for God* (3 vols., 1895); *Missouri Persecutions* (1900); *The Rise and Fall of Nauvoo* (1900); and *Mormon Doctrine of Deity* (1908). He served also as editor of Smith's *Journal History of the Church* (6 vols., 1900); *History of the Mormon Church* (6 vols.), and *The Seventy's Course in Theology* (in 5 books).

Robertson, Gideon Decker. Canadian statesman, died in Ottawa, Ont., Aug. 25, 1933. Born in Welland Co., Ont., Aug. 26, 1874, he attended the public schools of Welland and entered the employ of the Canadian Pacific Railroad in 1893 as telegraph operator, eventually rising to the post of general chairman for that line of the Order of Railroad Telegraphers. After 1914 he was vice-

president of the Order of Railroad Telegraphers for Canada. Elected to the Senate in 1916, Mr. Robertson was appointed the following year Minister without portfolio. An attempt to meet the pressing demands of Labor was made in 1918 when he was offered the portfolio of Labor, serving during the next three years under Sir Robert Borden and Arthur Meighan. In 1930 he was again appointed Minister of Labor in the Conservative cabinet of Richard B. Bennett but was obliged to resign two years later on account of the impairment of his health due to the serious problems of unemployment with which he had to cope. Mr. Robertson was chairman of the Canada Registration Board in 1918 and attended at Washington the same year as representative of the Canadian Government the first International Labor Conference. In 1919 he served as promoter on the Canadian Railway Adjustment Board No. 1.

Robertson, John G. British Germanic scholar, died in London May 28, 1933. He was born in Glasgow, Jan. 18, 1867, and was educated at the Universities of Glasgow and Leipzig, receiving the Ph.D. degree from the latter. From 1896 to 1903 he was lecturer in English at the University of Strassburg and afterward held the chair of German language and literature at the University of London. He acted also after 1924 as director of the department of Scandinavian studies at that institution. In 1905 he founded the *Modern Language Review*. Among his publications were *Selections from the Correspondence between Schiller and Goethe* (1898), *History of German Literature* (1902); *Schiller After a Century* (1905); *Milton's Fame on the Continent* (1909); *Outlines of German Literature* (1911); *Goethe and the Twentieth Century* (1912); *The Literature of Germany* (1913); *The Genesis of Romantic Literary Theory* (1923); *Goethe and Byron* (1925); and *Goethe* (1927).

Robertson, John Mackinnon. British author, died in Kensington, Jan. 5, 1933. Born at Brodick, Isle of Arran, Scotland, Nov. 14, 1856, he received his schooling at Stirling, and in 1878 joined the staff of the *Edinburgh Evening News* as an editorial writer. Six years later he went to London where he became associated with Charles Bradlaugh on the *National Reformer*, editing that journal after Bradlaugh's death from 1891 until its abandonment in 1893. He then founded the *Free Review* and served as its editor until 1895. In 1900 he went to South Africa to study martial law in Cape Colony and Natal sending letters describing conditions there to the *Morning Leader*. He was elected to Parliament as Liberal member from the Tyneside Division of Northumberland in 1906 and retained his seat until 1918. During 1911-15 he served also as Parliamentary Secretary to the Board of Trade, this appointment having largely been secured through his work on *Trade and Tariffs* (1908). He later published the *Battle for Free Trade* (1923) and *The Political Economy of Free Trade* (1928). Robertson was better known, however, as a literary controversialist, his favorite topics being Christianity and the Shakespeare canon which he subjected to a process of "critical disintegration." He wrote *Montaigne and Shakespeare* (1897), *Christianity and Mythology* (1900); *Pagan Christ* (1911); *A Short History of Christianity* (1913), *The Baconian Heresy* (1913), *Elizabethan Literature* (1914), *Shakespeare and Chapman* (1917); *The Jesus Problem* (1917), *The Problem of Hamlet* (1919); *The Shakespeare Canon* (1922); *The Problems of the Shakespeare Sonnets* (1926), *The Dynamics of Religion* (1926); and *The Genuine in Shakespeare* (1930). As one of the leading advocates of Liberalism, he wrote *The Future of Liberalism* (1895), *The Meaning of Liberalism* (1912); and *History of Free Thought in the Nineteenth Century* (1929).

Robertson, Sir William Robert, died Feb. 12, 1933.

Robinson, Corinne Roosevelt. American poet, welfare worker, and sister of the late President Theodore Roosevelt, died Feb. 17, 1933, in New York City where she was born Sept. 27, 1861. She was educated privately and in 1882 was married to Douglas Robinson, a New York realtor. During the World War she worked tirelessly in the interests of the American Red Cross, spoke numerous times during the Liberty Loan and Salvation Army campaigns, and formed and served for a time as chairman of the New York City committee for "Fatherless Children of France." Her entrance into national politics was in 1920 when at the Republican Convention in Chicago she seconded the nomination for president of General Leonard Wood. In addition to being a member of President Coolidge's advisory committee during his 1924 campaign, she was for several years a member of the executive committee of the Republican National Committee and of the New York State Committee. She was a vice-president of the Poetry Society of America. Besides lecturing and speaking on political subjects, Mrs. Robinson wrote *The Call of Brotherhood* (poems, 1912); *One Woman to Another* (1914); *Service and Sacrifice* (1919); *Collected Poems* (1921); *My Brother, Theodore Roosevelt* (1921); and *Out of Nymph* (poems, 1930).

Robinson, Joseph Armitage, died May 8, 1933.

Rockwell, Alphonso David, died Apr. 12, 1933.

Rodgers, Rear-Admiral John Augustus, U.S.N., Ret. American naval officer, died Mar. 2, 1933, at Havre de Grace, Md., where he was born July 26, 1848. A descendant of the John Rodgers who commanded the *President* during the War of 1812, he had the distinction of being appointed to the United States Naval Academy by President Lincoln in 1863, and during the last summer of the Civil War served on the *Marion* which pursued the Confederate steamers *Florida* and *Tallahassee*. On his graduation from Annapolis in 1868, he served as ensign with the Pacific squadron on the *Supply* and *Nipsic*, and in the torpedo service on the *Hartford*, *Junata*, *Monongahela*, *Trenton*, and *Constellation*, rising to the rank of lieutenant in 1874. In 1880 he was transferred to the Navy Yard at Washington where after three years service he returned to the *Ossipee*. In 1887 he was again detailed to shore duty as a member of the Steel Board of the Navy Department. He saw duty on the *Pensacola* during 1890-91 and on the *Montanama* during 1892-94. Commissioned a lieutenant-commander in 1895, he was assigned for the next two years to inspection duty. From 1897 to 1899 Rodgers served as executive officer of the *Indiana*, which during the Spanish-American War took an active part in destroying Cervera's squadron off Santiago. In recognition of his conduct in this battle he received a promotion of five numbers in seniority. He had charge of the Sixth light house district until 1902 and commanded the *Marietta* and the *Albany* until 1904. Previous to his appointment as inspector of the Third lighthouse district in 1906, he served on the *Illinois* with the rank of captain. Following his promotion to rear admiral in 1908, he became commandant of the Navy Yard at Puget Sound, Wash., where he remained until his retirement in 1910. During the World War he emerged to take charge of the organization of naval units at Harvard University, the Massachusetts Institute of Technology, Boston University and Tufts College.

Romaine, Rose Pastor Stokes. American radical, died in Frankfurt-on-the-Main, Germany, June 20, 1933. Born at Angustava, Suvolk, Russia, July 18, 1879, she was taken by her parents at the age of four to London where during 1887-89 she attended the Jewish Free School. In 1890 she came to the United States, her family settling in Cleveland, Ohio, where from 1892 to 1903 she was employed as a cigar maker. The acceptance of some of her poems by the *Jewish Daily News* led her to seek a journalistic career in New York and she served as assistant editor of that paper during the next two years. Her friendship with J. G. Phelps Stokes, scion of a prominent New York family who had identified himself with various philanthropic organizations, resulted from an interview in which she praised his social ideals. Soon after their marriage in 1905 they both became active in the Socialist party, but neither of them upheld the party's pacifist stand after the entry of the United States into the World War. Mrs. Romaine, however, later returned to the party, identifying herself with the more radical element from which the Communist party developed. After the War on account of her criticism of the government's alleged alliance with profiteers she escaped serving a 10-year prison term only when a higher court overruled the sentence imposed by the Federal Court at Kansas City. She was also active during the next decade in various strikes in New York City. Mr. Stokes sought a divorce in 1925, and four years later she was married to Isaac Romaine, a language instructor.

Roper, William Winston. American football coach and lawyer, died Dec. 10, 1933, in Philadelphia, Pa., where he was born Aug. 22, 1880. After his graduation from Princeton University in 1902 he went to the Virginia Military Institute at Lexington, Va., where his success as a football coach led to his call to Princeton as assistant coach in 1906. Between seasons he attended the law school of the University of Virginia, and on receiving his degree in 1907 was admitted to the Pennsylvania bar. His practice was interrupted in 1909 when he went to the University of Missouri as head football coach. In 1910 he returned to Princeton for the next two seasons and then entered politics on his appointment by President Wilson as United States appraiser of merchandise for the Port of Philadelphia. After 1920 he was a member of the Philadelphia City Council. He fought for the repeal of Prohibition and of the Pennsylvania Sunday blue laws and lived to see each materialize. After giving up his law practice in 1926 he became manager of the Quaker City Agency of the Prudential Insurance Co. of America. In 1919 Roper again returned to Princeton University as football coach, his teams winning the "Big Three" championship in 1922, 1925, and 1926. Termed "the last of the gridiron romantics," he wrote previous to his retirement in 1930, *Winning Football* (1921) and *Football—Today and Tomorrow* (1927).

Ropes, Arthur Reed. British author, died Sept. 11, 1933, in London where he was born Dec. 23, 1859. He attended King's College, Cambridge, and was Lightfoot and Whewell scholar in 1883 and fellow of King's Col-

lege from 1884 to 1890. He lectured on history at Cambridge, wrote a *Short History of Europe* (1889), and edited *Lady Mary Wortley Montagu's Letters* (1893) and numerous French texts for the *Pitt Press Series*. Under the name of Adrian Ross he wrote after 1899 the lyrics or librettos of some of the most popular operettas. Among these were *Joan of Arc* (1891), *San Toy* (1899), *The Toreador* (1901), *The Merry Widow* (1907), *The Dollar Princess* (1909), *Gypsy Love* (1912), *Monsieur Beaucaire* (1919), *Lilac Time* (1922), and *The Toy-maker of Nuremberg* (1930).

Ropes, James Hardy. American theologian, died in Cambridge, Mass., Jan. 8, 1933. Born at Salem, Mass., Sept. 3, 1866, he was graduated from Harvard University in 1889 and from the Andover Theological Seminary in 1893. After attending the Universities of Kiel, Halle, and Berlin he returned to Harvard in 1895 as instructor in New Testament criticism and interpretation, being advanced to assistant professor in 1898. Following his ordination to the Congregational ministry he was chosen in 1903 Bussey professor of divinity and after 1910 held the Hollis chair of divinity. He was also after 1903 Dexter lecturer on biblical literature and in 1928 received the British Academy's medal for biblical studies. Dr. Ropes was also prominent in an administrative capacity, being dean in charge of University Extension from 1910 to 1922, and dean of special students from 1918 to 1922. He wrote *The Apostolic Age in the Light of Modern Criticism* (1906), *Commentary on the Epistle of St James* (1915), *The Text of Acts* (1925), and *The Singular Problem of the Epistle to the Galatians* (1929).

Ross, Adrian. See Ropes, Arthur Reed.
Roux, Emile Pierre Paul, died Nov. 3, 1933.
Rowland, Henry Cottrell. American author and physician, died in Washington, D. C., June 5, 1933. He was born in New York City, May 12, 1874. On his graduation from the medical school of Yale University in 1898 he enlisted immediately in the Spanish-American War, serving on the cruiser *Yankee*. During the Philippine Insurrection of 1900 he was assistant surgeon with the United States forces. His experience in the East suggested his first adventure story *Sea Scamps* (1903). On settling at Vermenton, France, in 1905, he devoted his leisure to fiction writing, his more popular works being *In the Shadow* (1906), *Across Europe in a Motor Boat* (1908), *In the Service of the Princess* (1909), *The Mugnet* (1910), *The Apple of Discord* (1912), *The Closing Net* (1912), and *Duda* (1919). During the early part of the World War Dr. Rowland was director of the military auxiliary hospital at Acolay. After the entry of the United States into the conflict he became an accredited special agent in France of the intelligence department of the United States Navy.

Royce, Sir (Frederick) Henry, died Apr. 22, 1933.
Ruggles, Brig.-Gen. Colden L'Honniedieu, U.S.A., Ret. American soldier, died at Charleston, S.C., Apr. 2, 1933. He was born in Omaha, Neb., Mar. 18, 1869. On his graduation from the United States Military Academy in 1890 he was commissioned a 2d lieutenant in the 1st Artillery and was assigned to duty on Governor's Island. He later served at Fortress Monroe, Sandy Hook Proving Ground, and the Frankfort (Pa.) Arsenal and in 1900 became inspector of ordnance for the United States Army at the Bethlehem Steel Works. In 1903 he was transferred to the Watertown (Mass.) Arsenal. After serving as professor of ordnance and the science of gunnery at the United States Military Academy he became in 1911 commanding officer at the Benicia (Calif.) Arsenal and ordnance officer of the Western Department. In 1913 he was sent to the Philippines where he had charge of the Manila Ordnance Depot and was ordnance officer for the Philippine Department. Returning to the Sandy Hook Proving Ground in 1915, General Ruggles served as commanding officer until 1918 when he became chief of the inspection division of the Ordnance Department and served overseas with the American Expeditionary Force. From 1919 to 1922 he was chief of the technical staff of the Ordnance Department. Appointed in 1923 assistant to the chief of ordnance with the rank of brigadier-general, he became later in that year assistant chief of ordnance and chief of manufacture. In 1925 President Coolidge appointed him delegate to the Conference for the Supervision of the International Trade in Arms and Ammunition and in Implements of War, held in Geneva, Switzerland. He received the Distinguished Service Medal and the Army Ordnance Association's Medal of Merit. He retired in 1930.

Ryan, John Denis, died Feb. 11, 1933.
Sabin, Charles Hamilton, died Oct. 10, 1933.
Saintsbury, George Edward Bateman, died Jan. 28, 1933.

Salmond, Sir (William) Geoffrey (Hanson), died Apr. 27, 1933.

Sánchez Cerro, Luis M., died Apr. 30, 1933.
Sanders, Frank Knight. American theologian and educator, died at Rockport, Mass., Feb. 20, 1933. Born at Batticotta, Jaffna, Ceylon, June 5, 1861, he was gradu-

ated from Ripon College in 1882 and with the Ph.D. degree from Yale University in 1889. At the latter institution he held the chair of biblical literature from 1891 to 1901 and then became professor of biblical history and archaeology and dean of the Divinity School. After serving from 1905 to 1908 as secretary of the Congregational Sunday School and Publication Society he was elected president of Washburn College. In 1914 he returned to the National Council of Congregational Churches as director of missionary preparation for foreign missions of the Conference of North America, resigning in 1927. Besides editing with C. F. Kent *The Messages of the Bible* (12 vols., 1897-1912), Dr. Sanders wrote *The Messages of the Earlier Prophets* (1898); *The Messages of the Later Prophets* (1899); *The Teachers' Life of Christ* (1907); *Studies in the Life of Paul* (1908); *The Messages of the Sages* (1912); *History of the Hebrews* (1914), *The Program of Christianity* (1918), *Old Testament Prophecy* (1921); and *Old Testament History* (1921). At the time of his death he was editing with H. P. Beach *The World's Living Religions* (10 vols.) and with H. A. Sherman *The Life and Religion Series* (10 vols.).

Sayce, Archibald Henry. British Orientalist, died at Bath, England, Feb. 4, 1933. He was born at Shirehampton Sept. 25, 1845, and attended Queen's College, Oxford, where he became fellow in 1869. In addition to serving as a member of the Old Testament Company of the Bible Revision Committee from 1874 to 1884 he was appointed in 1876 deputy professor of comparative philology at Oxford and in 1891 professor of Assyriology, holding the latter chair until his retirement in 1919. He served as a member of the Advisory Committee on Words of Disputed Pronunciation of the Funk & Wagnalls *Standard Dictionary*, 1891-1900. His scholarly activity covered a wide range of subjects—Assyriology, Oriental history, biblical criticism, comparative philology, and general archaeology, and in recognition of the contribution which he had made to these various fields he received in 1925 the Gold Medal of the Asiatic Society. He delivered the Hibbert Lectures in 1887, the Gifford Lectures in 1900-02, and the Rhind Lectures in 1906. Among Dr. Sayce's works were: *An Assyrian Grammar for Comparative Purposes* (1872); *The Principles of Comparative Philology* (1874); *Babylonian Literature* (1877); *Introduction to the Science of Language* (1879), *The Monuments of the Hittites* (1881); *The Ancient Empires of the East* (1884); *Assyria* (1885); *Babylonian Religion* (1887), *The Races of the Old Testament* (1891); *The Higher Criticism and the Verdict of the Monuments* (1894), *Patristic Palestine* (1895); *Early History of the Hebrews* (1897); *Israel and the Surrounding Nations* (1898); *Babylonians and Assyrians* (1900), *The Archaeology of Cuneiform Inscriptions* (1907); and *Kemissences* (1923). He edited also the *Records of the Past* (2d series, 1888-92).

Scapinelli, Raphael, Cardinal, died Sept. 17, 1933.
Schillings, Max von, died July 24, 1933.
Schmidt, Johannes. Danish biologist, died in Copenhagen, Feb. 22, 1933. He was born at Jagerspris, Jan. 2, 1877. In 1910 he became director of the physiological department of the Carlsbad Laboratories in Copenhagen. The discoveries which he made in connection with the migration of eels were especially significant, the collection of his data being completed in 1928 on an around-the-world oceanographic expedition on the research ship *Dana*. His principal work was *Contributions of the Life-History of the Eel* (1906).

Schoen, Wilhelm von. German diplomat, died at Berchtesgaden, Bavaria, Apr. 24, 1933. He was born at Worms, June 3, 1851. After serving with the 24th regiment of Hessian dragoons during the Franco-Prussian War, he decided to abandon an army career and in 1877 entered the diplomatic service as attaché at the German embassy in Madrid. Transferred to Athens as legation secretary in 1882, he held the same post in Berne (1883), The Hague (1885), and Paris (1887). While at the latter embassy he was made counselor, in which capacity he served until 1895. After acting as Grand Marshal of Saxe-Coburg-Gotha, he was appointed in 1900 Minister to Denmark. Five years later he became Ambassador to Russia, helping greatly to strengthen cordial relations between Russia and Germany. In 1907 Von Schoen was recalled to assume the office of Secretary of State for Foreign Affairs, negotiating with France in 1909 the first treaty regarding German concessions in Morocco. In 1910 he was again assigned to the Paris embassy as Ambassador, being recalled on the outbreak of the World War. He was raised to the Hessian nobility in 1885 and was made a baron in 1909. He wrote *Erliebtes Beiträge zur Geschichte der Neuesten Zeit* (1921).

Schreiber, The Most Rev. Christian Karl August. German Roman Catholic bishop, died in Berlin, Sept. 2, 1933. Born at Somborn, near Gelnhausen, Aug. 3, 1872, he attended the Gregorian University in Rome and was ordained to the priesthood at the age of 26. In 1899 he

became professor of philosophy and the history of philosophy and theology at the Fulda Seminary, being appointed prebendary in 1908. In 1921 he was consecrated Bishop of Meissen and on the ratification of the concordat between Prussia and the Vatican in July, 1929, became head of the newly-created Bishopric of Berlin. He was the first incumbent of this office since the Reformation.

Schröder, Admiral Ludwig von. German naval officer, died in Berlin, July 23, 1933. Born at Hinzekamp, Prussia, July 17, 1854, he entered the German Navy in 1871, becoming a flag officer in 1905 and squadron leader in 1908. During 1911-12 he was in charge of the naval station at Kiel and retired the following year. On the outbreak of the World War, however, Schröder was recalled and was placed in command, with the rank of admiral, of the marine corps that held the German end of the North Sea throughout the conflict. After the German occupation of Flanders he directed from Zeebrugge mine planting in the North Sea and English Channel submarine warfare on Channel traffic, and the air raids over eastern England. Ruthless in the prosecution of his duty, he was one of 12 German high seas officers whose extradition was demanded by the Allies after the War.

Scialoja, Vittorio, died Nov. 19, 1933.

Seligman, Arthur. American administrator, died at Albuquerque, N. M., Sept. 25, 1933. Born at Santa Fe, N. M., June 14, 1873, he attended Pierce's College of Business in Philadelphia and in 1888 entered the mercantile business in Santa Fe, serving as president of Seligman Bros. from 1903 to 1926. He was also interested in the beautification of his native city, being instrumental in the erection of Santa Fe's famous hostelry La Fonda and serving as president of the La Fonda Building Corp. during 1920-26. In the financial field he was president of the First National Bank of Santa Fe after 1924 and a director of the Northern New Mexico Loan Association. He served on the Board of Irrigation Commissioners in 1910 and was president in 1923 of the Educational Survey Commission. Governor Seligman had long been a leader in the Democratic party, acting as chairman of the Territorial Democratic Committee (1895-1911) and of its successor, the Democratic State Committee (1912-22). After 1920 he was also a member of the Democratic National Committee. Elected Governor of New Mexico for the term 1931-33, he strove during his administration for efficiency and economy in government. He vetoed the measure calling for State control of narcotics as he held Federal control was sufficient.

Seymour, Arthur Bliss. American botanist, died at Belmont, Mass., Mar. 29, 1933. He was born at Moline, Ill., Jan. 3, 1859. On his graduation from the University of Illinois in 1881, he was appointed botanist to the Illinois State Laboratory of Natural History. In 1883 he was called to the Cryptogamic Herbarium at Harvard University where with the exception of the year 1885-86 when he was instructor in botany at the University of Wisconsin he remained until his death. He taught cryptogamic botany at Radcliffe College during 1890-91 and at the summer sessions of 1890 and 1892. He compiled *A Provisional Host Index of the Fungi of the United States* (with W. G. Farlow, 1888-91), and *Host Index of the Fungi of North America* (1929). He edited and published with F. S. Earle *Economic Fungi and Economic Fungi Supplement* and contributed to scientific and agricultural periodicals, articles on fungi and fungus diseases.

Seymour, William. American actor and stage director, died at Plymouth, Mass., Oct. 2, 1933. Born in New York City, Dec. 19, 1855, he began his theatrical career at the age of seven appearing during the next five years at the Varieties Theatre, New Orleans. Joseph Jefferson selected him in 1867 as the boy Hendrick in *Rip Van Winkle* and from 1869 to 1879 he toured with such notables as Edwin Booth, Lawrence Barrett, A. M. Palmer, John McCullough, and Thomas Maguire. He also gained with Barrett, Palmer, and Maguire experience as a stage manager and in 1879 became associated with the Boston Museum's company as both actor and stage manager. After touring with Julia Marlowe in 1889 he became actor-manager for Abbey, Schoeffel and Grau at the Tremont Theatre in Boston, remaining there until 1898. Mr. Seymour then came to New York City where until 1911 he was general stage manager and until 1916 antiquarian for Charles Frohman. After serving as manager of the Empire Theatre he became stage director for George C. Tyler during the seasons of 1919-23. Previous to his retirement he appeared in such revivals as *The School for Scandal* (1925) and *The Two Orphans* (1926). His farewell gesture was the production in 1928 of *She Stoops to Conquer*.

Shepherd, William Gunn. American journalist, died in Washington, D. C., Nov. 4, 1933. He was born at Springfield, Ohio, June 13, 1878. After attending the St. Paul (Minn.) high school he began his career in 1898 as a reporter on the St. Paul *Dispatch*. Ten years later he removed to New York City where he wrote fiction for *Munsey's Magazine* and, as a free lance,

covered the Madero revolution in Mexico. In 1912 he became correspondent for the Newspaper Enterprise Association, in which capacity he commented on the Olympic Games at Stockholm and on political and other news in the capitals of Europe. He then returned to Mexico in the interests of the United Press Association and was there at the time of Huerta's downfall. Returning to Europe on the outbreak of the World War in 1914, Mr. Shepherd gave an impartial view of the progress of the war in articles which he contributed to *Everybody's*, *Collier's*, *Harper's*, the *Metropolitan*, and other magazines. During the Russian revolution he was correspondent for the United Press Association as well as for the *Exchange Telegraph* of London, and *Everybody's Magazine*. He attended the Paris Peace Conference and was present at the signing of the treaty of Versailles, reporting this momentous occasion in *Everybody's Magazine* and the *New York Evening Post*. In 1921 he investigated and wrote reports on the reconstruction problems of Germany, France, and England. After 1924 Mr. Shepherd was staff correspondent for *Collier's Weekly*, his principal assignments being such topics as prohibition enforcement, state penitentiary systems, law violations, organized crime, and commercial and financial situations. He was a member of the council of the Authors' League of America and had been a vice-president of the Authors' Guild. Among his books were *The Confessions of a War Correspondent* (1917); *The Scar That Tripled* (1918); *Boy's Own Book of Politics* (1923); and *Great Preachers as Seen by a Journalist* (1925).

Sherman, Lucius Adelno. American educator, died at Lincoln, Neb., Feb. 13, 1933. Born at Douglas, Mass., Aug. 28, 1847, he was graduated from Yale University in 1871, receiving the Ph.D. degree four years later. Called to the University of Nebraska as professor of English language and literature in 1882, he served also during 1887-1901 as dean of the general faculty of that institution and during 1901-26 as dean of the graduate college. He retired as dean emeritus in 1930. Dr. Sherman was the author of *Analytics of Literature* (1893); *What is Shakespeare?* (1902); *Elements of Literature and Composition* (1908); and *How to Describe and Narrate Visually* (1925). In 1878 he translated *Frithjof's Saga*.

Sherrerd, Morris Rebeson, died Oct. 20, 1933.

Shipman, Louis Evan. American author, died at Bourg-en-Vexin, Department of Oise, France, Aug. 2, 1933. Born in Brooklyn, N. Y., Aug. 2, 1869, he attended the Brooklyn Polytechnic Institute and Harvard University. After serving as an editorial writer for *Leslie's Weekly* during 1895-96, he embarked on his writing career, publishing *Urban Dialogues* (1896), *A Group of American Theatrical Caricatures* (1898), *Predicaments* (1899); *The Curious Courtship of Kate Poins* (1901); and *The Quality of Youth* (1904). His first play *The Head of the House* (1898), was written with Glen McDonough, but it was not until the production of *D'Arcy of the Guards* (1901), with Henry Miller in the lead, that he achieved recognition as a playwright. He next collaborated with Winston Churchill in the dramatization of Mr. Churchill's novels, *The Cross* (1902), and *The Crossing* (1905), and with Frederic Remington wrote *John Ermine of the Yellowstone* (1903). His later successes were *On Parole* (1906); *The Admiral* (1909); *The Grain of Dust* (1911); *The Fountain of Youth* (1918); *Fools Errant* (1921), and *Poor Richard* (1924). The latter as *Le Bonhomme Richard* was played at the Théâtre National de l'Odéon in Paris, June 17, 1930, on the occasion of the 153d anniversary of Franklin's official recognition as the first Ambassador from the United States to France. In addition to contributing to *Collier's Weekly* and *Life*, Mr. Shipman served as editor of the latter during 1922-24. He was decorated a chevalier of the French Legion of Honor.

Sichel, Walter. British biographer and lawyer, died in London Aug. 7, 1933. Born in 1855, he was educated at Harrow and at Balliol College, Oxford, and was called to the bar in 1879. In addition to his law practice he took an interest in politics and in journalism, editing the magazine *Time*, but he acquired his greatest reputation as an historical biographer. Among his works were: *Bolingbroke* (1902); *Disraeli: A Study in Personality and Ideas* (1904); *The Life of Lord Beaconsfield* (1904); *Emma, Lady Hamilton* (1905); *The Life of Richard Brinsley Sheridan* (2 vols., 1909); *Sterne: A Study* (1910); and *Types and Characters: A Kaleidoscope* (1925).

Silverman, Sime. American editor and publisher, died at Hollywood, Calif., Sept. 21, 1933. He was born at Cortland, N. Y., May 19, 1872, and attended the public schools there and in Syracuse. After being associated with his father in business for a time, he removed to New York City where he obtained a position as a reporter on the *Morning Telegraph*. Discharged by the editor of that paper for an unfavorable criticism which he wrote of a vaudeville sketch, he founded in 1905 the

theatrical magazine *Variety* which through its veracity became recognized as one of the most authoritative periodicals pertaining to the theatre Mr. Silverman wrote his articles in the jargon peculiar to the theatrical world, coining expressions that soon became part of the slang vocabulary of the United States and that influenced the work of Ring Lardner (q.v.) and other writers.

Sisson, Francis Hincley. American banker, died in Yonkers, N. Y., Sept. 17, 1933. Born at Galesburg, Ill., June 14, 1871, he was graduated from Knox College in 1892 and took a post-graduate course at Harvard University the following year. He began his career in 1893 as editorial writer and reporter on the Galesburg *Evening Mail*, becoming editor five years later. In 1903 he came to New York City where he was on the editorial staff of *McClure's Magazine* for a year and then entered the advertising field as advertising manager for the American Real Estate Co. In 1912 he became vice-president and general manager of the H. E. Lisan Advertising Agency. Mr. Sisson served as assistant chairman of the Association of Railway Executives during 1916-18 and after 1917 was vice-president of the Guaranty Trust Company of New York. During the course of his banking career he lectured frequently on economic subjects and in 1932 was president of the American Bankers' Association.

Sloan, James Todhunter (Tod). American jockey, died in Los Angeles, Calif., Dec. 21, 1933. He was born at Kokomo, Ind., Aug. 10, 1873, and attended the public schools there. On becoming interested in ballooning during the '80s he toured the Indiana circuit with a balloonist, meeting with an adventure at one of the fair grounds that started him on his horse-racing career. His first professional riding was in New Orleans, Chicago, and St. Louis. After unsuccessful attempts in the East he went to San Francisco where, after winning a number of races, he was recognized by race-track enthusiasts. Under the tutelage of George E. Smith (Pittsburgh Phil), he came into prominence, winning in 1896 races successively at San Francisco, Gravesend, and New Market, England. Tod Sloan reached the peak of his career the following year when as a jockey in the royal stables of Great Britain, he won three races and was influential in changing the British jockey's style of riding. In 1898 he returned to the United States where he continued to bring his horses "down the home stretch first," winning both the Futurity and Flatbush races in 1900. He was subsequently a café proprietor in Paris, motion picture actor in Hollywood, and real estate operator in San Diego, Calif.

Sloan, Richard E. American jurist and administrator, died at Phoenix, Ariz., Dec. 14, 1933. Born in Preble Co., Ohio, June 22, 1857, he was graduated from Monmouth College in 1877 and from the Cincinnati Law School in 1884. Removing to Phoenix, Ariz., in the latter year, he began his practice there. Four years later he was elected to the 15th Territorial Council. In 1889 he was appointed by President Harrison Associate Justice of the Supreme Court, being assigned to the First Judicial District and serving until 1894. Before his reappointment to the Supreme Court by President McKinley in 1897, he practiced for a time at Prescott. President Theodore Roosevelt confirmed his appointment to the Fourth Judicial District in 1902 and again in 1906. Judge Sloan was one of two delegates to the Republican National Convention of 1908 where he played an important part in securing the adoption by the committee on resolutions of the plank in the party's platform calling for statehood for Arizona. In 1909 he was appointed Territorial Governor by President Taft and held that office until 1912 when Arizona was admitted to the Union. He wrote *Memories of an Arizona Judge* (1932).

Smith, J(onas) Waldo, died Oct. 14, 1933.

Smith, Ormond Gerald. American publisher, died Apr. 17, 1933, in New York City where he was born Aug. 30, 1860. After his graduation from Harvard University in 1883, he entered the publishing business in New York City, founding numerous popular magazines such as *Ainslee's*, *Popular*, *People's*, *Smith's*, *Top Notch*, and *Picture Play*. In these appeared the first short stories of several writers who were to achieve prominence. The most notable example was William Sydney Porter (O. Henry) whose tales of the more humble element of the metropolis found a sympathetic response among their readers. The detective and love story magazines, more commonly known as "pulp wood," which he established also achieved a wide circulation. At the time of his death, Mr. Smith held the office of president of the Street and Smith Publishing Co. and had been president of the Ormorge Realty Co. He donated funds in 1931 for the erection in New York City of the building of the French Institute in the United States and served as president of the Institute, as chairman of the executive committee of its Museum of French Arts, and as curator of its library. He was also chairman of the French Chamber of Commerce of the United States. For the services which he thereby rendered in promoting

Franco-American friendship, he received the decoration of Officer of the French Legion of Honor in 1927 and that of Commander four years later.

Sothern, Edward Hugh, died Oct. 28, 1933.

Southerland, Rear Admiral William Henry Hudson, U.S.N., Ret. American naval officer, died in Washington, D. C., Jan. 30, 1933. He was born in New York City July 10, 1852, and joined the United States Volunteer Navy at the age of 13, seeing service on such famous vessels as the *Constellation* and *Hartford* and participating for a short while in the Civil War. On his graduation from the United States Naval Academy in 1872 he was promoted through the grades from ensign to rear admiral in 1910. During the Spanish-American War he commanded the gunboat *Eagle*, which aided in the blockade of Cuban ports and succeeded in capturing three Spanish vessels. He was next assigned to the United States Hydrographic Office where with Commander Schroeder he prepared the notable *Azimuth Tables*. After commanding the *Cleveland* for two years he became in 1906 a member of the Board of Inspection and Survey of the Navy Department and in 1910 of the Naval Examining and Retiring Board. After commanding the second division of the Pacific Fleet during 1911-12 Admiral Southerland was made commander-in-chief of that fleet, having charge of an expeditionary landing force of 2000 marines sent to Nicaragua in August, 1912, to protect the lives and property of American citizens until suppression of the revolt led by Gen. Luis Mena. In 1913 he was named member of the General Board and the following year was retired by operation of law.

Spenlove-Spenlove, Frank. British landscape and figure painter, died in London, Apr. 30, 1933. Born at Bridge of Allan, Stirling, North Britain, Feb. 24, 1868, he received his art education in London, Paris, and Antwerp and after 1886 was a regular exhibitor at the Royal Academy. Among his best-known paintings were "Funeral in Holland in Winter" (which won the gold medal at the Paris Salon of 1901); "Too Late" (in the Musée de Luxembourg, Paris); "The Little White Cross" and "In the Shadow of the Church" (Manchester Gallery); "Vespers, Holland" (Glasgow Corporation Gallery); "Grey of the Morn" (Guildhall, London); "Grey of Evening" (Hull Gallery); "Return of the Prodigal" and "Pilot's Funeral" (Hotel de Ville, Paris). His landscapes all showed his peculiar skill in the rendering of atmosphere, while his figure paintings resembled in style and sentiment the work of Israels and other Dutch genre painters of the nineteenth century. He founded the Spenlove School of Painting and was a member of the Royal Institute of Painters in Water-colors, Royal Institute of Oil Painters, and Royal Society of British Artists.

Starr, Frederick, died Aug. 14, 1933.

Sterki, Victor. American zoologist, died at New Philadelphia, Ohio, Jan. 25, 1933. He was born at Solothurn, Switzerland, Sept. 27, 1846, and was graduated with the M.D. degree from the University of Berne in 1873. On coming to the United States ten years later he abandoned medicine to take up the study of mollusca and protozoa, and after 1910 was assistant curator of mollusca at the Carnegie Museum in Pittsburgh. He had published more than 100 papers, articles and pamphlets on original researches in zoology. His phenomenal nearsightedness enabled him to study the smallest snail, clam, or shellfish without the aid of a microscope.

Stewart, Rear Admiral Edwin, U.S.N., Ret. American naval officer, died at South Orange, N. J., Feb. 28, 1933. Born in New York City, May 6, 1837, he was graduated from Williams College in 1862. During the Civil War he served as paymaster in the Navy and also saw service at the battles of Port Royal, Port Hudson, and Mobile Bay. After the War he served at the Great Lakes station on the *Michigan* which patrolled those waters and in 1866 captured a party of Fenian invaders who were crossing the Niagara River into Canada. Admiral Stewart next saw service in Washington as purchasing officer for the Navy from 1868 to 1873, and then became fleet paymaster of the Asiatic station. After his promotion to pay inspector in 1879, he was made inspector of provisions and clothing at the New York Navy Yard and in 1883 became fleet paymaster of the European station. Appointed paymaster general of the Navy in 1890, he was reappointed in 1894 and 1898. During the Spanish-American War the Navy's efficient Bureau of Supplies and Accounts, under his direction, was credited with performing the work effected by three departments of the Army. His foresight in purchasing the Chinese supply ships *Nanshan* and *Zafiro* also contributed greatly to Dewey's victory at Manila Bay. Shortly before his retirement in 1899 he had been commissioned a rear admiral.

Stewart, George David. American surgeon, died in New York City, Mar. 9, 1933. He was born at Upper Malagash, N. S., Canada, Dec. 28, 1862, and after graduating from the Teachers' College at Truro, N. S., in 1884 taught at the St. Francis Xavier College at

Antigonish, N. S. Two years later he decided to study medicine and came to New York City to attend the Bellevue Hospital Medical College of New York University, receiving his degree in 1889. He practiced for a year in Nova Scotia and then returned to New York City to become professor at the University and Bellevue Hospital Medical College. He was rapidly promoted to instructor in anatomy, assistant professor of anatomy, and assistant visiting surgeon at Bellevue Hospital. In 1899 he was appointed to the chair of anatomy and 16 years later became professor of surgery, holding that post at the time of his death. After 1915 he was also surgical director and visiting surgeon of Bellevue and St. Vincent's Hospitals and consulting surgeon to several institutions in the suburbs of New York City such as St. Joseph's Hospital, Yonkers, N. Y.; St. Mary's Hospital, South Orange, N. J.; Monmouth (N. J.) Memorial Hospital; Tuxedo (N. Y.) Memorial Hospital; South Side Hospital, Bay Shore, L. I., N. Y.; and Englewood (N. J.) Hospital. Noted as an after-dinner speaker, Dr. Stewart came into prominence in January, 1927, when at a banquet of the American College of Surgeons in Washington he maintained that alcohol was a valuable remedy which medical men should be allowed to prescribe regardless of the Eighteenth Amendment. He was a founder of the American College of Surgeons and served as its president in 1927. He was also president during 1919-25 of the New York Academy of Medicine. In 1929 his friend, George F. Baker, gave \$1,000,000 to New York University to establish in his honor the George David Stewart professorship of surgery.

Stillman, Charles Orrin. Canadian oil executive, died in Toronto, Ont., Nov. 18, 1933. He was born in Cleveland, Ohio, Oct. 23, 1864, and after being educated privately began his career with the Standard Oil Company in Bayonne, N. J. After gaining 10 years of experience in various phases of the business, he was transferred to Buffalo in 1890 as plant superintendent. In 1897 he went to Sarnia, Ont., to supervise the construction of the Bushnell Company's new plant there, and two years later became director and superintendent of Imperial Oil Ltd., a subsidiary of the Standard Oil Co. After a series of managerial promotions, he rose to the office of vice-president of the latter concern in 1911 and of president in 1919. He retained the latter post until his retirement in June, 1933. Mr. Stillman was also president of Imperial Pipe Line Co., Ltd., and Queen City Oil Co., Ltd.

Stokes, Rose Pastor. See Romaine, Rose Pastor Stokes. Stone, Ormond. American astronomer, died at Fairfax, Va., Jan. 17, 1933. Born at Pekin, Ill., Jan. 11, 1847, he attended the University of Chicago, receiving the A.M. degree in 1875. He began his career as assistant at the United States Naval Observatory in Washington in 1870 and five years later was appointed director of the Cincinnati Observatory. In 1882 he was called to the chair of astronomy at the University of Virginia, where until his retirement in 1912 he acted also as director of the Leander McCormick Observatory. Among Ormond Stone's noteworthy observations were eclipses of the sun in Iowa in 1869, in Colorado in 1878, and in South Carolina in 1900, while his observations of double and variable stars, nebulae and the satellites of Saturn added to the information about these bodies. He was chairman of the astronomy section of the International Congress of Arts and Sciences held in St. Louis in 1904.

Storms, Albert Boynton. American clergyman and educator, died at Berea, Ohio, July 1, 1933. Born at Lima, Mich., Apr. 1, 1860, he was graduated from the University of Michigan in 1884. Joining the Detroit Conference of the Methodist Episcopal Church in the latter year, he held pastorates during the next 14 years at Franklin, Mich., Hudson, Mich., and Detroit, being assigned in the latter city to the Woodward Avenue Church (1890-93) and the Cass Avenue Church (1893-98). In 1898 he was transferred to the First Church in Madison, Wis., and in 1900 to the First Church in Des Moines, Iowa. Elected president of the Iowa State College of Agriculture and Mechanic Arts in 1903, Dr. Storms carried these administrative duties until 1910 when he became pastor of the Central Avenue Church in Indianapolis. In 1915 he was appointed superintendent of the Indianapolis District of the Methodist Episcopal Church. In 1918 he again returned to the educational field as president of the Baldwin-Wallace College at Berea, Ohio. He wrote *The Cool of the Day* (1902); *The Outlook* (1904); and *The Master Secret* (1913).

Strachan, Robert Charles. American consulting engineer, died in Brooklyn, N. Y., Apr. 16, 1933. He was born at Newburgh, N. Y., Oct. 23, 1862, and was graduated in civil engineering from New York University in 1883. He began his career as assistant on railroad and canal construction, serving in that capacity with the West Shore Railroad, the Erie Railroad, and the State of New York and Kings County

Elevated Railroad, Brooklyn. After acting as structural draughtsman and engineer for various concerns, he entered about 1905 upon the work for which he was best known, the design and construction of bridges in New York City. The original designs for the Queensboro Bridge over the East River were largely his work, and he was in charge of the design and construction of the bridges over the Harlem River at Third Avenue and Willis Avenue. From 1917 to 1927 Mr. Strachey served as examining engineer for New York City, reporting on proposed projects such as the municipal market buildings in Brooklyn and acting as designing engineer for the subway and tunnel work under way during that period. After 1928 he was engaged in a general consulting practice, the terminal facilities of the George Washington Bridge at Fort Washington and Fort Lee being planned under his direction. In addition to numerous contributions to professional and technical magazines he wrote *A Table of Hyperbolic Radicals* (1928).

Straus, Herbert Nathan. American merchant, died Apr. 8, 1933, in New York City, where he was born Nov. 2, 1881. He was graduated from Harvard University in 1903 and immediately afterward became associated with his father, Isidor Straus, and his uncle, Nathan Straus, in the New York department-store firm of R. H. Macy and Co. After the death of his father on the *Titanic* in 1912, he formed a partnership with his brothers, Jesse Isidor and Percy S. Straus, building up in Macy's what was said to be the largest mercantile business in the United States. When the firm was incorporated in 1919, Mr. Straus, who was the youngest of the three brothers, became secretary-treasurer. After 1922 he was vice-president of Macy's and after 1930 president of L. Bamberger and Co., a Newark department store which was bought by Macy's in 1929. He was also a director of two other department-store firms, the Davison-Paxon Co. of Atlanta, Ga., and the La Salle and Koch Co. of Toledo, Ohio. Mr. Straus was active in political affairs, having served as a delegate to the Republican National Convention in 1928 and shortly afterward as treasurer of the New York State Republican Committee. The Republican Business Men, Inc., which he organized and became president of in 1926 supported Herbert Hoover in his presidential campaign. During the World War he served on Hoover's staff in the Food Administration and was also controller of the War Trade Board. He joined the first Citizens Military Training Corps at Plattsburg in 1916 and two years later enlisted with the Motor Transport Corps, receiving the rank of captain. Mr. Straus was a trustee of the Georgia Warm Springs Foundation for the treatment of infantile paralysis victims and with his brothers was engaged in many other philanthropies. In 1924 they gave \$300,000 to Harvard for the construction of a dormitory bearing their father's name, and in 1927 endowed a professorship in the Harvard Graduate School of Business Administration.

Strother, (Edgar) French. American writer, died in Washington, D. C., Mar. 12, 1933. Born at Marshall, Mo., Oct. 5, 1883, he received his education in the public schools of Fresno, Calif., and began his journalistic career at the age of 19 as a reporter for the *Fresno Republican*. In 1904 he moved to New York City and joined the staff of *World's Work*, an association which was continued until 1926 except for an interval spent as associate editor of the *California Weekly* in San Francisco, 1909-10, and in the office of the state superintendent of public instruction in Sacramento, 1911. Mr. Strother was named managing editor of *World's Work* in 1913 and associate editor in 1923, but after three years in the latter post turned to free lance writing. In March, 1929, President Hoover called him to the post of administrative assistant, which he held until May, 1931, and again after February, 1932. In this capacity he was engaged in research work, particularly in the preparation of articles and speeches, and acted in the organization of the White House Conference on Child Health and Protection, the President's Conference on Homes and Home Building, and similar enterprises. He was the author of a great many magazine articles and of *Fighting Germany's Spies* (1918) and *Maid of Athens* (1932). He collaborated with Henry Morgenthau in the writing of two books, *All in a Life-Time* (1922) and *I Was Sent to Athens* (1929).

Stuart, Henry Carter. American administrator, died at Elk Garden, Va., July 24, 1933. He was born at Wytheville, Va., Jan. 18, 1855, and graduated from Emory and Henry College in 1874, after which he studied law for two years at the University of Virginia. He did not take up the practice of law, however, but turned to farming and cattle raising, and subsequently acquired coal and iron interests of considerable importance. He became president of the Stuart Land and Cattle Co. of Virginia, of the Buckhorn Coal Co., and of the First National Bank of Lebanon, Va. (1898-1905). Governor Stuart's political career began with

his election as a delegate to the Democratic National Convention in 1892. He was a member of the Virginia Constitutional Convention in 1902 and in 1903 was appointed to the Virginia State Corporation Commission, on which he served for five years. His nomination for Congressman from the 9th Virginia District in 1910 resulted in defeat because of the strong Republican majority there, but in 1913 he was elected governor of Virginia by an almost unanimous vote and served the term 1914-18. It was during his administration that the State prohibition law was passed. Mr. Stuart was again delegate to the Democratic National Convention in 1916 and in 1924. He served as chairman of the National Agricultural Advisory Committee in 1917-18 and was a member of the price-fixing committee of the War Industries Board. In December, 1919, he attended the President's Industrial Conference.

Stuart, Robert Young. American forester, died in Washington, D. C., Oct. 23, 1933. He was born in South Middleton Township, Cumberland County, Pa., Feb. 13, 1883, and was educated at Dickinson College and the Yale School of Forestry, receiving the M.F. degree from the latter institution in 1906. The U.S. Forest Service assigned him upon graduation to duty in Montana, Idaho, and Wyoming, and from 1906 to 1912 he was chief of timber sale and planting in the Missoula district of Montana. He was then promoted to the position of forest inspector with headquarters in Washington, D. C., where he remained until 1917. During the World War he served with the Forestry Engineers Corps at the A. E. F. headquarters in Paris, at Tours, Chaumont, and in the Gen district, being promoted to the rank of major in 1918 and cited by General Pershing. The years following the war found Mr. Stuart in Pennsylvania, where he served successively as deputy commissioner of forestry for the State (1920-22), as commissioner (1922-23), and as secretary of forests and waters (1923-27). On May 1, 1928, he was appointed chief of the United States Forest Service, and during his administration accomplished much in carrying out plans for the enlargement of the national forests of the United States. These plans were furthered in 1933 through the work of the Civilian Conservation Corps.

Sturgis, Maj.-Gen. Samuel Davis, U. S. A. Ret., died Mar. 6, 1933.

Stutsman, Jesse O. (rila). American penologist, died at Lewisburg, Pa., Apr. 25, 1933. He was born at Philadelphia, Ind., Feb. 19, 1871, and attended De Pauw University (A. B., 1895) and the Johns Hopkins University. Ordained as a minister in the Methodist Episcopal Church in 1896, he served various pastorates in the State of Indiana. In 1910 he entered the field of penological work as general secretary of the Prisoners' Aid Association of Maryland. He was superintendent of the research department of the Board of Public Welfare, Kansas City, Mo., from 1912 to 1918, and also of the Kansas City Municipal Farm for Misdemeanants. During the World War various military camps claimed his services in connection with the War Camp Community Service, and subsequently he was superintendent of the Detroit House of Correction (1920-23) and of the Rockview Penitentiary, Bellefont, Pa. (1923-29). In 1929 Mr. Stutsman was appointed superintendent of the United States Detention Headquarters in New York City, and when the first Federal Training School for Prison Officers was opened there in 1930 he was made principal. In addition to lecturing in behalf of fair colonies for misdemeanants he wrote *Curing the Criminal* (1926). He was an advocate of character analysis in the study of criminals and made important contributions to that field.

Sumner, Frederick Azel. American clergyman and educator, died at Hoboken, N. J., Dec. 26, 1933. He was born at Eastford, Conn., Mar. 26, 1864, and was graduated from Oberlin College in 1891 and the Hartford Theological Seminary in 1894. Ordained to the ministry of the Congregational Church in the latter year, he served several pastorates in Minnesota, including the Pilgrim Church in Minneapolis, 1902-07. In 1907 he was called to the First Church of Milford, Conn., where he remained for nine years. In 1916 Dr. Sumner assumed the presidency of Talladega College, a school for negroes at Talladega, Ala., conducted under the auspices of the American Missionary Association of the Congregational Home Mission Board. He retired as president emeritus in June, 1933. During his administration a fund of \$1,000,000 was raised for the institution, five new buildings were erected, and Talladega achieved a rating of grade "A" in the Southern Association of Colleges and Secondary Schools.

Surtees, Brig. Gen. Sir Conyers. British army officer, died in London, Apr. 18, 1933. Born Jan. 13, 1858, and educated at Harrow and Sandhurst, he entered the army in 1876 and rose rapidly through the ranks to lieutenant-colonel in 1900. He served in the Nile Expedition (1884-85), with the Egyptian Frontier Field Force (1885-86), and in the Boer War (1899-1900).

In recognition of his South African services he was named a Companion of the Distinguished Service Order in 1900. From 1905 to 1909 he was military attaché at the British embassies in Constantinople and Athens, at which time he received the Cross of Grand Commander of the Order of Saviour of Greece. During the World War Sir Conyers was in command of the 52d Infantry Brigade in France and Belgium, 1915-16, being twice mentioned in dispatches, and was inspector of infantry, 1916. A Conservative Member of Parliament for Gateshead during 1918-22, he was made a Companion of St. Michael and St. George in 1919 and was knighted in 1932.

Sutro, Alfred. British dramatist, died Sept. 11, 1933, in London where he was born Aug. 7, 1868. While serving his apprenticeship as a journalist during the '90s he essayed the writing of plays, following from the first that dictum of certain literary aspirants of Grub Street to appeal to the public by "never being dull." His first successful play was *The Walls of Jericho* (1904), an artificial comedy dealing with high society in London. In the same year appeared *A Marriage Has Been Arranged*, which remained popular as a curtain raiser over 80 years. These were followed by *Mollentrave on Women* (1905); *John Glayde's Honor* (1907); *The Builder of Bridges* (1908); *Making a Gentleman* (1909); *The Perplexed Husband* (1911); *The Two Virtues* (1914); *The Choice* (1919); *The Great Well* (1922); *The Desperate Lovers* (1927); and *Living Together* (1929). Sutro won distinction also as the translator of the works of Maeterlinck. In 1918 he was made an officer of the Order of the British Empire.

Suzzallo, Henry, died Sept. 25, 1933.

Švehla, Antonín. Czechoslovak statesman, died Dec. 12, 1933, in Prague, near which city he was born Apr. 15, 1873. As leader in the Chamber of Deputies of the Agrarian party, the largest and most influential in the country, he assumed in 1909 a position of political importance which he maintained throughout his public career. He was vice-president of the National Committee which in 1918 played a prominent part in the formation of the republic. He was appointed Minister of the Interior in the first Czechoslovak cabinet of Edward Benes, serving until 1920. First becoming premier in October, 1922, Švehla retained that office almost continuously for seven years in spite of political crises that caused a change of cabinet three times. He was convinced of the necessity of uniting the landowners against Bolshevism and strongly supported cooperation on the part of his government with Germany. An agriculturist himself, he labored throughout his career for the betterment of the peasants. In January, 1929, he retired because of ill-health.

Swettenham, Sir Alexander. British colonial administrator, died in Switzerland, Apr. 19, 1933. He was born at Derby, England, in 1846 and was educated at Clare College, Cambridge. Between 1868 and 1901 he held various government offices in Ceylon, Cyprus, Singapore, and the Straits Settlements, serving as acting governor of the latter from 1898 to 1900. He was governor and commander-in-chief of British Guiana during 1901-04 and captain-general and governor-in-chief of Jamaica during 1904-07. In 1907 Jamaica was visited by a severe earthquake, which partly destroyed Kingston, the capital and seat of government, and resulted in the loss of 800 lives. The United States government willingly sent assistance to Jamaica, but Swettenham appeared to resent American interference and aroused harsh criticism, both in the United States and England, for his failure cordially to avail himself of the relief offered by Rear Admiral C. H. Davis. He retired from office the same year. In 1898 he was created Knight Commander of St. Michael and St. George.

Swynnerton, Annie Louisa (Robinson). British painter, died in London, Oct. 24, 1933. Born in Manchester about 1845, she was educated there and in Paris, and in 1883 was married to Joseph William Swynnerton, a sculptor. Besides being well-known for her studies of children, she painted a number of symbolic works, including: "The Sense of Sight," in the Liverpool Art Gallery; "The Unrelenting Past," in the Ottawa Art Gallery; "Mater Triumphalis," in the Luxembourg, Paris; "Dream of Italy," in the Metropolitan Museum of Art, New York City; "Hope," in the Melbourne Art Gallery; and "The Oreads" and "New Risen Hope," in the Tate Gallery, London. Her election as an associate of the Royal Academy in 1922 was reputed to be that of the first woman painter so honored since Angelica Kauffmann was made one of the original members of the Academy in 1769. She was also a member of the International Society of Sculptors, Painters and Gravers.

Sydenham of Combe, George Sydenham Clarke, 1st Baron, died Feb. 7, 1933.

Talmage, James Edward. American scientist and theologian, died in Salt Lake City, Utah, July 27, 1933. He was born at Hungerford, Berkshire, England, Sept. 21, 1862, but emigrated with his family to the United States at the age of 18. He attended Lehigh University

and Johns Hopkins and received the Ph.D. degree from Illinois Wesleyan University in 1896. His educational work began at the Brigham Young Academy at Provo, Utah, where he was professor of chemistry and geology during 1884-88. He was president of the Latter-Day Saints College in Salt Lake City from 1888 to 1893 and of the University of Utah from 1894 to 1897, resigning in the latter year as president but remaining as professor of geology until 1907. In 1911 he was ordained as one of the 12 apostles of the Church of Jesus Christ of Latter Day Saints. Dr. Talmage was the author of the following works on Mormonism: *The Articles of Faith* (1899); *The Story of Mormonism* (1907); *The Great Apostasy* (1909); *The House of the Lord* (1912); *The Philosophy of Mormonism* (1914); *Jesus the Christ* (1915); and *The Vitality of Mormonism* (1919).

Taylor, Sir William, died Jan. 29, 1933.

Teasdale, Sara, died Jan. 29, 1933.

Terry, Fred, died Apr. 17, 1933.

Terry, Marshall Orlando, died Oct. 11, 1933.

Terry, Roderick. American antiquary and clergyman, died in Newport, R. I., Dec. 28, 1933. Born in Brooklyn, N. Y., Apr. 1, 1849, he was educated at Yale, Andover Theological Seminary, and the Union Theological Seminary. After his graduation from the latter institution in 1875 he was ordained to the ministry of the Presbyterian Church and served as pastor at Peekskill, N. Y., 1875-79, and of the South Reformed Church of New York City, 1881-1905. He was also chaplain of the 12th Infantry Regiment of the National Guard of the State of New York, 1890-1900, and served as chaplain during the Spanish-American War. After his retirement in 1905 Dr. Terry devoted much time to the preservation of historic buildings and Colonial relics in Rhode Island. Among these were the State House, erected in 1739, Fort Barton, and the site of the Battle of Rhode Island. On July 14, 1928, there was dedicated in King Park the memorial tower which he gave marking the spot where 6000 French troops under Rochambeau landed in 1780. Interested in the work of the Newport Historical Society, he acted as president of that organization from 1918 until the time of his death. He was also president of the Redwood Library, one of the oldest in the United States.

Thatcher, Roscoe Wilfred. American educator, died at Amherst, Mass., Dec. 6, 1933. Born at Chatham Centre, Ohio, Oct. 5, 1872, he was graduated from the University of Nebraska in 1898, receiving the M.A. degree from the same institution in 1901 and the degree of D.Agr. in 1920. He began his career as assistant chemist at the Nebraska Agricultural Experiment Station in 1899, and transferred in 1901 to the Washington Agricultural Experiment Station, where he remained for 12 years, becoming director in 1907. He was also professor of agricultural chemistry at Washington State College during 1907-13. From 1913 until 1921 he was on the faculty of the University of Minnesota, becoming dean of the Department of Agriculture in 1917 and being connected also during that time with the Minnesota Agricultural Experiment Station. He was director of the New York Agricultural Experiment Station, 1921-23, and of the experiment stations of the New York State College of Agriculture, 1923-27. In 1927 he became president of the Massachusetts Agricultural College (later the Massachusetts State College), retiring in 1932 because of ill health but continuing his work there as research professor of chemistry. Dr. Thatcher was president of the American Society of Agronomy in 1912 and of the American Society for the Promotion of Agricultural Science in 1919. He edited the *Journal of the American Society of Agronomy*, 1922-27. President Coolidge appointed him a member of the President's Agricultural Commission in 1924. His researches in the chemistry of flour and wheat and his chemical studies of insecticides brought him wide recognition. He wrote *Chemistry of Plant Life* (1921).

Thayer, Benjamin Bowditch. American mining engineer, died in New York City, Feb. 22, 1933. He was born in San Francisco Oct. 20, 1862. After graduating from the Lawrence Scientific School of Harvard University in 1885 he engaged in mining operations for the Anaconda Copper Mining Co. in Montana, later supervising the mining interests of William Randolph Hearst and his mother in California and becoming general manager of the Santa Rita Mine in New Mexico. From 1909 to 1915 he held the office of president of the Anaconda Copper Mining Co. and after its merger with the Amalgamated Copper Co. the office of vice-president of the greater Anaconda company. He was also president of the Raritan Copper Works, Anaconda Sales Co., Electrolytic Zinc Process Co., and Santiago Mining Co. In 1914 Mr. Thayer served as president of the American Institute of Mining Engineers. The following year he was appointed to the United States Naval Consulting Board because of his expert knowledge of explosives.

Thayer, Russell. American civil engineer, died at Mount Airy, Philadelphia, Pa., Oct. 21, 1933. He was born in Philadelphia, Dec. 24, 1852, and received his education at the University of Pennsylvania and the United States Military Academy, where he became assistant instructor in artillery after his graduation in 1874. The following year he gave up the army as a career, although he was later for six years brigadier-general of the 2d Brigade of the Pennsylvania National Guard. After serving for a time as assistant supervisor for the Pennsylvania Railroad, he was appointed chief engineer of Fairmount Park in Philadelphia. In that post, which he held for 23 years, he designed and carried out a number of park improvements. In 1899 he became connected with the United Gas Improvement Co., where he remained for 17 years. He was also president of several lighting companies. Mr. Thayer was known for a number of inventions. His interest in aeronautics led him to submit plans for an Army dirigible as early as 1885. These plans were approved by the Army Ordnance Department, but apathy on the part of Congress failed to secure the necessary appropriation for the construction of the airship. Among his patents was one for the gyroscopic control of airships. The gold separator machine for recovery of gold lost in amalgamation on plates was another of his inventions.

Thayer, Webster, died Apr. 18, 1933.

Thompson, Charles Edwin. American steel manufacturer, died in Washington, D. C., Oct. 4, 1933. He was born at McIndoe Falls, Vt., July 16, 1870, and, after receiving a preparatory school education in Boston, entered business in 1892 as manager of telephone companies in Cleveland and Dallas. In 1900 he became associated with the Cleveland Cap Screw Co., of which he became general manager in 1905. He remained throughout his career with this company, which later became known as the Electric Welding Products Co., acquired two other companies by merger in 1916, and was incorporated as Thompson Products Co. under his presidency in 1924. This organization was known for its improvements in valve manufacture. Mr. Thompson having devised at the outset a method of electrical welding. The first alloy valve was produced in 1907 and 10 years later a one-piece valve of alloy steel, which was universally adopted. On the formation of the Thompson Aeronautical Corp. Mr. Thompson's interest in aviation expanded, causing him to offer each year after 1930 the Thompson Trophy with cash prizes amounting to \$15,000 for the winner of the land plane speed race in connection with the National Air Race meeting. He assisted in organizing the Glenn L. Martin Co., manufacturers of aeroplanes, and the Trans-American Airlines, later merged with American Airways, and developed the silerome aviation valve. He was twice president of Motor and Accessory Manufacturers Association and was a director of Automotive Parts and Equipment Association.

Thompson, William Oxley. American educator, died in Columbus, Ohio, Dec. 9, 1933. Born at Cambridge, Ohio, Nov. 5, 1855, he was graduated from Muskingum College in 1878, receiving the M.A. degree three years later, and from the Western Theological Seminary in Allegheny City, Pa., in 1882. Ordained in the ministry of the Presbyterian Church in the latter year he served a pastorate at (Odebolt, Ia., until 1885 and then because of his wife's health removed to Longmont, Colo., where he was for six years president of Longmont College and pastor of the local church. Upon his return to Ohio in 1891 he became president of Miami University in Oxford. In 1899 he was called to the presidency of the Ohio State University, a position which he filled for more than 25 years. When he retired as president emeritus in 1925, the university occupied a plant valued at \$15,000,000 and the enrollment had increased during his administration from 1200 to almost 10,000. Dr. Thompson continued in active participation in religious activities, serving as president of the International Sunday School Association in 1918 and as moderator of the General Assembly of the Presbyterian Church in the United States of America in 1926-27. Also considered an authority on matters pertaining to agriculture, he was chairman of the Agricultural Commission sent to England and France in 1918 to study agricultural conditions in Allied countries. In 1920 he was chairman of the commission appointed by President Wilson to settle the anthracite coal controversy.

Thomson, Sir (John) Arthur, died Feb. 12, 1933.

Thomson, John Millar. British scientist, died in London Mar. 22, 1933. He was born in the Old College of Glasgow Mar. 7, 1849, and educated at the University of Glasgow. He was appointed Assistant Demonstrator of Chemistry in King's College, London, in 1871 and Senior Demonstrator in 1879. The following year he went to Queen's College, London, as professor of chemistry, remaining there until 1887. He returned to King's College in that year as professor of chemistry, serving also as vice-principal from 1905 to 1914, when he retired as professor emeritus. Dr. Thomson held several offices in

the Chemical Section of the Society of Arts and the Chemical Society of London and was president, 1900-08, of the Institute of Chemistry of Great Britain and Ireland. He published a number of papers and addresses on chemical subjects.

Thorndike, Ashley Horace. American English scholar, died in New York City Apr. 17, 1938. He was born at Houlton, Me., Dec. 26, 1871, and was graduated from Wesleyan University in 1893 and from Harvard University with the Ph.D. degree in 1898. He then became an associate professor at Western Reserve University but in 1902 was called to Northwestern University as professor of English literature. After 1906 he was professor of English at Columbia University. Dr. Thorndike wrote *The Influence of Beaumont and Fletcher on Shakespeare* (1901); *Elements of Rhetoric and Composition* (1905); *Tragedy* (1908); *Everyday English* (1913); *Facts about Shakespeare* (1915); *Shakespeare's Theatre* (1916); *Literature in a Changing Age* (1920); *A History of English Literature* (1920); *English Comedy* (1929); and *The Outlook for Literature* (1931). Also he edited the *Tudor Shakespeare, Library of the World's Best Literature, Longman's English Classics*, and the *Modern Readers' Series*. He was a member of the National Institute of Arts and Letters and in 1927 delivered the annual Shakespeare lecture before the British Academy.

Thornton, Sir Henry Worth, died Mar. 14, 1933.

Thurston, E(rnest) Temple. British novelist, died in London Mar. 19, 1933. Born at Halesworth Sept. 23, 1879, he published his first work, two volumes of verse, at the age of 16. His first novel, *The Apple of Eden*, was written two years later but was not published until 1905. In 1902 his first play, *Red and White Earth*, appeared. Three years later he dramatized as *The Masquerader* the novel *John Childe, M.P.*, written by his first wife Katherine Cecil Alden Thurston. Mr. Thurston's novels won popular appeal through a certain poetic sentiment, admirably illustrated in *Traffic* (1906), *The Rentier* (1907), *Sally Bishop* (1908), *The City of Beautiful Nonaenae* (1909), *The Greatest Wish in the World* (1910), and *The Garden of Resurrection* (1911). He wrote also *The Antagonists* (1912), *Richard Furlong* (1913), *The Passionate Crime* (1915), *The Five-Barred Gate* (1916); *Enchantment* (1917), *The Forest Fire* (1919), *The World of Wonderful Reality* (1920); *The Green Bough* (1921); *The Eye of the Wife* (1922), *May Eve* (1924); *Mr. Bottleby Does Something* (1925); *The Rosetts* (1926); *The Goose-Feather Bed* (1926); *Come and Listen* (1927); *Portrait of a Spy* (1928); *Man in a Black Hat* (1930), and *A Hank of Hair* (1932). His plays included *The Greatest Wish* (1912), *Drogen* (1914), *The Coat* (1914), *The Wandering Jew* (1923), *A Roof and Four Walls* (1923); *Judas Iscariot* (1923), *The Blue Peter* (1924); *Emma Hamilton* (1929); and *Charmeuse* (1930).

Tiffany, Louis Comfort, died Jan. 17, 1933.

Tilton, Edward Lippincott. American architect, died at Scarsdale, N. Y., Jan. 5, 1933. He was born in New York City, Oct. 19, 1861, and at the age of 18 started work in a banking house. He soon abandoned the banking business, however, in order to study architecture with the firm of McKim, Mead, and White, and in 1887 he went to Paris for three years, where he studied at the École des Beaux Arts. The year following his return to New York he entered a partnership with William A. Boring and the two shortly afterward won the competition for the Ellis Island Immigration Station. When Mr. Boring retired in 1916, Mr. Tilton continued practice with Alfred Morton Githens as partner. He specialized in libraries, museums, and buildings of a similar nature, and designed the Welch Medical Library at the Johns Hopkins University, the Currier Museum at Manchester, N. H., the Springfield and Somerville (Mass.) libraries, and other notable buildings. During the World War he designed almost 100 libraries and theatres for the government military camps. He was awarded a gold medal at the Paris Exposition in 1900 and the gold medal of the American Institute of Architects in 1925 for the Public Library at Wilmington, Del. He received other medals at the Pan-American Exposition of 1901 and the Louisiana Purchase Exposition of 1904. He was a former president of the Society of Beaux Arts Architects. Mr. Tilton was also known as an archaeologist. When the Archaeological Institute of America excavated the Argive Heraeum in Argos in Greece in 1895, he was architect for the expedition. He contributed the chapters on Greek architecture to the *Dictionary of Architecture* (1901) and wrote a monograph entitled *The Architecture of the Argive Heraeum* (1902).

Titworth, Paul Emerson. American educator, died at Alfred, N. Y., Dec. 10, 1938. Born at Ashaway, R. I., May 31, 1881, he was graduated from Alfred University in 1904 and received the Ph.D. degree from the University of Wisconsin in 1911. He spent most of the years between 1904 and 1923 on the faculty of Alfred University, becoming professor of modern languages in 1909, professor of English in 1919, and dean in 1920. He served as president of Washington College at Chester-

town, Md., from 1923 to 1938, and returned, less than two months before his death, to Alfred University as president. Dr. Titworth was a well-known Rotarian. He founded the first Rotary Club in Chestertown, Md., and was appointed governor in 1931 of the 84th district of Rotary International. He was one of the two United States representatives of the international service committee of Rotary International. He compiled a *Bibliography for High School Teachers of Modern Languages* (1902) and collaborated in the translation from the French of *Emancipation of Medieval Towns* (1906).

Tomaso, Antonio de. Argentine statesman, died Aug. 8, 1933, in Buenos Aires, where he was born in 1889. After taking a business school course he became clerk for a cereal export firm at the age of 16 and bookkeeper for the firm two years later. In that position he learned of the excessive profits of the employers and became an ardent member of the Socialist party. At the age of 20 he won by examination an appointment as stenographer in the Chamber of Deputies and began the study of law at the University of Buenos Aires, receiving his degree in 1914. In the same year, already acknowledged as a political leader, he was elected to membership in the Chamber of Deputies, which he retained until the dissolution of the Chamber in 1930. When the Socialist party split in 1927 he became a leader of the Independent Socialists, who were openly opposed to President Hipólito Irigoyen and helped precipitate the revolution in 1930. Gen. Agustín P. Justo, after his inauguration in February, 1932, appointed him Minister of Agriculture. In spite of illness, Dr. de Tomaso accompanied to London early in 1933 the embassy headed by Julio Roca and participated in the negotiation of a commercial treaty with Great Britain.

Torrence, Ernest. American motion-picture actor, died in New York City May 15, 1933. Born in Edinburgh, Scotland, June 26, 1878, he prepared for a musical career at the Edinburgh Academy of Music and the Conservatory in Stuttgart, Germany. In 1901 he joined the Savoy Opera Company, singing the baritone rôles in several Gilbert and Sullivan productions, and during the next 10 years appeared on the London stage in *The Emerald Isle* and other comic operas. He made his New York début in 1911 as the Scotch comedian in *The Only Girl*, but his greatest success on Broadway came nine years later as the captain in *The Night Boat*. Cast as the villain in the film *Tolable David* in 1922, he thereafter achieved considerable fame for his character delineations in *The Covered Wagon*, *Peter Pan*, *Captain Blood*, *The Blind Goddess*, *The Pony Express*, *The King of Kings*, *The Bridge of San Luis Rey*, *The Unholy Night*, and *Untamed*.

Tourian, Archbishop Leon. Prelate of the Armenian Church, died by assassination in New York City, Dec. 24, 1933. He was born about 1878 in Constantinople (later Istanbul), Turkey, where he was educated for the priesthood at an Armenian seminary. He held high offices in this denomination more properly known as the Gregorian Church, having been Primate of Smyrna, Vicar-Patriarch of Constantinople, Bishop of Bulgaria, and Archbishop of England, residing at Manchester. In 1931 he came to the United States as Primate of all of North and South America, except California. Archbishop Tourian had supported the establishment of a Soviet Armenian government at Erivan in 1920. After assuming his duties in New York City his stand at that time was criticized by opponents of the Soviet Government's domination in the Republic of Armenia, and during the last year of his life attacks on him grew more and more frequent. On July 2, 1933, supporters of an independent Armenian republic stopped him while he was making an address at the Century of Progress Exposition in Chicago. In August he was assaulted at Westboro, Mass., when about to give his blessing to a large congregation by five members of the Armenian Revolutionary Federation. A convention of the Armenian Apostolic Church, meeting in New York City in September, voted him out of office, but as his supporters continued to express confidence in him he refused to recognize their action. On December 24, however, he was stabbed to death in the aisle of the Holy Cross Armenian Church in New York City, while participating in the grand processional. The slaying was perpetrated by four Armenian revolutionists.

Towse, J(ohn) Ranken. American dramatic critic, died Apr. 12, 1933, at Streatham, Surrey, England, where he was born Apr. 2, 1845. Educated at Cambridge, he came to the United States in 1869 and the following year joined the staff of the New York *Evening Post*, serving as its dramatic critic from 1874 to 1927. For 17 of those years he was also city editor. He published *Sixty Years of the Theatre* (1916).

Treowen, Ivor John Caradoc Herbert, First Baron. British soldier, died at Llanarth Court near Abergavenny, Monmouthshire, Oct. 18, 1938. Born July 15, 1851, and educated at St. Mary's College, Oscott, he entered the Grenadier Guards in 1870 and received rapid promotion to brevet-colonel in 1889. He served in the Egyptian campaign of 1882 and in the Nile Expedition of 1884-

85, taking part in the actions at Abu Klea, Gubat, and Metemneh. After acting as military attaché at the British embassy in St. Petersburg (later Leningrad) from 1886 to 1890 he was for five years commander of the Canadian militia in Canada with the local rank of major-general. At Queen Victoria's Diamond Jubilee in 1897 he commanded the entire body of colonial troops in England. Lord Treowen served also in the Boer War as assistant adjutant-general of the Field Force. After his retirement from the army in 1908 he was promoted to the rank of major-general. He was active in political affairs, being Liberal Member of Parliament for South Monmouthshire from 1906 to 1917. In 1913 he became Lord Lieutenant of Monmouthshire. Named a Companion of the Bath in 1890 and a Companion of St. Michael and St. George in 1895, he was created a baronet in 1907 and a baron in 1917. In 1929 he accepted the presidency of University College of South Wales and Monmouthshire.

True, John Preston, American author, died at Waban, Mass., Jan. 4, 1933. He was born at Bethel, Me., Feb. 13, 1859, and attended Exeter Academy and the Roxbury Latin School in Boston. In 1879 he entered the educational department of Houghton, Mifflin and Co., publishers, an association which he continued for 40 years, retiring in 1919. He was the author of a number of books for boys, including: *Their Club and Ours* (1883); *Shoulder Arms* (1889); *The Iron Star* (1899); *Scouting for Washington* (1900); *Morgan's Men* (1901); *On Guard Against Torv and Tarleton* (1902), and *Scouting for Light Horse Harry* (1911).

Turner, William Thomas (Everton), British sea captain, died at Great Crosby near Liverpool June 23, 1933. Born about 1856, he began his sea career at the age of 8 as a deck boy on his father's bark, the *Grasmere*, and during the next 25 years saw considerable service on sailing vessels. In 1883 he entered the employ of the Cunard Steamship Co., Ltd., becoming a captain 10 years later and subsequently commanding the transatlantic liners *Aquitania*, *Mauveania*, and *Lusitania*. When the *Lusitania* was torpedoed by a German submarine on May 7, 1915, some miles southwest of the Old Head of Kinsale on the Irish coast, Captain Turner was on duty. He went down with his ship but succeeded in saving himself with the aid of an oar and was rescued two hours later. In the investigation of the tragedy he was exonerated from all blame, as the vessel was unarmed and carried no high explosives, guns, or loaded shells. The casualties numbered 1152, of whom 114 were Americans. The fact that the attack was made in violation of all principles of international law produced a feeling of widespread horror and indignation in the United States and resulted in the eventual entry of that country into the World War. Captain Turner had another harrowing experience when the *Feorna* which he was commanding was torpedoed in the Mediterranean while carrying British troops to Saloniki. Thereafter until his retirement in 1919 he served as relief captain at Glasgow and Liverpool. He was decorated in recognition of his War services, with the Order of the British Empire.

Tweed, John, British sculptor, died in London Nov. 12, 1933. A native of Glasgow, Scotland, he studied at the Royal Academy Schools and later at the Ecole des Beaux Arts in Paris under Falguere. He devoted his talents to the creation of monuments and commemorative statues and received a number of important commissions from cities in various parts of England and the Dominions. Among the most famous of his public works are the national memorial to Earl Kitchener of Khartum in the Horse Guards Parade, the memorial to Lord Beresford in St. Paul's Cathedral, the War Memorial of the 60th Rifles for Winchester, a marble bust of Joseph Chamberlain in Westminster Abbey, statues of Queen Victoria at Aden and Madras, statues of Lord Clive in London and Calcutta, statues of Cecil J. Rhodes at Bulawayo, Salisbury, Rhodesia, and Mafeking, and the Rifle Brigade War Memorial in Grosvenor Gardens. He completed also the Alfred Stevens monument to the Duke of Wellington in St. Paul's Cathedral.

Unwin, William Cawthorne, died Mar. 17, 1933.

Urban, Joseph, died July 10, 1933.

Urquhart, John Leslie, British mining engineer, died in London, Mar. 14, 1933. Born in 1874, he was sent abroad to study languages, then took up mining engineering at the Universities of Glasgow and Edinburgh. After operations in the petroleum fields near Baku, Caucasus, where he was engaged between 1896 and 1906, he undertook the ownership and management of mines in the Ural Mountains, Siberia, and in various parts of European Russia, serving as chairman of the Russo-Asiatic Consolidated Mining Trust, the largest foreign enterprise in the old Russian empire. After the Bolshevik revolution of 1917 he headed, as chairman, the Association of British Creditors of Russia, while at the post-war conferences in Geneva and The Hague, he acted as adviser to Lloyd George on Russian economic matters. On the signing of the Anglo-Soviet Trade Agreement in March, 1921, Urquhart negotiated with Krassin, the Soviet Minister of Trade and Commerce, for the restora-

tion of 2,500,000 acres of land belonging to the Russo-Asiatic Consolidated Mining Trust and for compensation amounting to \$280,000,000. Lenin, however, vetoed this arrangement the following year. In 1923 Urquhart was reputed to control the Turkish import and export trade. He was engaged thereafter in mining enterprises in France, Australia, and New Guinea, directing in the latter country the New Guinea Goldfields. Among the honors conferred on him were the Albert Gold Medal, first class, by King Edward in 1906 and the Silver Medal of the Royal Society of Arts in 1916.

Uyehara, Yussaku, Viscount, Japanese army officer, died in Tokyo, Nov. 8, 1933. Born at Hyuga in 1856, he was commissioned a sub-lieutenant of engineers in the Japanese Army in 1879, and in 1889 was among the first officers sent to France to study military history and tactics. During the war with China five years later he served as staff officer of the 1st Army. He also represented the Emperor in 1894 at the coronation of Czar Nicholas II of Russia. Created a baron in 1897 he was delegated to attend The Hague Peace Conference in 1899. On the outbreak of the Russo-Japanese War of 1904-05 he was chief of staff to Marshal Nogi and in 1908 became commander of the 7th Army Division. He served as Minister of War during 1912-13, as chief of the Military Education Board in 1914, and from 1918 to 1923 as chief of the general staff of the Japanese Army, having been elevated to the rank of Field Marshal in 1919. At the time of his death he was a member of the Board of Marshals and Fleet Admirals.

Uzès, Anne, Duchesse d', French sculptor and author, died in Paris Feb. 3, 1933. A daughter of Louis de Rochechouart, Comte de Mortemart, she was born in Paris Feb. 10, 1847, and was married at the age of 19 to Emmanuel, the twelfth Duc d' Uzès. Widowed in 1878, she devoted herself with enthusiasm to politics, to sports, to literature and art, and to her position of social leader of the French nobility. During the '80s she financed the activities of Gen. Georges Boulanger in the hope of restoring the House of Orleans and the monarchy. Through her skill in the hunting-field she became the master of the hunt at Bonnelles-Rambouillet and in 1923 was awarded the ancient title of Wolf Lieutenant in her district. She was one of the first motorists to be licensed in France and founded the Woman's Automobile Club of Paris. Under the pseudonym of "Manuella" the Duchess exhibited her sculpture at the Salon of French Artists and won honorable mention. Notable pieces were: "Diane Surprised," "St. Hubert" in the Church at Montmartre, "Notre Dame de Poissy" in the Church at Poissy, "Jeanne d'Arc" at Pont-à-Mousson, "Jeanne d'Arc" at Mehun-sur-Yèvre, and "Notre Dame de France" at Rheims. She was president of the Union of Women Painters and Sculptors. The Duchess wrote two novels, *Pauvre petite* and *Juven Masly*; *Le Voyage de Mon Fils au Congo*, an account of her son Jacques's fatal exploring expedition to the Congo, *L'Arrondissement de Rambouillet*, and several plays, among them *Le Cœur et le Sang*, *Une Saint-Hubert sous Louis XV*, *Un Cas*, and *La Sourde*. Among the numerous honors bestowed on her were the medal of Queen Elizabeth of Belgium and the decorations of Chevalier of Serbian Charity, and Chevalier of the Legion of Honor.

Vaihinger, Hans, died Dec. 19, 1933.

Vance, Louis Joseph, American novelist, died in New York City Dec. 16, 1933. He was born in Washington, D. C., Sept. 19, 1879, and attended the preparatory school of the Brooklyn Polytechnic Institute. After attaining success with the *Brass Bowl* in 1907 he devoted himself to tales of mystery and adventure, becoming one of the most popular and prolific writers in that field. Among his 35 novels were: *The Black Bag* (1908), *The Bronze Bell* (1909), *The Fortune Hunter* (1910), *The Handbox* (1912), *Joan Thursday* (1913), *The Lone Wolf* (1914), *Sheep's Clothing* (1915), *The False Faces* (1917), *Beau Revel* (1919), *Red Masquerade* (1921), *Alias the Lone Wolf* (1921), *The Lone Wolf Returns* (1923), *The Road to En-Dor* (1925), *The Dead Ride Hard* (1926), *The Woman in the Shadow* (1930); and *The Trembling Flame* (1931).

Van Dyke, Henry, died Apr. 10, 1933.

Van Dyke, Paul, died Aug. 30, 1933.

Van Royen, Jan Herman, Dutch diplomat, died at The Hague, Aug. 31, 1933. Born at Zwolle, the Netherlands, Mar. 28, 1871, he attended the local schools and the University of Groningen. After his appointment as attaché in the Dutch diplomatic corps in 1897 and as secretary in 1899, he served at the legations in Berlin (1900-1), Washington (1901-04), and Constantinople (1904-7), being advanced to counselor in 1906. In 1907 he was secretary to the Peace Conference at The Hague. His appointment as Minister to Japan in 1908 was followed by transfers to Spain in 1914, to Italy in 1919, and to the United States in 1927, succeeding in the latter post Andre de Graaff, who had been made Governor-General of the Dutch East Indies (later Netherlands India). Dr. Van Royen strengthened the historic ties between the Netherlands and the United States by

his cooperation in securing the extension of the Root treaty of arbitration in 1929, whereby the United States might adhere to the Permanent Court of International Justice at The Hague. The Formula set forth in this treaty allowed an American objection to have the same force and effect as would attach to a vote by a member of either the Assembly or the Council of the League of Nations and permitted the American government to withdraw if it did not wish to submit an issue to the World Tribunal. When American abandonment of the gold standard proved disadvantageous to Dutch foreign trade, Dr. Van Royen preserved friendly feelings between the two nations by asserting emphatically the intention of his government to cooperate with the United States in attempts to reduce tariff barriers and other obstacles to trade. He was author of *The Consular Jurisdiction of Japan*, 1895.

Varona y Pera, Enrique José, Cuban philosopher, statesman, and author, died at Vedado Nov. 19, 1933. Born at Camagüey Apr. 13, 1849, he attended the University of Havana, receiving the Ph.D. degree and holding there for many years the chair of psychology, moral philosophy, and sociology. Previous to the Cuban Revolution he was for a brief period one of the Cuban Deputies in the Spanish Cortes. He edited also from 1885 to 1895 *Revista Cubana* and founded *Patria*, the organ of the Revolutionary party. Dr. Varona fought in the Spanish-American War and during the first American occupation of Cuba (1899-1902) was Secretary of Public Instruction. One of the founders of the Conservative party, he was elected in 1912 vice-president of the republic on the ticket with Mario G. Menocal, holding the office for four years. During his later years he was a bitter opponent of President Machado. Among Dr. Varona's works were: *Odas Anacrónicas* (1868); *Poesías* (1878); *Estudios Literarios y Filosóficos* (1883); *Los Cubanos en Cuba* (1891); *Cuba contra España* (1895-98); *Noções de Lógica* (1902); *Curso de Psicologia* (1905-08); *El Fundamento de la Moral* (1903); and *Por Cuba, Discursos* (1918).

Villa-Urrutia, Wenceslao Ramírez, Marqués de, died Apr. 21, 1933.

Vitale, Ferruccio, American landscape architect, died in New York City, Feb. 26, 1933. Born in Florence, Italy, Feb. 5, 1875, he was educated at the Royal Military Academy at Modena and was commissioned in the Italian Army. While a military attaché at the Italian Embassy in Washington, D.C., during 1898-99 he was sent to the Philippines with the United States Army as a military observer. In 1904 he resigned his commission in the Italian Army and established himself in New York City as a landscape architect. He drafted the designs for Meridian Hill Park in Washington, D.C., and the plans for the towns of Scarsdale and Pleasantville, N. Y., besides carrying out Federal government commissions in several Western national parks and laying out many private estates near New York, Chicago, Philadelphia, and Pittsburgh. He was instrumental in arranging scholarships at the American Academy at Rome, of which he was a trustee, and in establishing a department of landscape architecture there. He became a citizen of the United States by naturalization in 1921. President Coolidge appointed him a member of the National Fine Arts Commission for the term 1927-31, and at the time of his death he was serving on the Architectural Commission of the Chicago Century of Progress Exposition. For his work in the Philippines in 1898 he was created a Chevalier of the Crown of Italy. In 1920 there was awarded to him the gold medal of the Architectural League of New York City. He was a member of the Foundation for Architecture and Landscape Architecture at Lake Forest, Illinois.

Vonnoh, Robert, died Dec. 28, 1933.

Wakefield, The Rt. Rev. Henry Russell, British Clergyman and social reformer, died in London, Jan. 9, 1933. Born at Mansfield, Nottinghamshire, Dec. 1, 1854, he was educated at the Lycée Bonaparte in Paris and at the University of Bonn. His ecclesiastical career, which began in 1877, was distinguished by his participation in social services and by his popularization of social questions among laymen of the Church of England and of other communions. After acting as prebendary of St. Paul's during 1908-9 and as Dean of Norwich during 1909-11, he was consecrated Bishop of Birmingham but resigned this see in 1924 to devote all his time to his social interest. Under his presidency, from 1913 to 1924, the National Council of Public Morals undertook inquiries into such problems as adolescence, the birth-rate, and the motion picture. During the World War Bishop Wakefield traveled more than 18,000 miles in the United States and Canada on an official mission to set forth the moral issues which required American support of the Allies in that conflict, receiving in recognition of these services commanderies in the Order of the British Empire (1920) and the Order of Leopold II of Belgium. Other offices held by him were: Chairman of the Central Committee of the Unemployed; president of the Free and Open Church Society; and president of the Christian Counter-Communist Crusade.

Walden, Lionel, American marine painter, died at Chantilly, France, July 12, 1883. Born at Norwich, Conn., May 22, 1861, he studied under Carolus-Duran in Paris and exhibited widely both in the United States and abroad. Among the awards accorded him were silver medals at the Paris Exposition of 1900, the Louisiana Purchase Exposition in St. Louis in 1904, and the Panama-Pacific International Exposition in San Francisco in 1915. His best known works are "Fishing in the Roadstead" in the Wiltach Collection at Philadelphia and "Cardiff Docks" in the Luxembourg Gallery in Paris. He was also represented in the Cardiff (Wales) Museum, the Honolulu Academy of Arts, and the Corcoran Gallery in Washington. In 1910 he was made a Chevalier of the French Legion of Honor.

Waldo, Frederick Joseph, British physician and barrister, died in London Nov. 2, 1893. Born in Bristol Oct. 18, 1852, he was educated at Clifton College and at St. John's College, Cambridge, receiving from the latter the A.M. and M.D. degrees. After serving his internship at St. Bartholomew's Hospital, London, he did research work during 1889-91 in the laboratories of Louis Pasteur in Paris, Robert Koch in Berlin, and Max von Pettkofer in Munich. On his return to England he was appointed house physician at St. Bartholomew's Hospital, serving also from 1892 to 1900 as tutor in public health at the St. Bartholomew's Hospital Medical School. He was connected with the City of London Hospital for Diseases of the Chest as house physician and with the East London Hospital for Children as senior resident medical officer. Combining his interest in medicine with law, Dr. Waldo served after his admission to the bar in 1896 as the first medical officer of the Inner and Middle Temples and, at the time of his death, was considered one of the foremost authorities on medical jurisprudence. He held also the office of coroner of the City of London and Southwark from 1901 to 1932 and during 1915-16 was president of the Coroner's Society of England and Wales. In 1900 he delivered the Milroy Lectures before the Royal College of Physicians and in 1904 was special lecturer on medical jurisprudence for the Council of Legal Education. He was a Knight of Grace of the Order of St. John of Jerusalem in England.

Walsh, Thomas James, died Mar. 2, 1933.

Ward, George Clinton, American engineer, died in Los Angeles, Calif., Sept. 11, 1933. Born at White Plains, N. Y., Jan. 9, 1863, he was educated at Phillips Academy, Andover, Mass. His engineering career began in 1882, when he joined the construction corps of the New York, West Shore, and Buffalo Railroad (later part of the New York Central system). Surveying and construction for other railroads occupied him from 1884 to 1902 when he accepted the post of engineer in charge of the modernization of the city water supply at Washington Court House, Ohio. For the Henry E. Huntington he undertook the construction of hydroelectric plants in California, becoming vice-president and general manager in 1905 of the Huntington Land and Improvement Co. He resigned in 1912 to become vice-president of the Pacific Light and Power Corp. In 1917 he was elected vice-president of the Southern California Edison Co., and in 1932 president.

Wauters, Emile Charles Marie, died Dec. 11, 1933.

Wells, Amos Russel, American author and editor, died at Auburndale, Mass., Mar. 6, 1933. He was born at Glens Falls, N. Y., Dec. 23, 1862. Upon graduation from Antioch College in 1883, he served as professor of Greek and geology there until 1891 when he became associated with the Rev. Francis E. Clark, the founder, in pioneering the establishment of the World's Christian Endeavor Union. After 1891 he edited the society journal, the *Christian Endeavor World*, and was a contributing editor to the *Christian Herald*. Dr. Wells was the author of more than 100 books, some of which are *Golden Rule Meditations* (1893), *When Thou Hast Shut Thy Door* (1895), *Little Sermons for One* (1898), *The Business Man's Religion* (1900), *The Cheer Book* (1901), *Rolling Rhymes* (1902), *The Young People's Pastor* (1905), *The Living Bible* (1908), *Why We Believe the Bible* (1910), *The Arithmetic of Friendship* (1913), *Bible Snapshots* (1925), *Go Tell You Guess* (1929), *Walk in His Ways* (1930), and *The Devotional Year-book* (1931). His interest in Sunday school work was demonstrated by such volumes as *Sunday School Problems* (1905), *The Teacher That Teaches* (1907), *Sunday School Essentials* (1911), *The Ideal Adult Bible Class* (1912), *A Successful Sunday School Superintendent* (1915), and the annual volume of *Peloubet's Notes on the Sunday School Lessons*. Always an earnest advocate of prohibition, he served on the temperance commission of the Federal Council of the Churches of Christ in America.

Wentworth, Cecile de, American painter, died at Nice, France, Aug. 28, 1893. Born in New York City, she attended the Sacred Heart Convent there and in 1886 went to Paris where she studied under Alexander Cabanel and Edward Detaille. She first exhibited at the Paris Salon in 1889, won honorable mention for

a portrait in 1891, and continued to exhibit annually until her death. With Rosa Bonheur she shared the rare distinction among women painters of decoration with the cross of the Legion of Honor and of purchase for permanent exhibition by the Musée du Luxembourg. She received commissions from many notable personages. Her portrait of Queen Alexandra of England, executed for the King of Spain, was admired by King Edward VII at the Paris Salon, while Pope Leo XIII was so pleased with his portrait which received a medal at the Paris Exposition in 1900 that he made her a grand commander of the Order of the Holy Sepulchre. President Taft and President Theodore Roosevelt were famous American subjects for her brush. Examples of her work are displayed at the Luxembourg in Paris, the Vatican Museum in Rome, the Metropolitan Museum in New York City, and the Corcoran Art Gallery in Washington, D.C. She held the papal title of marquise.

Wester Wemyss, Rosslyn Erskine Wemyss, 1st Baron of Wemyss, died May 24, 1933.

Westinghouse, Henry Herman, American mechanical engineer, died at Goshen, N. J., Nov. 18, 1933. Born at Central Bridge, Schoharie Co., N. Y., Nov. 16, 1853, the youngest of seven sons, he was graduated from the Union High School, Schenectady, N. Y., in 1871 and studied mechanical engineering at Cornell University during 1871-72. His family bent was strongly mechanical, for his father was a machinist, inventor, and manufacturer of agricultural implements, and his brother George, with whom he was closely associated in business enterprises, was the famous inventor of the air-brake and other mechanical appliances. In the Westinghouse Air Brake Co., established in Pittsburgh by his brother in 1869, he began work in the foundry in 1873, continued in the machine-shop and the drafting-room, became general agent, then rose to the office of general manager in 1887, vice-president in 1899, and, after the death of his brother, president in 1914. At the time of his death he was chairman of the board of directors. Mr. Westinghouse himself invented the single-acting steam-engine, which proved to be an important factor in the development of the electric power industry. He organized the Westinghouse Machinery Co. in 1880 to manufacture this engine and founded the engineering firm of Westinghouse, Church, Kerr and Co., in 1885, which marketed the single-acting steam-engine all over the world. He was also chairman of the board of directors of the Canadian Westinghouse Co., Ltd.; director of the Westinghouse Electric and Manufacturing Co., and of the Westinghouse Brake and Saxby Signal Co., Ltd., London; president and director of La Compagnie des Freins Westinghouse, Paris, and director of the Westinghouse Brake Co. of Australasia, Ltd., Sydney, N.S.W. Brake Subsidiaries, Ltd., London, and the Union Switch and Signal Co.

Weston, Charles Valentine, American civil engineer, died in Chicago, Ill., Jan. 27, 1933. Born at Kalamazoo, Mich., Feb. 14, 1857, he received a public school education there and was engaged on railroad engineering and construction projects in the Southwest from 1880 to 1888. In the latter year he came to Chicago to construct intake cribs and water-supply tunnels for the suburb of Lake View. While chief engineer of the Northwestern Elevated Railroad during 1890-94, he built the Van Buren St. street car tunnel. With his brother George in 1901 he formed the firm of Weston Bros., consulting and construction engineers, and together they built electric railways in Illinois and Michigan. In 1903 he became chief engineer and in 1908 president and general manager of the South Side Elevated Railroad Co., holding the latter office until the unification of the Chicago elevated lines in 1911. From 1918 to 1920 he was operating manager of the Market Street Elevated Railways in Philadelphia. He was also after 1920 consulting engineer for the Chicago Surface Lines.

Whitehead, Thomas Henderson, British banking manager, died in London, May 16, 1933. Born in Dunblane Parish, Scotland, in 1851, he received six years of legal and commercial training in Dunblane and Liverpool. Then going to London he joined the staff of the Chartered Bank of India in 1873 and until 1902 was engaged in banking activities in the Far East, particularly in India, Ceylon, Japan, and China, serving after 1893 as superintendent of Far Eastern Branches. On his return to England he acted as the bank's London manager from 1902 until his retirement in 1920. For his political and financial aid Mr. Whitehead was held in high esteem by Chinese merchants, bankers, and statesmen. In 1895, on behalf of the Hongkong tax payers, he petitioned the Imperial Parliament for constitutional reform of the municipal government, and in October of the same year informed the London *Times* of the secret arrangement made by Russia with China for the occupation of Port Arthur, Manchuria. In 1900 and in 1908 he refused the post of financial adviser offered by the Chinese Government.

Williams, Charles Turner, American banker and Red Cross official, died in Baltimore, Md., July 27, 1933.

Born at Warrenton, N. C., Oct. 17, 1874, he received a public school education and then worked as a stenographer and as a reporter on the Raleigh *News and Observer*. He was also employed for a while by the Seaboard Airline Railroad, being promoted to division superintendent. His banking career began in 1904 when he became associated with John L. Williams and Sons, private bankers of Richmond, Va. Removing to Baltimore, he acted as investment manager for the Fidelity Trust Co. from 1912 to 1919 and as vice-president of the Fidelity Securities Corp. from 1920 to 1923. After the latter date he was president of C. T. Williams and Co., investment bankers. During the World War Mr. Williams served as treasurer of the American Red Cross Mission to Rumania, directing the transportation via Siberia and Russia of the first supplies sent out from the United States to that country. In 1918 he was promoted to the rank of major and placed in charge of the American Red Cross Mission which took relief supplies to the White Russian refugees in Archangel. In recognition of these activities the Rumanian Government decorated him in 1920 with the Order of Cross of Queen Maria.

Williamson, Alice Mariel (Livingston), British novelist, died at Bath, England, Sept. 24, 1933. Born in Virginia about 1870, she received a private education and in 1895 was married to Charles Norris Williamson, editor of the English periodical, *Black and White*. Jointly as "C. N. and A. M. Williamson" they produced a group of lively, breezy, popular romances in several of which the newly invented automobile was conspicuous: *The Lightning Conductor* (1903); *The Princess Faeus* (1905); *My Friend the Chauffeur* (1905); *The Car of Destiny* (1906); *Set in Silver* (1909); and *The Motor Maid* (1910). They wrote also *The Heather Moon* (1912); *The Love Pirate* (1913); *It Happened in Egypt* (1914); *The War Wedding* (1916); *Crucifix Corner* (1918); and *The Lion's Mouse* (1919). After her husband's death in 1920 Mrs. Williamson continued to publish her books under the joint name. The more important of these were *The Lure of Monte Carlo* (1921), and *The Brightener* (1922).

Wilson, Henry Harrison, American engineer, died in Baltimore, Md., May 31, 1933. Born at "Bonbrook", Cumberland Co., Va., Jan. 15, 1882, he was graduated from the Virginia Polytechnic Institute in 1907. In 1908 he became construction engineer for Winston and Co., serving on the Ashokan dam, and head-works of the Catskill aqueduct of the New York City water supply, and other projects until 1911. As a partner in Sneed and Wilson he engaged in highway construction near Cropseyville, N. Y., during 1912-13, then became a special partner of Winston and Co. in highway and railway construction from 1914 to 1925, and was managing associate of Winston Brothers Co. and Wilson on bridge and other construction work from 1925 to 1931. After 1930 he was president and treasurer of the Lime Bluff Co. Mr. Wilson was prominent in engineering associations, organizing the Associated Pennsylvania Constructors and serving as president and chairman of the executive committee after 1924. For 11 years he was also vice-president of the Associated General Contractors of America. He was the author of *Cost Keeping for Highways* (1924) and editor of the *Highway Builder*, organ of the Associated Pennsylvania Constructors.

Wilstach, Frank Jenners, American theatrical manager and author, died in New York City Nov. 28, 1933. Born at Lafayette, Ind., Oct. 20, 1865, he attended Purdue University, 1879-81, and Seton Hall, 1882-84, then became advance press agent for circuses and Wild West shows. His first theatrical venture was in 1889 as business manager for De Wolf Hopper, with whom he was associated for 12 years. Among his other noted clients were Viola Allen (1902-08), William Faversham (1908-10), Mrs. Leslie Carter (1911-12), and E. H. Sothern and Julia Marlowe (1912-15). From 1916 to 1923 he was advance publicity representative for the Shubert Theatrical Co. and served also in the same capacity for brief periods to Sam H. Harris and Douglas Fairbanks. After 1927 he was associated with the Motion Picture Producers and Distributors of America as assistant to Will H. Hays. Mr. Wilstach contributed to the art of letters as well as to the stage. About 1908 he created a literary furor by a series of newspaper articles that called attention to an English novelist, Robert Smith Surtees, to whose stories of a cockney grocer the origin of Charles Dickens's *Pickwick Papers* has been attributed. His flair for picturesqueness and novelty were so successfully combined that his biography, *Wud Bul Hickok, the Prince of Pistolero* (1926), rekindled interest in western characters of frontier days. The same qualities inspired the compilation from both classical and modern authors of his most noted work, *Wilstach's Dictionary of Similes*, published in 1916, revised in 1924, and annually supplemented from the pages of current newspapers, magazines, and books.

Winship, Albert Edward, American editor, died in Cambridge, Mass., Feb. 17, 1933. He was born at West Bridgewater, Mass., Feb. 24, 1845, and served during

the latter part of the Civil War with the 60th Massachusetts Volunteers. After a teaching experience of several years at the Newton (Mass.) grammar school and the Bridgewater State Normal School he attended the Andover Theological Seminary in 1875 and the following year became pastor of the Prospect Hill Congregational Church in Somerville, Mass. In 1883, however, he decided to resume his educational work, serving during the next three years as district secretary of the New West Educational Commission. In 1886 he became editor of the *Journal of Education*, published in Boston, which grew to be one of the leading popular educational magazines of the United States. In addition to serving as president of the National Education Press Association in 1895 and of the American Institute of Instruction in 1896 he was from 1903 to 1909 a member of the Massachusetts State Board of Education. Dr. Winship published *Life of Horace Mann* (1896); *Great American Educators* (1900); *Educational Preparedness* (1919); and *Educational History* (1929). He was also a staunch believer in the importance of heredity in molding human character, publishing *Jukes-Edwards* (1900) and *Heredity* (1919).

Wolfe, John Frederick, died Jan. 12, 1933.

Wood, William Robert, American lawyer and congressman, died in New York City Mar. 7, 1933. He was born at Oxford, Ind., Jan. 5, 1861, and after attending rural schools learned the trade of harness-making, taught school for several years, then attended the University of Michigan law school, from which he was graduated in 1882. Admitted to the Indiana bar in 1882, he practiced at Lafayette with W. Dewitt Wallace until 1884, with W. H. Bryan until 1891, and with J. Frank Hanly until 1904. After 1904 he practiced alone. Mr. Wood's political career began in 1890 with his election to the office of prosecuting attorney of Tippecanoe Co. In 1896 he was elected to the Senate of the Indiana Legislature and, being four times re-elected, he served until 1914, twice acting as president pro tem. The Republican constituents of the 10th Indiana District elected him to the House of Representatives in 1914. A vigorous supporter of Charles Evans Hughes in the 1916 presidential campaign, he was equally conspicuous after Wilson's inauguration in opposing his policies. His last appointments were as chairman of the House Appropriations Committee and of the Republican National Congressional Committee in the 72d Congress.

Woodbury, Helen Sumner, American social worker, died in New York City Mar. 10, 1933. She was born at Sheboygan, Wis., Mar. 12, 1876, and was graduated from Wellesley College in 1898, receiving the Ph.D. degree from the University of Wisconsin in 1908. After 1904 she was associated with the American Bureau of Industrial Research. She served also as special investigator during 1906-07 of equal suffrage in Colorado for the New York Collegiate Equal Suffrage League. In 1913 she entered the Children's Bureau of the Department of Labor as an industrial expert, being advanced in 1915 to assistant chief and remaining with that organization until her marriage in 1918 to Robert Morse Woodbury, the economist. During 1924-26 she was connected with the Institute of Economics. Dr. Woodbury's writings include *The White Slave* (1896); *Labor Problems* (with Thomas S. Adams, 1905); *Equal Suffrage* (1909); *History of Women in Industry* (vol. 1, *Report on Women and Children in Industry*, United States Labor Bureau, 1911); *Child Labor Legislation in the United States* (with Ella A. Merritt, 1915); *Administration of Child Labor Laws in Connecticut and in New York* (with Ethel E. Hanks, 1915); *History of Labor in the United States* (with John R. Commons and others, 1918); *The Working Children of Boston* (1923); *Standards Applicable to the Administration of Child Labor Laws* (1924). In 1910 she served as associate editor of the *Documentary History of American Industrial Society*.

Wright, The Most Rev. John Charles, Australian prelate of the Church of England, died at Christchurch, New Zealand, Feb. 24, 1933. Born Aug. 19, 1861, he was educated at Merton College, Oxford. After his ordination in 1885 he served populous parishes in Bradford (1888-93), and Leeds (1895-1904) until his appointment as a resident canon of Manchester Cathedral in 1904. In 1909, following his appointment as Archdeacon of Manchester, he was elected Archbishop of Sydney and Metropolitan of New South Wales. The following year he was translated Primate of Australia. A staunch adherent to the Evangelical traditions of the Anglican Church, he was an active participant in the organization of the Pan-Anglican Congress. In 1929 he was appointed a sub-prelate of the Order of St. John of Jerusalem.

Wright, R(obert) Ramsay, British biologist and educator, died at Droitwich, England, Sept. 7, 1933. He was born at Alloa, Scotland, Sept. 23, 1852, and was graduated from the University of Edinburgh in 1873. The following year he was called to University College, Toronto, as professor of natural history. In 1887 he was transferred to the University of Toronto as professor

of biology, serving also from 1901 until his retirement in 1912 as vice-president of the institution and dean of the faculty of arts. Dr. Wright was a past president of the Canadian Institute, the American Association of Anatomists, and the Royal Society of Canada. He contributed many papers on comparative anatomy of vertebrates to scientific periodicals. After his retirement as professor emeritus he made his home at Oxford.

Yamamoto, Gombel, Count, died Dec. 8, 1933.

Yohn, Frederick Coffay, American illustrator, died at Norwalk, Conn., June 5, 1933. Born in Indianapolis, Ind., Feb. 8, 1875, he attended the Indianapolis Art School and the Art Students' League in New York City. Noted for his spirited battle scenes, he was commissioned to illustrate a book of frontier sketches by Theodore Roosevelt, serials by James Barnes and Molly Elliott Seawell, John Lodge's *Story of the Revolution*, and Gen. Frederick Funston's *Memoirs of Two Wars*. His illustrations appeared also in *Scribner's Magazine* and *Collier's Weekly*. In 1930 he painted several historical scenes for the Massachusetts Bay Tercentenary.

Yoshida, Isaburo, Japanese diplomat, died in Angora, Turkey, Apr. 24, 1933. Born at Kyotofu, Japan, in 1878, he was graduated from the Imperial University at Tokyo in 1903, qualified for the diplomatic service in 1904, and was sent as attaché to the Japanese embassy at Washington, D.C., being advanced to third secretary in 1908. In 1911 he returned to the Foreign Office in Tokyo but the following year was sent to London as second secretary to the Japanese embassy, becoming first secretary in 1916. In 1921 he was transferred as embassy counselor to Peking where he served on the Japan-China joint committee for the settlement of the Shantung question. For two years (1924-25) he was embassy counselor in Washington, D.C., and then was transferred to London in the same capacity. Mr. Yoshida was appointed Minister to Switzerland in 1926 and in 1930 was given the highly regarded post of Ambassador to Turkey. In 1932 he was named Japan's assessor on the commission appointed by the League of Nations to study the situation in Manchuria, with the Earl of Lytton as chairman.

Yudenitch, Gen. Nikolai Nikolaevitch, Russian soldier, died in Paris, France, Oct. 5, 1933. Born July 18, 1862, he attended the Alexandrovski Military School in Moscow and after entering the Imperial Army in 1879 saw service as a regimental commander in Turkestan and during the Russo-Japanese War. He served also on the general staff after 1887, being made assistant chief on his promotion in 1907 to the rank of major-general. Six years later he was commissioned lieutenant-general and chief of staff of the military district of the Caucasus. At the beginning of the World War he rendered great service to the Allied cause as commander of the Russian forces in the Caucasus, stemming the Turkish invasion by his brilliant feats at Erzerum, Sarikamys, and Ardahan. When in 1917, however, the revolution caused a complete breakdown of the Russian military organization Yudenitch, by a masterly retreat, succeeded in extricating his men from a difficult position. From Estonia in 1919 he attempted as commander of the army of the new provisional government to overthrow the Soviet régime but was defeated. His declining days were spent in France.

Zoller, Hugo, German journalist and explorer, died in Munich, Jan. 11, 1933. Born at Oberhausen near Schleiden Jan. 12, 1852, he studied jurisprudence and natural science but was forced by ill health to abandon them. While recuperating in Spain in 1873, he sent articles commenting on the current civil war to the *Kölnische Zeitung*. He was made a special correspondent and thereafter became a confirmed explorer and traveler. In 1882, as a correspondent for his paper, he was present at the battle of Tell el Kebir between the British and Egyptian insurgents and in 1885-86, as a government representative, visited Buea, West Africa. His paper sent him with an exploring party to New Guinea in 1888, where he was the first to scale the highest mountain peak, which later bore his name. He was said to have discovered the Buka Straits, while a group of islands in the Solomon Archipelago and a bay of New Pomerania in the Bismarck Archipelago were likewise named for him. In 1902 he accompanied Prince Henry of Prussia, the Kaiser's brother, to the United States. Among his books were: *Rund um die Erde* (2 vols., 1881); *Der Panama-Kanal* (1882); *Die Deutschen im brasilianischen Urwald* (2 vols., 1883); *Pampas und Anden* (1884); *Die deutschen Besitzungen an der westafrikanischen Küste* (1885); and *Deutsch-Neuguinea* (1891).

NELSON, CHARLES ALEXANDER, An American librarian, died at Swarthmore, Pa., Jan. 12, 1933.

He was born at Calais, Me., Apr. 14, 1839, and was graduated from Harvard University in 1860, later attending the Lawrence Scientific School of that institution. During the Civil War he served as a civil engineer in the quartermaster's department of the Federal Army, and from 1865 to 1873 was superintendent of schools and justice of the peace in New Bern, N. C., where he had been sent to carry out reconstruction provisions. The following six years were spent in the book business and in library work in Boston.

After a brief period as professor of Greek at Drury College, Springfield, Mo., Charles Nelson joined in 1881 the Astor Library (later incorporated in the New York Public Library) as catalogue librarian. In 1888, he served as librarian in the Howard Memorial Library, New Orleans, and in 1891 assistant librarian in the Newberry Library, Chicago. Returning to New York City in 1893, he was appointed deputy and reference librarian at the Columbia University Library, which post he held until his retirement in 1909. From 1913 to 1926 he was connected with the Mercantile Association Library, New York City. Elected in 1927 an honorary member of the American Library Association, of which he was one of the founders, he was known at the time of his death as the Dean of American Librarians.

NELSON ART GALLERY. See ART MUSEUMS.

NEPAL, nē-pōl'. An independent kingdom in the Himalayas between Tibet and British India, under British influence. Area, about 54,000 square miles; population, estimated at 5,600,000. Capital, Kathmandu (80,000 inhabitants); reigning sovereign in 1933, Maharajadhiraja Tribhubana Bir Bikram.

NETHERLAND EAST INDIES. See NETHERLAND INDIA.

NETHERLAND INDIA (NEDERLANDSCH INDIE). A group of large islands in the East Indies forming a colony of the Netherlands. Capital, Batavia, on the island of Java.

AREA AND POPULATION. With a total area of 733,494 square miles, Netherland India had a population in 1930 of 60,728,733 (Java and Madoera, 41,717,232; Outer Islands, 19,011,501). The 1920 census population was 49,350,834. The area, population, and population density of the various island groups in 1930 are shown in the accompanying table from the *U. S. Commerce Yearbook*.

NETHERLAND INDIA: AREA AND POPULATION BY ISLANDS

Group of islands	Area,	Population,	Density
	sq. miles, 1930	1930	per sq. mile
Java and Madoera	51,219	41,717,232	817
Sumatra	168,138	7,661,399	47
Riouw-Lingga	12,507	298,829	24
Bangka	4,549	205,438	45
Billiton	1,878	78,409	39
Borneo:			
West District	56,688	827,898	15
South and East Districts	149,277	1,866,638	9
Island of Celebes:			
Celebes	86,200	8,087,385	81
Manado	84,980	1,139,251	33
Molukka Islands and New Guinea	192,453	898,080	5
Timor Archipelago	24,537	1,656,636	68
Bali and Lombok	4,072	1,802,146	443
Total	733,494	60,728,733	83

In Java and Madoera in 1930 there were 40,890,244 natives, 635,662 other Orientals (chiefly Chinese), and 193,618 Europeans. The chief cities

(all in Java except as noted), with their 1930 populations, were: Batavia, 435,184; Soerabaja (Surabaya), 336,814; Semarang, 217,775; Soerakarta, 163,013; Bandoeng, 166,395; Djokjakarta (Jogjakarta), 136,554; Malang, 86,567; Bandjermasin (Borneo), 64,223; Palembang (Sumatra), 109,069; Makassar (Celebes), 86,662; Medan (Sumatra), 74,976.

EDUCATION. The number of children of school age in 1920 was 12,058,000. The school attendance in 1930-31 was: Primary, 1,801,157; higher elementary and secondary, 16,774. In addition there were a few teachers' training, professional, and technical schools.

PRODUCTION. Agriculture is the main occupation, but there is some mining and manufacturing. The area under cultivation in Java and Madoera in 1932 was about 18,962,000 acres (58 per cent of the total area); in the Outer Provinces, 3,395,000 acres. Production of the chief crops in 1932 (1931 in parentheses) was: Sugar (Java only, 1932-33 season), 1,358,000 metric tons (2,631,000 in 1931-32); rubber, 215,000 metric tons (261,000); coffee (European estates only), 138,228,000 pounds (227,612,000 pounds, all producers, 1931); tea, 177,470,000 pounds (179,254,000); rice (Java and Madoera), 284,231,000 bushels (257,739,000); corn (Java and Madoera), 77,662,000 bushels (75,217,000); groundnuts (Java and Madoera), 356,930,000 pounds (311,955,000); tobacco (east coast Sumatra), 26,984,000 pounds (all production, 1931, 242,759,000); copra (exports), 1,054,240 pounds (794,033,000); cinchona (estate production), 20,944,000 pounds (23,424,000); palm oil (estate production), 196,496,000 pounds (142,108,000). Kapok, citronella oil, cassava roots, and sisal and agave are other products.

Mineral output in 1932 was: Gold, 77,959 troy ounces (100,092 in 1931); silver, 842,000 troy ounces (1,473,000); diamonds, 267 carats (287); tin (1932-33), 26,201 metric tons (27,814 in 1931-32); coal, 1,050,000 metric tons (1,404,000); petroleum, 39,028,000 barrels (35,859,000); natural gas, 899,683 metric tons (682,464); manganese ore, 8287 metric tons (14,541); iodide of copper, 449,961 (418,288); salt, 212,373 metric tons in 1931.

Sugar and rubber refining, rice milling, and the preparation of tea, vegetable and animal oils are the chief manufacturing industries.

COMMERCE. Imports in 1932 were valued at 384,324,000 florins (\$154,498,000 at par), compared with 572,405,000 florins (\$230,107,000) in 1931. Exports totaled 543,493,000 florins (\$218,484,000) as against 749,029,000 florins (\$301,110,000) in 1931. The leading imports in 1932 were: Cotton piece goods, 73,157,000 florins (19.84 per cent of the total); foodstuffs, 41,995,000 florins (11.39); husked rice, 33,678,000 florins (9.13); other piece goods, 26,327,000 florins (7.14); machinery and tools, 17,558,000 florins (4.76); iron and steel, 16,742,000 florins (4.54). The chief 1932 exports were: Sugar, 97,712,000 florins (18.05 per cent of the total); mineral oil, 90,900,000 florins (17.90); leaf and cut tobacco, 45,830,000 florins (8.65); copra, 42,299,000 florins (7.81); coffee, 35,195,000 florins (6.50); rubber, 34,012,000 florins (6.28); tea, 32,549,000 florins (6.01); tin, 17,854,000 florins (3.30); pepper, 16,159,000 florins (2.99); and palm oil, 11,844,000 florins (2.19).

Japan in 1932 supplied 21.24 per cent of the total imports (16.98 in 1931); the Netherlands, 15.75 per cent (15.38); Singapore, 12.55 (11.35);

Germany, 7.69 (9.37); United States, 6.66 (9.33); Great Britain, 9.63 (7.95). Of the total 1932 exports, the Netherlands took 19.15 per cent (17.42 per cent in 1931); Singapore, 16.64 (18.89); United States, 12.11 (11.77); Great Britain, 8.94 (9.18); British India, 5.47 (7.79); and Japan, 4.37 (4.42). In 1933, exports to the United States were valued at \$33,076,118; imports from the United States were \$6,890,197.

FINANCE. Budget operations during the period 1930-34 showed substantial deficits, as indicated in the accompanying table. The totals include ordinary and extraordinary receipts and expenditures.

NETHERLAND INDIA: BUDGET OPERATIONS
[In 1,000 florins: florin equals \$0.402 at par]

Year	Revenue	Expenditure	Deficit
1930	755,162	892,436	137,274
1931 *	598,151	766,719	168,568
1932 *	710,718	808,126	97,408
1933 *	561,120	660,449	99,329
1934 *	289,000	312,000	23,000

* Provisional returns. * Budget estimates.

The total public debt on June 30, 1932, amounted to 1,392,615,400 florins (floating debt, 292,304,000 florins). The funded debt Dec. 31, 1932, was 1,113,231,000 florins.

COMMUNICATIONS. There were 4610 miles of railway line in 1931 (government lines, 2720 miles). Passengers carried in that year numbered about 106,981,000; gross receipts were 88,286,000 florins and operating expenses 67,715,000 florins. Highways extended about 35,900 miles, most of them suitable for motor traffic. Airlines connected the chief towns of Java and Sumatra and extended to Singapore. The Royal Dutch Airlines operated a weekly mail and passenger service between Batavia and Amsterdam. On June 30, 1933, telephone service was opened between Palembang and Benkulen in South Sumatra. Radio-telephone service between Java and the port of Makassar in Celebes was inaugurated in July, 1933.

GOVERNMENT. Administrative and executive authority rests in the hands of a Governor-General, assisted by an advisory council of seven members. Both the Governor-General and the Council members are nominated by the Queen of the Netherlands. An assembly (Volksraad) of appointive and elective members shares legislative powers with the Governor-General. It consists of 30 natives, 25 Dutch, and not more than five foreign-born subjects, such as Chinese. The provinces are administered by governors, local affairs being controlled almost entirely by native civil servants, headed by Regents. Governor-General in 1933, Jhr. Dr. B. C. de Jonge, appointed May 8, 1931.

HISTORY. The Dutch authorities in Netherland India placed in effect during 1933 various measures designed to raise prices of local products and relieve the acute economic depression. As a result of a tea-restriction scheme a gain of about 35 per cent in tea prices was recorded during the second quarter of the year. A small tax was levied on all estate-produced exports to finance research work on tea, rubber, coffee, cacao, and cinchona cultivation. East Indian sailors on the Dutch warship *De Zeven Provinciën* mutinied at a port in Northern Sumatra on Feb. 5, 1933, and sailed away with the ship. Pursued by other vessels and airplanes they were forced to surrender five days later after an airplane dropped a bomb on the deck, killing 22 sailors. The incident reflected the unrest aroused in the islands by the economic depression and the government's reductions of sal-

aries and public works. See **NETHERLANDS, THE**, for the trial of the mutineers. For Japan's growing interest in Netherland India and Dutch uneasiness aroused thereby, see **JAPAN under History**. Consult Thomas Steep, "White Failure in the East Indies," *Current History*, September, 1933.

NETHERLANDS, THE (HOLLAND). A constitutional monarchy of northwestern Europe. Capital, Amsterdam. Seat of the government, The Hague. Sovereign in 1933, Queen Wilhelmina Helena Pauline Maria, who succeeded to the throne Nov. 23, 1890.

AREA AND POPULATION. The Netherlands has an area of 13,197 square miles and a population estimated on Jan. 1, 1933, at 8,183,392 (7,935,365 at the census of 1930). Of the 1930 population 7,475,305 (94 per cent) were in urban communities of 2000 or more. In 1932 there were 178,542 living births, 73,043 deaths, and 55,838 marriages. The birth rate per 1000 was 22.0; death rate, 9.0. Estimated populations of the chief towns on Jan. 1, 1932, were: Amsterdam, 766,263; Rotterdam, 587,316; The Hague, 449,614; Utrecht, 156,194; Haarlem, 122,386; Groningen, 107,158. Emigration was 2756 in 1930 and 158 in 1932.

EDUCATION. Less than 1 per cent of the adult population are illiterate. Enrollment in educational institutions in 1931 was: Primary, 1,208,724; secondary, 26,780; preparatory and lyceums, 21,676; universities, 9876. The four public universities are at Leiden, Utrecht, Groningen, and Amsterdam.

PRODUCTION. Of the 3,185,563 gainfully employed persons at the census of December, 1930, 1,235,810 (39 per cent) were engaged in industry; 639,023 (20 per cent) in farming; 398,681 (12 per cent) in commerce; and 296,707 (9 per cent) in transportation. Arable land (1931) totaled 2,249,000 acres (27 per cent of the total); meadow, 3,291,000 acres; woods and forests, 597,000 acres. Livestock in 1930 was (in thousands): Cattle, 2366; swine, 2018; sheep, 485; goats, 131; horses, 299. Butter output in 1932 was 187,866,000 pounds (186,921,000 in 1931); cheese, 263,426,000 pounds (292,837,000). Production of the chief crops in 1932 (thousands of units, bushels except as specified), with 1931 figures in parentheses, was: Wheat, 12,838 (6751); rye, 13,863 (14,167); barley, 2541 (3274); oats, 19,104 (19,784); potatoes, 126,472 (100,535); sugar beets (metric tons), 1533 (1028); beet sugar (metric tons, seasons of 1932-33 and 1931-32), 229 (167); flax (pounds of fibre), 3086 (3918).

The output of the chief minerals in 1932 was: Coal, 12,756,000 metric tons (12,901,000 in 1931); lignite, 113,000 metric tons (122,000); salt, 61,000 metric tons (56,141). Factory production (1931) included: Briquets, 1,096,000 metric tons; cotton yarn, 53,792,000 pounds; wool yarn, 9,370,000 pounds; boots and shoes, 9,010,000 pairs; margarine, 290,289,000 pounds; bicycles, 320,500; vessels launched, 120,276 gross tons (26,000 in 1932). Leading industries, by value of production in 1932, were: Cotton textiles, 89,240,000 florins; flour milling, 69,846,000 florins; shipbuilding, 47,104,000 florins; machinery, 42,120,000 florins; woollen textiles, 40,762,000 florins; cocoa and chocolate, 37,052,000 florins. Shipping tonnage launched (1932) was 26,232 gross tons.

COMMERCE. Dutch imports for consumption in 1932 were valued at 1,299,427,000 florins (\$522,370,000 converted at par), compared with 1,892,733,000 florins (\$760,879,000) in 1931. Exports

amounted to 846,128,000 florins (\$340,143,000), compared with 1,311,814,000 florins (\$527,349,000) in 1931. The principal import items (1932) were: Textile manufactures, \$75,508,000; iron and steel, \$28,626,000; coal, coke, and briquets, \$25,719,000; corn, \$24,153,000; machinery, \$30,881,000. Gold imports in 1932 amounted to \$257,562,000. The chief exports were: Gold, \$141,411,000; coal, coke, and briquets, \$24,278,000; radio apparatus, \$15,453,000; cheese, \$14,442,000; fresh vegetables, \$14,338,000; condensed and other milk, \$13,018,000; fertilizers, \$12,450,000. Of the total value of 1932 imports, Germany furnished 30.8 per cent; Belgium, 10.4; United Kingdom, 9.1; and United States, 6.6 per cent. Germany purchased 21.4 per cent of all the exports; United Kingdom, 19.1 per cent; Belgium, 14.1; France, 10.2; and the United States, 3.5 per cent.

Both imports and exports declined in value in 1933. Imports totaled 1,209,000,000 florins and exports 726,000,000 florins. Imports from the United States (1933) were valued at \$48,716,550 (\$45,254,154 in 1932) and exports to the United States were \$30,949,428 (\$22,430,220 in 1932).

FINANCE. The budget for 1934 was framed in anticipation of a considerable deficit, with ordinary expenditures estimated at 730,000,000 florins and ordinary revenues at 539,000,000 florins. This anticipated deficit was eliminated by provision for economies of 84,000,000 florins and for new taxation calculated to bring in 107,000,000 florins. In the capital accounts for 1934, expenditures were fixed at 73,000,000 florins and receipts at 22,000,000 florins. There was a budget surplus of 28,000,000 florins in 1930, a deficit of 46,000,000 florins in 1931, and an estimated deficit of 77,000,000 florins in 1932. In the latter year actual ordinary revenues amounted to 516,000,000 florins, or 42,000,000 less than in 1931. The 1933 budget estimates placed total revenues at 541,000,000 florins and expenditures at 642,000,000 florins.

On Jan. 1, 1933, the public debt totaled 3,093,650,000 florins (2,475,282,000 funded and 618,368,000 florins of floating debt). This was equivalent to \$1,243,647,000 (\$995,063,000 funded and \$248,584,000 floating). The florin exchanged at an average of \$0.4022 in 1930, \$0.4023 in 1931, and \$0.4029 in 1932.

COMMUNICATIONS. There were 2261 miles of railway line (1931) owned by two private companies in which the government held a controlling interest. During 1931 these lines carried 56,174,000 passengers and 21,977,000 metric tons of freight, the gross receipts totaling 164,296,000 florins (\$66,047,000). There are 4660 miles of navigable rivers and canals. Highways extended 15,534 miles (10,563 miles of macadam). Royal Dutch Air Lines planes in 1932 flew 1,919,505 miles (961,305 in Europe and 958,200 miles on the India line). They carried 20,600 passengers, 912 tons of merchandise, and 143 tons of mail on the European lines and 450 passengers, 11,000 pounds of freight, and 58,300 pounds of mail on the Amsterdam-Batavia line. A 2994-foot bridge over the Waal River near Zaltbommel, costing about \$2,611,000, was opened Nov. 18, 1933. It eliminated the ferry service which had provided the only link for highway traffic between the north and south of Holland. The Dutch merchant marine on June 30, 1932, comprised 1445 ships of 2,963,840 gross tons. The shipping tonnage idle on Oct. 1, 1933, was 226,000 (841,000 on Oct. 1, 1932).

GOVERNMENT. Executive power is vested in the sovereign and legislative power conjointly in the

sovereign and the States-General (parliament). The Upper Chamber consists of 50 members elected by the Provincial states for six years and the Lower Chamber of 100 members elected directly for four years. The sovereign rules through a Council of Ministers, which is quasi-independent of Parliament.

HISTORY

BEERENBROUCK MINISTRY OVERTHROWN. The cabinet headed by Jonkheer Dr. Ch. J. M. Ruys de Beerenbrouck (Catholic), which had been in office since Aug. 10, 1929, was defeated in the Lower House of the States General on Feb. 9, 1933. Late in 1932, the cabinet had adopted a policy of rigid financial retrenchment in an effort to wipe out a large budget deficit. The growing revolt against this policy came to head in a vote on proposed economies in the judicial and penal institutions. The ministry was defeated, 51 to 38. Queen Wilhelmina, who had been on vacation in Switzerland, hurried home and dissolved Parliament.

New elections, called for April 26, unexpectedly resulted in gains for the bourgeois, anti-revolutionary parties and losses for the Social Democrats. The various Fascist groups, which made their appearance in the Netherlands during 1932, won no seats. The standing of the parties in the new Lower Chamber, with the previous standing in parentheses, was: Catholics, 28 (30); Social Democrats, 22 (24); Anti-Revolutionary, 14 (12); Christian Historical, 10 (11); Liberal, 7 (8); Liberal Democrats, 6 (7); Communists, 4 (2); minor parties, 9 (6). The election marked the further decline of the once powerful Catholic party, which had wielded a predominant influence on Dutch politics over half a century, and added to the political prestige of Dr. Hendrik Colijn, a Protestant and a leader of the Anti-Revolutionary party. A former Prime Minister, he had represented the Netherlands in various capacities at the League of Nations and successive international conferences.

The new cabinet, appointed May 24, 1933, was headed by Dr. Colijn as Prime Minister and Minister of Colonies. Other members were: Foreign Affairs, Dr. A. C. D. de Graeff; Interior, Dr. J. A. de Wilde; Finance, Dr. J. P. Oud; Justice, Dr. J. R. H. van Schaik; Defense, Dr. L. N. Deckers; Public Works, Dr. J. A. Kalf; Economic Affairs, Dr. J. Th. Verschuur; Social Affairs, Dr. J. R. Slötemaker de Bruine; Education, Science, and Arts, Dr. H. P. Marchant.

ECONOMIC MEASURES. Under Dr. Colijn's leadership, the government took vigorous steps to check the economic decline and balance the budget. An "agricultural crisis" law, adopted by the States General May 5 and amended on August 5, went into effect Aug. 13, 1933. It gave the government extensive powers to aid agriculture and the fishing industry by limiting imports and other methods. Under this law the ministry restricted imports of grain, fruit, and vegetables during the year, and extended the measures taken in 1931 and 1932 to aid wheat growers, swine raisers, and producers of dairy products.

The Dutch tariff policy was extensively revised. On September 5 the government denounced the tariff truce concluded on May 12 for the duration of the World Economic Conference at London. About the same time it notified the League of Nations of its desire to denounce the 1927 treaty under which import and export prohibitions were abolished. The Lower Chamber on September 13

approved new import duties of 5 per cent on manufactured goods and of 12 per cent on articles of luxury. Import quotas were placed on wire goods, unbleached cotton, and various other articles in an effort to eliminate the adverse visible trade balance. The law of Nov. 17, 1933, extended to Jan. 1, 1938, the crisis importation (quota) law, which was to have expired on Jan. 1, 1935. The law was amended at the same time to increase the government's tariff bargaining powers.

At the opening of the States General for the fall session in September, the Queen's speech emphasized the need of increased taxation and economies to eliminate the estimated deficit of 267,000,000 florins in the 1934 budget. Shortly afterward a government sales tax bill passed the Lower House levying 4 per cent on general sales and 10 per cent on luxuries, with additional taxes on imported goods. The yield from these new measures was estimated at 85,000,000 florins (\$34,000,000 U. S. gold). Meanwhile the government held tenaciously to the gold standard, joining with France and Italy at the London Economic Conference in demanding stabilization of the dollar and the other non-gold currencies. Gold in the Bank of the Netherlands on Dec. 18, 1933, was 947,029,312 florins and the note issue was 898,120,295 florins. On Oct. 17, 1932, the gold reserve was 1,034,897,000 florins and the note issue was 976,866,000 florins.

RELATIONS WITH GERMANY. Dutch relations with Germany became somewhat strained during 1933 as a result of the agitation conducted by German Nazis in the border districts, the exclusion of Dutch agricultural products from their accustomed market in Germany, and other irritating developments. Disorders in the frontier towns led the government on August 24 to prohibit Germans from crossing the border while wearing the Nazi brown shirts or emblems. In October, for the first time in Dutch history, the Dutch Air Protection Service held manœuvres near the German border, with emphasis placed upon protection against gas attacks. The terms of the transfer moratorium on the German private foreign debt aroused indignation in Holland as well as in other creditor countries and led the Dutch government to lodge a protest at Berlin. On Dec. 27, 1933, the Dutch government requested the German government to commute the death sentence passed upon the Dutch citizen, Marinus van der Lubbe, who was convicted of setting fire to the German Reichstag building. See GERMANY under *History*.

NAVAL MUTINY. Pay cuts placed in effect for native and European marines in Netherland India provoked a mutiny on board the warship *De Zeven Provinciën* at a port in Northern Sumatra on Feb. 5, 1933. Some 400 native marines imprisoned their Dutch officers and sailed away. The ship was recaptured five days later after an airplane bomb had been dropped on the deck, killing 22 members of the crew. In Holland there was fear that the mutiny was the forerunner of Communist-instigated disorders and uprisings and accordingly the naval court-martial meted out severe punishment to the ringleaders. The court-martial was held at Soerabaja, Java. In November, 19 Javanese marines received sentences ranging from six to 18 years in prison, and in December the court sentenced five Dutchmen, accused of complicity in the mutiny, to prison for terms ranging from one to 16 years.

See JAPAN under *History* for the lively interest in Netherland India displayed by Japan during

1933 and the resulting Dutch apprehensions. Also see NETHERLAND INDIA.

NEUTRON. See CHEMISTRY; PHYSICS.

NEVADA. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 91,058, as against 77,407 in 1920. The capital, Carson City, had (1930) 1596 inhabitants.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame) . . .	1933	207,000	362,000*	\$1,810,000
	1932	200,000	401,000*	1,925,000
Wheat	1933	17,000	378,000	309,000
	1932	18,000	461,000	254,000
Potatoes	1933	2,000	250,000	175,000
	1932	2,000	300,000	135,000

* Tons.

MINERAL PRODUCTION. The total value of the mines' production of gold, silver, copper, lead, and zinc attained only \$5,135,792 for 1932, which came to but 15.6 per cent of the value of the corresponding total for 1929; for 1931 the total was \$11,673,787. Although general economic conditions favored the mining of gold, the production of this metal declined considerably, to \$2,695,607 (1932) from \$2,941,473 (1931), reckoned at \$20.67 an ounce. Nevertheless, the production of gold constituted (1932) for the first time in many years the chief part of the output, by value, of all metals produced in the State. The number of persons prospecting for gold in the placer areas was not great; it was estimated, for 1932, as between 600 and 700.

The yearly quantity of silver produced fell to 1,390,100 fine ounces (1932), from 2,562,071 (1931); of copper, to 31,473,600 pounds, from 72,634,497; of lead, to 1,195,200 pounds, from 15,860,634; of zinc, to 892,800 pounds, from 20,861,348.

It was estimated, for 1933, that mines produced gold, silver, copper, lead, and zinc to the value of \$5,720,815. This included gold to the value of \$2,170,543 (still reckoned at \$20.67 an ounce, though some of it fetched much more); silver, \$384,675; copper (38,900,000 pounds), \$2,489,600; zinc, \$500,950.

The total of gypsum sold or utilized by producers in the State fell for 1932 to 80,938 short tons, in value \$429,998, or about half the quantity and less than half the value of the product of 1930.

EDUCATION. Though lack of funds sufficient for normal scale of expenditure seriously handicapped some of the public schools, none of the schools were closed on account of this difficulty up to December, according to the *Journal* of the National Education Association. It was then expected that no school would provide instruction for less than six months of the academic year and that the majority would be open for nine months. There were organized, for adults, classes for brief courses in prospecting.

LEGISLATION. A regular session of the Legislature, convened on January 16, made provision for regulating the closing and opening of State banks. A State convention was created, to be composed of delegates to be elected by the voters on September 5, to act for the State with regard to the proposed repeal of the Federal Eighteenth Amendment.

POLITICAL AND OTHER EVENTS. On May 27 were

elected by popular vote the members of county conventions, who later in turn chose delegates to the State convention on the repeal of the Federal Eighteenth Amendment. The popular vote was reported to be heavily in favor of repeal. The State convention met on September 5 and voted the State's adoption of repeal through the superseding amendment proposed by Congress. The banks of the State had come into difficulties some months before the nation-wide banking panic of March. The greater part of them were reopened after the period of Federal closure, including several of the Wingfield banks, of which depositors signed waivers enabling reorganizations to proceed.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Fred B. Balzar; Lieutenant-Governor, Morley Griswold; Secretary of State, W. G. Greathouse; Comptroller, Edward C. Peterson; Treasurer, George B. Russell; Attorney General, Gray Washburn; Superintendent of Public Instruction, Walter Anderson.

Judiciary. Supreme Court: Chief Justice, Edward A. Ducker; Associate Justices, Ben W. Coleman, J. A. Saunders.

NEVADA, UNIVERSITY OF. A coeducational State institution of higher education in Reno, Nev., founded in 1874. There was an enrollment of 911 students for the autumn term of 1933, distributed as follows: College of arts and science, 630; normal school, 39; college of agriculture: school of agriculture, 24; school of home economics, 38; college of engineering: school of mines, 45; school of civil engineering, 34; school of electrical engineering, 66; school of mechanical engineering, 35. There were 79 members on the faculty. The productive funds of the university amounted to \$335,437, and the income for the year to \$632,548. The library contained 55,820 volumes. President, Walter E. Clark, Ph.D., LL.D.

NEW BRITAIN. See NEW GUINEA.

NEW BRUNSWICK. One of the Maritime Provinces of Canada, between Nova Scotia and Quebec. Area, 27,985 square miles; population (1931 census), 408,219 compared with 387,876 in 1921. The principal cities were Saint John, with 47,514 inhabitants in 1931; Moncton, 20,689; Fredericton, the capital, 8830. In 1931, births numbered 10,801; deaths, 4644; marriages, 2544. Enrollment in the public schools totaled 86,355 in the same year and the average daily attendance was 66,810.

Agriculture, mining, manufacturing, fishing, and lumbering are the principal industries. The acreage under field crops in 1932 totaled 907,500 acres and the value of production amounted to \$12,029,000. Livestock (1931 census): horses, 51,157; cattle, 213,450; sheep, 143,677; swine, 85,012; poultry, 1,342,313. About half of the 21,476 square miles of forest is owned by the Province. The production of lumber and other sawmill products for 1931 was valued at \$3,534,442. The fish catch for 1932 was valued at \$2,972,706, of which lobsters represented \$1,041,845. The provisional value of mineral production for 1932 was \$2,243,879. Coal, copper, antimony, and gypsum, are mined. In 1931, the 872 manufacturing establishments, 13,107 employees, and a capital investment of \$128,859,472, produced manufactured products valued at \$55,209,818 gross and \$29,577,902 net.

Ordinary revenue and expenditure of the Province for the fiscal year ended Oct. 31, 1931, to-

taled \$5,980,914 and \$6,761,420 respectively. Government is vested in a lieutenant-governor and a legislative assembly of 48 members. The Province is represented in the Dominion Parliament at Ottawa by 6 members in the Senate and 11 members in the House of Commons. Lieutenant-Governor in 1933, Maj.-Gen. H. H. McLean; Premier and Attorney General, C. D. Richards. See CANADA.

NEW CALEDONIA, kâl'e-do'nî-â. A French colony in the South Pacific, consisting of the island of New Caledonia some 875 miles east of Australia and the following dependencies: Isle of Pines (58 square miles), Wallis Archipelago (40 square miles), Rutuna and Alofi (61 square miles), Loyalty Islands (800 square miles), Huon Islands. Total area, 8548 square miles; total population (1931 census), 62,919, of whom 28,502 were Polynesians and Melanesians. Noumea, the capital on the island of New Caledonia, had 10,708 inhabitants in 1931. In 1932 there were 115 primary schools with a total of 5690 students.

The chief agricultural products are cotton, coffee, copra, manioc, maize, tobacco, bananas, and pineapples. Livestock: cattle, 200,000; sheep, 25,000. The chief minerals produced are nickel, chrome, cobalt, iron, and manganese. Exports of nickel matte in 1931 amounted to 5334 tons valued at 25,636,523 francs. Total imports in 1931 were valued at 86,701,259 francs and exports at 89,085,656 francs (franc equaled \$0.0392 at par). The budget for 1932 was estimated at 32,626,212 francs. The colony is administered by a governor assisted by a privy council and an elective council of 15 members. Governor in 1933, L. Jore.

NEWFOUNDLAND, nû'fûnd-lând'. A large island at the entrance to the Gulf of St. Lawrence, forming, with the Atlantic watershed of Labrador (q.v.), a British colony. Capital, St. John's.

AREA AND POPULATION. The island has an area of 42,734 square miles and Labrador 110,000 square miles. The estimated population of the total area in 1932 was 282,021, compared with the 1921 census population of 263,033 (Newfoundland, 259,259; Labrador, 3774). In 1921 St. John's had 52,219 inhabitants including suburbs (58,000 in 1932); Bonavista, 4052; Harbour Grace, 3825; Grand Falls, 3789; Carbonear, 3320. In 1930-31 there were 1214 schools, all conducted by religious denominations, with 60,592 pupils.

PRODUCTION. Fishing, the main occupation, is supplemented by farming, mining, manufacturing, and lumbering. The codfish catch in 1933 was about 112,000,000 pounds (121,744,000 in 1932). The seal catch, which averaged 216,161 for the period 1926-30, totaled 87,866 in 1931 and 48,013 in 1932. Codfish prices in 1933 were about \$2 per quintal (112 pounds) higher than in 1932. There were 188,000 acres of farm land, against 9,600,000 acres of forests. Hay, potatoes, turnips, and cabbage are the chief crops. Livestock (1932) included 26,759 cattle, 60,000 sheep, 5850 swine, 14,495 horses, and 10,500 goats. The iron ore production in 1932 was 384,000 short tons (790,000 in 1931); lead and zinc concentrates, 184,000 (182,000 in 1931). Newsprint production in 1932 was 272,804 short tons (295,000 in 1931).

COMMERCE. For the fiscal year ended June 30, 1932, imports amounted to 18,136,000 Newfoundland dollars (\$16,373,000 U. S.), against \$25,262,000 in 1930-31. Exports totaled 26,690,000 Newfoundland dollars (\$23,172,000 U. S.) in 1931-32,

compared with \$32,909,000 in 1930-31. (Conversions to United States dollars made at the average exchange rate for 1931-32.) The chief 1931-32 imports were: Flour, \$1,401,000; bullion and coin, \$1,682,000; machinery, \$1,089,000; coal, \$986,000. The principal exports were: Paper, \$13,882,000; dried codfish, \$4,541,000 (\$7,725,000 in 1930-31); iron ore, \$1,173,000; lead concentrates, \$957,000; zinc concentrates, \$867,000. In 1931-32 Canada supplied 46 per cent of the total imports; the United States, 31.5 per cent; and the United Kingdom, 17.5 per cent. Of the exports, the United States took 30.8 per cent; United Kingdom, 29.6; and Canada, 4.9 per cent.

FINANCE. The critical financial condition of the government was responsible for the loss of Newfoundland's dominion status in 1933 (see *History*). Budget operations for the fiscal years ended June 30 were (in Canadian dollars): 1931-32, ordinary receipts, 7,931,000 (9,656,000 in 1930-31); current expenditures, 11,960,000 (12,899,000 in 1930-31); gross receipts, including loans, 14,078,000; gross expenditures, 13,780,000. The funded debt increased from 87,592,000 Canadian dollars on Dec. 31, 1931, to approximately 97,000,000 Canadian dollars on Dec. 31, 1932. The gold Newfoundland dollar is equivalent to the United States dollar at par.

COMMUNICATIONS. The island has 974 miles of railways, of which 905 miles were government owned. In 1933 the government railway was reported to be operating on a paying basis for the first time in years. Steamer lines connected various points on the island with the continent. There were more than 1000 miles of roads (about 880 miles passable to motor cars). The tonnage of vessels entered and cleared in 1930-31 was 2,503,243.

GOVERNMENT. Under dominion status, executive authority was vested in a governor, assisted by an executive council, and legislative power in an appointive council of not more than 24 members and an elected house of representatives of 40 members. Governor and Commander-in-Chief in 1933, Admiral Sir David Murray Anderson. Prime Minister, Frederick C. Alderdice (United Newfoundland party). For changes during 1933, see *History*.

HISTORY. As a result of an insupportable financial burden, fastened upon the island by gross financial incompetence and many years of political corruption, Newfoundland lost its position as a British dominion and reverted to the status of a Crown colony during 1933. For several years, Newfoundland had averted default on its obligations only through the aid of Canadian and British banks and firms doing business in the island. Of the interest due on the public debt Jan. 1, 1933, approximately half was met by the Newfoundland government and the remainder was advanced in equal parts by the British and Canadian governments. To meet the semi-annual interest payments due June 30 and July 1, 1933, Newfoundland received an advance of £400,000 from the British government. It became increasingly evident that complete financial collapse was in prospect unless more constructive measures could be taken.

Formulation of such measures was entrusted, in accordance with a campaign pledge made by Premier Alderdice in 1932, to a Royal Commission, appointed in March, 1933. It consisted of Lord Amulree (chairman), C. A. Magrath (nominated by the Canadian government), and Sir William Stavert (nominated by the Newfoundland

government). The commission considered the federation of Newfoundland with Canada, but was advised that Canada was not in a position to assume the financial obligations involved in such a transaction.

The report of the commission, made public in November, recommended: (1) Replacement of the existing form of government by a special commission, consisting of three Englishmen and three Newfoundlanders, with the Governor as president, the commission to have full legislative and executive authority and be subject only to supervisory control by the British government; (2) a readjustment and lowering of the customs tariff; and (3) assumption by the United Kingdom of responsibility for Newfoundland's finances until the island was self-supporting. The financial recommendations called for the conversion of Newfoundland debt certificates into new sterling 3 per cent stock fully guaranteed as to principal and interest by Great Britain. Certain trustee loans, held chiefly in England, were to receive special treatment and outstanding pre-war dollar loans, the 5½ per cent prosperity loan of 1932 guaranteed by the Petroleum Monopoly, advances from the Canadian banks secured by liens on customs receipts, and the 4 per cent sterling stock repayable in 1935 were all to be paid in full forthwith. The remaining obligations consisted mainly of dollar loans raised in the United States. Holders of these bonds were obliged to convert their securities into guaranteed 3 per cent stock or take their chance of collecting the higher rate of interest on the existing securities after all other obligations had been paid.

The recommendations were immediately accepted by the British government, subject to parliamentary approval. The Newfoundland Parliament, convened on November 27 to consider the report, approved it on November 29. A bill embodying the recommendations was then approved by the British Parliament and received the royal assent Dec. 21, 1933. The Chancellor of the Exchequer advised the House of Commons that in addition to guaranteeing Newfoundland's public debt of £19,000,000 the British government would be obliged to advance £2,550,000 as a free gift during the period 1933-36 to meet the Newfoundland budget deficit.

Largely as a result of these developments, an improvement in economic activity and political conditions was reported toward the end of 1933. Government bonds and bonds of the city of St. John's were quoted locally at about par.

NEW GUINEA, gin'ī. The name applied to both an island in the East Indies and to those territories in the western Pacific Ocean, including a part of the island of New Guinea, which are administered by Australia under mandate of the League of Nations. The area of the island of New Guinea is estimated at 310,000 to 335,000 square miles and the population at slightly below 1,000,000. The northeastern portion is included in the Australian mandated area; the section west of 141°E. longitude belongs to Netherland India; and the southeastern part constitutes the Territory of Papua (British Guinea) also administered by Australia. See **NETHERLAND INDIA**; **PAPUA**.

TERRITORY OF NEW GUINEA. This territory, administered by Australia, comprises the section of the island known as North-East New Guinea, 70,000 square miles; Bismarck Archipelago (New Britain, 13,000 square miles; New Ireland, 3000

square miles; Lavongai, 600 square miles; Admiralty Islands and North-Western Islands, 1000 square miles); Solomon Islands (Bougainville, 3200 square miles; Buka, 200 square miles). Total area, 91,000 square miles; the total native population was estimated to be 520,000. The estimated non-indigenous population on June 30, 1932, was 4362; total indentured native labor (1931) was 27,765. Rabaul, on the island of New Britain, is the administrative centre. The total area under cultivation on June 30, 1931 was 212,500 acres of which 204,100 acres were planted with coconuts. Coffee, cacao, and kapok, and tropical fruits are other crops. Mining is confined to gold (£132,239 exported in 1930-31) but various other minerals are present in the territory. Total imports (less specie) for 1931-32 amounted to £779,397; total exports, £1,108,619. For 1930-31 revenue totaled £290,233; expenditure, £293,378. Administrator in 1933, Brig.-Gen. Thomas Griffiths.

NEW HAMPSHIRE. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 465,293, as against 443,083 in 1920. Manchester, the most populous city, had (1930) 78,384 inhabitants; Concord, the capital, 25,228.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame) .	1933	336,000	322,000*	\$4,701,000
	1932	336,000	303,000*	3,989,000
Potatoes	1933	8,000	1,440,000	1,368,000
	1932	8,000	1,320,000	660,000
Corn	1933	15,000	600,000	396,000
	1932	14,000	560,000	224,000

* Tons.

CHARITIES AND CORRECTIONS. The chief administrative body of the State, with regard to the care and custody of persons under the system operating in 1933, was the State Board of Public Welfare. It was composed of the Governor and the secretary of the State Board of Health, both *ex-officio* members, and of five appointed members, named one each year by the Governor and Council. The board employed a secretary and staff. Its duties included supervision of neglected, delinquent, and defective children; aid toward enforcing laws to protect children; inspection of charitable and correctional institutions of the State and of the counties; and functions relative to mothers' aid, probation, parole, prevention of the marriage of mental defectives, and special aid to the deaf, blind, and aged. A statute of 1931, to provide public assistance to the needy aged, was in limited operation.

The State-conducted institutions of care and custody were: New Hampshire State Hospital (mental patients), at Concord; Laconia State School (feeble-minded children), Laconia; New Hampshire State Industrial School (committed minors), Manchester; State Prison, Concord; New Hampshire Soldiers' Home, Tilton; State Sanatorium (tuberculosis), Glencliff. The State maintained sufferers from tuberculosis in other institutions, besides its own. The employment of State prisoners by a private company manufacturing chairs ceased in 1932, because of Federal restrictions upon prison-made goods, and the prisoners were employed in 1933 in making the State's automobile license plates, cutting stone, and printing for State departments,

LEGISLATION. The regular session of the General Court convened on January 4. It gave the State's ratification to the pending child-labor amendment to the Federal Constitution. A law to establish minimum wages in industrial employment was passed; likewise, a measure requiring \$7 a week as the minimum to be paid an injured employee under the system of workmen's compensation. An interim commission was created and charged with the study of a project for dealing with future unemployment. Measures were adopted for supporting the credit of counties, cities, and towns.

With regard to the current banking difficulties, measures were passed to legalize the continuance of the general closure of State banks that had been effected by the Governor's proclamation of a banking holiday; to give the Governor extensive powers thereafter to declare banking emergencies and take steps therein for the protection of depositors; and to permit building-loan associations to become connected with the Federal Home Loan system.

The Legislature reversed its former trend with regard to liquor questions. It created a State convention of 10 delegates, to be elected at large at a popular election on June 20, who should act for the State on the subject of the proposed repeal of the Federal Eighteenth Amendment. A bill to repeal the State's prohibitory act and to provide State dispensaries for alcoholic liquors, in the event that Federal prohibition should end, passed the lower house but was rejected by the Senate, save for provisions permitting sale of 3.2 per cent beer under the State-control system. A further act was passed to set the alcoholic content of permissible beer and wine at 6 per cent in case the State convention should declare for Federal repeal and Federal repeal should become a fact.

Betting at horse races, under the pari-mutuel system, was made lawful and subjected to a State levy of a percentage on the total of bets laid.

POLITICAL AND OTHER EVENTS. There were chosen by popular vote, on June 20, delegates favorable to the repeal of the Eighteenth Amendment to the Federal Constitution; these met in State convention on July 11 and voted the State's adoption of repeal as provided in the Federal superseding amendment proposed by Congress. The popular vote of June 20 was reported as leaning to repeal in the proportion of 2½ to 1. A special master for the United States Supreme Court, after a hearing of the State's boundary dispute with Vermont, recommended in March that the boundary between the two States be declared to follow the low-water line of the Connecticut River on the Vermont side. The Attorney General of New Hampshire thereupon filed a brief against making a low-water mark in the stream a boundary.

The banks of the State were closed by executive action on March 4, shortly before President Roosevelt's order closing all banks to prevent their depletion by runs. Some 50 commercial banks and all the State's savings banks had been reopened by the middle of the month. Employees of the Amoskeag cotton mills at Manchester, 7800 in number, struck for an advance in pay on May 19 and rioted, necessitating the calling out of militia on May 22. Rioters clashed with the troops on May 23; they were persuaded on the 25th to accept an increase of 15 per cent in their

pay, which had previously been offered and rejected.

OFFICERS. The chief officers of the State serving in 1933 were: Governor, John G. Winant; Secretary of State, Enoch D. Fuller; Treasurer, Charles T. Patten; Attorney General, Francis W. Johnston; Commissioner of Education, James N. Pringle.

Judiciary. Supreme Court. Chief Justice, Robert J. Peaslee; Associate Justices, Peter Woodbury, John E. Allen, Thomas L. Marble, and Oliver W. Branch.

NEW HAMPSHIRE, UNIVERSITY OF. A co-educational State institution of higher learning at Durham, N. H., founded in 1806 in Hanover, N. H., and operated as coequal with Dartmouth College, transferred to Durham as State College in 1893, and made State university in 1923. It consists of a college of liberal arts, a college of agriculture, a college of technology, a graduate school, an agricultural experiment station, and an extension service in agriculture and home economics. The 1933-34 enrollment was 1653, of whom 1195 were men and 458 women. The summer session had a registration of 299. The faculty and research and extension staff totaled 243. The endowment amounted to \$1,209,079 and the income for the year was \$1,497,430. The basis of course accreditation was changed from the time-unit to the credit-hour in order to secure greater continuity of study, a "year-course" plan of study being adopted in fundamental courses for freshmen. An engineering experiment station, with an engineer with industrial training in charge, was established to furnish liaison between the smaller industrial plants of the State and the faculty of the college of technology for the purpose of conducting research on production problems of these concerns. The library contained 75,557 volumes. President, Edward Morgan Lewis, A.M., LL.D., Litt.D.

NEW HEBRIDES, hēb'ri-dēz. A group of islands in the South Pacific Ocean about 250 miles northeast of New Caledonia and 500 miles west of Fiji. The group includes Espiritu Santo, Malekula, Efate (or Sandwich Islands), Epi, Ambrym, Erromanga, Tanna, and Anietyūm. The islands of Tanna, Ambrym, and Lopevi each contain an active volcano. Approximately the total area is 5700 miles and the population 50,300, including 1150 Europeans, 5081 Asiatics, and about 50,000 natives. The area under cultivation is set at 43,000 acres. Copra, coconuts, cacao, cotton, coffee, maize, and cotton seed are the chief exports. Trade is chiefly with France, New Caledonia, and Australia. Port Vila is the capital and chief port.

The islands are under the joint administration of Great Britain and France, according to the Anglo-French Convention of 1906. Each country is represented by a High Commissioner and a Resident Commissioner.

NEW IRELAND. See NEW GUINEA.

NEW JERSEY. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 4,041,334, as against 3,155,900 in 1920. Newark had (1930) 442,337 inhabitants; Jersey City, 316,715; Paterson, 138,513; Trenton, the capital, 123,356.

AGRICULTURE. The accompanying table shows the acreage, production, and value of the principal crops for 1933 and 1932.

MINERAL PRODUCTION. The mining of zinc was continued in spite of adverse conditions that

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame)	1933	202,000	850,000*	\$4,305,000
	1932	202,000	818,000*	4,134,000
Potatoes	1933	44,000	7,216,000	8,948,000
	1932	45,000	7,155,000	8,434,000
Corn	1933	167,000	6,012,000	8,126,000
	1932	165,000	6,980,000	2,911,000
Apples	1933	3,880,000	2,704,000
	1932	3,640,000	2,184,000
Peaches	1933	987,000	1,086,000
	1932	1,776,000	1,243,000
Sweet potatoes	1933	11,000	1,925,000	1,251,000
	1932	12,000	1,560,000	986,000

* Tons.

caused radical curtailment of this industry in many other States. The zinc produced in New Jersey came entirely from the mines of the New Jersey Zinc Company. There were mined 81,460 short tons of recoverable zinc (1932), as against 94,285 for 1931. The value of the product after smelting was estimated, for 1932, as \$7,993,650. The State's secondary and somewhat erratic yearly production of iron ore fell off by about 94 per cent, to 14,966 gross tons for 1932, from 239,722 for 1931.

EDUCATION. High schools in the State were subject to demand during the year for post-graduate instruction for alumni who could not obtain gainful employment and who sought further education. Effort to make particular provision for this group was made in the northern part of the State, with the aid of Federal funds. In Union County a junior college was opened for their instruction.

There were enrolled in the public schools of the State, in the academic year 1932-33, 825,827 pupils. Of these, 44,329 were in kindergartens, 575,985 in elementary schools, 45,951 in junior high schools, 27,871 in senior high schools, 122,472 in four-year high schools, and 9219 in special classes; all the figures were higher than for the year before, except those for the kindergarten and elementary groups, which were slightly lower. The year's expenditures for public-school education totaled \$100,492,876, which was some \$14,000,000 below the total for the year before. The year's total included \$18,252,676 for service of debt, but did not include capital outlays, radically reduced, which totaled, \$3,616,610; nor did it include \$3,596,209 paid by districts to other districts for tuition. The salaries of the 27,860 teachers averaged \$1996.64 for the year, which was almost 10 per cent below the average for the year before.

CHARITIES AND CORRECTIONS. Central functions of the State with regard to dependents, defectives, and delinquents were performed in 1933 by the Department of Institutions and Agencies, organized in 1918. Its duties included coordination of the activities of State public welfare institutions and agencies, establishment of general policies for them, supervision of their management and expenditure, preparation of their budget requests, the furnishing of expert staff services to local institutions and inspection of private, municipal, and county institutions.

The Department included a non-political Board of Control composed of nine non-salaried members, chosen by Governor's appointment to serve terms of nine years expiring in rotation. This board held the power to appoint boards of managers for the several State institutions, subject to the Governor's approval, and to name the commissioner of the department. Examination and classification of persons admitted to State

institutions, medical matters, social research, prison labor, charge of paroles, inspection, relief for the aged, and other functions were distributed respectively among divisions of the department.

The institutions directed by the department, with their populations of Sept. 30, 1933 were: for the insane, Greystone Park State Hospital (4246), Trenton State Hospital (2673), Marlboro (1531); for the feeble-minded, State School at Vineland (females, 1247), State Colony at New Lisbon (males 753), State Colony at Woodbine (males 551), North Jersey Training School at Totowa (females 524); State Village for Epileptics, at Skillman (1303); Sanatorium for Tuberculous Diseases, Glen Gardner (463); State Prison, Trenton (1405), and State Prison farms at Leesburg (230), and Bordentown (211); reformatories, at Rahway (males, 859), Annandale (males 407), and Clinton (females, 189); for juvenile delinquents, State Home for Boys at Jamesburg (529), and State Home for Girls at Trenton (266); Home for Disabled Soldiers, Menlo Park (54); Home for Disabled Soldiers, Sailors, Marines, and Their Wives and Widows, Vineland (224). The State Board of Children's Guardians had charge of 27,506 cases.

LEGISLATION. The regular annual session of the Legislature convened on January 10 and recessed on June 22. It gave the State's ratification to the proposed Federal Constitutional amendment as to child labor. To act for the State on the proposed Federal amendment to repeal prohibition it created a State convention to be composed of 226 delegates, who were to be chosen by popular election on May 16, 64 at large and the rest by districts. The traffic in beer of the strength permitted by Federal statute (3.2 per cent of alcohol) was permitted under a temporary system of control, at first until July 1, later extended on account of failure to enact a definitive system of regulation.

The banking panic of February and March led to the passage of the Altman act, empowering the commissioner of banking and insurance to forbid the payment of a State bank's depositors in whole or in part, when the condition of a bank should require delay, without suspending the management of the bank. A further act authorized the creation of a central clearing house under the commissioner's supervision, which might issue uniform State scrip against banks' assets. Other wide powers were given the commissioner with a view to conserving the resources of building-loan associations and insurance companies.

Falling revenues and high expenditure for the relief of the needy had brought the finances of the State and many of its subdivisions into a condition requiring legislative attention. Recommendations made in January, by a committee appointed by Governor Moore and headed by Prof. H. W. Dodds of Princeton, to the end of bringing the State's budget into balance without imposing further taxation, were in large part adopted. The statutory office of State finance commissioner was created, to be filled by Governor's appointment and to carry power of supervision over budgetary estimates of departments. In order to obtain the means with which to aid municipalities and to meet school needs, including back pay for teachers, it was provided that the State should receive bonds covering its share of contributions to the cost of the Camden-Philadelphia bridge, which bonds the State could sell. The temporary reductions that had previ-

ously been made in State salaries were kept in effect for another year.

An effort to legalize betting at race tracks under the pari-mutuel system failed of passage; it would have required the submission of an amendment to the provision of the State constitution against gaming. There was passed, however, a measure to permit under counties' option the operation of race tracks, the policing of which was to be left to agents of the tracks themselves. A narcotic law was enacted, giving the State department of health authority over the sale and use of narcotic drugs.

Reconvening in August, the Legislature failed again to agree on a permanent system of control for the beer traffic and further extended the temporary control of the beer traffic to November 28. A non-partisan commission was created, to formulate a plan for the State control of expected future commerce in other liquor. Municipalities were authorized to have receivers placed in charge of properties producing income, on which taxes were delinquent. A grant of \$5000 was made to be used in checking the Dutch elm disease in the 8 northern counties. Death was made the penalty for kidnaping for ransom, save that if the jury should recommend mercy the penalty should be 30 years of prison.

Again reconvened, the Legislature passed on December 6, over Governor Moore's veto, an act for the State control of liquor traffic; he had declared it to require amendment on the ground of constitutionality. It created the office of Alcoholic Beverage Commissioner and named the first incumbent; left bars free to operate; but left bars and Sunday sales to be restricted by local bodies. A separate revenue bill put State taxes on sales of alcoholic drinks. Sellers were put under licenses costing at the minimum rate \$200 a year.

POLITICAL AND OTHER EVENTS. During the banking panic the State-chartered banking institutions, late in February, began operating under the Altman act, whereby the State commissioner of banking and insurance put restrictions on withdrawals of a bank's deposits without suspending the management of the bank. However, it became necessary on March 4 to declare a banking "holiday" or general cessation of banking business throughout the State, and the cessation was prolonged until March 12, with regard to State banks, to permit of the organization of clearing houses and other protective measures. Thereafter business was resumed with reasonable promptness in most localities, though State banks in Atlantic and Passaic counties were in many instances unable to reopen without reorganization or outside aid.

At an election on May 16 there were chosen by popular vote, partly by districts and partly at large, 226 delegates, of whom 224 favored repeal of the Federal Eighteenth Amendment; the two others, who favored retaining the Amendment, were elected in constituencies where the opponent had either withdrawn or been disqualified. The popular vote, while light, favored repeal in the approximate proportion of 6½ to 1. The elected delegates met in State convention on June 1 and voted the State's adoption of repeal through the superseding constitutional amendment proposed by Congress. Beer of the alcoholic strength of 3.2 per cent was sold in the State up to the end of Federal prohibition under a system of temporary regulation, the Legislature having failed to enact a definitive system.

State Finances. The post of State Finance Commissioner, created by enactment and carrying authority to curtail or suspend appropriations, was filled on August 11 by the appointment of John Colt, a banker of Princeton. The State finished the fiscal year on June 30 with a reported deficit of some \$2,500,000. In order to provide means for the State's further expenditures to relieve the destitute, a plan to convert to this use \$5,000,000 of authorized but unissued highway bonds was proposed to the voters and was adopted by them on November 7. A similar proposal, to convert authorized but unissued water bonds to the amount of \$7,000,000 to use for special additional aid to distressed local public-school systems, was likewise carried on November 7. The improvement of the State's financial position by the sale of its bonds representing its share of the cost of the Delaware River bridge at Camden was blocked by inability to market the bonds at par, coupled with Pennsylvania's objection to a sale at a lower price. A strong effort on the part of some interests in the State to impose an income tax, with a view to reducing the burden of other taxation, failed to find general favor, and the effort to keep going without taking this step, through severe economy and budgetary control, was the alternative. The burden of poor-relief was heavy, both on the State and on localities, particularly during the early part of the year; some 115,000 of the State's 986,000 families were estimated to have been recipients in March.

Other State Bodies. A State milk-control commission was created and set prices to be paid starting with June 1 at 13 cents a quart for consumers and 5.2 cents for producers of Grade A. Chancellor Campbell appointed 12 advisory masters to hear divorce actions and other matrimonial cases throughout the State, with a view to doing away with abuses that he declared to exist in the procedure.

Lighterage Case. New Jersey's effort to have the Interstate Commerce Commission condemn the railroads' practice of furnishing free lighterage throughout New York harbor, as prejudicial to New Jersey, led to a report, rendered by the Commissioner's examiner, Earl M. Speer, recommending the abolition of the practice.

Local Occurrences. The city of Newark had much financial difficulty because of inability to collect taxes and was at times temporarily unable to meet payrolls. At Paterson a strike of the Associated Silk Workers began at the end of August, involving some 7000 workers in more than 500 shops. It was one of the labor troubles connected with the moves of the National Recovery Administration to put industries under close Federal control. The strikers' organization demanded a settlement of their status on a National basis and sought a 30-hour week at \$30 minimum. The strike spread to silk centres in other States. A disease called the Dutch elm blight, not previously prevalent in the United States, broke out among elm trees in the Oranges early in the summer and spread in Essex and seven other northeastern counties, passing also into New York State. It was combated by removing or pruning affected trees. The project of building a ship canal from Raritan Bay to the Delaware River at Federal cost was the subject of a favorable report by an Army engineer; the cost was estimated at \$173,000,000 for a depth of 25 feet. Morristown National Historical Park,

including the sites of Washington's headquarters and of the camp of his army, was delivered to the Federal government on July 4 by a group of persons who had obtained the land. Severe storms on the coast in August and September ate away much shore front, imperiling the Barnegat Light, which 75 years before had been a mile from the sea.

At the election of November 7 some 14 of the 21 counties voted to permit horse races in their respective territories. Republicans retained control of the State Assembly by a reduced margin of 6 seats. Some 14 municipalities approved referenda for the local permission of public amusements on Sundays and four defeated like proposals.

The Court of Errors and Appeals in a decision of November 23 held invalid the statutory provision of 1933 to prevent deficiency judgments against foreclosed mortgagors who had given mortgages before the act was passed.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, A. Harry Moore; Secretary of State, Thomas L. Mathis; Treasurer, Albert C. Middleton; Comptroller, John McCutcheon; Attorney General, William A. Stevens; Commissioner of Education, Charles H. Elliott.

Judiciary. Chancellor, Luther A. Campbell; Supreme Court, William S. Gummere (Chief Justice; died), Thomas W. Trenchard, Charles W. Parker, Frank T. Lloyd, Clarence E. Case, Joseph L. Bodine, Ralph W. E. Donges, Thomas J. Brogan (elevated to Chief Justice), Harry Heher, and Joseph Perskie.

NEW JERUSALEM, CHURCH OF THE. An organization which is also known as the New Church, and popularly called Swedenborgian because based upon the statement of Christianity set forth in the writings of Emanuel Swedenborg, Swedish scientist, philosopher, theologian, and seer (1688-1772). The two bodies that now compose it in the United States are the General Church of the New Jerusalem and the General Convention of the New Jerusalem.

THE GENERAL CHURCH OF THE NEW JERUSALEM. This body was organized in 1897 under episcopal government with headquarters in Bryn Athyn, Pa., where the church maintains a cathedral church of unusual architectural interest; the Academy of the New Church, with departments from kindergarten to junior college, theological, and normal schools, with an enrollment of 323 in 1933. The General Church, at the beginning of 1933 had a world-wide membership of 2074 with 3 bishops, 35 pastors, 4 ministers, 21 societies, and 5 "circles," 16 of which were in the United States and Canada, 3 in England, and others in France, The Netherlands, Sweden, Natal, New South Wales, and Brazil. A native mission was maintained in South Africa. Among the periodicals published by the General Church are *New Church Life*, its official monthly magazine, *New Church Sermons*, and *The Journal of Education*.

THE GENERAL CONVENTION OF THE NEW JERUSALEM IN THE UNITED STATES OF AMERICA. In 1933, the General Convention consisted of about 6000 communicant members. Educational institutions included a theological school in Cambridge, Mass., a junior college in Urbana, Ohio, and the Waltham school for Girls in Waltham, Mass. Periodicals included the *New-Church Messenger*, weekly, Brooklyn, N. Y.; the *New-Church Review*, quarterly, Boston, Mass.; the *Sweden-*

borg Student, monthly, New York City; the *New Church League Journal*, monthly, Boston, Mass.; *The Helper*, weekly, Philadelphia, Pa. The convention held its 112th annual meeting at Philadelphia, Pa., May 16-23, 1933. Officers elected were: President, the Rev. Fred Sidney Mayer, Baltimore, Md.; vice-president, Ezra Hyde Alden, Philadelphia, Pa.; treasurer, Albert P. Carter, Boston, Mass.; and secretaries, B. A. Whittemore, Boston, and J. Woodruff Saul, Chicago, Ill.

NEW MEXICO. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 423,317, as against 360,350 in 1920. Santa Fe, the capital, had (1930) 11,176 inhabitants.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame) ..	1933	164,000	352,000 ^a	\$3,274,000
	1932	167,000	322,000 ^b	2,415,000
Cotton	1933	92,000	86,000 ^b	4,171,000
	1932	112,000	72,000 ^b	2,016,000
Wheat	1933	245,000	1,485,000	1,013,000
	1932	276,000	2,027,000	618,000
Corn	1933	238,000	3,332,000	2,033,000
	1932	297,000	3,267,000	1,143,000
Grain sorghums	1933	372,000	5,200,000	1,927,000
	1932	392,000	3,763,000	677,000
Dry beans ...	1933	176,000	598,000 ^c	1,704,000
	1932	163,000	408,000 ^c	694,000

^a Tons. ^b Bales. ^c 100-lb. bags.

MINERAL PRODUCTION. The mines' production of gold, silver, copper, lead, and zinc declined in yearly value to \$4,812,793 for 1932, from \$9,494,766 for 1931. Of gold, the production was \$494,669 (1932), as against \$644,160 (1931); of silver, the quantity was 1,190,451 ounces (1932) and 1,041,859 (1931) and the value \$335,707 (1932) and \$302,139 (1931); of copper, 28,899,000 pounds (1932) and 61,503,100 pounds (1931), in value \$1,820,637 (1932) and \$5,596,782 (1931); of lead, 20,951,000 pounds (1932) and 22,537,000 pounds (1931), in value \$628,530 (1932) and \$833,869 (1931); of zinc, 51,108,000 pounds (1932) and 55,732,000 pounds (1931), in value \$1,533,240 (1932) and \$2,117,816 (1931).

The total production of these metals for 1933, was estimated at \$6,185,052. To this total, gold (still reckoned at \$20.67 an ounce, the old statutory price abandoned in the course of the year) contributed \$536,724; silver, \$409,216; lead, \$796,869; copper (27,264,000 pounds), \$1,744,876; and zinc (62,729,000 pounds), \$2,697,347.

The quantity of coal mined fell off to 1,220,000 net tons (1932) from 1,552,822 (1931). The output of petroleum decreased to 12,511,000 barrels (1932), or by 18 per cent from 1931's record total of 15,227,000 barrels.

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$6,705,906 (of which \$1,268,688 was for local education); for interest on debt, \$573,243; for permanent improvements, \$4,425,173; total, \$11,704,322 (of which \$5,871,435 was for highways, \$1,837,957 being for maintenance and \$4,033,478 for construction). Revenues were \$10,795,300. Of these, property and special taxes furnished 18.4 per cent; departmental earnings and compensation to the State for officers' services, 8.8; sale of licenses, 31.1 (in which was included a gasoline sale tax that produced \$2,533,665). Funded debt

outstanding on June 30, 1932, totaled \$10,751,500, of which \$9,599,500 was for highways. Net of sinking-fund assets, the debt was \$10,089,567. On an assessed valuation of \$334,301,418 the State levied in the year ad-valorem taxes of \$2,048,724.

LEGISLATION. A regular session of the Legislature convened on January 10. In order to save State banks involved in the Nation-wide banking collapse of February and March it granted power to the Governor and State bank examiner to declare bank holidays, thus checking runs on the part of depositors. To act for the State, on the proposed repeal of the Federal Eighteenth Amendment, a State convention was created, to be composed of three delegates-at-large, who were to be elected by popular vote on September 19. It was provided that at the same popular election a referendum vote should be taken on whether to repeal the State's own prohibition laws. There was further submitted to the voters a proposal to limit the State's direct tax on property to the rate of 20 mills on the dollar of assessed valuation. In advance of the September vote, the Legislature passed a bill for the regulation of traffic in liquor, subject to the repeal of prohibition in Nation and State. Betting at racetracks was rendered lawful under the pari-mutuel system, with provision for payment to the State of a percentage on bets laid.

POLITICAL AND OTHER EVENTS. On September 19 the voters elected delegates, who met on October 19 in State convention and voted the State's adoption of the repeal of the Federal Eighteenth Amendment, through the superseding amendment proposed by Congress. The popular vote of September 19 also repealed the State's constitutional provision for the prohibition of liquor and adopted a proposal to limit the direct State tax on property to 20 mills on the dollar of valuation. A proposal to increase the number of the State's judicial districts to 12 was defeated. Governor Seligman died on September 25 and was succeeded by Lieutenant Governor A. W. Hockenhull.

The banks of the State were closed by proclamation of a holiday on March 3. All State banks and 25 National banks were authorized to reopen on March 15.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Arthur Seligman (died, September 25; see **NECROLOGY**); succeeded by Lieut.-Gov. A. W. Hockenhull; Secretary of State, Mrs. Marguerite P. Baca; Auditor, Arsenio Velarde; Treasurer, Warren R. Graham (died in January; succeeded by Clinton P. Anderson); Attorney General, E. K. Neumann; Superintendent of Public Instruction, Mrs. Georgia L. Lusk.

Judiciary. Supreme Court: Chief Justice, John C. Watson; Associate Justices, Howard L. Bickley, A. L. Zinn, A. H. Hudspeth, D. K. Sadler.

NEW ORLEANS. See **FOUNDATIONS**.

NEW SCHOOL FOR SOCIAL RESEARCH. See **UNIVERSITIES AND COLLEGES**.

NEW SOUTH WALES. One of the six original states of the Commonwealth of Australia. Area, exclusive of Federal Territory (q.v.), 309,432 square miles; population at the census of June 30, 1933, 2,601,104 (2,100,371 on Apr. 4, 1921). Sydney, the capital, had 1,235,367 inhabitants on June 30, 1933. The other cities, with their 1931 populations, were: Newcastle and suburbs, 103,700; Broken Hill, 22,950; Lithgow, 15,050; Holroyd, 14,990; Cessnock, 13,860. Births in 1932 numbered 22,582; deaths, 21,343; marriages, 17,-

362. The natural increase of population for the year was 23,552 and the excess of emigration over immigration was 1192.

PRODUCTION, ETC. Wheat is the chief crop, others being barley, oats, rye, oranges, citrous fruits, potatoes, tobacco, sugar cane, bananas, grapes, and apples. The 1932-33 wheat crop was estimated at 78,389,000 bushels (54,966,000 in 1931-32). Wool production for the year ended June 30, 1932, was 503,275,416 pounds (as in the grease). Livestock in 1931 included 52,986,000 sheep, 2,993,586 cattle, 424,751 horses and 385,846 swine. Production of all minerals in 1932 was valued at \$6,533,191 (£6,517,703 in 1931), of which coal was valued at \$4,376,453. Factories in operation in 1931-32 numbered 7387, with 126,368 employees; the value added in process of production during the year was \$46,653,481 (£49,523,773 in 1930-31).

The actual budget deficit for the fiscal year ended June 30, 1932, was \$14,227,844, included the revenue and expenditures of the unemployment relief and family endowment funds. Excluding these funds, total revenues were \$38,635,132 and expenditures \$51,730,689. The budget for the fiscal year ended June 30, 1933, estimated revenues at \$45,185,000 and expenditures at \$49,535,000. Preliminary actual returns were: Receipts, \$48,437,000; expenditures, \$52,565,000. The state debt at June 30, 1933, was \$314,068,000 (Australia, \$138,234,000; London, \$162,363,000; New York, \$13,471,000). Government railways open for traffic in 1932-33 extended 6164 miles (private lines, 83 miles). For the year ended June 30, 1933, the state lines reported gross earnings of \$15,406,000 and working expenses of \$12,022,000.

GOVERNMENT. Executive power is vested in a governor appointed by the British government, who delegates his authority to a responsible ministry. Legislative authority is vested in a bicameral legislature, consisting of a legislative council of not less than 21 members (123 in 1932) appointed by the crown for life, and a legislative assembly of 115 members elected by universal suffrage. Governor in 1933, Sir Philip Woolcott Game, appointed January, 1930. Premier and Colonial Treasurer, B. S. B. Stevens, who assumed office May 13, 1932. For the reform of the Legislative Council and other developments in 1933, see AUSTRALIA under *History*.

NEW YORK. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 12,588,066, as against 10,385,227 in 1920. New York City had (1930) 6,930,446 inhabitants; Buffalo, 573,076; Rochester, 328,132; Syracuse, 209,326; Albany, the capital, 127,412.

AGRICULTURE. The accompanying table shows the acreage, production, and value of the principal crops for 1933 and 1932.

MINERAL PRODUCTION. The production of coke, entirely in by-product ovens, from coal brought into the State, attained for 1932 the quantity of 3,130,078 net tons and the value of \$19,246,204, running about one-seventh less than that for 1931, as to both quantity and value. All but a few of the blast furnaces were closed in 1932; the normally considerable production of pig iron was greatly reduced, shipments falling to 594,350 gross tons (1932) from 1,014,320 (1931); in value, to \$8,546,837, from \$15,568,275.

The production of petroleum was increased, mainly by further application of the water-flooding process, to 3,501,000 barrels (1932), the high-

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame) .	1933	4,030,000	4,576,000*	\$43,472,000

* Tons. * 100-lb. bags.

est yearly total, save that of 1930, since 1883. Second only to Michigan in the production of salt, the State produced, in 1932, 1,556,642 short tons, as against 1,788,940 for 1931; in value, \$4,490,792 (1932) and \$5,293,470 (1931). Producers of gypsum sold or used, in 1932, 347,153 short tons of this product, in value \$3,715,126.

CHARITIES AND CORRECTIONS. Central authority over a great part of the State's institutional work was held in 1933 by the Department of Social Welfare, which was essentially the former Department of Charities, as renamed by an act of 1931. Its chief directing body, a Board of Social Welfare, composed of 12 appointees, appointed as its executive a commissioner of social welfare. The department administered a number of special schools for delinquents and others—the State Training School for Girls, Hudson; State Agricultural and Training School (delinquent boys), at Industry; Thomas Indian School, at Iroquois; State Training School for Boys (delinquent), Warwick; also, the Women's Relief Corps Home (soldiers' and sailors' mothers, wives, widows, and daughters), Oxford. It supervised over 1000 charitable, correctional, and other institutions that received public support; supervised children placed in private care, local boards of child welfare, and the distribution of State relief for the aged; and it directed Indian affairs.

Correctional institutions were under the Department of Correction, headed by a Commissioner (Walter N. Thaxter, Jr.), who was chairman of a State Commission of Correction composed of eight members, which visited institutions. A State Probation Commission of seven members and a director of probation had authority over the system for probationary release from custody. State Prisons at Attica, Auburn, Clinton, Great Meadow, Sing Sing, and Walkkill contained on June 30, 1933, 8409 inmates; Reformatories at Elmira, Albion (State Training School), and Westfield (State Farm, for women), 1765; an Institute for Male Defective Delinquents and the Albion State Training School, 1132 (defective delinquents); penitentiaries in the counties of Albany, Erie, Monroe, Onondaga, and Westchester, 1652. The penal population numbered 20,911. A Department of Mental Hygiene controlled 17 State mental hospitals, containing some 55,000 inmates.

LEGISLATION. A regular session of the 156th Legislature convened on January 4 and adjourned on April 10. To act for the State on the proposed repeal of the Eighteenth Amendment to the Federal Constitution it created a State convention of 150 delegates to be elected at large by popular

vote on May 23. The manufacture and sale of beer of the alcoholic strength of 3.2 per cent were legalized and put under State regulation; to regulate the beer trade there was created a State alcoholic beverage control board of 5 members to be appointed by the Governor; provision was made for the creation of county boards to co-operate with the State authority; licenses were made to cost \$2500 a year for brewers, \$500 for wholesalers, \$25 for wine manufacturers, and for beer retailers, from \$25 to \$200 according to the size of the community. Wine of Federally permissible alcoholic content was to be taxed at 10 cents a gallon.

During the nation-wide banking panic in March, in order to avert general banking insolvencies among institutions under State charter, power was given the State banking board to suspend any provision of the banking law and to suspend or regulate banking business. Another act gave the Governor power during the emergency to make, rescind, or amend any banking regulation. Similar powers, with regard to insurance companies, were given the superintendent of insurance, and an advisory board on insurance was created. The issuance of negotiable scrip by State banks was authorized, and a corporation was created to handle issues thereof. A central State savings bank was created, with which the State savings banks were required to become affiliated, and which was to act as an aid to any savings bank that had difficulty in meeting calls from its depositors. The circulation of false reports about the financial responsibility of corporations or of individuals was rendered a misdemeanor. Savings and loan associations were enabled to join the Federal home-loan system.

Measures were passed to accommodate difficulties caused by the prevalence of defaults on mortgages. Provision was made for the creation of State-directed corporations, under the superintendent of insurance, authorized to act on behalf of holders of certificates of participation in guaranteed mortgages, by foreclosure, by taking title, or otherwise. Provisions for reorganization of mortgage-guarantee companies were rendered subject to consent of only two-thirds of holders of such companies' certificates, group by group, as sufficient number to qualify such plans for adoption, provided that the superintendent of insurance and the court of jurisdiction should approve a plan in question. Alternatively, by another measure, direct power was given the superintendent of insurance to take over the affairs of a mortgage guarantee corporation that had defaulted, with a view to reorganizing it. Banking corporations were authorized, acting as trustees, to take over mortgaged properties in default, by way of foreclosure, and operate them. The question of relief to mortgagors from pressure to foreclose was left to a later special session.

Deficiency in the State's revenue obliged Governor Lehman to include in his budget proposals to the Legislature a plan for new and for increased taxes to produce about \$140,000,000 a year; this plan included heavier income taxes, a tax on retail sales, and a higher tax on motor fuel. The budget message also proposed reductions of State employees' salaries in excess of \$2000 and authorization to the public-service commission to levy against investigated companies for the cost of investigating them. The tax on retail sales was enacted, imposing 1 per cent on the amount of retail sales, except those of

motor fuel separately taxed; certain chief articles of food; gas, steam and water delivered by pipe; and articles sold by municipalities. Merchants selling less than \$5000 a year were exempt. The State personal-income tax was increased by the imposition of an emergency rate, applying to incomes of 1933, of 1 per cent of gross income, and the level of exemption was sharply lowered for one year, by \$1500, to the Federal level, with regard to the regular rate. The emergency rate had to be paid on the entire income without the above exemption, by all whose net income exceeded \$1000 for single or \$2500 for married persons. A barrel tax of a dollar was imposed on beer. The State inheritance tax was increased by about 20 per cent, by raising the rates or decedents' estates to the same levels as those of the Federal tax. Direct State taxation of personal property was abolished. The chief measure of budgetary economy was a reduction of State salaries, from Apr. 15, 1933 to June 30, 1934, starting at \$2000; above this figure the reduction began at 6 per cent and by degrees attained 33 $\frac{1}{3}$ per cent on excess over \$15,000. The budget for the ensuing year, as passed, totaled \$212,071,341 and was reported to be the lowest in 10 years. It did not include \$16,250,650 appropriated from bond issues, for public improvements.

Changes in Governmental Organization. Apart from State bodies affected or created by provisions of the liquor and banking laws, notably the advisory insurance board and the beverage-control board, other changes of organization were made. A board of milk control was created, with power to regulate the traffic in milk and to fix prices of milk to producer and consumer; it was composed of three appointee members. Its creation was due to an intention to allay violent discontent among the dairy farmers. The election law was modified, to provide bipartisan boards of election in all counties, doing away with single-party boards in counties, however one-sided the local partisan make-up. The jury system was modified by provision, after a method already in use in Federal procedure, for swearing in one or two "alternate jurors" in selecting petit juries for criminal trials; the alternates were to sit with the regular 12 jurors and hear trial, but were not to participate in a verdict unless regular jurors should cease to attend; but on the occurrence of a vacancy, whether through illness or through disqualification of a regular juror, an alternate was to be promoted to the vacancy, that the trial might not be broken off. The arrangement resulted from dissatisfaction with the frequency of mistrials through disqualification or disability of members of juries in important criminal cases.

Sundry Acts. It was required that automobiles manufactured after Jan. 1, 1935 and sold for operation in the State must be equipped with shatter-proof glass. Provision was made for stricter regulation of the practices of dentists. Recognition, in the State's law, of common-law marriage was terminated, but not retroactively. Teachers in the public-school system of New York City were forbidden to hold more than one position at a time in that system. Provision was made for the fixing of minimum wages for women and children in industry, and a permissive act to encourage minimum wages for men was passed. There was created a body named the Saratoga Springs Authority, with power to borrow \$5,000,-

000 for the development of Saratoga Springs as a place of medical treatment and to carry on the enterprise as a spa. Shop windows or signs were required, at all places of mercantile business, to display the names of persons conducting the business. Civil imprisonment for failure to pay alimony was curtailed by prohibiting further imprisonment for having failed to pay while already in prison.

Relief for the Needy. Work done by the previous Legislative session continued to provide the main needs for State relief to the needy during the early part of the current year. The issuance of \$60,000,000 in State bonds was authorized, subject to popular approval at the polls in November, as the means to raise money for disbursement on account of the State's share in the cost of relief to the needy during the 12 months starting with Nov. 15, 1933. A measure to provide a system of unemployment insurance was introduced but did not pass.

Affairs of New York City. The Hofstadter committee, which had investigated the government of New York City for many months, rendered its report to the Legislature at the outset of the session. It presented the evidence of waste, inefficiency, and corruption that it had gathered and recommended the creation without delay of a special commission to shape a new charter for the city. It further recommended that the existing municipal board of estimate and board of aldermen be replaced with a single municipal legislative chamber to be known as a city council, the members of which should be nominated by petition and elected under a system of proportionate representation. The organization of the constituent boroughs of the city, it held, should be built up by adding to the powers of borough presidents over local matters and creating elective borough councils of six members. The minority made a separate report in consonance with its contrary attitude during the investigation. A measure to provide for the revision of the city charter was introduced with Governor Lehman's support; it was killed in the Assembly, by Democratic votes aided by two bolting Republicans.

Authorization was given for reopening the city's budget for the current year so that the expenditures might be reduced. A Triborough Bridge Authority was created, to finish the Triborough Bridge, for which the city was not in a position to make further immediate expenditure, and to operate the bridge on a toll basis after completion. Authority was given the city to lease the Bronx Terminal Market, constructed under the Hyman administration, which had been a steady drain on the city's finances. A constitutional amendment to exempt from the city's debt-limit its obligations issued for self-liquidating dock and rapid-transit improvements was resolved, subject to second passage in 1934 and subsequent approval by popular vote. The city was permitted to sell small-denomination ("baby") bonds, which might be bought by taxpayers, in lieu of their obtaining discounts for taxes paid in advance. Several bodies having to do with the inspection of buildings were merged in a new bureau of buildings. Teachers in the city were empowered to borrow up to 25 per cent of sums paid to retirement fund.

First Special Session. New York City being obliged to raise new revenue in order to obtain further credit from bankers, its board of estimate

asked that Governor Lehman call a special session of the Legislature to authorize municipal taxation. He summoned the Legislature to meet on July 26. It gave a blanket authorization to New York City to impose taxes, affecting only persons and transactions within its limits, such as the State might impose; the city was thus authorized to raise its revenue temporarily so that it might obtain \$41,000,000 to cover the needs of poor-relief until the following February.

The July session also passed important State-wide laws. It authorized the suspension of foreclosure proceedings where default was on principal but not on interest or taxes, until July 1, 1934. The right to obtain deficiency judgment against a foreclosed mortgagor was limited in accordance with the theory of actual value of the property. The crime of kidnaping was made punishable by death, unless the jury objected, where the victim had not been returned safe. The State board of liquor control was authorized to regulate the sale of liquors, until April 1, should the repeal of Federal prohibition meanwhile render them lawful. State purchases were required to be made from subscribers to the Federal codes under the National Recovery Act, and the State's anti-trust laws were made to permit conformity with that act. Municipalities were permitted to borrow from Federal agencies to finance projects tending to relieve unemployment. Possession or sale of sub-machine-guns was made a felony. A revolving fund of \$6,000,000 was created to initiate eliminations of grade crossings, to the extent to which the Federal government was to reimburse the cost.

Second Special Session. The Legislature was convened again, on October 18. In a one-day session it voted financial provisions required for New York City so that it might obtain credit to save it anew from default; these included revolving funds to replace tax-anticipating notes, limitation of taxes on realty to the level of 1933, save for meeting extra debt charges, and a provision enabling the city to borrow \$70,000,000 with which to meet expenditure for relief.

POLITICAL AND OTHER EVENTS. The State was one of the last in which the banks remained open as the banking panic culminated in March. Governor Lehman closed them on the morning of March 4 by proclaiming a 2-day banking holiday. The Federal closure of banks ensued, before the State holiday had ended. One of the New York City banking institutions, the Harriman National Bank and Trust Company, having deposits of nearly \$25,000,000, was found badly impaired, upon Federal investigation, and was placed under a Federal conservator. Its former president, Joseph W. Harriman, was criminally prosecuted for misuse of its funds. A Federal demand was made upon the New York Clearing House Association to make good the bank's obligations in accordance with a pledge alleged to have been given by the association some months before the general closing of banks, at a time when the Harriman institution's troubles first were discovered. The Association's members denied that its officers had had authority to pledge the funds of their institutions. The Federal government accordingly brought suit in a State court in December.

Marcus and Singer, officers of the closed Bank of United States, which had failed early in the depression, finally lost their appeals from con-

viction and were imprisoned in Sing Sing in March. Charles E. Mitchell, former chairman of the National City Bank, whose conduct had been investigated by a committee of the Senate, was tried in March on a Federal charge of evading income taxes and was acquitted. Great distress was caused during the spring by the collapse of large mortgage-guarantee companies, with consequent loss of income to investors, and by the suspension of the life-insurance companies' practice of lending on policies. The State savings banks availed themselves of the privilege of suspending payment for 60 days but later resumed without the occurrence of insolvencies.

Relief for the Indigent. The State contributed throughout the year to the relief of the needy part of the population, which group was estimated in March at 1,200,000 persons; it also dispensed the State's share of Federal funds for the same purpose. A State commission was formed in February to approve local projects for public works as suitable to apply to the Reconstruction Finance Corporation for loans to promote the prosecution of such works as means for increasing employment. The committee submitted in June a programme of projects calling for the expenditure of \$350,000,000.

Vote on Prohibition. At a special election on May 23 there were elected, by a vote of about 8 to 1, 150 candidates pledged to repeal, to constitute the State convention to act for the State on the repeal of the Federal Eighteenth Amendment. The official vote was: for the repeal candidates, 1,946,532; for candidates against repeal, 247,450. For New York City alone, the vote was: repeal, 1,048,128; anti-repeal, 25,608. For the rest of the State: repeal, 898,404; anti-repeal, 221,842. Seven of the up-State counties gave majorities against repeal. The State convention met on June 27 and duly voted ratification of the repeal of the Eighteenth Amendment.

The "Milk War." In February a considerable number of the dairy farmers of the State organized in opposition to the Dairymen's League Cooperative Association, with which they had become dissatisfied as their representative, and agitated for higher prices to the producers of milk and diminished spread between these prices and those paid by consumers. Delivery of milk into Rochester by the Dairymen's League was impeded late in March and was effected only by the aid of State constabulary, after consignments had been seized on the road and spilled. The Legislature having hastened to create a board of milk control empowered to fix prices for milk, the farmers' agitation died down for the time. The board set minimum prices in May about a cent a quart higher, for both consumer and farmer, than those that had prevailed. Many dairy farmers were disappointed with the concession thus received. Attacks on milk in transit and on farmers who persisted in selling milk were renewed on August 1 and spread through a dozen or more counties; clashes of State constabulary and sheriffs' forces with considerable bands of milk-destroyers occurred. Governor Lehman promoted a plan for a State investigation of milk prices, which the Legislature carried through, also empowering sheriffs to appoint deputies to any number required. Violence ended about August 12.

The Lighterage Case. Hearings on the complaint of the State of New Jersey against the long-established practice of railroads to supply

free lighterage from terminals to points throughout the waterfront of the port of New York had been held in 1932, before Earl M. Steer, examiner for the Interstate Commerce Commission. He rendered his findings to the commission on January 28, recommending that free lighterage be abolished and that a system of charges based on a general minimum of 60 cents a ton by carload lots be imposed for lighterage service. New York interests fought the findings before the commission, as prejudicial to the interests of New York City.

Public Utilities. The State public service commission ordered on August 20 that charges for electric current purveyed to users in New York City be reduced by 6 per cent, from September 1, and those in Westchester County by 3 per cent. The order was declared to be based on the theory that accumulated earnings of previous years, carried to companies' surplus, enabled companies to stand a diminution of income by this intended temporary reduction, in view of consumers' reduced paying power. The companies contested this doctrine as not consonant with the principle of fair return, as having supposedly applied to their earnings of former years; they obtained a court order against the enforcement of the reduction, and the commission granted a rehearing. The companies contended that they had been subjected to the requirements of Federal codes under the National recovery act, thereby being obligated to raise their operating costs. A proposal of Governor Lehman to levy on public utilities for the cost of the public service commission's investigating them failed of passage in the Legislature. Regular connection for interchange of current between the electric system of the Consolidated Gas Company in New York City and the Niagara-Hudson Power Company up State was established on May 3 by a high-voltage link at the city limits.

Local Occurrences. Provision was made for the building, with a loan of \$2,800,000 from the Reconstruction Finance Corporation, of bridges over the Niagara River at Grand Island by a corporation intending to repay the cost of construction from tolls. From the same source a loan of \$3,000,000 was assured to build a highway toll-bridge across the Hudson River between Hudson and Claverack. A building of the State College of Ceramics was completed and dedicated at Alfred on June 12. The 150th anniversary of Washington's proclamation of peace at Newburgh was celebrated there on April 19 and by issue of a commemorative postage stamp nationally.

New York City. John P. O'Brien, who had been elected mayor on the Tammany ticket at the November election in 1932, took office on January 1 for an unexpired term of one year. Joseph V. McKee, who had been acting mayor subsequent to the resignation of Mayor Walker in 1932, resumed his office of President of the Board of Aldermen, but resigned on May 3. The O'Brien administration reopened the city budget for 1933 under authorization from the Legislature, in order to cure financial trouble arising from a deficit.

A reduced budget for the year current was adopted on February 8. It carried a total of \$518,427,972 and was thus lower by about \$39,000,000 than the budget as it had been adopted in November. The reduction was effected chiefly by reductions in city salaries above \$2000, which the Legislature had authorized in the previous De-

ember. City employees at or near the age of voluntary retirement were pressed to retire on pension. It soon developed, however, that the economies made would not suffice to keep the city solvent till the end of the year.

The city's tax receipts from the first half-yearly payment left a heavy deficiency on May 31, which was partly due to a reduced levy for the year. An approximate \$120,000,000 that the city owed to a banking group on the security of its revenue bills maturing June 10 was extended to September 10 with notice that no extension would be granted thereafter unless the city should make provisions for assuring service of the debt.

The Emergency Unemployment Relief Committee, a private organization that had dispensed about \$42,000,000 in three years for the relief of the needy in the city, announced on June 5 that it would cease to operate at the end of September. The cost of municipal relief to the needy was thus prospectively increased, as about 30,000 families depended on the committee for their support. The city committed itself on June 28 to furnish \$3,000,000 a month for relief, in consideration of which it was to receive a State (including Federal) contribution of \$4,000,000 a month. Facing these requirements, the city also made considerable expenditures for completing extensive sections of its municipal subway system, on the theory that, though the part already completed and operating was earning much less than the interest on its cost, earnings would be expanded sufficiently by lengthening the portion under operation to justify the comparatively slight cost of completion. But the effect was further to strain municipal credit.

Obligated to improve its credit the city government sought in June to devise a system of special taxes. A levy on automobiles registered in the city and a municipal sales tax were among those proposed; but popular agitation against these proposals caused their abandonment late in June. The city was left without revenue to meet \$8,746,000 of interest due on September 10, but diverted to this use money obtained by borrowing from its own sinking fund and from the State school fund. Samuel Untermyer was called in by the city administration to devise taxes that would satisfy the city's banking creditors.

On his advice the municipal legislature passed bills to tax at 5 per cent the gross incomes of all dealers in stock-market securities; at 1½ per cent, gross incomes of public utility companies; at ¼ per cent the investments of savings banks and life insurance companies; at 4 cents a share, transfers of ownership of shares of stock; it also raised the water rates by one-half and imposed 5 cents as a tax on every taxicab ride. The measures were passed by authority granted by the State Legislature and applied only to persons or companies in New York City. The New York Stock Exchange promptly hired quarters in Newark, New Jersey, and prepared to operate there as a separate exchange. This threat compelled Mayor O'Brien to veto the taxes on security dealers and on stock transfers. The higher water rates and the taxes on utilities and taxicabs were ratified.

Municipal income was thus left lower than the figure necessary to the requirements of the group of banking creditors; default was then averted by the city's agreeing to a plan whereby receipts from overdue taxes totaling \$181,900,000 were to be segregated and applied to redeeming the debt to the bankers; receipts from new tax payments

segregated to redeem further temporary accommodation; a fund of \$70,000,000 for relief of the needy created by loans that savings banks and life-insurance companies agreed to provide in part, on condition that the measure to tax their investments be vetoed, as it then was.

Mayor O'Brien, though the butt of blame for the city's financial difficulties, for the partial failure of the retrenchment policy, and for repugnant tax proposals, was renominated on the regular Democratic (Tammany) ticket at the primaries on September 19. A Fusion ticket, supported and largely influenced by Samuel Seabury, who had conducted the Hofstadter committee's investigation of the city's affairs in 1932, was nominated; it had as its mayoral candidate Fiorello H. LaGuardia. Joseph V. McKee, former acting mayor, who had not been a candidate at the primaries, announced his candidacy for mayor on September 29; he had the support of Postmaster General Farley and was credited with having been induced by the Federal Administration to enter the campaign with a view to overthrowing the Tammany organization. He formed a full ticket, which assumed the name of the Recovery party and was nominated by petition.

The New York Central's west-side viaduct for freight transportation was put in operation on August 1, in New York City. Exchanges in that city dealing in rubber, metal, silk, and hides were consolidated on May 1 as the Commodity Exchange. Judge Manton of the U. S. Circuit Court was restrained by Justice Stone of the Federal Supreme Court on September 23 from further action as to the receivership of the Interborough Rapid Transit Company, pending the latter court's passing on petitions against him, and gave up jurisdiction over the receivership, which, it was contended, a District judge should exert.

Elections. On November 7 the popular vote ratified provision for a State bond issue of \$60,000,000 for money with which to support the destitute and defeated a proposed amendment of the State constitution to extend the preference in civil service to veterans who had not been citizens of the State, but had been residents, at time of enlistment. Republicans gained seven seats in the State Assembly, losing three up-State but winning 10 in New York City.

In New York City Fiorello H. LaGuardia, Fusion candidate for mayor, was elected, with ample support in the municipal board of estimate. LaGuardia received about two-fifths of the vote; McKee, on the Recovery ticket, led O'Brien, the regular Democratic (Tammany) candidate, by a small margin; the Socialist vote was much reduced in comparison with earlier years, being about 65,000. A proposal to permit Mayor O'Brien to name a commission to revise the city charter was defeated.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Herbert H. Lehman; Lieutenant-Governor, M. William Bray; Secretary of State, Edward J. Flynn; Comptroller, Morris S. Tremaine; Attorney General, John J. Bennett, Jr.; Commissioner of Education, Frank P. Graves.

Judiciary. Court of Appeals: Chief Judge, Cuthbert W. Pound; Associated Judges, Frederick L. Crane, Irving Lehman, Henry T. Kellogg, John F. O'Brien, Irving G. Hubbs, Leonard C. Crouch.

NEW YORK, COLLEGE OF THE CITY OF. A co-educational institution in New York City, founded

in 1848 by the Board of Higher Education and supported by municipal taxation. The enrollment for the autumn of 1933 was 24,904. The 1933 summer session had an attendance of 5057. The faculty numbered approximately 950. The budget for the fiscal year was \$3,132,987. President, Frederick B. Robinson, LL.D.

NEW YORK CITY. See CRIME; NEW YORK under *Political and Other Events*; MUSIC; BRIDGES; TUNNELS; PORTS AND HARBORS; RAPID TRANSIT; FOUNDATIONS.

NEW YORK STATE ALCOHOLIC BEVERAGE CONTROL BOARD. See NEW YORK; PROHIBITION.

NEW YORK UNIVERSITY. A nonsectarian and privately governed institution for the higher education of men and women in New York City, chartered in 1831. It comprises the following divisions: At University Heights, a college of arts and pure science, college of engineering, Guggenheim school of aeronautics; at Washington Square, the graduate school, school of law, school of commerce, accounts, and finance, Washington Square college, school of education, school of retailing, university extension division, and the institute of education; at the Wall Street division, the graduate school of business administration and courses in the school of commerce, accounts, and finance. The medical college is on East Twenty-sixth Street, the dental college on East Twenty-third Street, and the college of fine arts on East Forty-third Street.

The enrollment for the year 1932-33 in all divisions of the university, after deducting all duplications, was 34,256, including college of arts and pure science, 1276; school of law, 1250; University and Bellevue Hospital Medical College, 530; College of Engineering, 964; Evening Engineering Division, 1012; Graduate School, 876; school of education, including both graduate and undergraduate divisions, 7943; school of commerce, accounts, and finance, including the Wall Street division, 7943; Washington Square college, 6153; graduate school of business administration, 915; school of retailing, 298; college of dentistry, 501; college of fine arts, 1053; the combined summer divisions (1933), 5941; extension and related courses, 2895. The faculty of the university totaled 1812 in number.

The productive funds for the year 1932-33 amounted to \$8,983,437, and the income was \$292,211. The total income of \$7,348,971 was derived as follows: Student fees, \$6,470,792; dormitory rents, \$17,941; gifts, \$263,559; other income, \$304,466; and income from endowments, \$292,211. The libraries contained 414,516 volumes. Chancellor, Harry Woodburn Chase, Ph.D., LL.D., LL.D., who in turn succeeded Elmer Ellsworth Brown, chancellor of the institution since 1911.

NEW ZEALAND. A British dominion in the South Pacific. Capital, Wellington.

AREA AND POPULATION. New Zealand consists of two main islands, North and South Islands, and a number of outlying and annexed islands. The total area is 104,015 square miles, including some 600 square miles of outlying islands. The estimated population, including Maoris, on Jan. 1, 1933, was 1,534,000 (1,522,000 on Jan. 1, 1932). On June 30, 1932, North Island had 984,277 inhabitants, including 66,842 Maoris; South Island, 540,644, including 3051 Maoris. In 1932, there were 24,884 living births, 11,683 deaths, and 9905 marriages. The birth rate per 1000 inhabitants was 17.1 and the death rate 8.0. The estimated

population of the chief cities Apr. 1, 1932, was: Auckland, 218,400; Wellington, 144,800; Christchurch, 128,900; Dunedin, 87,400.

EDUCATION. Primary education is compulsory between the ages of 7 and 14. At the beginning of 1932 there were 2524 public primary schools, with 223,105 pupils; 305 private primary schools, with 26,726 pupils; 152 public secondary schools of various types, with 28,341 students; 49 private secondary schools, with 4245 students; and 11 Maori secondary schools, with 503 pupils. The four constituent colleges of the University of New Zealand at Dunedin, Christchurch, Auckland, and Wellington had 4869 students in 1931.

PRODUCTION. Animal husbandry is the chief industry, the animals and animal products being produced mainly for the British market. Live-stock in the dominion on Jan. 31, 1932, included 280,994 horses, 4,072,383 cattle (1,702,070 dairy cows), 28,691,788 sheep and lambs, and 513,416 swine. The number of sheep on Apr. 30, 1933, was 27,777,322. The quantity and value of the chief exports in the year ended June 30, 1933, were: Butter, 2,430,234 cwt., £10,897,894; wool, 801,633 bales (of 350 pounds), £6,703,359; frozen lamb, 2,733,614 cwt., £6,222,561; cheese, 1,919,155 cwt., £4,808,148; frozen mutton, 1,081,611 cwt., £1,266,378; frozen beef, 674,386 cwt., £630,781.

The chief crops in the 1932-33 season were: Wheat, 10,000,000 bushels (6,583,000 in 1931-32); barley, 490,000 bushels (537,000); oats, 5,302,000 bushels (2,818,000). The 1931-32 potato crop was 4,358,000 bushels; corn, 259,000 bushels; hay, 1,071,000 long tons; grass and clover seed, 14,654,000 pounds. The coal output in 1931 was 2,158,000 long tons; gold and silver bullion, 564,871 troy ounces. Gold production for the year ended June 30, 1933, was 193,977 ounces. The value of manufactured products for the year ended Mar. 31, 1932, was £67,813,000 (\$264,619,000), of which £25,470,000 (\$99,389,000) represented the value added in process of manufacture. There were 4969 factories, employing 69,697 persons, with wages and salaries of £12,643,000 (\$49,336,000). The quantity or value of the chief manufactured articles produced in 1931-32 was: Flour, 129,602 long tons; ale, 10,775,000 gallons; leather, 4,595,000 pounds; boots and shoes, 1,349,000 pairs; sawn lumber, 154,193,000 feet; printing, publishing and bookbinding, £3,772,000; clothing and hosiery, £2,501,000; motor vehicles, £1,548,000; furniture, £727,000.

COMMERCE. For the 12 months ended June 30, 1933, New Zealand reported a marked improvement in exports, a further decline in imports, and a relatively large favorable merchandise balance of trade. Exports were valued (f.o.b. in terms of New Zealand currency) at £38,446,000, an increase of nearly £3,000,000 over the preceding year. Imports were valued at £22,336,000, or £727,000 less than for 1931-32; import values were current domestic values in the countries of export, plus 10 per cent. In the calendar year 1932 butter accounted for 30.4 per cent of the value of all exports; frozen meats, 24.1 per cent; wool, 16.4 per cent; cheese, 14.2 per cent. The percentage distribution of the chief import items in 1932 was: Drapery and other textiles, 11.5 per cent; machinery, 7.4; motor vehicles, 5.4; drugs and chemicals, 5.1; apparel and hats, 4.7. In 1932, the United Kingdom supplied 51.2 per cent of New Zealand's imports (51.1 in 1931) and took 87.8 per cent of its exports (88 in 1931). The

United States supplied 13.3 per cent of the 1932 imports (14.9 in 1931); Australia, 12.7 (10.8); Canada, 4.3 (4.9). Australia took 3.9 per cent of the 1932 exports (3.3 in 1931); the United States, 2.5 (2.6); and France, 1.4 (1.2).

For the calendar year 1933 exports were £41,302,000 and imports £21,451,000 (£36,906,000 and £23,045,000, respectively, in 1932). Exports to the United States in 1933 were \$4,793,215 (\$2,157,953 in 1932); imports from the United States, \$8,228,708 (\$9,253,522 in 1932).

FINANCE. For the fiscal year ended Mar. 31, 1933, treasury receipts were £22,568,521 and expenditures £22,528,379, leaving a surplus of £40,142. However, to achieve a balanced budget the Minister of Finance transferred £2,500,000 from the reserves to the consolidated fund and the government was relieved of the £825,000 due the British government during the year on account of the war debt. With these two items, amounting to £3,325,000, taken into consideration, there would have been an actual deficit of £3,285,000. Budget estimates for 1933-34 placed revenues at £22,306,000 and expenditures at £24,400,000, leaving an anticipated deficit of £2,094,000. The public debt on Mar. 31, 1933, totaled £282,622,958, compared with £281,942,800 on Mar. 31, 1932.

COMMUNICATIONS. The government railways in 1932 had 3315 miles of line (private lines, 117 miles). The government lines in the year ended Mar. 31, 1932, carried 19,155,600 passengers and 5,824,811 tons of freight. In the same year there was a net operating revenue of £487,312 and gross operating receipts of £5,788,965. Highways extended about 48,433 miles (30,630 miles of macadam). The net registered tonnage of vessels entering the ports in overseas trade in 1932 was 2,350,000 (2,156,000 in 1931); of vessels cleared, 2,368,000 (2,166,000 in 1931).

GOVERNMENT. Executive power is vested in the Governor-General, appointed by the Crown on recommendation of the Dominion government. Legislative power rests in the Governor-General and the parliament, consisting of the Legislative Council of 22 members appointed by the Governor-General for seven years and the House of Representatives of 80 members elected for three years by direct suffrage. Governor-General in 1933, Lord Bledisloe (Charles Bathurst), appointed in 1929. The coalition ministry of the Reform and United parties, which assumed office Sept. 22, 1931, was composed as follows during 1933: Prime Minister, Attorney-General, Minister of Railways and External Affairs, G. W. Forbes (leader of the United party); Finance and Customs, J. G. Coats (leader of the Reform party); Lands and State Forests, E. A. Ransom; Native Affairs, Sir Apirana Ngata; Health and Internal Affairs, J. A. Young; Education, Industries, and Commerce, R. Masters; Defense and Justice, Marine, J. G. Cobbe; Telegraphs, Labor, and Unemployment, A. Hamilton; Agriculture and Mines, C. E. Macmillan.

HISTORY

As in previous years, New Zealand's energies during 1933 were mainly devoted to the battle with the economic depression and the political issues to the fore were for the most part of economic origin. The country made distinct progress on the economic front. Prices for wool, butter, and other primary produce on the Dominion increased, greatly improving agricultural conditions. Business and commercial activity was stimulated by the government's building subsidy

and various public works projects and unemployment relief schemes. Moreover the budget for 1932-33 was balanced (see *Finance*) and the trade balance became increasingly favorable (see *Commerce*). Two large loan conversion operations were put through, materially reducing the debt service charges. In March the £115,000,000 domestic debt was converted to a 20 per cent lower interest rate under the government's threat to tax unconverted securities at a higher rate. This operation saved the Treasury about £570,000 annually. In October a £5,000,000 loan, bearing 5 per cent interest, due to mature in London in 1934, was converted to a 3½ per cent rate.

However, the economic picture was not altogether promising. The government was unable to undertake other conversion operations which it had hoped to complete in London during the year. A deficit was anticipated in budget estimates for 1934-35, presented to Parliament Nov. 9, 1933. The number of unemployed on June 1, 1933, was 70,502, an increase of 2117 since April 15. Of the total, 62,672 were assisted by the unemployment board and 5830 were ineligible for relief. Those eligible for relief were given subsidized employment on farms, on land improvement and development schemes, on highways, afforestation, public buildings, gold prospecting, and other subsidized projects.

THE EXCHANGE PROBLEM. The most controversial measure adopted by the government during the year was the arbitrary raising of the London rate of exchange on Jan. 19, 1933, so that £125 in New Zealand currency sold in London for £100 sterling. This measure was inflationary in purpose and effect. Throughout 1932, the government had maintained the New Zealand pound at a discount of 10 per cent, the exchange rate in London being £110 New Zealand for £100 sterling. The raising of the discount rate gave a stimulus to exports and benefited the New Zealand farmers and primary producers by raising prices. At the same time it discouraged imports and reduced the real value of wages. Accordingly the government's action won support among the rural population and was bitterly attacked by the Labor party as well as by the commercial and financial interests of the cities.

The government promised to indemnify the banks against any losses incurred on the sale of exchange purchased at the new rate. The budget accounts for 1932-33 revealed that between Jan. 20 and Mar. 31, 1933, these losses amounted to £1,910,000. The government contended that the improvement in agricultural conditions noted during the year justified these heavy expenditures. When the issue was made a question of confidence in the House of Representatives in October, the government was sustained, 43 to 30. At the same time a Labor motion of no-confidence, impugning the general policy of the administration, was defeated (46 to 27). Accordingly the coalition government retained a safe majority to the end of 1933.

OTHER LEGISLATION. Two other government proposals debated during the year were bills for the establishment of a central bank and for revision of the tariff. The proposal to make the central bank independent of political control was bitterly fought by the Labor party, which wanted to make the central bank a government institution, and by a few independents, who wished direct government control of the currency. Support of the bill by the coalition groups was assured.

AUSTRALIAN TARIFF TREATY. A new trade agreement was signed by New Zealand and Australia, Sept. 5, 1933 and submitted to the parliaments of both countries for ratification October 25. It revised the existing agreement by altering the list of commodities subject to preferential rates and providing for the reciprocal granting of the benefits of the British preferential tariff on all other commodities.

DEFENSE PREPARATIONS. Despite the government's financial difficulties, Prime Minister Forbes toward the end of October announced plans for extensive improvements in the national defense system. The proposals called for additional airdromes, the purchase of additional military airplanes, the strengthening of the coastal defenses and of the fleet. These increased expenditures were inspired chiefly by the fear of Japanese aggression.

NGAG-WANG LOBSANG THUBDEN GYA-TSHO, THE DALAI LAMA OF TIBET. A Tibetan sovereign and head of the Lama hierarchy of 500,000 priests, died in Lhasa, Dec. 17, 1933. Born at Per-Ho-De, Tak-Po, in 1876, he was chosen in infancy as the thirteenth vice-regent of Buddha, the incarnation of the Bodhisattva Avalokitesvara, the ancestor of the Tibetans, and was carefully reared and educated for his high office in a lamaserie. On acceding to power in 1893 he became spiritual leader of 10,000,000 Lamaists, found not only in Tibet but in Mongolia, Siberia, Manchuria, China, and India. His temporal power was nominally supreme in his own land during his latter years, but from 1904 to 1912 he was a wanderer in Mongolia and India, having been obliged to flee when the "Forbidden City" of Lhasa was entered by an expedition, sent out by the Indian government under Sir Francis Younghusband, which opened the region to British trade. The sovereignty of the Chinese government, however, was recognized by the Anglo-Russian convention of 1907, in accordance with which neither power was to enter into negotiations with Tibet except through the Chinese government. The Chinese retained their hold on Tibet until the revolution of 1912 when, after driving out all the Chinese troops and being upheld by Great Britain through the Anglo-Chinese treaty of 1906, the Tibetans claimed their independence.

After the Dalai Lama's return he directed the uprisings of 1917 and 1920 against the Chinese government, which had refused to accept the terms of the Simla agreement of 1914, providing for an autonomous Outer Tibet and an Inner Tibet ruled from Peiping. At the time of his death Outer Tibet was under the domination of Great Britain. The Dalai Lama had on several occasions granted permission to the Royal Geographical Society to dispatch mountaineering expedition to Mt. Everest.

NICARAGUA, nîk'â-rû'gwâ. The largest of the Central American Republics. Capital, Managua.

AREA AND POPULATION. With an area of about 49,500 square miles, Nicaragua had a population estimated at 750,000 in 1929 (638,119 at 1920 census). Western Nicaragua supports three-fourths of the population, which is chiefly of Spanish and Indian blood. The east coast has many West Indian negroes. Managua, the capital, was almost completely destroyed by an earthquake in 1931 and has been only partially rebuilt. Its estimated population in September, 1932, was 45,000. Other leading towns, with their estimated

populations, are: León, 50,000; Granada, 25,000; Masaya, 18,000; Matagalpa, 7000.

EDUCATION. About 62 per cent of the population are illiterate. The school enrollment of children between 6 and 14 years numbered 22,573 in 1932. Secondary schools are all in private hands. There are three universities at Managua, León, and Granada.

PRODUCTION. Agriculture is the main occupation, supplementary industries being lumbering, cattle raising, and mining. The chief crops are bananas, coffee, sugar, and coconuts. Cotton, corn, rice, and beans are raised for domestic consumption. The 1932-33 coffee crop was estimated at 30,000,000 pounds (exports, 1932, were 17,918,000 pounds). The 1932 banana exports totaled 3,378,000 bunches; corn, 1,998,000 bushels; refined sugar, 3,521,000 pounds; cabinet woods, 1,856,000 board feet. Gold and silver are mined in small quantities.

COMMERCE. Nicaraguan general imports in 1932 were valued at \$3,480,000 (\$6,015,000 in 1931) and general exports at \$4,542,000 (\$6,575,000 in 1931). Conversions to dollars were made at par of one cordoba to the dollar. The chief import items in 1932 were: Cotton manufactures, \$896,000; chemicals, drugs, dyes, and medicines, \$292,000; machinery, \$200,000; wheat flour, \$184,000. The main export items, by value, were: Bananas, \$2,238,000; coffee, \$1,479,000; gold, \$382,000. The United States in 1932 purchased 65.3 per cent of all Nicaragua's exports (53.3 in 1931); Germany, 9.4 per cent (12.8); France, 8.5 per cent (12.4); and United Kingdom, 6.5 per cent (7.0). In the same year the United States supplied 62.7 per cent of the total imports (61.2 in 1931); United Kingdom, 10.3 (9.0); Germany, 8.6 (9.4); and France, 3.4 (2.9). Imports from the United States (1933) were valued at \$2,095,702 (\$1,992,901 in 1932); exports to the United States were \$2,224,718 (\$1,964,174 in 1932).

FINANCE. In the fiscal year 1931-32, government receipts totaled 4,665,592 cordobas and expenditures 4,750,603 cordobas, compared with receipts of 5,479,963 cordobas and expenditures of 4,913,245 cordobas in 1930-31. The public debt on Dec. 31, 1932, totaled 3,533,380 cordobas (external, 2,375,630; internal, 1,157,750). Including claims subject to adjudication, total government obligations were estimated at 14,370,631 cordobas. The government paid \$10,000 monthly during 1932 on the external debt, which covered interest but little of the sinking fund. The exchange value of the cordoba remained at par of \$1 United States currency in 1932.

COMMUNICATIONS. Nicaragua in 1933 had approximately 166 miles of railway line (147 miles state owned), 897 miles of highway, 2824 miles of telegraph wire and 3485 miles of telephone wire. Steamers entered and cleared at Nicaraguan ports in 1932 numbered 415 and 414, respectively; net tonnage, 779,905 and 779,448, respectively. Corinto, Puerto Cabezas, San Juan del Sur, and El Bluff were the chief ports. A regular weekly airmail and passenger service was maintained between Managua, Bluefields, and Puerto Cabezas.

GOVERNMENT. The Constitution of 1913 vested executive power in a president, acting through a responsible ministry, and legislative power in a congress of two chambers—the Senate of 24 members, elected for six years, and the Chamber of Deputies of 43 members, elected for four years by universal suffrage. The President is elected for four years. President in 1933, Juan B. Sacasa,

elected Nov. 4, 1932, who assumed office Jan. 1, 1933.

HISTORY

UNITED STATES ENDS INTERVENTION. The evacuation of United States marines from Nicaragua, which began Nov. 29, 1932, was completed on Jan. 3, 1933, when the last contingent of 80 officers and 815 men embarked at Corinto. Save for a short period in 1925-26, United States troops had been in continuous occupation of the country for 20 years. The evacuation fulfilled the promise of Secretary of State Stimson, made in February, 1931. Thereafter American participation in Nicaraguan affairs was limited to the collection of customs.

SACASA ASSUMES PRESIDENCY. The American withdrawal coincided with the inauguration as President on Jan. 1, 1933, of Dr. Juan B. Sacasa, Liberal candidate elected on Nov. 6, 1932, in nation-wide balloting supervised by the United States. President Sacasa immediately opened negotiations with Gen. Augusto Sandino, the insurgent leader who had defied the United States marines and the previous Conservative governments for nearly six years. On February 2 he signed a peace agreement with General Sandino in Managua. In return for an amnesty to his followers, Sandino agreed to disarm his men and cease hostilities. The President promised to allot public lands to those insurgents who wished to settle down as farmers and to furnish others with employment by a programme of public works in the northern districts. In a public statement issued February 7 Sandino declared that his struggle against the marines was prompted solely by the patriotic desire to end foreign intervention and not by a spirit of ill-will toward the United States.

On February 22, it was reported that Sandino's men had surrendered all their arms. With 1000 of his followers, the general undertook the establishment of a colony on the Coco River near the Caribbean. The work was carried on with food-stuffs and equipment supplied by the government. Toward the end of the year it was learned that some of Sandino's men were still armed and that several of them had been killed in an accidental clash with a National Guard patrol. Manifestoes designed to end the hostility between the National Guard and Sandinistas were issued in Managua December 5 by Gen. A. Somoza, director of the National Guard, and General Sandino. Both proclaimed their mutual friendship, patriotism, and loyalty to the republic.

The government on March 23 lifted the state of siege declared throughout most of the country on January 22. However, widespread economic distress led to sporadic raids by bandit groups and on May 12 Congress placed the department of Managua under martial law. An explosion in the arsenal at Managua, which destroyed most of the government's ammunition, led President Sacasa to reimpose a state of siege throughout the country on August 2. He declared the explosion was "not the result of mere accident." No serious menace to the government developed, and on August 17 it was announced that a new supply of 2000 rifles and 2,000,000 rounds of ammunition had been received from abroad.

ECONOMIC DEVELOPMENTS. Economic conditions in Nicaragua continued bad during 1933, due to the low price of coffee and other export commodities. The government's revenues had declined to one-half those received in 1929. President Sacasa

introduced a number of economies, including a reduction in the National Guard budget from \$100,000 to \$75,000 monthly. Nevertheless he was forced to secure an emergency loan of \$1,500,000 from the National Bank of Nicaragua to balance the budget. In October, Col. Irving Lindberg, Collector General of Customs for Nicaragua, left for the United States and Great Britain to secure a temporary moratorium on Nicaragua's bonded indebtedness held in those countries. One encouraging development in the year ended Oct. 31, 1933, was an increase of 6502 tons in the volume of exports over the previous year, while imports remained stationary.

LEGISLATION. Congress during 1933 enacted a number of measures designed to alleviate economic hardships. One law prohibited the foreclosure of mortgages for a period of six months and reduced the interest rate to 9 per cent from the prevailing rates of 12 to 18 per cent. An additional tariff of 12½ per cent was placed on imports of flour and rice in July in order to stimulate the local production of these commodities. An executive decree of June 24 made it obligatory for local merchants to secure the approval of the Financial Control Board before placing orders for foreign merchandise. Another decree excluded foreigners from working on government wharfs and Nicaraguan ships during the depression. A measure effective in July required Chinese marrying Nicaraguan women to post a bond of \$500 with the government, the money to be used for the repatriation of the women should their husbands desert them. Congress convened on Dec. 15, 1933, to enact additional legislation.

NICKEL. The world's consumption of nickel increased from 57,000,000 pounds in 1932 to 96,000,000 in 1933, according to the annual report issued by The International Nickel Company of Canada, Ltd. Seventy-seven per cent of the total consumption, or 74,356,969 pounds, was sold by this company during the year, an increase of 116 per cent over the previous year. The report credits the automobile industry as the most important factor in the recovery of the nickel industry by the increased use of nickel steel. Other fields yielding a demand for nickel were the increased use of stainless steel, such as in airplane manufacture. Its use in the construction of the experimental 3-car articulated train for the Chicago, Burlington, & Quincy R. R., now building, is expected to inaugurate a large demand. Increasing demand for monel metal in chemical, engineering, and domestic applications, especially in the latter, accounted for much of the consumption. The adoption of this metal for heavy forgings of gate and valve equipment on the Boulder Dam is of great engineering value. Danzig, Iraq, and Japan have added nickel to their coinage systems, and Ethiopia, France, and Germany have added new nickel coins to existing currencies.

NIGER, COLONY OF THE. A French colony and one of the divisions of FRENCH WEST AFRICA (q.v.). Lieutenant-Governor in 1933, M. Tellier.

NIGERIA, NI-JŪ'II-À. A British West African colony and protectorate bounded by French West Africa on the west and north and by the French Cameroon on the east. Nigeria is divided politically into the Colony (1381 square miles; 325,020 people in 1931); Southern Provinces (89,515 square miles; 8,168,227 people, including 10,581 square miles and 374,872 people of the Cameroons); Northern Provinces (281,778 square miles; 11,434,924 people, including 17,500 square

miles and 422,440 people of the Cameroons). The Northern and Southern Provinces, including the mandated area of British Cameroons which has been included in Nigeria for the purposes of administration, together form the Protectorate. Total area, 372,674 square miles; total population (1931 census), 19,928,896. Lagos, the capital, had 140,000 inhabitants. There were 2884 schools with a total of 197,500 pupils. In addition, there were in the Northern Provinces 35,452 Koran schools.

In 1932, including specie of £152,182, total exports amounted to £9,528,701; total imports, including specie of £48,411, were £7,107,819. The principal exports were palm kernels, £2,096,068; groundnuts, £2,159,320; palm oil, £1,462,478; hides and skins, £482,483; tin, 3431 tons of metal (limited by quota). The chief imports were gasoline, kerosene, cotton piece goods, tobacco, salt, gin, and kola nuts. Of the total trade in 1932 the United Kingdom accounted for 52 per cent. During 1932, 756 ships aggregating 1,453,752 tons cleared the ports. The two main railway lines had a total of 1905 miles of single open track in 1932. There is an extensive network of motor highways, and the numerous rivers form the principal means of transportation.

Actual revenue for 1931-32 amounted to £6,732,454; actual expenditure, £8,063,143; expenditure on loan works, £597,147; public debt (Sept. 30, 1932), £28,305,582; sinking fund, £3,930,490. The whole of Nigeria is under a governor and commander-in-chief who is represented in the Colony by an administrator, and in each of the two groups of the Northern and Southern Provinces by a lieutenant-governor. The governor is assisted by an executive council, and by a partly elective legislative council which legislates only for the Colony and the Southern Provinces. This legislative council must sanction all expenditure from the funds of the central government which is incurred in the Northern Provinces. The governor legislates for the Northern Provinces. Sir Donald C. Cameron, Governor and Commander-in-Chief of the Northern Provinces, was succeeded in 1933 by G. S. Browne, whose title was changed to Chief Commissioner. Lieutenant-Governor of the Southern Provinces, W. Buchanan-Smith.

NITOBE, INAZO. A Japanese statesman, died in Victoria, B. C., Canada, Oct. 15, 1933. He was born at Iwateken, Japan, in 1863. On his graduation from the Sapporo Agricultural College in 1881, he came to the United States to study political economy at Johns Hopkins University, and then attended the Universities of Berlin, Bonn, and Halle. On his return to Japan he became a member of the Sapporo College faculty and then served for a time as director of the Industrial Bureau of the Formosan government. In 1904 he was called to the chair of political economy at the University of Kyoto and in 1906 was elected president of the Imperial College in Tokyo. In the latter position his influence in awakening Japanese youth to the importance of free speech, a free press, and representative government gained for him the sobriquet of the "Father of Japanese Liberalism." During 1911-12 he was the first Japanese exchange professor to American universities, lecturing at Brown University on "The Japanese Nation: Its Land, Its People, Its Life."

In 1919 Dr. Nitobe was appointed Under-Secretary-General of the League of Nations, which office he held until 1926. On the formation of the Institute of Pacific Relations in 1925, he became

active in that organization, serving as chairman of the Japanese Council. At the time of his death he was returning from the Institute's conference held at Banff. The Emperor elevated him in 1926 to the peerage in recognition of his services in the fields of education and international relations.

NITROGEN. See FERTILIZERS.

NOAILLES, nō'ü'y', ANNA ELISABETH, COMTESSE DE. A French poet and novelist, died Apr. 30, 1933, in Paris, where she was born Nov. 15, 1876. Before her marriage in 1897 to a grandson of Jules, Duc de Noailles, she was the Princess Anna Elisabeth de Brancovan, a member of an important Rumanian family. Her writings, which were emotional in the extreme and of exotique type, showed the influence of De Musset and of some years spent in the Orient. Known as the "Muse of Gardens," she sang especially the praises of nature, with freshness of sentiment and fervor of lyricism. Her volumes of poetry included *Le Cœur incommensurable* (1901), crowned by the French Academy; *L'Ombre des jours* (1902); *Les Éblouissements* (1907); *Les Vivants et les morts* (1913); *Les Forces éternelles* (1920), which received the Grand Prix de la Littérature française in 1921; *Poème de l'amour* (1924); *L'Honneur de Souffrir* (1927); and *Poèmes de l'Enfance* (1930). Among her novels were *La nouvelle espérance* (1903); *Le Visage émerveillé* (1904); and *La Domination* (1905). *Les Innocents* (1923) was a collection of short stories, showing keen analysis of a woman's mind. In 1922 Countess de Noailles was elected a member of the Royal Academy of Science of Belgium. The French government created her in 1931 the first woman commander of the Legion of Honor.

NOBEL PRIZES. On December 10, the centennial of the birth of the founder, the Nobel prizes for 1933 were presented in Stockholm by King Gustav to, or in behalf of, the following persons who, in accordance with the will of the Swedish inventor and philanthropist, Alfred B. Nobel, were deemed to have made the greatest contributions toward the progress of the world and the welfare of mankind: Professor Paul H. M. Dirac, of Cambridge, and Prof. Erwin Schrödinger, of Oxford, in physics; Thomas Hunt Morgan, of Pasadena, Calif., in medicine and physiology, and Ivan Bunin, Russian exile now living in France, in literature. The 1932 prize in physics, not previously awarded, was presented to Prof. Werner Heisenberg, of Leipzig. The awards in chemistry and world peace were reserved. The awards in medicine and physiology are determined by the Royal Caroline Medico-Surgical Institute of Stockholm; the award in literature by the Royal Swedish Academy; in chemistry and physics by the Royal (Swedish) Academy of Science; and the peace award by a committee of five which is elected by the Norwegian Storting. In addition to medals and diplomas, a financial award from funds of the \$9,000,000 left for the purpose by the founder is distributed to the prize winners. In 1933 the value of the prizes totaled about \$47,300 each.

The 1932 award to Professor Heisenberg was made on the basis of his discovery of allotropic forms of hydrogen. He is one of the youngest scientists ever honored by the award as he was not yet 32. His researches have been largely along the lines of the quantum theorem and in Germany he is an outstanding exponent of the indeterminacy principle. He had been previously awarded a medal and a stipend of \$2500 by the Research Corporation of New York. Dr. Dirac is also a

young man; his field of research in the development of the atomic theory has led to the conclusion that the electron and the proton are not independent and that in nature but one fundamental particle exists. Dr. Schrödinger, a recent incumbent at Oxford and previously professor of physics at Berlin, succeeding Max Planck, is noted for similar developments in the theory of atomic structure. Dr. Morgan was unable to be in Stockholm for the presentation of his award and it was accepted for him by Laurence A. Steinhardt, the United States Minister. Dr. Morgan, now at the California Institute of Technology, has contributed notably to biological science in researches on heredity, especially through his theory of the gene. Ivan Bunin, who received the award in literature, is a voluntary exile from Russia since the revolution, and is strongly antagonistic to the present Russian régime. His novels largely deal with the life of Russian peasantry, and his best known works are *Sacrament of Love*, *Night Village*, and *The Gentleman from San Francisco*.

NO-DRAFT VENTILATION. See AUTOMOBILES.

NOETZLI, FRED A. An American hydraulic engineer, died at Covina, Calif., May 24, 1933. Born in Zurich, Switzerland, in 1887, he attended the Swiss Federal Polytechnic Institute there and in 1911 made a topographical survey of the Swiss National Park. After teaching at the Swiss Polytechnic Institute for several years he came to the United States, being engineering instructor at Lehigh University during 1916-17. In 1918 he became chief engineer with the Beckman and Linden Engineering Corp. in San Francisco, and after 1924 was engaged in private practice as a consulting hydraulic engineer.

Dr. Noetzli's specialty was dam design. He served as adviser to the United States Indian Service on the construction of the Coolidge Multiple-Dome Dam, part of a project, on the Gila River in Arizona, authorized in 1924 to irrigate some 100,000 acres, largely Indian lands. He acted also as consultant to the Los Angeles Flood Control District upon the construction of the Big Dalton Dam, completed in 1929; to the city of Pasadena upon the construction of the Pine Canyon Dam, which will serve as part of the water supply of the Metropolitan District; and to the Mexican government on the construction of the Rodriguez Dam. He accomplished much in the improvement of the arch and multiple-arch dam, evolved from the slab and buttress form of hollow dam, and devised the roundhead buttress type of dam. After 1922 he acted as secretary of the committee appointed by the Engineering Foundation to carry out investigations of the arch dam. He was the author of several papers on dams published in the *Transactions of the American Society of Civil Engineers*.

Oats	1933	205,000	3,977,000	2,267,000
	1932	205,000	4,366,000	1,615,000

^a Pounds. ^b Bales. ^c Tons.

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$31,992,723 (of which \$17,230,765 was for local education); for interest on debt, \$8,064,993; for permanent improvements, \$6,922,730; total, \$47,008,072 (of which \$9,940,450 was for highways, \$3,697,069 being for maintenance and \$6,243,381 for construction). Revenues were \$44,061,761. Of these, property and special taxes furnished 28.4 per cent; departmental earnings and compensation to the State for officers' services, 8.3; sale of licenses, 52.3 (in which was included a gasoline sale tax that produced \$9,042,552). Funded debt outstanding on June 30, 1932, totaled \$175,878,800, of which \$108,037,000 was for highways. Net of sinking-fund assets, the debt was \$164,472,664. On an assessed valuation of \$2,830,758,190 the State levied in the year ad-valorem taxes of \$4,461,697.

EDUCATION. The State met the situation caused by the collapse of the local revenues of the public-school districts in a manner different from that of most other States, by assuming the entire cost of providing eight months of instruction a year in all the public schools (see *Legislation*, below). As an accompaniment of this provision it abolished the local taxes for the schools' support that had been levied by the authorities of the respective school districts. An exception was made for the cases of counties and cities that should vote to impose local taxes in order to supplement their shares of the State's appropriations. In such cases a popular vote was made a prerequisite to the levy's becoming effective. Some 15 of these local units, according to information given by the Superintendent of Public Instruction at the end of 1933, had held elections as to such supplementary local taxation, but only about six of these elections had approved the tax proposed.

For the academic year 1932-33 the number of persons of school age in the State was reported as 1,088,249. There were enrolled in the public schools 892,086 pupils. Of these, 747,355 were in common schools or elementary grades, and 144,731 were in high schools. The year's expenditures for public-school education were: current, \$24,887,196; total (including capital outlay), \$26,267,916. Both totals ran sharply below those for the year before. The salaries of teachers (principals included) for the year averaged \$776.38.

CHARITIES AND CORRECTIONS. Central supervisory authority for the State, over State and county institutions for the care and custody of

persons, was exercised by a Board of Charities and Public Welfare under the system in force in 1933. This board had seven unpaid members and as executive head a Commissioner of Public Welfare (Mrs. W. T. Bost). It was charged with organization and oversight of the counties' welfare units, promotion of a Statewide programme of children's welfare, and interpretation of the State's colored-welfare programme to the Negro citizens.

The employment of prisoners at road work continued with some modification in 1933; the State Prison Department being consolidated with the Highway Commission and all 30-day and longer-term convicts being committed to the prison division of the commission, which consequently controlled some 7700 prisoners. Special relief on account of the destitution incidental to industrial depression was dispensed by a State Emergency Relief Commission and was largely routed through the county-welfare division of the Board of Charities and Public Welfare.

An institutional population of some 22,000 was distributed among the following institutions: mental patients, in State hospitals at Goldsboro, Morganton, and Raleigh; the mentally deficient, at Caswell Training School, Kinston; physical defectives, at the Orthopedic Hospital, Gastonia, and the State Sanatorium, at Sanatorium; the deaf and blind, in a School for the Deaf and Blind, Raleigh, and a School for the Deaf, Morganton; juvenile delinquents, in Eastern Carolina Training School at Rocky Mount, Stonewall Jackson Manual Training School at Concord, State Home and Industrial School for Girls at Samarcand, Morrison Training School at Hoffman, and Industrial School for Negro Girls at Efland; the criminals, in the State Industrial Farm Colony for Women at Kinston, 100 county jails, 30 county prison farms and workhouses, and (men criminals) under the Highway Commission; the aged, in the Confederate Soldiers' Home at Raleigh, Confederate Women's Home at Fayetteville, and 87 county homes; some mental patients and many dependent children were in private institutions.

LEGISLATION. A regular session of the Legislature convened on January 4. It voted the State's ratification to the proposed Federal constitutional amendment to change the dates of Presidential inauguration and of the convening of Congress (the later adopted Twentieth Amendment). With regard to the proposed repeal of the Federal Eighteenth Amendment, provision was made for a popular vote on November 7, to elect members of a State convention which should declare the will of the State. The sale of beverages containing not more than 3.2 per cent of alcohol was made lawful by statute. To relieve State banks involved in the nation-wide banking collapse of February and March the power was given the State department of banking to permit restriction of depositors' right of withdrawal from an institution under State regulation without closure of such institution, liquidation, or removal of the management. It was made lawful for a depositor in a bank actually closed to sell his claim to a debtor of the bank, who might present it for satisfaction of debt.

The State corporation commission was abolished, to terminate Jan. 1, 1934, and to transmit its duties to a newly created commissioner of utilities. Authorization was given for the issuance of \$12,230,000 of State bonds to be used to

take up the deficit incurred in 1930 and 1931. Penalties imposed for nonpayment of direct property taxes from 1927 through 1931 were abolished and it was allowed that the delinquent taxes be paid in five annual installments, with interest at 6 per cent, from Apr. 1, 1933. Redemption, for future delinquents was allowed for 27 months after judgment. A tax of 3 per cent on sales was imposed, with exemption for certain foods. The State assumed the burden of the entire support of the public-school system for a yearly term of eight months. An appropriation of \$16,000,000 a year for public schools was made. Horse-racing with betting under the pari-mutuel system was permitted in six counties. The prison and highway departments were consolidated into a department of highways and public works, with a view to reducing the cost of the prisons by making more effectual use of convict labor.

The marriage law was modified, to make the requirements less stringent, by repealing the provisions for health certificates and for bans five days in advance, requiring instead that the male sign an affidavit to his not having suffered from tuberculosis nor social diseases within two years. The period of marital separation giving occasion for divorce was reduced to two years, from five. The right was given to lawyers to incorporate as a State bar with power to admit and eject members. A State board was created to license cosmetologists (operators of "beauty parlors"). The Legislature named the tomtit as the State bird, but later reconsidered and repealed the resolution.

POLITICAL AND OTHER EVENTS. The banks of the State, though not closed before the President's bank-closing proclamation of March 5, were put on a basis of restricted operation by the State banking department on March 3. Reopenings were general on March 15. Governor Ehringhaus declared in July that State expenditure had been reduced, since the end of 1932, by some 32 per cent. On August 31 Governor Ehringhaus, with the support of growers of tobacco, issued a proclamation demanding the cessation of all warehouse dealings in tobacco, to persist until prices should reach the average level of 20 cents a pound. South Carolina joined shortly after in this "tobacco holiday." At an election on November 7 the popular vote opposed the repeal of the Federal Eighteenth Amendment by 2½ to 1 and chose convention delegates committed to reject repeal as proposed by Congress.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, J. C. B. Ehringhaus; Secretary of State, Stacey W. Wade; Treasurer, C. M. Johnson; Auditor, Baxter Durham; Attorney General, Dennis G. Brummitt; Superintendent of Public Instruction, A. T. Allen.

Judiciary. Supreme Court: Chief Justice, Walter P. Stacy; Associate Justices, W. J. Adams, Heriot Clarkson, George W. Connon, W. J. Brogden.

NORTH CAROLINA, THE UNIVERSITY OF. A State institution for the higher education of men and, with restrictions as to admission, of women in Chapel Hill, N. C., founded in 1795. The enrollment in the autumn of 1933 was 2414 regular students, with 2250 in extension courses. In the regular group 2183 were men and 231 were women. There were 999 registered for the 1933 summer session. The faculty had 215 members. The endowment amounted to \$2,000,000, and the total budget for the year was \$1,316,458. The library

contained 265,000 volumes. President, Frank Porter Graham, M.A., LL.D., D.C.L., Litt.D.

NORTH CENTRAL, formerly NORTHWESTERN, COLLEGE. A coeducational institution of higher learning at Naperville, Ill., founded in 1861. In the autumn of 1933 there was an enrollment of 411 students, of whom 258 were men and 153 women. There were 36 members on the faculty. The productive funds of the college amounted to \$1,093,000, and the current income for the year was \$155,529. Gifts included a total of \$29,700 for endowment and permanent equipment. A new curriculum in pre-engineering subjects, covering the first two years of a general engineering course, was organized in September, 1933. The library contained 20,000 volumes. President, Edward Everett Rall, Ph.D.

NORTH DAKOTA. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 680,845, as against 646,872 in 1920. Bismarck, the capital, had (1930) 11,090 inhabitants.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Wheat ...	1933	9,554,000	65,386,000	\$40,686,000
	1932	10,639,000	110,396,000	30,925,000
Hay (tame)	1933	1,281,000	919,000*	4,503,000
	1932	1,366,000	1,615,000*	6,480,000
Corn	1933	1,334,000	20,010,000	7,404,000
	1932	1,404,000	26,676,000	4,001,000
Barley ...	1933	1,830,000	18,300,000	5,673,000
	1932	2,376,000	40,392,000	4,847,000
Flaxseed ..	1933	430,000	1,677,000	2,465,000
	1932	826,000	3,221,000	2,609,000
Oats	1933	1,703,000	22,189,000	5,813,000
	1932	2,004,000	42,084,000	3,156,000
Potatoes ..	1933	140,000	8,400,000	3,612,000
	1932	161,000	9,338,000	1,681,000
Rye	1933	571,000	3,712,000	1,559,000
	1932	1,099,000	12,089,000	1,692,000

* Tons.

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$8,400,947 (of which \$1,122,976 was for local education); for operating and maintaining public-service enterprises, \$1,909,310; for interest on debt, \$2,142,396; for permanent improvements, \$3,849,153; total, \$16,301,806 (of which \$4,525,935 was for highways, \$1,239,411 being for maintenance and \$3,286,524 for construction). Revenues were \$15,381,260. Of these, property and special taxes furnished 18.6 per cent; departmental earnings and compensation to the State for officers' services, 11.1; sale of licenses, 20.8 (in which was included a gasoline sale tax that produced \$1,345,000). Funded debt outstanding on June 30, 1932, totaled \$41,347,700. Net of sinking-fund assets, the debt was \$903,573. On an assessed valuation of \$880,432,053 the State levied in the year ad valorem taxes of \$3,328,033.

LEGISLATION. The Legislature met in regular session on January 3. Mrs. Minnie D. Craig was made speaker of the House and was said to be the first woman to hold this position in the Legislature of any State in the Union.

No action was taken with regard to the proposed repeal of the Eighteenth Amendment to the Federal Constitution. A bill was passed to permit the sale, but not the manufacture, of beer containing 3.2 per cent of alcohol; sale was to be made through municipally conducted stores. The Legislature voted the State's ratification of the

Federal amendment for the restriction of child labor. It created a system of old-age pensions, providing \$150 a year to every needy person more than 65 years old who had inhabited the State for 20 years. A graduated sales tax was created, to become effective on July 1.

POLITICAL AND OTHER EVENTS. During the banking panic a proclamation was issued on March 4 closing banks and declaring a moratorium on the payment of debts. The beer law enacted by the Legislature was put into effect but gave dissatisfaction. A measure was accordingly initiated by petition, to substitute for the municipally run beer shops a system of licensing and taxing private vendors. This measure was carried at a special election on September 22; a proposed State sales tax was defeated. Governor Langer took strenuous measures on behalf of the State's debtors and farmers. On March 23, by proclamation, he forbade forced sales of premises occupied by the owners and of personal property used for agriculture. On October 16 he proclaimed an embargo on all shipments of wheat from the State, to continue until wheat should reach a satisfactory price. Railroads, opposing this order, sought to move wheat under consignment.

An area of grasshopper infestation, extending among some 13,000,000 acres of wheat land in seven States, included much of the agricultural land of North Dakota, according to an account published in December.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, William Langer; Lieutenant-Governor, O. H. Olson; Secretary of State, Robert Byrne; Treasurer, Alfred S. Dale; Auditor, Berta E. Baker; Attorney General, A. J. Gronna; Superintendent of Public Instruction, Arthur E. Thompson.

Judiciary. Supreme Court: Chief Justice, W. L. Nuesse; Associate Justices, Luther E. Birdzell, A. G. Burr, John Burke, A. M. Christianson.

NORTH DAKOTA, UNIVERSITY OF. A State institution of higher education at University Station, Grand Forks, N. D., founded in 1933. The enrollment for the autumn of 1933 was 1435, classified as follows: College of Liberal Arts, 446 men, 183 women; School of Commerce, 73 men, 12 women; School of Education, 82 men, 190 women; College of Engineering, 186 men; School of Law, 68 men, 9 women; School of Medicine, 67 men, 1 woman. Summer session 1933 enrollment, 288. The faculty numbered 120 (full-time teaching staff). The income for 1933 was derived as follows: State Appropriation, Maintenance, \$250,723; Land grant funds, \$32,000; Student fees, \$47,500; Income from dormitories, athletics, etc., \$35,600; Extension and Correspondence fees, \$4000; Miscellaneous local income, \$8000. Grounds, buildings, and equipment were valued at \$2,400,000. Value of gifts, 1933, \$11,000. The library contained 80,000 catalogued volumes. President, John C. West, Ed.D.

NORTH-EAST NEW GUINEA. See NEW GUINEA, TERRITORY OF.

NORTHERN RHODESIA. See RHODESIA.

NORTHERN TERRITORIES. See under GOLD COAST.

NORTHERN TERRITORY OF AUSTRALIA. A territory of the Commonwealth of Australia, occupying the north central part of the continent. Area, 523,620 square miles; population (Apr. 1, 1933 estimate), 4392 exclusive of aborigines. Darwin, the capital and principal port, had approximately 1000 inhabitants. The two ad-

ministrative divisions (North Australia and Central Australia) of the Northern Territory of Australia were abolished on June 12, 1931, when the *Northern Australia Act 1926* was repealed by the *Northern Territory Administration Act 1931*, and the whole placed under the control of an administrator, residing in Darwin, assisted by a deputy administrator, residing in Stuart (Alice Springs). The territory elects one member (who does not vote but may take part in the debates) to the House of Representatives at Canberra. Administrator in 1933, Lieut.-Col. R. H. Weddell; Deputy Administrator, V. G. Carrington.

NORTH RIVER PIERS, New York. See FOUNDATIONS; PORTS AND HARBORS.

NORTH-WESTERN ISLANDS. See NEW GUINEA.

NORTHWESTERN UNIVERSITY. A co-educational institution of higher learning in Evanston and Chicago, Ill., founded in 1851. It is composed of a college of liberal arts, a graduate school, and schools of engineering, commerce, journalism, music, education, and speech in Evanston; and schools of law, medicine, dentistry, commerce, and journalism in Chicago. For the autumn term of 1933 there was an enrollment of 5709 full-time and 4576 part-time students. In the 1933 summer session 2015 students were enrolled. The faculty included 710 persons of the rank of instructor or above. The endowment as of June 30, 1933, was \$23,000,000, yielding \$1,161,000 in income; the total income for the fiscal year was \$3,950,000. There was completed during 1932-33 construction of Deering Memorial Library, erected at a cost of \$1,250,000, and the George R. Thomas Auditorium, erected at a cost of \$300,000. In the various libraries of the university there were approximately 418,000 bound volumes and 200,000 pamphlets. President, Walter Dill Scott, Ph.D., LL.D.

NORTHWEST TERRITORY. A vast area in northern Canada, largely uninhabited and only partially explored, lying north and west of Hudson Bay and Strait, north of the Prairie Provinces and east of the Yukon Territory. Total area, 1,309,682 square miles (land, 1,258,217 square miles; water, 51,465 square miles). The total population at the census of 1931 was 9723. Most of the inhabitants were Eskimos and Indians. Furs were valued at \$999,203 in 1931-32 and numbered 341,922. The division of the territory into three provisional districts of Mackenzie, Keewatin, and Franklin, became effective on Jan. 1, 1920. They are administered from Ottawa, the capital of the Dominion, by a commissioner, deputy commissioner, and five councillors appointed by the Governor-General. Commissioner in 1933, H. H. Rowatt.

NORWAY. A constitutional monarchy of northern Europe. Capital, Oslo. Reigning king in 1933, Haakon VII, who was elected by the Storting Nov. 18, 1905.

AREA AND POPULATION. With a total area of 124,587 square miles (land area, 119,148 square miles), Norway had a population estimated in 1933 at 2,845,000 (2,814,194 at census of 1930). Of the total population, 28.4 per cent resided in urban communities in 1930. During 1931 there were 47,236 living births, 30,308 deaths, and 17,756 marriages; birth and death rates per 1000 inhabitants were 16.7 and 10.7, respectively. The chief cities, with their 1930 populations, are: Oslo, 253,125; Bergen, 98,303; Trondheim (Nidaros), 54,458; and Stavanger, 46,780. The school enroll-

ment in 1930-31 was: Elementary, 404,362; secondary, 32,435; university and academies, 5164.

PRODUCTION. Only 1,971,000 acres, or 2.6 per cent of the total area, was cultivable in 1932. Forests covered 24.2 per cent of the area and 72.2 per cent was unproductive. Crop yields in 1932 (thousands of units, bushels except as specified), with 1931 figures in parentheses, were: Wheat, 785 (592); rye, 527 (378); barley, 5578 (4207); oats, 13,282 (9494); potatoes, 38,029 (28,451); hay (metric tons), 2041 (2113); fodder roots (metric tons), 808 (625). Livestock in 1932 included 1,342,000 cattle, 1,736,000 sheep, 304,000 swine, and 179,000 horses. The agricultural indebtedness of Norway for the tax year 1932-33 was 1,192,262,000 crowns (crown equals \$0.2680 at par). The value of the fish catch in 1932 was 53,000,000 crowns (\$13,279,000), against 60,000,000 crowns (\$15,030,000) in 1933. The Norwegian whaling fleet produced about 1,280,000 barrels of oil in the 1932-33 season, or about 52 per cent of the total output.

The value of mineral production (1932) was estimated at 20,647,000 crowns; that of smelted metals, 87,385,000 crowns (\$18,648,386). Output of the chief minerals in 1931 was (in metric tons): Pyrites, 359,951; iron ore, 574,887; feldspar, 12,465; titanium ores, 5000; ferro alloys, 105,975; aluminum, 21,420 (19,500 in 1932); zinc, 39,472 (39,300 in 1932); fine silver (troy ounces), 308,647. The value of industrial production in 1932 increased by 15 per cent to 1,259,000,000 crowns, as compared with 1931, but was 15.4 per cent lower than in 1930. Production value of the paper industry was 211,000,000 crowns; foodstuffs, 301,000,000 crowns; textiles, 98,000,000 crowns; lumber, 72,000,000 crowns; chemical and electrochemical industries, 85,000,000 crowns. Leading manufactured products in 1931 were pig iron, 12,862 metric tons; mechanical wood pulp, 523,018 metric tons; chemical wood pulp, 142,237 metric tons; paper, 454,300,000 pounds; margarine, 104,432,000 pounds; beer, 13,829,000 gallons.

COMMERCE. Norway's imports in 1932 were valued at 690,376,000 crowns (\$124,268,000 at the average exchange rate), compared with 861,363,000 crowns (\$215,858,000) in 1931. Exports amounted to 560,924,000 crowns (\$100,966,000), against 459,759,000 crowns (\$113,974,000) in 1931. Iron and steel, coal, chemicals, and chemical products, mineral oils, and textile fabrics were the chief imports. The leading 1932 exports were: Wood pulp, \$13,854,000; fish in bulk, \$13,814,000; paper, \$6,777,000 (excluding newsprint, \$4,880,000); Norway salt-peter, \$6,458,000. The United Kingdom purchased 25.3 per cent of all Norway's exports in 1932; Germany, 12.1; Denmark and Sweden, 10, and the United States, 9 per cent. Imports came principally from the United Kingdom (21.5 per cent), Germany (21.3), Denmark and Sweden (13.4). Imports from United States (1933), \$7,112,014; exports, \$13,159,754.

FINANCE. The budget for the fiscal year ended June 30, 1932, closed with a deficit of 35,473,000 crowns (receipts, 361,631,000 crowns; expenditures, 397,104,000 crowns). In 1932-33 there was a deficit of 35,667,000 crowns (receipts, 350,376,000 crowns; expenditures, 386,043,000). Budget estimates for 1933-34 balanced at 374,400,000 crowns. The public debt on June 30, 1932, totaled 1,526,050,000 crowns (provisional), compared with 1,518,054,000 crowns on June 30, 1931.

COMMUNICATIONS. On June 30, 1932, there were 2406 miles of railway line (2177 miles of state

and 229 miles of private line). During 1931-32 they carried 18,297,000 passengers and 6,019,000 metric tons of freight, gross receipts totaling 67,566,000 crowns (\$14,223,000). Highways extended 23,343 miles. The Norwegian merchant marine on June 30, 1932, comprised 2001 steam and motor ships of 4,164,000 gross tons. The net tonnage of vessels entering Norwegian ports in 1932 was 4,205,000; cleared, 4,203,000.

GOVERNMENT. Executive power is vested in the King, who acts through a cabinet or council of state, and legislative power in the Parliament or Storting of 150 members, elected for three years by universal suffrage without distinction as to sex. When assembled, the Storting divides itself into the Lagting and Odelsting, comprising one-fourth and three-fourths of the membership of the Storting, respectively. The two sections function much as the upper and lower houses of bicameral parliaments. The Cabinet at the beginning of 1933 was headed by J. T. Hundseid (Agrarian).

HISTORY

HUNDSEID CABINET OVERTHROWN. The Cabinet formed by J. F. Hundseid (Agrarian) on Mar. 14, 1932, was forced to resign on Feb. 25, 1933, by a no-confidence vote in the Storting. The Liberals and Labor party united to defeat the government on the issue of a sales tax. A new ministry was formed on Mar. 2, 1933, by J. L. Mowinckel, a leader of the Radical party. Its programme called for the curtailment of military service, reduction in interest and sinking fund on the national debt, and a 10 per cent increase in the income tax.

THE LABOR VICTORY The Mowinckel Ministry, composed entirely of Radicals, remained in office for the remainder of the year although it controlled only a small group in the Storting and suffered a crushing defeat in the elections of Oct. 16, 1933. The elections resulted in a sweeping victory for the Norwegian Labor party, one of the most radical in Europe. By gaining 22 seats in the new Storting, it controlled 69 out of 150 representatives in that body. The standing of the parties in the new Storting, with their previous standing in parentheses, was: Labor, 69 (47); Conservative, 30 (41); Liberal, 24 (33); Agrarian, 23 (25); minor groups, 4 (4).

On the strength of their victory, the Labor leaders on October 26 demanded the immediate resignation of the government. The Premier replied that the government would not resign until it had been defeated by majority vote in the Storting. The Storting was not in session and would not convene until early in 1934. Lacking a majority in the new Storting, the Labor party was obliged to choose between forming a government with the toleration of the Liberals, and refusing power until they had won complete control of the government. Their campaign pledges, which they were expected to push when the Storting opened, called for the reduction of hours of labor to six hours a day, of bank interest to a 3 per cent maximum, and of farm indebtedness. They demanded the development of Norway's natural resources by a large public works programme, disarmament, the crushing of fascism, and restoration of labor's right to boycott employers.

The Labor leaders discerned a menace in the fast-growing National Union, a Fascist party founded by Major Quisling only five months previous to the election. Despite its late start, the

National Union polled nearly 28,000 votes, as contrasted with the 22,000 received by the Communist candidates. The total ballots cast numbered 1,241,000.

OTHER DEVELOPMENTS. Norway's claim to parts of the east coast of Greenland was rejected in favor of Denmark in a decision of the World Court issued at The Hague, Apr. 5, 1933. The Norwegian government immediately abolished the skeleton administrative system it had established in Greenland and assured Denmark that the relations of the two countries would continue to be friendly. See DENMARK under *History*; WORLD COURT. For background of the dispute see GREENLAND in 1931 and 1932 YEAR BOOKS. An important commercial treaty with Great Britain was concluded by the Norwegian government on May 15, 1933 (see GREAT BRITAIN under *History* for treaty provisions).

NORWEGIAN LITERATURE. See SCANDINAVIAN LITERATURE.

NOTRE DAME, UNIVERSITY OF. A Roman Catholic institution at Notre Dame, Ind., founded in 1842 for the higher education of men. The university consists of the colleges of arts and letters, science, engineering, law, and commerce. The enrollment in the summer session of 1933 was 663, of which number 515 were religious, sisters of religious communities also being permitted to attend the summer session. The enrollment for the first semester of 1933-34 was 2547. The faculty numbered 196. The endowment amounted to \$1,000,000, while the income for 1933-34, including student fees and departmental income, was \$1,218,413. The library contains 181,565 volumes. President, the Rev. Charles L. O'Donnell, C.S.C., Ph.D.

NOVA SCOTIA, nō'vā skō'shyā. The easternmost of the Maritime Provinces of Canada. Area, 21,068 square miles; population (1931 census), 512,846 (523,837 in 1921). Chief cities, with (1931 census) populations: Halifax, the capital, 59,275; Sydney, 23,089; Glace Bay, 20,706; Dartmouth, 9100; New Glasgow, 8858. In 1931, births numbered 11,615; deaths, 5968; marriages, 3394. There were 3231 departments operated in 1872 school buildings, with a total of 115,511 students enrolled for the year 1931. The Province has nine universities and colleges.

Agriculture is the chief occupation with fruit growing (chiefly apples) one of the important branches. The estimated total value of agricultural production for 1932 amounted to \$21,238,000 including: field crops harvested from 536,000 acres valued at \$10,206,000; dairy products, \$5,608,000; fruits and vegetables, \$2,222,000; poultry and eggs, \$1,007,000; fur farming, \$175,000; farm animals, \$1,909,000. Livestock (1932): horses, 42,640; cattle, 287,740; sheep, 155,650; swine, 53,370. Mineral production for 1932, including the small production from Prince Edward Island, was valued at \$16,234,882 (\$21,080,740 in 1931). The value of lumber and other sawmill products in 1931 was \$2,460,753.

In 1931 there were 1449 manufacturing establishments, with an invested capital of \$129,824,727, a total of 16,175 employees, and an output of \$70,679,503 of which \$37,391,253 represented the value added in process of production. The 1932 fish catch was valued at \$6,557,943 of which lobsters represented \$2,711,371; codfish, \$1,282,082; haddock, \$1,086,343. There are 14,682 miles of highways and 1420 miles of railway.

Revenue for 1931 amounted to \$8,104,601; ex-

penditure, \$8,509,436; public debt, \$60,325,613. Executive power is vested in a lieutenant-governor appointed by the Dominion government, and a legislative assembly of 38 members elected for five years by popular vote. The province sends 10 members to the Senate and 14 members to the House of Commons, of the Dominion Parliament at Ottawa. Lieutenant-Governor in 1933, W. H. Covert. As a result of the provincial election of Aug. 21, 1933 Angus L. MacDonald (Liberal) succeeded Gordon S. Harrington (Conservative) as Premier. See CANADA.

NOVELS. See FRENCH LITERATURE; GERMAN LITERATURE; LITERATURE, ENGLISH AND AMERICAN; SPANISH LITERATURE, ETC.

NYASALAND, nyá'sá-lánd, **PROTECTORATE.** A British protectorate in East Africa between Mozambique and Northern Rhodesia. Land area 37,596 square miles; population (1932), 1,502,283 of whom 1910 were Europeans and 1537 were Asiatics. The chief settlements are Zomba, the capital, with 3000 inhabitants; Blantyre, 6000; Limbe, Fort Johnston, Karonga, and Livingstonia. In 1931 there were 2965 native schools with an average attendance of 84,638 students. Coffee, tobacco, cotton, and tea are the main crops. Livestock (1931): goats, 225,129; cattle, 175,136; sheep, 94,396; pigs, 70,263; asses and mules, 220. For 1932, excluding specie and goods in transit, imports totaled £690,479; exports, £678,734; government revenue totaled, £530,931; expenditure, £505,800; public debt on Jan. 1, 1933, was £3,228,150. Governor and Commander-in-Chief in 1933, Sir H. W. Young.

OATS. The 1933 oats production in 33 countries reporting to the International Institute of Agriculture was estimated at 2,914,964,000 bu. as compared with 3,476,012,000 bu. produced in 1932. The acreage in these countries was approximately 5,000,000 acres or about 5 per cent below the acreage of the preceding year and of the five-year average for 1927-31. The production of the leading countries outside of the United States was estimated as follows: Germany 478,890,000 bu., Canada 330,769,000 bu., Poland 168,791,000 bu., and Czechoslovakia 108,655,000 bu. The Canadian yield was 20.5 per cent below the yield in 1932. For the Soviet Republics which have reported an average annual production of over a billion bu. no estimates for 1933 were available. Argentina estimated its 1933-34 production at 58,147,000 bu., a decrease of 16.4 per cent from the production of the preceding years.

As reported by the Department of Agriculture the oats crop of the United States in 1933 was 722,485,000 bu. or 42 per cent below the crop of 1,246,658,000 bu. in 1932 and the smallest since 1897. Since 1911 up to this year every crop exceeded a billion bushels. The acreage harvested in 1933, 36,541,000 acres, was 11.8 per cent below the acreage in 1932 and the smallest since 1910. The 1933 production data indicated an average yield of 19.8 bu. per acre as compared with 30.1 bu. in 1932 and the smallest on record but equaled in 1890. Both yield and acreage were reduced by a late and wet spring and by dry weather in parts of the northern Mississippi Valley. On the basis of the average farm price of 30.4 cents per bushel on Dec. 1, 1933, the value of the crop was \$219,520,000 while the much larger crop in 1932 at the corresponding price of 13.4 cents per bushel was valued only at \$167,333,000.

Production of oats was reported by all States and the yield estimates of the leading States were

as follows: Iowa, 134,618,000 bu., Minnesota 96,406,000 bu., Illinois 78,760,000 bu., Wisconsin 63,882,000 bu., and Missouri 32,634,000 bu. The acreages devoted to oats for grain production in these States were 6,119,000; 4,484,000; 4,039,000; 2,457,000; and 1,764,000 acres respectively. These States produced over 50 per cent of the country's crop and harvested nearly 50 per cent of the acreage.

For the fiscal year ended June 30, 1933, the United States exported 4,085,000 bu. of oats as grain and 22,963,000 pounds of oatmeal, including flaked and rolled oats, of which 13,478,000 pounds was put up in packages and the remainder put up in bags for shipment in bulk. Only 15,000 bu. of grain were imported during this fiscal period. Trading in oats futures on the grain-futures markets during this fiscal year amounted to 570,839,000 bu., or 49 per cent above the record low of 382,149,000 bu. during the preceding year. Several varieties of oats showing resistance to crown rust, recently introduced by the Department of Agriculture from Australia and South America, are used for the development of strains of winter oats for sections of the South where this disease limits the successful production of this crop.

OBERTHOFFER, ó'bér-hóf'ér, EMIL. An American orchestral conductor, died in San Diego, Calif., May 22, 1933. He was born near Munich, Germany, Aug. 10, 1867. He received his first instruction from his father, who was an excellent organist. His progress was so rapid that at 10 he was quite remarkable both as a violinist and as an organist. While studying at the Gymnasium he continued his musical education with Cyril Kistler (piano and composition). Later he went to Paris to study piano under Isidore Philipp. When he came to the United States in 1897 he settled in St. Paul as conductor of the Apollo Club. In 1901 he directed the Philharmonic Club, a choral organization, in Minneapolis, and immediately began to work for the organization and endowment of a permanent orchestra. His efforts resulted in the establishment in 1903 of the Minneapolis Symphony Orchestra, which under his direction came to be one of the foremost instrumental bodies in the United States, giving more than 200 concerts annually. On his resignation in 1923 he was succeeded as conductor by Henri Vergruggen. In addition, Oberthoffer held for many years the chair of music at the University of Minnesota, and served as guest conductor of the Los Angeles Philharmonic, San Francisco Symphony, St. Louis Symphony, and Detroit Symphony orchestras.

OBERLIN COLLEGE. A nonsectarian institution for the higher education of men and women in Oberlin, Ohio, founded in 1833. The registration for the first semester of 1933-34 was 1615, while that for the summer session of 1933 was 138. The faculty had 196 members in 1932-33. The productive funds of the institution as of Aug. 31, 1933 amounted to \$18,216,031, and the income for the year was \$1,287,434. The library contained 353,413 bound and 215,338 unbound volumes. President, Ernest Hatch Wilkins, Ph.D., Litt.D., LL.D.

OBITUARY RECORD OF THE YEAR. See NECROLOGY.

O'BRIEN, THOMAS JAMES. An American lawyer and diplomat, died in Grand Rapids, Mich., May 19, 1933. He was born in Jackson, Mich., July 30, 1842, and after his graduation in law

from the University of Michigan in 1865 began his practice at Marshall, Mich. In 1871 he removed to Grand Rapids where for almost 35 years he served as general counsel to the Grand Rapids and Indiana Railway. He was delegate-at-large to the Republican National Conventions of 1896 and 1904.

Mr. O'Brien's diplomatic career began in 1905 on his appointment as Minister to Denmark. The action which he took at this time resulted in the United States' purchasing the Virgin Islands in 1917 as a naval base. On his transfer in 1907 to the embassy in Tokyo he successfully arranged the "gentlemen's agreement" by which the Japanese government gave an oral assurance that if of itself would restrict the emigration of Japanese laborers to the United States, and negotiated a treaty which protected American commercial interests in Japan and Korea. As ambassador to Italy from 1911 to 1913, he effectively paved the way for peace between Italy and Turkey at the close of the war over Italy's annexation of Tripoli. Turkey pledged herself to withdraw her troops from Tripoli, while Italy agreed to restore to Turkey the Aegean islands occupied by Italian troops and to pay that part of the Ottoman public debt guaranteed by the revenue of Tripoli and Cyrenaica.

OCEANIA, ō'shē-ān'ī-ā, FRENCH ESTABLISHMENTS IN. A French colonial possession consisting of groups of small islands scattered throughout a wide area of the southern Pacific. The total area of the Establishments is estimated at 1520 square miles; total population (1931 census), 39,920 of whom 29,308 were natives Papeete, the capital on the island of Tahiti, had 7061 inhabitants. The principal island is Tahiti which forms a part of the Society Islands. The other groups are the Marquesas Islands, Tuamotu Islands, Leeward Islands (Iles sous le Vent), the Gambier, Tubuai, and Rapa groups, and a number of outlying islands. The principal exports were copra, mother-of-pearl, vanilla, coconuts, and phosphates. Governor in 1933, Leonce Jore.

OCEANOGRAPHY. See EXPLORATION.

ODENBACH, FREDERICK LOUIS. An American educator and meteorologist, died in Cleveland, O., Mar. 15, 1933. He was born in Rochester, N. Y., Oct. 21, 1857. On his graduation from Canisius College, Buffalo, N. Y., in 1881, he joined the Society of Jesus and twelve years later accepted the chair of physics and chemistry at the College of St. Ignatius (later the John Carroll University) in Cleveland. After 1903 he taught astronomy and meteorology at that institution and served as director of the meteorological observatory which he had founded in 1895. He invented the ceraunograph, an instrument for indicating or recording lightning discharges by means of the Hertzian waves they produce, and devised an electrical seismograph. In the astronomical field Father Odenbach had the distinction of being the sixth observer of the Helvetian halo, Dec. 6, 1901. He made several predictions as to the changing topography of the Great Lakes basin in years to come.

OGLETHORPE UNIVERSITY. An institution for higher education, founded in 1913. A university of the same name was in existence in Atlanta, Ga., from 1835 to 1872, being recognized as one of the famous educational institutions of the South. The enrollment for the autumn term of 1933 was 525; 165 persons attended the 1933 summer session.

The faculty numbered 31. The income for the year amounted to \$120,000. The library contained 50,000 volumes. President, Thornwell Jacobs, LL.D., Litt.D.

OHIO. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 6,646,697, as against 5,759,394 in 1920. Cleveland, the most populous city, had (1930) 900,429 inhabitants; Cincinnati, 451,160; Toledo, 290,718; Akron, 255,040; Columbus, the capital, 290,564.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1933	3,364,000	112,694,000	\$39,443,000
	1932	3,433,000	121,872,000	23,156,000

MINERAL PRODUCTION. Labor troubles in the coal mines supervened in 1932 upon industrial depression, and for some months, beginning with April 1, many of the coal mines were idle. The production of coal declined by 34.6 per cent, in consequence, to 13,350,000 net tons for 1932, from 20,410,995 for 1931. Coke production, also severely diminished, attained 2,346,686 net tons (1932), in value \$10,388,072. Of 58 blast furnaces, the number in blast during 1932 was 13 at mid-year and 12 on December 31. There were produced 2,387,028 gross tons of pig iron (1932), as against 5,036,305 for 1931. The yield of petroleum, 4,597,000 barrels for 1932, was 14 per cent below that for 1931. Ohio continued to lead in the production of lime, but the total sales fell to 477,000 short tons (1932), from 656,441 (1931), as to quantity, and to an average value of \$5.20 a ton, from \$6.10 a ton. Producers of salt sold or used 1,196,993 short tons (1932), as against 1,398,000 (1931); in value, \$2,249,613 (1932), and \$2,526,952 (1931).

EDUCATION. The system of public schools was affected during 1933 by a general tendency among the districts to shorten the academic year, and was further impaired by deficiencies in the amount of equipment and by reductions in teachers' salaries, prejudicial to maintaining the normal teaching force. The failure of the ordinary main source of revenue for the schools, by reason of the impoverishment of taxpayers, was accountable for these developments. Legislation was enacted which, according to a report in the *Journal of the National Education Association*, guaranteed State support for the schools. On the other hand, the vote at the popular election of November 7 adopted a proposal that lowered the top limit of the rate of taxation in the school districts to 10 mills on the dollar, from 15.

The number of persons of school age in the State, for the academic year 1932-33, was reckoned as 1,560,284. There were enrolled in the public schools 1,306,565 pupils. Of these, 845,441 were in common schools or elementary grades; in high schools, 333,747. The year's current expenditure

for public school education was estimated at \$84,000,000, which was some \$17,000,000 less than the corresponding total for the year before.

CHARITIES AND CORRECTIONS. The Department of Public Welfare, which had become operative in 1921, continued in 1933 to exercise the strongly centralized State direction of activities for the care and custody of persons. It had at its head a director (John McSweeney); its functions included the direction of 22 State institutions with an aggregate population of 35,639 (Dec. 1, 1933), administration of a pay-patient law; examination and classification of prisoners; criminal identification and investigation; the operation of prison industries supplying public departments and institutions; duties in the prevention of blindness and the occupation of the adult blind; through a board of parole and a division of probation and parole, the granting of paroles from penal and reformatory institutions, the supervision of the paroled, and the encouragement of adult probation among the counties; through a division of charities, extensive duties as to safeguarding unprotected children, inspecting county jails and workhouses, licensing the agencies for the care of children, and hospitalizing child cripples.

State institutions controlled by the department were: for the mentally afflicted, State hospitals at Athens, Cleveland, Columbus, Dayton, Lima, Cincinnati, Toledo, and Massillon; Ohio Hospital for Epileptics, Gallipolis; institutions for the feeble-minded at Columbus, Orient, and Apple Creek; Ohio State Sanatorium, Mount Vernon; Ohio Soldiers' and Sailors' Home, Sandusky; Madison Home, Madison; Boys' Industrial School, Lancaster; Girls' Industrial School, Delaware; Ohio Penitentiary, Columbus; Prison Farm, London; Ohio State Reformatory, Mansfield; Ohio Reformatory for Women, Marysville; Bureau of Juvenile Research, Columbus.

LEGISLATION. A regular session of the Legislature convened on January 2. It voted the State's ratification of the proposed amendment to the Federal Constitution, for doing away with child labor. It created a State convention, to be composed of 52 delegates at large elected by popular vote on November 7, to act for the State on the proposed repeal of the Federal Eighteenth Amendment. The "lame-duck" amendment to the Federal Constitution (the Twentieth Amendment) received Ohio's legislative ratification.

In the banking panic of February and March authority was given the State superintendent of banks to restrict withdrawals of deposits from members of the State banking system and to authorize 60-day suspensions without receivership for affected banks. Provision was made for banks in the State system, after the nation-wide closure, to reopen either under license or under conservators, in a manner similar to the reopening of National banks under Federal law.

With regard to assisting the needy part of the population the Legislature failed to carry out proposals of Governor White for taxation to raise the necessary means. It rejected two successive bills for a general tax on commercial sales, which formed the main part of the Governor's plan for revenue. Taxing subdivisions of the State were empowered to issue, with approval of the State tax commission, non-interest-bearing negotiable 5-year notes in anticipation of receipts through payment of delinquent taxes; it was expected that these notes would be tendered

in part payment of public salaries. Horse-race betting under the pari-mutuel system was legalized.

A special session dealt in December with the situation created by the repeal of Federal prohibition. By an act of December 23 a State board of liquor control was created and was authorized to run 250 shops for the retailing of intoxicating liquors, in packages; restaurants, hotels, and clubs were to be licensed to serve alcoholic drinks; prices, sales, and manufacture were to be regulated by the board.

POLITICAL AND OTHER EVENTS. As the banking panic spread at the end of February great numbers of the State banks, without warrant of law, declared of their own motion restrictions on withdrawals, in advance of the passage of the State law authorizing the superintendent of banks to impose such restrictions. Upon the general reopening of banks after the Federal proclamation of closure, it was found needful to liquidate some large Ohio institutions, including the Union Trust Company and the Guardian Trust Company of Cleveland. Accordingly the First National Bank was created in Cleveland, with the aid of a subscription of \$5,000,000 from the Reconstruction Finance Corporation to its preferred stock; it made available in April 20 per cent of the \$66,000,000 of deposits tied up in the Guardian Trust Company.

Vote on Repeal. The supporters of Federal prohibition fought in the State courts the Legislature's provision for election of a State convention on the repeal of the Eighteenth Amendment, demanding the right to hold a popular referendum on whether the convention should be held. They lost their case in the State supreme court. The election of delegates was held on November 7, and delegates favorable to the repeal of the Federal amendment were chosen, by a 3-to-1 popular vote. Repeal of State constitutional prohibition was also voted November 7. A popular vote also approved a proposed old-age pension, despite alleged lack of funds to meet the cost of the payments. The State's repealing convention met on December 5 and declared the State's adoption of the proposed superseding amendment (the later Twenty-First Amendment) doing away with the Eighteenth.

The failure of the Legislature to make adequate provision for the unusual financial needs in the State compelled Governor White to appeal in July to Federal Emergency Relief Administrator Hopkins for \$4,000,000 to make good the lack of means to relieve the destitute. Hopkins declared on July 20 that he would not do this, as the Legislature had adjourned without making adequate provision for the State's share of relief. It was stated in September that many of the State's poorer school districts, lacking sufficient State aid, would have to close school long before the end of the school year, some of them before Christmas.

The law taxing intangibles was held invalid, in some of its features, by the State supreme court in February.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, George White; Lieutenant-Governor, Charles Sawyer; Secretary of State, George S. Myers; Treasurer, Harry S. Day; Auditor, Joseph Tracy; Attorney General, John W. Brickner; Director of Education, B. O. Skinner.

Judiciary. Supreme Court: Chief Justice, Carl

V. Weygandt; Associate Judges, Edward S. Matthias, Thomas A. Jones, Howard L. Bevis, Will P. Stephenson, Florence E. Allen, Charles Zimmerman.

OHIO NORTHERN UNIVERSITY. An institution for the higher education of men and women at Ada, Ohio, founded in 1871, and under the direction of the Methodist Episcopal Church. The enrollment for the fall quarter of 1933 was 472. The 1933 summer quarter had an attendance of 242. The faculty consisted of 34 members. The productive endowment of the institution, as of June 30, 1933, amounted to \$471,453, and the income for 1932-33 was \$151,605. The main library contained 16,900 volumes. During the year engineering shops and Turner Hall, a dormitory for women, were added to the campus buildings. President, Robert Williams, A.M., D.D., LL.D.

OHIO STATE UNIVERSITY. A State institution for the higher education of men and women in Columbus, Ohio, founded in 1870. The enrollment for the autumn term of 1933 totaled 9448, distributed as follows: Graduate school, 932; agriculture, 779; applied optics, 78; arts and sciences, 1865; arts-education, 78; commerce and administration, 1006; dentistry, 196; education, 1606; engineering, 1197; law, 243; medicine, 356; nursing, 48; pharmacy, 147; veterinary medicine, 220. There were in addition 3382 students registered in the summer quarter of 1933. The faculty numbered 900. The endowment amounted to \$1,168,568. The total income for the year was \$6,423,212, while the total expenditures were \$6,391,698. The buildings and equipment were valued at \$22,254,798. The library contained 407,000 volumes. President George W. Rightmire, LL.D.

OHIO UNIVERSITY. A State university for the higher education of men and women, founded at Athens, Ohio, in 1804. The student enrollment for the first semester of 1933 was 2265, of whom 1198 were in the college of arts and sciences, 975 in the college of education, and 92 in the campus evening and Saturday classes. The enrollment for the 1933 summer session was 1077, of whom 257 were in the college of arts and sciences and 820 in the college of education. The enrollment in the 1933 post-summer session of three weeks was 185. The income for 1932 was \$1,258,337. The faculty numbered 220. The library contained more than 88,000 bound volumes. President, Elmer Burritt Bryan, LL.D., L.H.D.

OHIO WESLEYAN UNIVERSITY. An institution for the higher education of men and women in Delaware, O., under the control of the Methodist Episcopal Church, founded in 1844. For the autumn semester of 1933 the total enrollment was 1321. The faculty numbered 116. The productive endowment of the university amounted to \$3,545,000 and the income for the year 1932-33 for educational enterprises was \$459,486 and for auxiliary enterprises \$275,554. The library contained 141,248 volumes. President, Edmund D. Soper, D.D., LL.D.

OIL. See PETROLEUM.

OIL CIRCUIT BREAKERS. See ELECTRIC TRANSMISSION AND DISTRIBUTION.

OKLAHOMA. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 2,396,040, as against 2,028,283 in 1920. Oklahoma City, the capital, had (1930) 185,389 inhabitants.

AGRICULTURE. The following table shows the

acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1933	2,932,000	1,285,000*	\$56,540,000
	1932	3,108,000	1,084,000*	28,726,000
Wheat	1933	3,093,000	33,095,000	22,505,000
	1932	3,966,000	43,626,000	12,215,000
Corn	1933	2,598,000	19,485,000	9,158,000
	1932	3,288,000	65,780,000	11,837,000
Hay (tame)	1933	449,000	591,000*	4,137,000
	1932	510,000	746,000*	8,730,000
Oats	1933	1,161,000	21,478,000	7,303,000
	1932	1,334,000	24,012,000	3,122,000
Grain sorghum	1933	1,400,000	11,900,000	4,998,000
	1932	1,602,000	15,219,000	2,739,000
Potatoes	1933	36,000	2,520,000	2,268,000
	1932	42,000	3,108,000	1,647,000
Sweet potatoes	1933	18,000	1,404,000	842,000
	1932	22,000	1,584,000	634,000

* Bales. † Tons.

MINERAL PRODUCTION. There were produced, in 1932, 152,621,000 barrels of petroleum. This total fell short of that for 1931 by about 15 per cent. The producers, however, sold from storage in 1932 some 20,000,000 barrels that had previously been set aside out of excessive production at lower prices. The prices obtained for petroleum in the State in 1932 were some 30 cents a barrel higher than those for the greater part of 1931. The reduced quantity of the output was attributable to the more consistent working of the system of proration enforced by the State corporation commission. A new field of apparent importance was opened near Perry, in Noble County. Mines in the State shipped, in 1932, material having a zinc content of 60,053 short tons, in value \$3,603,180; also a lead content of 10,554 short tons, in value \$633,240.

EDUCATION. The ability of the State's public schools to carry on in the face of a partial collapse of receipts from the ordinary taxation for this purpose was reinforced by the Legislature's enactment of a State tax of 1 per cent on sales and of alterations in the State's income tax providing that three-fourths of its proceeds go to the schools' account. It was designed that the receipts thus secured should take the place of ad-valorem taxes, of which the payment had become difficult.

The number of persons of school age in the State in January, 1933, was reckoned as 765,546, from 6 to 21 years old. There were enrolled in the public schools, in 1932, 673,297 pupils. Of these, 552,226 were in common schools or elementary grades; in high schools, 113,421. The year's expenditures for education approximated \$22,000,000. Salaries of teachers were estimated to average about 24 per cent less than for the year before.

CHARITIES. AND CORRECTIONS. The central authority of the State over institutions for the care and custody of persons, under the system that obtained in 1933, rested in a Commissioner of Charities and Corrections. His functions were mainly those of inspection and of investigation, on complaint, of the institutions; he also appeared in court in proceedings to name guardians for dependent children in the event of their falling heirs to property or legacies. His office was established by the State constitution, which provided that it be elective. Of the 553 institutions within his jurisdiction, the greater part were local or private; these included 254 city and town jails, 77 county jails, and 135 hospitals.

The 20 State institutions were conducted by superintendents or by wardens; they were: for the insane, Central State Hospital at Norman

(2498 inmates in 1932), Eastern Oklahoma Hospital at Vinita (2041), and Western Oklahoma Hospital at Supply (1387); State Institution for the Feeble-Minded, Enid (764); State schools for the deaf, at Sulphur (394), for the blind, at Muskogee (152), and the Deaf, Blind, and Orphans' Institute, at Taft (colored, 347); for the sufferers from tuberculosis, three sanitariums, at Talihina (241), Clinton (360), and Sulphur (soldiers, 726); Oklahoma Confederate Home, Ardmore (93); for juvenile delinquents State Industrial School for Girls, at Tecumseh (274); State Training School for Negro Girls, at Taft (62), State Training School for Boys, at Pauls Valley (235), and State Training School for Negro Boys, at Boley (120); for prisoners, the Oklahoma State Reformatory, at Granite (246), and Oklahoma State Penitentiary, at McAlester (3402); for white orphans, West Oklahoma Home, Helena (246), and Whitaker State Home, Pryor (307); State University Hospital, Oklahoma City (6787).

LEGISLATION. A regular legislative session convened on January 3. Dealing with the State banks affected by the nation-wide banking panic it authorized the State bank commissioner to close imperiled State banking institutions in emergency and to reopen them on application of 85 per cent of their depositors. The insurance commissioner was empowered to act as receiver for insolvent insurance companies. A further banking measure gave the bank commissioner power to limit the proportion of deposits that might be drawn from a State bank.

With regard to prohibition, there was created a State convention of 16 delegates (two from each Federal Representative district), to be chosen at large by popular vote on a date after December 5, who were to pronounce for the State on the proposed repeal of the Federal Eighteenth Amendment. The sale of beer of alcoholic strength of 3.2 per cent was made lawful under a system providing revenue for the State from taxes on the resulting traffic.

Troubled by an accumulated deficit of \$13,000,000 in State revenues, the Legislature enacted a tax of 2 per cent on merchants' sales, with exception of some articles. A "mortgage moratorium" measure was passed, to put off foreclosures for two years. A form of cooperative saving and loan associations under the name of credit unions was authorized and such bodies were put under supervision of the bank commissioner. A system of State compensation-insurance was created, to be handled by the State industrial commission. The issue of \$15,000,000 of State warrants, bearing $4\frac{1}{2}$ per cent interest and repayable within six years, to finance a deficit of the general revenue, was authorized. The cost of automobile licenses was reduced, by act, for those who had not yet paid.

The sterilization of habitual criminals in the State prison and reformatory was authorized, subject to approval of the Board of Affairs. The release of natural gas from oil wells in excess of 20 M cu. ft. to the barrel of petroleum was prohibited.

POLITICAL AND OTHER EVENTS. During the banking panic, until all banks had been closed by Federal authority, the banks of the State were saved from depletion through the withdrawal of deposits by the proclamation of a series of legal holidays. Some communities issued local scrip in order to supplement scarce money while all

banks were closed, after March 5. At an election on July 11, held as the Legislature had required, at the expense of the sponsors of plans to legalize beer, a measure to permit the sale of 3.2-per cent beer, subject to State taxation, submitted by the Legislature to the popular vote, was adopted. The resulting taxes, later in the year, brought substantial improvement of the State's revenue. Governor Murray issued an order to sheriffs late in February directing them not to dispossess owners of real estate nor to make sales of property under foreclosure before March 15; thus was provided time in which the Legislature passed its measure declaring a moratorium on foreclosures. The moratorium law, contested in the courts, was invalidated in some of its chief features by decisions of the State supreme court, rendered on October 17; however, the court upheld the provision that judges might, at their discretion, extend foreclosure proceedings for two years before awarding final judgment. An act of the Legislature, requiring reduction of the salaries of constitutional officers of the State, was declared invalid on this point, in a decision of the State supreme court, rendered in September.

The State's authority in fixing the allowed rate of production of petroleum was subordinated to the Federal system of regulation applied by Secretary of the Interior Ickes; the State corporation commission ordered on September 7 a reduction of the State's allowable daily total of production by 61,500 barrels, to conform with the Federal allowance for Oklahoma's production.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, William H. Murray; Lieutenant-Governor, Robert Burns; Auditor, Frank C. Carter; Attorney General, J. Berry King; Treasurer, Ray O. Weems; Superintendent of Public Instruction, John Vaughan.

Judiciary. Supreme Court: Chief Justice, Fletcher Riley; Associate Justices, Wayne W. Bayless, Earl Welch, James B. Cullison, Charles Swindall, Monroe Osborn, Edwin R. McNeill, Thomas G. Andrews, and Orel Busby.

OKLAHOMA, UNIVERSITY OF. A State institution for the higher education of men and women in Norman, Okla., founded in 1890. The enrollment for the autumn of 1933 totaled 5233, of whom 3394 were men and 1839 women. For the summer session of 1933, 1518 students were registered. There were 294 faculty members. The productive funds of the university amounted to \$3,200,000 and the income for 1933-34 was \$1,389,000 (including two hospitals operated by school of medicine). The library contained 148,000 volumes. President, William Bennett Bizzell, Ph.D., LL.D.

OLD AGE PENSIONS. In 1933, 13 new jurisdictions were added to the roll of those carrying old age security laws on their statute books, making the total jurisdictions in the country, 29. The 13 jurisdictions which enacted such legislation during the year were Arizona, Arkansas, Colorado, Indiana, Maine, Michigan, Nebraska, North Dakota, Ohio, Oregon, Pennsylvania, Washington, and the Territory of Hawaii. All the laws were mandatory, in accordance with best recent practice. The laws of the seven States of Arizona, Arkansas, Colorado, Indiana, Maine, Michigan, and North Dakota provided for State aid in the financing of pension systems. In the jurisdictions of Nebraska, Oregon, Washington, and Hawaii, the whole cost was placed upon the county; how-

ever, the Washington legislature later in the session provided for State assistance by passing a law creating an old age pension fund out of the proceeds of a tax on horse racing. In Colorado, Hawaii, Maine, Nebraska, and Washington the minimum age for eligibility was 65; in North Dakota, it was 68; and in Arizona, Arkansas, Indiana, Michigan, and Oregon, it was 70. The required period of State residence varied from 35 years in Arizona to 10 years in Michigan, the most general requirement being 15 years State residence and 15 years citizenship. In all of the States except Maine and Michigan the county commissioners were made the administrators of the old age security laws. In Maine, town and city boards, under the supervision of the department of health and welfare, were placed in charge while in Michigan, administration was turned over to the county boards operating in conjunction with the State welfare department.

The Colorado old age pension law, which had given judicial power to the county commissioners and executive power to the county judges, had been declared unconstitutional by the Colorado supreme court in 1932 as being an improper delegation of power. In view of the popular demand in the State for the existence of such a law, however, the Colorado legislature in 1933 reenacted an old age pension law after first having remedied the constitutional defects of the earlier law. In Minnesota an amendment was passed which made the old age pension law mandatory; with the proviso, however, that a county might discontinue the system after a year's trial by referendum vote of the electorate. It should be noted that the Arkansas law, which was passed in 1933, was declared unconstitutional by the State supreme court because of the inclusion of a provision for a 1 per cent tax in the State and county expenditures in order to finance the pension fund.

On election day the voters of Ohio, in a State wide referendum and by a vote of nearly 3 to 1, approved a pension law for the protection of citizens indigent in their old age. This law was endorsed by a vote of 1,388,860 as against 520,221 in the negative and provided for mandatory State aid to needy persons 65 years and over who had resided in Ohio and had been citizens of the United States for 15 years. County residence for one year was also required. The applicants for pensions were not to possess property valued at more than \$3000. The pensions were not to exceed \$25 a month. A division of aid for the aged in the State department of welfare was set up to administer the law through county boards of commissioners who were to receive no compensation. The law requires that "the General Assembly shall provide necessary and adequate funds for the carrying out of the provisions of this act."

Another triumph for the scientific care of aged persons was the elimination of the poor house in the State of Delaware. This State, in 1931, adopted an old age pension system and two years later, that is, in 1933, closed its three county poor houses and opened its new State welfare home for those who needed institutional care.

At the end of March reports from the New York State Department of Social Welfare indicated that 53,185 persons were receiving assistance. The total number of applications filed up to that date in New York State was 107,030. The average allowance for March throughout the

State amounted to \$22.74 per month while New York City paid an average of \$27.33 to its 24,248 pensioners. New York State expended \$1,209,489 for the support of the aged during March, of which \$662,837 was spent in New York City. The California Department of Social Welfare reported that at the end of March the number of persons assisted under the State's old age security law was 13,024. The average allowance for the month was \$21.92 and the State's share of the pension expenses amounted to \$142,732.

The American Association for Old Age Security, which almost single handed had led the fight in the United States for the writing of old age security laws on the statute books of the States, in May, having passed the half way milestone, decided to amplify its activities, and to fight for the enactment of legislation providing security not only against old age but against all other forms of social disabilities. When the organization had been formed in 1927 there were only four States with feeble pension laws granting aid to less than 1000 persons. In 1933, six years later, 28 jurisdictions had adopted old age security legislation and over 100,000 persons were already in receipt of benefits under these laws. In May, changing its name to American Association for Social Security, this organization announced its intention to "strike out for a comprehensive system of social insurance covering all the important risks which make life a nightmare of uncertainty to the American worker—the risks of unemployment, sickness, and old age dependency." The organization was to continue to function under the leadership of Bishop Francis J. McConnell, Executive Secretary Abraham Epstein, Treasurer Nicholas Kelley, and the other prominent leaders who have helped to awaken America to the crisis of indigent old age. In the same month there was published Mr. Epstein's comprehensive survey of the problem of social insurance under the title *Insecurity—A Challenge to America*. Mr. Epstein's book is a result of three years of investigation in the United States and abroad and is the most complete study available of the problem of social insurance in all its various phases. Among the chapters are the following: The Specter of Insecurity, The Need for Social Insurance, Unemployment and Its Causes, Nostrums and Antidotes for Unemployment, Insurance Against Sickness and Invalidism, Insecurity in Old Age, Insurance Against Accidents, and Subsidies for Mothers and Children. The book carries a foreword by Miss Frances Perkins, Secretary of Labor.

According to Mr. Warren J. Vinton, writing in *Social Security* for July-August, 1933, 115,000 aged Americans were aided during 1932 under the provisions of old age security laws in 13 States. The year 1932 opened with 74,141 pensioners and during the succeeding 12 months 40,437 new applications for pensions were approved, making a total of 114,578 aged persons who received aid at one time or another during the year. A total of 13,619 names were dropped from the lists mostly on account of death with the result that the end of the year found 100,959 pensioners on the rolls. The number of pensioners per 1000 population in the pension States and counties amounted to 3.33 at the end of 1932. This number varied from 6.56 in Delaware to 4.31 in New York, 4.01 in Massachusetts, 3.45 in Idaho, and 3.30 in Utah; the rest of the States

had rates below 3.00 per thousand. The nation wide average of pensions per month decreased from \$24.68 in 1931 to \$22.35 at the end of 1932. The total amount spent on old age security in all the pension States during 1932 was \$25,094,986, an increase of \$9,203,023 over 1931. New York paid out \$15,454,308, Massachusetts, \$4,469,520, and California, \$3,057,327. According to Mr. Vinton, had it been necessary to care for all the old age pensioners in the old fashioned poor houses the total costs based on the various State figures would have amounted to \$47,300,000 instead of only \$25,094,986. Mr. Vinton made a startling comparison by pointing out that a single modern battleship costs more than the \$25,094,986 expended in 1932, which brought security to nearly 115,000 destitute old people. Old age pensions were responsible for only a negligible portion of the taxation levied on property. In California, Massachusetts, and New York, for example, only the county share was raised by a general property tax. The year's cost of old age pensions per \$1000 of assessed property amounted to only 17.3 cents in California, 41.2 cents in Massachusetts, and 26.5 cents in New York.

CANADA. Old age pension legislation was adopted in the provinces of Prince Edward Island and Nova Scotia during the year. Enabling acts had been passed in both provinces in 1931. New Brunswick has already enacted the necessary legislation but has not yet put it into effect; while Quebec is the only province in the Dominion not yet to cope with the problem of indigent old age. In the five provinces in which such laws were in operation in 1932, a total of 70,516 aged persons were receiving protection. The largest proportion, 42,315, was from Ontario where \$25,729,215 had been expended since the inception of the system on Nov. 1, 1929. In Canada the federal government assumed 75 per cent of the cost, the rest being shared by the provinces and municipalities. Pensions in the dominion averaged in the neighborhood of \$20 a month.

GREAT BRITAIN. During the year 1932-33 the English Ministry of Health, covering England and Wales, and the Scottish Department of Health, covering Scotland, in their annual reports indicated that 687,017 persons between the ages of 65 and 70 were receiving old age pensions at the end of the year. In addition, 728,318 persons over 70 were receiving old age pensions in right of insurance at the end of the year. Also 1,028,623 widows, dependent children, and orphans were receiving pensions. The widows, dependent children, and orphans and the aged persons between 65 and 70 were receiving pensions as a result of contributions made to the various social service funds. During the year 1932-33 the following sums were paid in widows', orphans', and old age contributory pensions in England, Wales, and Scotland (figures are converted into United States currency on the basis of pound equals \$3.43): England, \$113,032,220, of which \$51,271,640 were for old age pensions at age of 65 to 70; Wales, \$8,039,920, of which \$3,375,120 were for old age pensions at age of 65 to 70; Scotland, \$11,046,959, of which \$4,737,866 were for old age pensions at age of 65 to 70.

OLYMPICS. There was an unusual amount of discussion in 1933 about the Olympic games, scheduled for Berlin in 1936. Berlin was selected as the 1936 city after the 1932 games, the second time that the German capital had been chosen.

The 1916 games, cancelled by the Great War, were originally slated for Berlin.

In 1933 the governing bodies of the other nations of the world took cognizance of Adolf Hitler's programme of discrimination against the Jews, which programme entered into the athletic field. In the fall the Amateur Athletic Union of the United States, meeting in Pittsburgh, went on record as in favor of holding the event in some other city of the world if the German authorities continued to discriminate against Jewish athletes and not to allow the German Jewish athletes equal chance to practice. One week later the American Olympic Committee, meeting in Washington, upheld a resolution of the same type. This latter resolution, supplementing the A.A.U. recommendation, carried the weight of approval of all the amateur athletic bodies in the United States, and caused Hitler to issue an edict in which he declared that plans were going ahead for the 1936 games in Berlin and that no discrimination would be practiced.

OMAN. See under ARABIA.

ONTARIO, ōn-tā'rī-ō. A Canadian province reaching from Quebec on the east to Manitoba on the west. Total area, 412,582 square miles; population (1931 census), 3,431,683 (2,933,662 in 1921). Toronto, the capital and chief city, had 631,207 inhabitants in 1931; Hamilton, 155,547; Ottawa, 126,872; London, 71,148; Windsor, 63,108. For 1931, births totaled 69,209; deaths, 35,705; marriages, 23,771.

Ontario is rich in agricultural, mineral, and forest resources, and is the chief manufacturing province of the Dominion. With 10,140 manufacturing establishments, representing a capital investment of \$2,285,361,451, and 269,739 employees, the factories of the Province in 1931 manufactured goods valued at \$1,312,400,828 of which \$714,521,036 represented the value added in the process of production. During 1931, the publicly owned Ontario Hydro-Electric Power Commission delivered 1,050,903 electric horse power to 721 municipalities through which a total of 600,297 customers were supplied.

There are some 14,000,000 acres of cultivated land, of which 9,224,300 acres yielded field crops valued at \$113,904,000 in 1932. Livestock (1931): 577,322 horses, 2,514,344 cattle, 1,044,624 sheep, 1,359,176 swine, 23,746,395 poultry. Mineral production for 1932 was provisionally reported at \$79,239,578, the chief minerals being gold, silver, nickel, platinum, crude petroleum, and natural gas. The production of gold in 1933 was 2,149,921 ounces, valued at \$44,442,810; silver, \$1,728,164; nickel, 84,586,310 pounds, valued at \$20,736,000.

From the forested area of about 240,000 square miles, lumber and other sawmill products valued at \$12,789,684, wood pulp valued at \$22,944,933, and paper and newsprint valued at \$45,535,894 were extracted in 1931. In the same year, fisheries yielded \$2,477,131 and the value of furs taken in 1931-32 amounted to \$1,857,397. Steam railways had a mileage of 10,905 miles of single track in 1931, and highways totaled 66,411 miles. For the fiscal year ending Oct. 31, 1933 there was a surplus of revenue over expenditure amounting to \$150,000; revenue for the year amounted to \$2,450,000 more than was estimated and the government reduced the estimated expenditure by \$660,000. The bonded indebtedness on Oct. 1, 1933 amounted to \$499,986,000.

The Province is administered by a lieutenant-governor appointed by the Dominion, a respon-

sible executive council, and a single legislative assembly of 112 members elected, for five years, by popular vote. The 18th Legislature constituted in 1929 comprised 90 Conservatives, 15 Liberals, 5 Progressives, 1 United Farmer, and 1 Labor. Ontario is represented in the Dominion Parliament at Ottawa by 24 members in the Senate and 82 members in the House of Commons. Lieutenant-Governor in 1933, Col. H. A. Bruce; President of the Council, C. S. Henry.

OREGON. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 953,786, as against 783,389 in 1920. Portland had 301,815 inhabitants. Salem, the capital, 26,266.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame)	1933	967,000	1,603,000 ^a	\$15,068,000
	1932	992,000	1,705,000 ^a	10,230,000
Wheat	1933	897,000	17,492,000	10,320,000
	1932	991,000	20,060,000	7,223,000
Hops	1933	17,000	19,556,000 ^b	5,867,000
	1932	15,500	13,020,000 ^b	2,844,000
Potatoes	1933	39,000	6,435,000	3,861,000
	1932	42,000	5,040,000	2,016,000

	1932	96,000	2,688,000	914,000

^a Tons. ^b Pounds.

EDUCATION. Widespread deficiency of revenues needful to cover the expenses of the public schools prevailed during the year. It was reported, however, in the *Journal* of the National Education Association that up to December no public schools had been forced to close; they had been kept going in numerous cases by the issue of warrants in lieu of cash payment for salaries and some other liabilities; so common and prolonged had this practice become that nearly one-fifth of the school districts were reported to be a year behind in redeeming such warrants. Delinquencies in the payment of taxes imposed for the support of the schools, rather than failures to impose sufficient taxes, were the cause of the inability to redeem warrants.

For the academic year 1932-33 the number of persons of school age in the State was reckoned as 259,574. There were enrolled in the public schools 205,623 pupils. Of these, 149,478 were in common schools or elementary grades; in high schools, 56,145. The year's expenditures for public-school education totaled \$12,410,323.

LEGISLATION. The Legislature held a regular session, convening on January 9. It created a State convention to act for the State with regard to the proposed repeal of the Eighteenth Amendment to the Federal Constitution; the convention was to be composed of 116 delegates, of whom each county was to elect at least one and, in addition, one for every 10,000 of population. The Legislature by its own action gave the State's ratification to the proposed Federal Amendment to restrict child labor. To provide for the future of State banks involved in the banking collapse

of February and March, there were given the State bank examiner powers similar to those held with regard to National banks by the Comptroller of the Currency.

A tax of 2 per cent on gross sales was enacted, subject to approval by popular vote at a special election in July. A system of old age pensions was created, which was designed to provide payments of \$30 a month to each needy inhabitant who had reached the age of 70. The State legalized betting at horse races under the pari-mutuel system. To provide a receiver for insolvent municipalities the Legislature created the position of fiscal administrator; affairs of a defaulting municipality might be put in the hands of such an official at the petition of 25 per cent of its bondholders, and the liberty of dissenting bondholders, in case of such appointment, was restricted.

A special session that convened in November enacted a system of State control over traffic in alcoholic drinks and authorized expenditure for the needs of the destitute unemployed.

POLITICAL AND OTHER EVENTS. The banks of the State, in the course of the nation-wide banking panic, ceased payment on March 2, their retention of deposits sought for withdrawal being rendered lawful, as in most other States, by the proclamation of legal holidays. After the period during which banks had been kept closed by Federal authority the banks in Oregon reopened about March 15, generally with full liberty to depositors to withdraw.

At a popular election on July 21 there were chosen, by counties, 116 delegates who were instructed by the vote and pledged to the State to act in accordance with the popular majority in each county as to the repeal of the Federal Eighteenth Amendment. Two counties, naming five delegates between them, voted for retaining the amendment; all the others, for repeal; the State's popular vote was cast for repeal in somewhat less than the proportion of 2 to 1. The delegates met in State convention on August 7 and voted the State's adoption of the repeal of the Eighteenth Amendment through the superseding amendment proposed by Congress. At the election of July 21 the voters also adopted the repeal of the State constitution's provision for the prohibition of liquor.

The State lacked cash in March and was obliged on March 20 to resort to payments in the form of warrants bearing interest at 5 per cent. The Federal Public-Works Administration allotted on September 29 \$20,000,000 for expenditure on the proposed construction of a dam and a hydroelectric generating station at Bonneville on the Columbia River. A severe forest fire in the northern coastal part of the State late in August destroyed timber reported to be worth millions of dollars.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Julius L. Meier; Secretary of State and State Auditor, Hal E. Hoss; Treasurer, Rufus C. Holman; Attorney General, I. H. Van Winkle; Superintendent of Public Instruction, Charles A. Howard.

Judiciary. Supreme Court: Chief Justice, John L. Rand; Associate Justices, Henry J. Bean, Harry H. Belt, J. O. Bailey, George Rossman, Percy R. Kelly, J. U. Campbell.

OREGON, UNIVERSITY OF. A coeducational institution under State control and support at Eugene, founded in 1876. It consists of a college

of arts and letters, a college of social science, schools of business administration, education, fine arts, journalism, law, physical education, and service departments of home economics, military science, religion, science. The total enrollment for the autumn term of 1933 was 2122, of whom 1229 were men and 893 women. The attendance at the 1933 summer sessions was 1048, of whom 338 were men and 710 women. The faculty for the autumn term numbered 194. The total income for the year ending June 30, 1933, was \$881,444. The library contained 244,812 volumes. In accordance with the reorganization and co-ordination of curricula, effected by the Oregon State System of Higher Education in 1932, the University of Oregon is one of six units in the State's higher educational plan, offering a comprehensive programme of technical, liberal, and professional education. The other institutions participating in the plan are the Oregon State Agricultural College, Oregon Normal School, Eastern Oregon Normal School, University of Oregon Medical School, and Southern Oregon Normal School. Chancellor of the Oregon State System of Higher Education, William Jasper Kerr, Sc.D., LL.D.

OREGON STATE AGRICULTURAL COLLEGE. The Federal land-grant college of Oregon, established under Federal and State support at Corvallis in 1868. In accordance with the reorganization and co-ordination of curricula, effected by the Oregon State System of Higher Education in 1932, there are located at the State college lower division in liberal arts and sciences, lower division and service work in business administration, fine arts, journalism, and physical education, upper division and graduate biological and physical science (school of science), and professional and technical schools of agriculture, education, engineering and industrial arts, forestry, home economics, pharmacy, and secretarial science. Graduate work is organized in the graduate division. The enrollment for the autumn term of 1933 was 1961, of whom 1259 were men and 702 women. The 1933 summer session enrollment was 306. There were 268 members on the resident teaching faculty. The library contained 113,819 catalogued volumes. Chancellor of the Oregon State System of Higher Education, William Jasper Kerr, Sc.D., LL.D.

ORT, WOMEN'S AMERICAN. A society organized in 1927 for the support of trade and agricultural activities among the Jews in Central and Eastern Europe. It is derived from the organization ORT (the initials of three Russian words meaning Organization for the Promotion of Trade and Agriculture), founded in 1880 by prominent Russian Jews, such as Baron H. Ginzburg, S. Poliakov, and Prof. N. Bakst. Among its activities in 1933 were the support of technical and vocational schools for youths and adults of both sexes; the purchase of agricultural implements and live stock for Ort colonies; and the supplying of tools and machinery to artisans. The Ort Tool Supply Service enabled relatives in the United States to send machinery free of duty to Jews in the U.S.S.R. The society established also a guardian bureau to finance orphans through a three-year course in vocational schools. World headquarters of the Ort are in Paris, France, with branches in England, Rumania, Latvia, Lithuania, Germany, Poland, South Africa, the United States, Canada, and Russia. The offices of the

Women's American Ort are at 220 Fifth Avenue New York City.

PACIFIC RELATIONS, INSTITUTE OF. The American Council of the Institute of Pacific Relations during 1933 has directed a great deal of its activity toward preparation for and participation in the Fifth Biennial Conference of the Institute of Pacific Relations, which was held at Banff, Alberta, August 14 to 28. The subject of the Conference was Economic Conflict and Control in the Pacific, and the American studies published in connection with the meeting were for the most part in this field.

The research department has continued issuing its fortnightly memoranda, dealing briefly with such subjects as the Chinese Boycott, Basic English as an Aid to Language Communication, Railway Construction in Manchuria, International Co-operation in China's Public Health, and United States Investments in Japan. The pamphlet, "Behind the Far Eastern Conflict," was published early in the year for use of clubs and classes throughout the country.

For the first time, the American office has made the experiment of having on its staff visiting secretaries from other national Councils. Chinese, Japanese, and Canadians have coöperated in the research and educational work of the American Council over periods of several weeks or several months. With the help of a number of individuals and organizations interested, under the direction of one of the Japanese secretaries, Prof. Yasaka Takaki, the American Council is planning to make a survey of facilities in this country for the study and interpretation of Japan.

The Honorable Newton D. Baker continues as Chairman of the American Council, and was newly elected Chairman of the Pacific Council at Banff. Mr. Edward C. Carter, who has been Secretary of the American Council since 1926, was chosen at Banff to be Secretary-General of the Institute of Pacific Relations.

PAINLEVÉ, pā'n'le-vā', PAUL. A French mathematician and statesman, died Oct. 29, 1933, in Paris where he was born Dec. 5, 1863. He attended the Lycées St. Louis and Louis le Grand and the École Normale Supérieure. His studies were interrupted during 1886-87 when he served on a mission to Germany. On his return to the École Normale Supérieure he received his doctor's degree in mathematical science. He then became a member of the science faculty at the University of Lille and in 1891 was called to lecture at the Sorbonne. He taught mathematics at the École Normale Supérieure between 1895 and 1903 and after 1895 was professor of general mathematics at the University of Paris. He later held the chair of mechanics at the École Polytechnique. A laureate of the Institute of France in 1890, 1894, and 1896, he was elected to membership in its Academy of Sciences in 1900.

Painlevé's political career began in 1910 when he was elected to the Chamber of Deputies for the Seine. He continued to represent that department until 1928 when he was returned for Ain. In the Chamber he rose to leadership of the Republican-Socialist party and of the Left Wing. His first cabinet appointment was that of Minister of Public Instruction and Inventions concerning the

National Defense in the Briand cabinet of 1915-16. On General Gallieni's resignation he succeeded to the portfolio of War. He held this portfolio also in the Ribot cabinet, formed in March, 1917, and was responsible for naming General Pétain as commander-in-chief of the French Army. On the fall of the Ribot ministry in September, 1917, he was invited by President Poincaré to form a new ministry, retaining for himself the portfolio of War. He served also on the Committee of War formed at this time, and it was hoped that he would carry into vigorous effect the policy undertaken by Ribot of punishing the "defeatists" or perpetrators of crimes against the national defense, such as disloyalty and treason. With Lloyd George, the British premier, and Orlando, the Italian premier, Painlevé attended at Rapallo, Italy, on November 9, the conference which resulted in the creation of a Supreme War Council, whose mission was to watch over the general conduct of the War. On the inter-Allied general staff he named General Foch as France's representative. His ministry was forced to resign, however, after a duration of only two months as a result of an adverse vote on its proposal that consideration of the "defeatist" question should be deferred. Furthermore, as Minister of War he was accused by the supporters of General Nivelle of having interfered through his appointment of General Pétain with the French offensive of April, 1917.

For the next seven years, aside from his service in the Chamber, Painlevé was politically eclipsed. He spent the year 1920 in the Far East as advisory director-general of Chinese government railways. In the spring of 1924, as a result of the victory of the Left *cartel* which he had formed with Herriot, he was chosen president of the Chamber. The following April, after the fall of Herriot's ministry, he was requested by President Doumergue to form a cabinet of his own, in which he once again held the War portfolio. Shortly after taking office he announced that the embassy at the Vatican was to be continued and thus settled for the time being a problem which had disrupted the country for months. He succeeded also in gaining the Opposition's support of the war with Moroccan tribesmen. After Caillaux's unsuccessful attempt to negotiate a settlement of France's debt to the United States in October, 1925, Painlevé formed a new cabinet, this time assuming the portfolio of Finance. His ministry fell a month later when the Senate rejected his drastic taxation measure and proposal to further inflate the currency.

In the cabinet which Briand was requested to form Nov. 27, 1925, Painlevé accepted the portfolio of War so as to continue supervision of operations against the Druse revolt in Syria and that of Abd-el-Krim in Morocco. He held this portfolio also in Herriot's one-day cabinet of July, 1926, and Poincaré's succeeding ministries which lasted until July, 1929. In the Steeg ministry formed in December, 1930, Painlevé accepted a post for which he was eminently fitted by reason of his interest in the early experiments of the Wright brothers and his calculations regarding air resistance, namely that of Minister of Air. He continued to hold this portfolio in the succeeding Herriot and Paul-Boncour cabinets of 1932, accomplishing much toward the reorganization of the Air Service. He served also as French delegate to the League of Nations and as presi-

dent of the Committee of International Coöperation.

A founder of the League of the Republic, Painlevé had been president of that organization after 1922. He was also a past president of the Conservatory of Arts and Trades and of the Paris Observatory. The decoration of chevalier of the Legion of Honor was conferred on him, and he was elected to membership in the Academies of Science of Bologna, Stockholm, Upsala, and the Reale Accademia dei Lincei of Rome. Among his works were: *Leçons sur l'intégration des équations de la mécanique* (1895); *Leçons sur le frottement* (1895); *Leçons sur le frottement* (1895); *Leçons sur la théorie analytique des équations différentielles* (1897); *La Méthode dans les sciences* (1909); *L'Aviation* (1910); and *Comment j'ai nommé Foch et Pétain* (1926).

PAINTING. Great impetus was given to painting late in 1933 by the action of the government by which the employment of artists was made possible under the Civil Works Administration. Early in December announcement was made by the Assistant Secretary of the Treasury, L. W. Robert, Jr., of the creation of a Fine Arts Advisory Committee for the Treasury to assist in the formulation and execution of a policy in connection with the construction of Federal buildings. This committee, consisting of Frederic A. Delano, Charles Moore, Harry L. Hopkins, Dr. Rexford G. Tugwell, and Henry T. Hunt with Edward Bruce as secretary, held a first meeting promptly thereafter, to which directors of various museums of art and other experts were invited as conferees. On December 11th followed the announcement of a plan to give 2500 artists temporary employment through the Civil Works Administration. Headquarters were opened in the Treasury Department with Forbes Watson as technical adviser, and arrangements were made to have the work conducted and the artists chosen by 14 regional committees as follows: New England States—Francis H. Taylor, c/o Isabella Stuart Gardner Museum, Boston, Mass.; New York City and State, Metropolitan New Jersey and Connecticut—Mrs. Juliana Force, Director, Whitney Museum of Art, New York City; Eastern Pennsylvania, Delaware, and New Jersey—Fiske Kimball, Pennsylvania Museum of Art, Philadelphia; District of Columbia, Maryland and Virginia—Duncan Phillips, 1600, 21st St., Washington, D. C.; Georgia, North and South Carolina, Tennessee, and Florida—J. J. Haverty, High Museum of Art, Atlanta, Ga.; Louisiana, Arkansas, Mississippi, and Alabama—Ellsworth Woodward, Isaac Delgado Museum, New Orleans, La.; Missouri, Kansas, Nebraska, and Iowa—Louis LaBeaume, City Art Museum, St. Louis, Mo.; Western Pennsylvania, and West Virginia—Homer Saint-Gaudens, Carnegie Institute, Pittsburgh, Pa.; Ohio, Indiana, Kentucky, and Michigan—William Milliken, Cleveland Museum of Art, Cleveland, Ohio; Illinois, Wisconsin, and Minnesota—Walter S. Brewster, 135 South LaSalle St., Chicago, Ill.; Colorado, Wyoming, North and South Dakota—George H. Williamson, Majestic Bldg., Denver, Colo.; Texas, and Oklahoma—John S. Ankeney, Dallas Power and Light Bldg., Dallas, Texas; New Mexico, and Arizona—Jesse L. Nussbaum, Santa Fe, N. M.; Southern California—Merle Armitage, Los Angeles, Calif.; North California, Nevada, and Utah—Water Heil, California Palace of the Legion of Honor, San Francisco, Calif.; Oregon, Washington, Idaho, and Montana

—Burt Brown Barker, 814 Oregon Bldg., Portland, Oregon.

At the same time arrangements were made for the employment of a thousand or more unemployed architects to help record interesting specimens of American architecture of historical significance. The plan embraced every type of antique structure in America from the Colonial architecture of the Atlantic Seaboard and the traces of Spanish culture in the South and Southwest to the prehistoric remains in New Mexico and the Russian remains in Alaska. Excavations of aboriginal ruins and the making of complete records of the disappearing cities of the old mining settlement were contemplated. Residential buildings ranging from the birthplaces of Presidents to the hewn log cabins of the early pioneers were included. The direction of this work was under a committee headed by Arno B. Cammerer, director of the Office of National Parks, Buildings and Reservations, Interior Department, and consisted of seven members, three chosen by Mr. Cammerer and four by the American Institute of Architects. The former were as follows: Miss Harlean James, Dr. Herbert Bolton, and Dr. Waldo Leland. The latter, all of whom are architects, were as follows: Dr. Leicester B. Holland, Chief of the Division of Fine Arts of the Library of Congress; William Graves Perry of Williamsburg, Va.; Albert Simons of Charleston, S. C.; and John Gaw Meem of Santa Fe, New Mexico.

Painting during 1933 showed no new tendency or trend unless it was in the direction of conservatism, some of the more extreme painters striving for abstract expression declaring themselves in favor of subjective themes, indicative of a rebound in popular sentiment.

Regarding the monumental mural paintings by Diego Rivera in the Detroit Institute of Art, Detroit, Michigan, and in Radio City, New York City, controversy arose, which embraced not only the painter and those who had commissioned him but also a large portion of the public. The objections in Detroit on the part of the public were as follows: (1) that the paintings were communistic propaganda; (2) that one panel was a travesty of the Holy Family, and (3) that the paintings were unsuitable for the background of the Court, which is in Roman Baroque style. These paintings begun in June, 1932 and finished in March, 1933, were considered by the painter as his masterpiece. In Detroit, the difficulty seemed to have blown over, but not so in New York. There, when Rivera was completing his painting, 63 feet long by 17 feet high, in the lobby of the R. C. A. building, objection was raised to a figure of Lenin joining the hands of a soldier and a negro. That this was objectionable to the Rockefeller family was brought to his attention with the request that he paint out the face of Lenin and substitute that of an unknown person. This Rivera refused to do, and the matter ended by his being paid for the work in full and the painting obliterated.

A kinder fate attended the mural painting by Thomas Benton, illustrating the History of Indiana, which was executed for and placed in the Indiana State Building at the Century of Progress Exposition, Chicago. This painting, panoramic in character, 12 feet high by 230 feet long, was primarily illustrative, including a great many life-sized figures as well as familiar buildings and scenes in the State of Indiana, and from first to

last seemed to give great satisfaction to those who commissioned it.

A large mural was executed for the New School of Social Research, New York City, by Camilo Egas of Quito, Ecuador.

A series of murals, "Fruits of Iowa" by Grant Wood was executed for the Montrose Hotel, Cedar Rapids, Iowa.

A series of paintings on the side walls and ceiling of what is known as the Huntington Bridge, Pasadena, Calif., was executed by Frank M. Moore and ceremoniously dedicated on March 7th. These paintings were exclusively of California scenes—unique and engaging.

Outdoor art markets were not as popular in 1933 as in 1932 but on September 22nd and 23rd a most successful one was held at Fort Worth, Texas, in the parks surrounding the Public Library and Museum—the centre of this city's art activity. More than 100 artists were represented by nearly a thousand exhibits and receipts from sales were sufficiently gratifying to lead to the announcement of a repetition.

The Grand Central Galleries, New York, took over in the fall of 1933 and opened as an annex the former home of the Union Club at the corner of Fifth Avenue and 51st Street, New York, and thus reaffirmed confidence in both the quality and commercial value of works by contemporary American artists.

Cecilia Beaux, the distinguished American portrait painter, was the recipient of the annual award made by the National Sorority, Chi Omega, to an American woman for outstanding contribution to international culture. The medal was designed by Frances Grimes and the award was made in the Galleries of the Fine Arts Bldg., 215 W. 57th St., New York, on the evening of April 16th. William Sloane Coffin, then President of the Metropolitan Museum of Art, Cass Gilbert, President of the National Academy of Design and others made addresses. The presentation was made by Mrs. Franklin D. Roosevelt, wife of the President of the United States. At the annual meeting of the National Academy of Arts and Letters in November, Cecilia Beaux was elected to membership—an honor accorded to but few women.

The Library of Congress during 1933 was enriched by comprehensive groups of original illustrations by the late William T. Smedley and the late Arthur I. Keller, given by Mrs. Smedley and Mrs. Keller as memorials to their husbands. These gifts were especially timely in view of the recent establishment by the Library of Congress of a Cabinet of American Illustration. The National Print Collection at the Library of Congress was enhanced during 1933 by a complete collection of etchings by Donald Shaw MacLaughlan, given by the artist in memory of his wife.

In April, 1933, a National Commission to Advance American Art, with a governing board consisting of fourteen American artists residing in New York was organized, primarily as a protest against the patronage of foreign art by American Art Museums, dealers and the public. In the early winter of 1933-34, steps were taken by this same group to establish a National Art Foundation with approximately the same object in view. F. Ballard Williams, President of the Professional Artists League, served as chairman of the organizing committees.

During 1933, much larger use than heretofore was made of the radio to increase knowledge and appreciation of art. The latter part of the year,

the Carnegie Corporation of New York made a generous grant to the American Federation of Arts for a series of 20 weekly talks on American Art to be broadcast on a national circuit.

FOREIGN. Announcement was made in June that the American Academy of Rome had declined a gift of one hundred and fifty thousand dollars from the estate of Mrs. E. A. Abbey, for scholarships in mural paintings, under the conviction that it duplicated, at least in purpose, a gift made by her during her lifetime in the form of a fund for the acquisition of mural paintings by American artists. A similar bequest to the Royal Academy, London, was, however, accepted.

NECROLOGY. The following eminent American painters passed away in 1933: John Quincy Adams, Joseph Birren, R. Sloan Bredin, Charles H. Davis, Cecile de Wentworth, John I. Downes, Frank French (wood engraver), George O. ("Pop") Hart, William H. Holmes, E. W. Kemble, Daniel Kotz, George Luks, Dora L. Murdock, Henry W. Parton, Lilla Cabot Perry, Charles Adams Platt, Francis Paulus, Louis C. Tiffany, Clark Voorhees, W. S. Robinson, Lionel Walden, Frederick C. Yohn.

NOTABLE BOOKS ON ART. During the year the following were published: *The Stage Is Set* (Designing for the Theatre) by Lee Simonson; *An Account of French Painting*, by Clive Bell; *Sir William Orpen, Artist and Man*, by Sidney Dark and P. G. Konody; *Thomas Eakins—His Life and Work*, by Lloyd Goodrich; *Mary Cassatt*, by Forbes Watson; *Glenn O. Coleman*, by C. Adolph Glasgold; *Ernest Lawson*, Guy Pene du Bois; *Allen Tucker*, by Forbes Watson; *Making a Water Color*, by George Pearce Ennis; *The Meaning of Modern Sculpture*, by R. W. Wilenski; *Tapestry—the Mirror of Civilization*, by Phyllis Ackerman; *Rockcullkentana*—"Few words; many pictures," by Rockwell Kent; *Old Charleston*—Woodcuts by Charles W. Smith; *A Farmer's Year*—Woodcuts by Clare Leighton; *The Arts and Crafts in Philadelphia, Maryland, and South Carolina, 1786-1800*—Collected by Alfred C. Priam; *Great Georgian Houses of America*—Illustrated with drawings and photographs—Published by Architects Emergency Committee; *Vincent Van Gogh*, by Julius Meier-Graefe; *Poor Splendid Wings*—The Pre-Raphaelite Brotherhood, by Frances Winwar.

PAKENHAM, ADMIRAL SIR WILLIAM CHRISTOPHER. A British naval officer, died at San Sebastián, Spain, July 28, 1933. Born July 10, 1861, he entered the British Navy in 1874 as a cadet and was commissioned a lieutenant in 1883. The following year he became flag-lieutenant on the *Nelson* to Rear-Admiral Tryon, commander-in-chief in Australia, where he served for three years. He was second in command of the cruiser *Garnet* during 1890-94 and in 1896 was promoted to the rank of commander. After being detailed to the Naval Intelligence Department of the Admiralty for two years, he returned to the Pacific in 1901 as commander of the sloop *Daphne* and two years later was promoted to captain. During the Russo-Japanese War he served as British naval attaché with Admiral Togo's fleet, receiving from the Japanese Emperor the decoration of the Order of the Rising Sun (second class). On his return to England he became commander of the cruiser *Antrim* in the Atlantic Fleet. He later commanded the battleships *Triumph* in the Mediterranean (1909) and *Collingwood* in the Home Fleet (1910-11).

In 1911 Pakenham was made Lord Commissioner of the Admiralty with the title of Fourth Sea Lord and two years later was promoted to the rank of rear-admiral in command of the Third Cruiser Squadron of the Grand Fleet. He became commander of the Second Cruiser Squadron in 1915, and it was this command which he held at the Battle of Jutland May 31, 1916. In 1917 he succeeded Beatty as commander of the Battle Cruiser Force and on his flagship *Lion* was present at the surrender of the German High Sea Fleet Nov. 22, 1918. Commissioned vice-admiral in 1918, Pakenham held the office of president of the Royal Naval College at Greenwich in 1919-20. His last important command was that of the North American and West Indies Station. On his return in 1922 he was made admiral. He retired four years later. Among the honors conferred on him were Companion of the Bath (1905), Member of the Royal Victorian Order (1907), Knight Commander of the Bath (1916), Knight Commander of the Royal Victorian Order (1917), Knight Commander of St. Michael and St. George (1919), and Knight of the Grand Cross of the Bath (1925).

PALACE OF THE SOVIETS. See ARCHITECTURE.

PALAU. See CAROLINE ISLANDS.

PALESTINE. A territory comprising part of historic Palestine, administered by Great Britain under a mandate of the League of Nations since Sept. 29, 1923. Capital, Jerusalem.

AREA AND POPULATION. Palestine has an area of about 10,000 square miles. The population rose from 757,182 in 1922 to 1,035,821 at the census of Nov. 18, 1931. This represented an annual increase of 354 per 10,000 inhabitants, the highest on record. During this period the Moslem population, with a birth rate of 53 per 1000, increased by 28 per cent to 759,712. The Jewish population was 174,610, or more than double the 1922 number. The Christians, who numbered 90,607 in 1931, increased by 25 per cent to 91,398. About 29 per cent of the population was engaged in industry, trade, and transport, the remainder engaging in agriculture. Of the Jews, 15 per cent were engaged in agriculture; three-fourths of the Jews lived in towns. The nomadic population numbered 66,553. The population of the chief towns (1931) was: Jerusalem, 90,407; Jaffa, 51,366; Tel-Aviv, 46,116; Haifa, 50,533; Gaza, 17,069; Nablus, 17,171; Hebron, 17,532; Lydda, 11,249. Immigrants in 1932 numbered 6730 (5823 Jews); emigrants, 1555. Net Jewish immigration (1922-30) was 63,066.

EDUCATION. In 1931 there were 308 government schools, with 24,288 pupils (mostly Moslem). Jewish schools (1932) numbered 369, with 34,456 pupils; Christian schools, 156, with 16,099 pupils; private Moslem schools, 137, with 7319 pupils. The Hebrew University on Mount Scopus, Jerusalem, had 171 students.

PRODUCTION. Agriculture is the main support of the population. The yield of the chief crops (1931) was (in metric tons): Wheat, 79,650; barley, 41,200; durra, 16,862; olives, 33,906; lentils, 3758; tobacco, 504; grapes, 3250. Oranges, grapefruit, and other citrus fruits are extensively grown. Livestock in 1932 included 159,600 cattle, 247,700 sheep, 380,600 goats, 7400 buffaloes, 14,100 horses, 5600 mules, 74,200 donkeys, and 32,300 camels. Gypsum, rock salt, cooking salt, carnallite and bromide are the chief minerals found. Wine and soap making and the manufac-

ture of food products, cement, and textiles are the main industries.

COMMERCE. Imports in 1932 were valued at £P7,768,920 (\$37,803,765), compared with £P5,940,000 (\$26,937,900) in 1931; exports of domestic produce amounted to £P2,381,491 (\$11,588,335) in 1932, compared with £P1,572,061 (\$7,129,300) in 1931. The Palestine pound, equivalent to the pound sterling, is here converted into dollars at par. Imports from the United Kingdom in 1932 were valued at £P1,342,031; exports to United Kingdom, £P1,522,073. Imports from the United States (1933) were \$2,730,481 (\$1,672,662 in 1932); exports to the United States, \$193,966 (\$90,697 in 1932). Oranges, laundry soap, watermelons, durra, and wine are the leading export items; leading imports were cotton piece goods, cattle, silk tissues, wheat, timber, and benzine.

FINANCE. Revenues of the government in 1932 amounted to £P3,015,917 and expenditures to £P2,516,394, compared with receipts of £P2,327,096 and expenditures of £P2,378,902 in the previous year. The public debt at the beginning of 1933 totaled £P4,600,000. The revenues include a grant-in-aid from the British government (£P222,909 in 1931).

COMMUNICATIONS. The government railway administration in 1933 operated 607 miles of line (excluding 70 miles on the Ma'an-Mudawara section), which carried 1,235,494 passengers and 989,565 metric tons of freight. Gross earnings were £P554,711 and working expenses £P425,064. There were 1275 miles of highways (540 miles suitable for motor traffic), and air lines providing communication with India, Egypt, and Europe. Vessels entering the ports in foreign trade (1932) numbered 2943, of 2,058,305 gross tons; vessels clearing, 2914, of 2,033,814 gross tons. The new port of Haifa in northern Palestine was completed and formally opened in October, 1933, the work having cost the Palestine government £1,250,000. The British branch of the oil pipeline from Kirkuk, Iraq, to Haifa, also was practically completed at the end of 1933, and the port was beginning to rival Beirut, Syria, as the trading centre for the Arabian and Syrian hinterland. Telephone service between Palestine and Great Britain was inaugurated early in 1933.

GOVERNMENT. The Constitution of Sept. 1, 1922, vested executive authority in a High Commissioner and Commander-in-Chief and an executive council. It provided also for a legislative council including representatives of the various religious communities, but due to lack of coöperation among religious groups this council had not been established. In the meantime its functions were performed by an advisory council appointed by the High Commissioner. The Jewish community enjoyed complete autonomy in their religious, cultural, and communal affairs, which were controlled by a Chief Rabbinate, an elected assembly, and a general council elected by the assembly, which represented the community in its dealings with the government. A Moslem Supreme Council controlled Moslem religious affairs. English, Arabic, and Hebrew are official languages. High Commissioner and Commander-in-Chief in 1933, Lieut.-Gen. Sir Arthur Grenfell Wauchope (appointed Nov. 1, 1931).

HISTORY

The conflict between Jews and Arabs for the control of Palestine flared forth in new riots and bloodshed during 1933. The outbreaks differed

from those of 1929, in which the Arabs launched armed attacks directly upon Jewish communities and individuals. In 1933 the actual fighting was between the British police and the Arabs, but the issue was the Arab demand for the cessation of Jewish immigration into Palestine. The immigration issue had become the crux of the Arab-Jewish struggle, with the British mandatory authorities bearing the brunt of the attacks by Arabs and Jews for failing to grant the mutually irreconcilable demands of each racial group.

A deputation from the Arab Executive petitioned the High Commissioner on February 26 to prohibit the sale of Arab lands to Jews and to further restrict Jewish immigration. Upon his refusal, the Arab Executive on the following day announced that it would extend its policy of non-coöperation with the British authorities to include a boycott on British goods and the refusal to pay taxes. Later the Arab leaders decided to postpone their final decision on non-coöperation. In the meantime the Jews were pressing the High Commissioner to raise the immigration bars to permit an influx of Jews from Germany and other lands where they were being persecuted. The Jews pointed to the economic boom which Palestine was enjoying as justifying the admittance of 25,000 Jewish laborers and capitalists during a six-months period, as compared with the 6730 admitted in 1932 and the 5500 admitted in the period between April and September, 1933. The High Commissioner proved as impervious to the Jewish as he had to the Arab demands.

New light on the immigration issue was shed by the publication in July of two reports submitted to the British government by Lewis French, former Director of Developments in Palestine. The reports dealt with agricultural and land development in Palestine and with the problem of settling landless Arabs on the land. They denied the Jewish claim that large areas of unoccupied land were capable of settlement and development and that the country's agricultural resources were sufficient to support a much larger population. "If land is required for colonists, Arab or Jew, it must be bought with cash or its equivalent from existing occupiers," he reported. Simultaneously with the publication of his reports, the British government announced that it would lend £2,000,000 to the Palestine government for public works and the resettlement of dispossessed Arabs.

The French reports and final returns of the Palestine census spurred the Arab agitation for the restriction of Jewish immigration. Defying a government order against demonstrations of all kinds, the Arab Executive called for anti-immigration demonstrations on October 13 at Jerusalem, Jaffa, Nablus, and other points. They were prevented or broken up by the police. Thereupon the Arab Executive announced a general strike and mass protest at Jaffa October 27. In the resulting clash with the police, 22 persons were killed and 130 wounded. The Arabs, inflamed by the police action at Jaffa, clashed with the police in Haifa, Nablus, Safed, Nazareth, Jerusalem, and other cities. Including the Jaffa casualties, the toll of the rioting was some 30 killed and 200 injured. The British stamped out the agitation by troop and airplane concentrations, the arrest of Arab leaders, censorship of the Arab press, and the declaration of a state of emergency. The general strike, which had paralyzed business throughout most of the country, was called off by the Arab

Executive on November 4 and the demonstrations ended.

The immigration issue remained unsolved, however. On November 13 a delegation of Arab mayors presented their grievances to the High Commissioner. They charged that Jewish immigrants in excess of the quota were entering the country in large numbers and urged the early establishment of representative self-government, which would give the Arab majority control of the government. The High Commissioner met the Arab demands in part by taking stringent measures to prevent the illegal entry and settlement of Jews (for the actual measures, see JEWS). The application of these measures led to anti-government demonstrations on December 9 by Jews in Tel-Aviv, in which 16 British and Jewish policemen and three civilians were injured. Armed police from Jaffa were required to disperse the mobs. Meanwhile several members of the Arab Executive were given short jail terms for their part in the October 13 riots in Jerusalem. Trial of the ringleaders in the Jaffa demonstration of October 27 was postponed to 1934.

On November 23 the British Colonial Secretary announced in the House of Commons that the government would establish in the near future the long-projected legislative council in Palestine. Dr. Chaim Orlosorov, prominent Labor member of the Jewish Agency Executive, was murdered in Tel-Aviv on June 16, 1933. His death, attributed by many Laborites to the Zionist Revisionist party, revived the bitter feud between these two factions and was the cause of dispute at the World Zionist Congress at Prague, Czechoslovakia, in August. See JEWS.

PALMER, GEORGE HERBERT. An American scholar and author, died in Cambridge, Mass., May 7, 1933. He was born in Boston, Mass., Mar. 19, 1842, attended the Phillips Academy at Andover, and in 1864 was graduated from Harvard University. After study at the University of Tübingen and at the Andover Theological Seminary he returned to Harvard in 1870 as tutor in Greek, becoming two years later curator of the Gray collection of engravings and also instructor in philosophy. Promoted to assistant professor of philosophy in 1873, he was made full professor ten years later and from 1889 to 1913 held the Alford chair of natural religion, moral philosophy, and civil polity. On his retirement as professor emeritus in the latter year, he served as overseer until 1919.

In the Harvard philosophy department during Professor Palmer's régime were some of the ablest philosophical thinkers in the United States—William James, Josiah Royce, and George Santayana. He himself, however, was better known for his ability in awakening his students to an appreciation of philosophy as an interpretation of the intellectual and spiritual forces of life. In 1887 he married, as his second wife, Alice Freeman, president of Wellesley College. Her biography, *The Life of Alice Freeman Palmer*, which he published in 1908, six years after her death, is one of the most beautiful tributes paid a woman by her husband.

Among Professor Palmer's other publications are: *The New Education* (1887); *The Glory of the Imperfect* (1898); *The Field of Ethics* (1901); *The Nature of Goodness* (1904); *The Life and Works of George Herbert* (3 vols., 1905); *The Teacher* (1909); *The Problem of Freedom* (1911); *Intimations of Immortality in the Son-*

nets of Shakespeare (1912); *Altruism: Its Nature and Varieties* (1919); and *The Autobiography of a Philosopher* (1930). To *Contemporary Idealism in America* (1932), he contributed the chapter on "Josiah Royce." His prose translation of Homer's *Odyssey* (1884) is notable for the beauty of its diction and for its faithfulness to the original.

PANAMA. A republic of Central America, bisected by the Panama Canal Zone (q.v.). Capital, Panamá.

AREA AND POPULATION. Excluding the Canal Zone, Panama has an area of 28,575 square miles. The population at the 1930 census was 467,459 (446,098 in 1920). The natives are for the most part a mixture of Spanish, Indian, and Negro blood. The 1930 population residing in towns of more than 1000 was 153,248. The chief cities, were: Panamá, 74,409; Colón, 29,765.

EDUCATION. The school enrollment in 1929 was 65,459 (65 per cent of children of school age). Elementary public schools in 1932 numbered 559, with 55,424 pupils; there was 1 secondary school with 898 pupils. The university (Instituto Nacional) had 626 students in 1930. Private educational institutions numbered 71.

PRODUCTION. Agriculture, the main industry, is supplemented by cattle raising, pearl fishing, and lumbering. The chief crops are bananas, cacao, coconuts, coffee, sugar, rubber, tobacco, and sarsaparilla. Bananas, the chief export item, are produced mainly on United Fruit plantations. Banana exports in 1932 totaled more than 4,000,000 stems, valued at \$1,728,000 (\$2,941,000 in the peak year of 1929). The forests contain mahogany and other hardwoods, but exports are negligible. There is some manufacturing for the local markets, principally beer and liquors, shoes and tropical clothing, tobacco and furniture. Some gold is mined.

COMMERCE. Panama customarily has a large excess of imports over exports. Imports declined in value from \$19,278,000 in 1929 to \$13,492,000 in 1931 and \$8,853,000 in 1932; exports fell from \$4,144,000 in 1929 to \$2,608,000 in 1931 and \$2,006,000 in 1932. The figures include bullion and specie. The chief exports, by value, in 1932, were: Bananas, \$1,728,000; coconuts, \$103,000; cacao beans, \$85,000. Textile fabrics, iron and steel, chemicals, machinery, wheat flour, milk, and petroleum products were leading imports. About half the imports are reexported to the Canal Zone for consumption or sale to tourists. The United States in 1932 purchased 95.8 per cent of all exports and supplied 61.1 per cent of the general imports (90.7 and 60.5 per cent, respectively, in 1931).

FINANCE. The financial status of Panama was difficult to ascertain, due to incomplete financial reports and a confusing budget system. Government revenues, exclusive of loans, were reported as follows: July 1, 1930 to Feb. 28, 1931, \$5,064,000; Mar. 1, 1931, to Feb. 28, 1932, \$6,012,000; Mar. 1, 1932, to June 30, 1932, \$1,955,000. A corresponding statement of expenditures was understood not to be available. Estimates for the two-year period beginning Jan. 1, 1933, balanced ordinary revenues and expenditures at \$11,849,000. The expenditures included \$3,271,000 (27.6 per cent) budgeted for service of the public debt. The total public debt on Sept. 1, 1933, amounted to \$18,929,159 (external, \$15,544,508; internal, \$3,384,651). In addition, bonds of the National Bank of Panama, outstanding abroad in the amount of \$3,097,500, were guaranteed by the gov-

ernment. The unit of currency is the balboa, par value \$1 United States currency.

COMMUNICATIONS. Including the Canal Zone, Panama had 295 miles of railway lines. The Panama Railroad, connecting Colón on the Atlantic with Panamá on the Pacific, is the chief line (47.61 miles). Highways extended about 680 miles. A section of the Pan American Highway, from Panamá to the Costa Rican border, was under construction. Panamá, Cristobal, and David (Chiriqui Province) are on the Pan American airways system.

GOVERNMENT. The Constitution of Feb. 13, 1904, as amended in 1918 and 1928, vested executive power in a President elected by direct vote for four years and ineligible for reelection. Legislative power rests in a national assembly of 32 members, elected for four years. President in 1933, Dr. Harmodio Arias (assumed office Oct. 1, 1932).

HISTORY

AGREEMENT WITH UNITED STATES. A long step toward the solution of difficulties between Panama and the United States, involving the Panama Canal, was taken as a result of conferences between Presidents Arias and Roosevelt in Washington, Oct. 9-17, 1933. These difficulties had clouded the friendly relations of the two countries ever since the Panamanian Assembly rejected the treaty of 1926, which aimed to eliminate the main sources of controversy. The basic issue was the Panamanian charge that the United States in the Panama Canal Zone was infringing the terms of its lease, obtained in the treaty of 1903. Other points of controversy were (1) the control of radio stations in Panama by the United States; (2) the competition of army commissaries in the Canal Zone with private Panamanian business enterprises; (3) the administration by Panama of the municipality of New Cristobal, populated almost exclusively by Americans, and (4) the care or disposition of large numbers of foreign workmen discharged by the Canal Zone authorities and who then became public charges in Panama.

The suggestion made by President Arias that these problems could best be disposed of by a personal discussion with President Roosevelt was quickly accepted and the Panamanian President was a guest at the White House for the first three days of his stay in Washington. On October 17 the result of the conversations was published in a joint statement, the important parts of which follow:

We are in accord on certain general principles as forming the bases of the relations between Panama and the United States in so far as the Canal Zone is concerned, as follows:

1. Now that the Panama Canal has been constructed, the provisions of the treaty of 1903, between the United States and Panama contemplate the use, occupation and control by the United States of the Canal Zone for the purpose of the maintenance, operation, sanitation, and protection of the Canal.

2. In view of that purpose the Republic of Panama is recognized as entitled, as a sovereign nation, to take advantage of the commercial opportunities inherent in its geographical situation so far as that may be done without prejudice to the maintenance, operation, sanitation, and protection of the Panama Canal by the United States of America, which is earnestly desirous of the prosperity of the Republic of Panama.

3. The United States government would view sympathetically any request which the government of Panama might make for the solution by arbitration of any important question which might arise between the two governments and may appear impracticable of decision by direct negotiations, provided that such question is purely economic in its nature and does not affect the maintenance, operation, sanitation, and protection of the Canal.

With regard to the activities of the United States in the Canal Zone, Panama feels that some of them constitute a competition prejudicial to Panamanian commerce. The

United States has agreed to restrict and regulate certain activities; for example, special vigilance will be exercised to prevent contraband trade in articles purchased from the commissaries; sales of "tourist" goods from the Zone commissaries for resale on ships transiting the canal will be prohibited, sales of other goods to ships from the Canal Zone commissaries will be regulated with the interests of Panamanian merchants in view.

The services of the United States hospitals and dispensaries in the Canal Zone will be limited to officers and employees of the United States government and of the Panama Railroad Company and their families, excepting only in emergency cases; admission to the restaurants, clubhouses, and moving picture houses in the Zone will be similarly restricted.

The United States also intends to request of Congress an appropriation to assist in repatriating some of the aliens who went to the isthmus attracted by the construction work of the canal and have now come to constitute a serious unemployment problem for Panama.

The clause binding lessees or contractors of restaurants to purchase their provisions from or through the commissaries will be abrogated. The United States government furthermore is prepared to make the necessary arrangements in order that Panama may establish at the terminal ports of the canal, houses and guards to collect duties on importations destined to other portions of Panama and to prevent contraband trade.

President Arias' trip to Washington proved to be a popular move, in line with the increasingly nationalistic sentiment evidenced in Panama. On July 8 there had been a demonstration by 5000 Panamanians before the Presidential palace demanding the deportation of unemployed foreign workmen (mostly West Indians) as a relief measure for native workmen. In August, President Arias and members of his Cabinet had joined in signing a consumers' agreement designed to increase the use of local goods; the signers pledged themselves not to purchase foreign foods or manufactures if similar goods made or produced in Panama were obtainable. On the President's return from Washington by airplane he received one of the greatest ovations in Panama's history. En route he made stopovers at Mexico City, San Salvador, and Managua and was everywhere accorded the highest honors. Before he reached Panama the restrictions upon Panama Canal facilities and commissaries agreed to by President Roosevelt were placed in effect by the American Governor of the Canal Zone.

DEFAULT ON LOAN SERVICE. Despite the economies effected by President Arias, his government was unable to meet the interest payment due May 15, 1933, on a \$11,000,000 loan secured from the National City Bank of New York in 1928. The bonds were secured by liens on specified internal revenues and funds and on the \$250,000 annuity from the U. S. government. Income from these sources was said to be more than sufficient to meet the loan service charges. Readjustment of the terms of the loan was announced by the Panamanian government Nov. 23, 1933. The plan called for suspension of sinking-fund payments during 1933, 1934, and 1935 and for payment of about one-third of the stipulated interest during the same years to bondholders who accepted the plan.

A moratorium law reducing the rate of interest on certain private debts, extending the maturity thereof, or guaranteeing the obligation was promulgated by decree on May 25, 1933, and extended to Aug. 31, 1934, by the decree of Dec. 22, 1933.

PANAMA CANAL. Traffic through the Panama Canal during 1933 showed some improvement over that recorded in the previous year and in tonnage and total number of ships was not far below that recorded for the year 1931. Toll-paying commercial traffic for the year—which includes all ocean-going vessels, except those in direct

service of the United States, Panamanian, and Colombian governments, including vessels chartered by those governments, and vessels transiting solely for repairs—numbered 4939 vessels, comprising a net tonnage of 25,251,759 tons, as against 4367 vessels of 22,636,141 net tons in 1932, and 4972 vessels of 25,560,252 net tons in 1931. The tolls paid by this traffic were \$21,422,273 in 1933, \$19,685,671 in 1932, and \$22,530,820 in 1931. The accompanying table shows the 1933 transits and toll collections by months.

PANAMA CANAL TRANSITS AND TOLLS, 1933

Month	Transits	Tolls
January	415	\$1,762,808.56
February	368	1,575,708.35
March	399	1,718,908.41
April	370	1,554,250.14
May	372	1,617,943.65
June	364	1,629,411.28
July	401	1,732,164.93
August	416	1,829,754.49
September	408	1,758,587.41
October	467	2,036,909.16
November	463	2,001,692.77
December	496	2,204,134.64
Total	4,939	\$21,422,273.79

Of the total number of vessels using the canal the largest number was of United States registry with 1993 transits and 9,886,567 tons of cargo; Great Britain was second in number and in cargo, with 1058 transits carrying 4,402,714 tons. Dropping down in number and tonnage followed the order: Norway, 399 vessels carrying 1,789,501 tons; Japan, 226 vessels with 1,342,198 tons; Germany, 314 vessels with 911,153 tons; Sweden, 108 vessels with 591,827 tons; Danzig, 59 vessels with 494,209 tons; Denmark, 124 vessels with 469,239 tons. Other nations contributing to the traffic through the canal were, Belgium, Chile, Colombia, Holland, Finland, France, Greece, Honduras, Italy, Mexico, Panama, Peru, Venezuela, Yugoslavia.

PANAMA CANAL ZONE. A strip of land extending for five miles on each side of the Panama Canal ceded to the United States by Panama in the treaty of Nov. 18, 1903. Area, 552.8 square miles, of which 361.7 square miles are land and 191.1 square miles water. The population in June, 1933, included 31,839 civilians (2879 Americans) and 11,012 members of the United States Army (9706) and Navy (1306), or a total of 42,851, compared with 42,070 on June 30, 1932. Of the civil population in June, 1933, 7346 were employed by the Panama Canal and the Panama Railroad Co.; about 5250 employees lived outside of the Canal Zone. The birth rate per 1000 of population in 1932 was 11.69 in the Canal Zone (32.32 in Panama City and 30.77 in Colon); death rate, 7.30 (15.90 in Panama City and 14.43 in Colon). A Canal Zone Junior College was opened at Balboa on Sept. 26, 1933.

For the fiscal year ended June 30, 1933, net revenues from Canal operations proper were \$10,775,500, compared with \$11,194,800 in 1931-32; they were \$7,449,344 below revenues collected in the peak year of 1928. The combined net revenues accruing from the Canal and its business units totaled \$11,911,209 on a capital investment of \$533,106,009, or a return of 2.23 per cent on the investment. These figures were exclusive of the operations carried on with funds of the Panama Railroad Co., which resulted in a net profit of \$784,432 (\$782,464 in 1931-32). Including canal tolls of \$19,621,159, postal and

civil revenues of \$310,014, and business profits of \$1,135,709, total revenues of the Canal Zone government were \$21,066,861 (\$21,591,108 in 1931-32) and net appropriation expenses (after deduction of Canal earnings repaid to appropriations) were \$9,155,672 (\$9,839,212 in 1931-32).

The status of the Canal Zone is that of a military reservation, under a Governor appointed by the President of the United States. The Canal Administration controls sanitation and quarantine in the cities and harbors of Panamá and Colón, although they remain within the political jurisdiction of Panama. Governor in 1933, Col. Julian L. Schley. See PANAMA CANAL.

PAN AMERICAN CONFERENCE. The Seventh International Conference of American States, which met at Montevideo, Uruguay, from December 3 to 26, 1933, gave new vigor and impetus to the Pan American movement. The conference convened under discouraging circumstances. It had been postponed from December, 1932, due to the unfavorable economic and political situation. These adverse conditions had improved but little by December, 1933. The failure of the World Economic Conference in London during the summer set an unfortunate precedent and the press of the American countries was uniformly pessimistic concerning the prospects of the Montevideo gathering. This pessimism was deepened by President Roosevelt's announcement on the day before the American delegation sailed that unsettled conditions made it inadvisable for the conference to discuss economic problems.

Due largely to the able diplomacy and sincerity of Secretary of State Cordell Hull, head of the United States delegation, the national rivalries, mutual suspicions, and discouragement which pervaded the opening days of the conference were quickly relegated to the background. Manifesting an unexpected spirit of unity and coöperation, the conference set an unusual record of tangible accomplishment in both the political and economic fields. This transformation in the atmosphere of the conference was made possible by Mr. Hull's success in winning the friendship and coöperation of the Argentine Foreign Minister, Señor Saavedra Lamas. The Argentine Foreign Minister, through the instrumentality of the Argentine Anti-War Pact, had been vigorously building a bloc of South American nations opposed to the predominant position of the United States in the western hemisphere (see ARGENTINA under *History*). Secretary Hull not only offered the signature of the United States to the Argentine Anti-War Pact but also urged Señor Saavedra Lamas to take the lead in extending the application of Pan American peace machinery and attempting a settlement of the warfare between Bolivia and Paraguay in the Chaco. The Argentine Foreign Minister accepted this friendly gesture in like spirit, signing on behalf of his country the Kellogg-Briand Pact, which Argentina had previously declined to accept. The conference was attended by ten foreign ministers, one ex-president, and three ministers of finance.

THE CHACO TRUCE. The problem of immediate importance confronting the delegates at Montevideo was the reestablishment of peace in the Chaco. The matter was not on the agenda, but President Terra of Uruguay voiced the sentiment of the delegates when he stated in his opening address that the conference must of necessity face this issue before it could hope to accomplish anything in other fields. The combined influence of the nations represented at Montevideo was brought

to bear upon the belligerents and after two weeks of negotiation both Bolivia and Paraguay agreed to a truce from midnight, December 19, to December 31. The conference delegated to the League of Nations Chaco Commission, which had arrived in Asunción, Paraguay, November 18, the task of formulating a permanent peace settlement during the period of the truce. No agreement was in sight when the conference adjourned and accordingly the belligerents were induced to extend the truce to January 6 to give time for additional negotiations. Before the conference adjourned it adopted several resolutions seeking to promote a settlement of the Chaco dispute. One resolution pledged the Pan American countries to support "whatever formula of settlement might be reached" by the League Chaco Commission. Another approved an Argentine proposal for a conference of the belligerents and the ABCP powers (Argentina, Brazil, Chile, Peru) in Buenos Aires to consider the economic and geographic problems at issue between Bolivia and Paraguay. A final resolution, adopted on motion of Secretary Hull December 26, urged the two nations to "accept juridical processes for the solution of their differences." For the warfare in the Chaco and the peace efforts of other agencies, see *BOLIVIA* under *History*.

PEACE MACHINERY STRENGTHENED. The conference supplemented its efforts to mediate the Chaco dispute by adopting a resolution urging those American governments which had not already done so to ratify or adhere to the various treaties and agreements designed to promote the peaceful development of Pan American relations. These instruments included the Gondra treaty signed at the Santiago conference in 1923, the inter-American conciliation and arbitration conventions signed at Washington in 1929, the Kellogg-Briand Pact of 1928, and the Argentine Anti-War Treaty of 1933. Many delegations complied with the spirit of the resolution by signing immediately those instruments not previously accepted by their respective governments.

INTERVENTION RENOUNCED. Even more important was the action of the conference in adopting a convention which expressly declared that "No State has the right to intervene in the internal or external affairs of another." The intervention resolution, which was aimed chiefly at the United States, had caused dissension at the Sixth Pan American Conference at Havana in 1928, where it had been side-tracked at the insistence of Secretary of State Hughes. The issue was brought up early in the seventh conference by the Cuban and Haitian delegates and with the consent of the United States delegation was debated at length previous to the vote on the resolution. In the course of the debate Secretary Hull made a historic pronouncement pledging his government to a non-intervention policy. He said in part:

Every observing person must by this time thoroughly understand that under the Roosevelt administration the United States government is as much opposed as any other government to interference with the freedom, the sovereignty or other internal affairs or processes of the governments of other nations. . . . I feel safe in undertaking to say that under our support of the general principle of non-intervention as has been suggested, no government need fear any intervention on the part of the United States under the Roosevelt administration. . . .

In voting to accept the non-intervention clause, Secretary Hull stated that the United States would follow its existing policies until the 10 separate articles of the resolution had been authoritatively interpreted and codified. To become

binding on the United States, the resolution required ratification by the Senate.

RESOLUTION ON ECONOMIC POLICY. President Roosevelt's injunction against discussion of economic problems was withdrawn soon after the conference convened, thus paving the way for the adoption of a suggested programme of economic, commercial, and tariff policy, to be pursued by the American governments in their relations with one another and with the world. The resolution, formulated by Secretary Hull and introduced by him on December 12, contained the following points: (1) reduction of high trade barriers through the negotiation of comprehensive, bilateral reciprocity treaties based upon mutual concessions; (2) the elimination of trade restrictions which almost completely exclude international competition; (3) inclusion of the unconditional most-favored-nation clause in all tariff agreements; and (4) creation of an international agency to report on the progress of governments in reducing tariff barriers. The resolution, which was adopted by the conference on December 15, exempted from its scope such temporary economic measures as those placed in effect in the United States to promote economic recovery. Moreover the resolution committed no government to immediate action.

Further steps toward economic and financial coöperation were taken by the conference through the adoption of a resolution providing for the convening of the Third Pan American Financial Conference at Santiago, Chile, and of a Pan American Commercial Conference at Buenos Aires immediately following the Santiago conference.

OTHER ACHIEVEMENTS. In addition to the above measures, the conference at Montevideo adopted a series of other resolutions setting up the goals of Pan American progress in the fields of intellectual coöperation, social endeavor, communications, and transportation. The codification of international law was advanced through the adoption of conventions on the rights and duties of states, on nationality, on political asylum, and on extradition. The conference approved a convention on the nationality of women, embodying the principle that there should be no distinction based on sex as regards nationality in the legislation or practice of the signatory states. This convention recommended that the respective states extend equal civil and political rights to women as soon as possible.

Rowe, "The Seventh International Conference of American States," *Bulletin of the Pan American Union*, March, 1934; Ernest Gruening, "Pan-Americanism Reborn," *Current History*, February, 1934.

PAN AMERICANISM. As a result of the visit of the Argentine President, General Justo, to Brazil on October 10 a non-aggression pact and nine additional treaties of lesser importance were signed. Argentina and Brazil were joined in these accords by four other Latin-American nations—Chile, Mexico, Paraguay, and Uruguay. This anti-war pact condemns wars of aggression and pledges the signatories (three of whom—Argentina, Brazil, and Uruguay—had never signed the Briand-Kellogg Pact) to settle controversies "only through the pacific means established by international law." Formal approval is given to the Stimson doctrine of non-recognition of territorial

changes effected by armed force. In case of violation of the pact by any one of the parties, both consultation and a mild type of sanctions are envisaged. The treaty establishes closer understanding between Argentina and Brazil, the two leading powers of the southern continent, whose naval rivalry was a prominent issue before the Santiago Conference of 1923. Its signature represents another advance for the vigorous policy of the Argentine's Foreign Minister, Dr. Saavedra Lamas, that had previously resulted not only in the consummation of trade treaties with Great Britain, Italy, and Chile, but also in the return of Argentina to the League of Nations on September 25, with its subsequent election to the Council.

This new pact may have no immediate effect on the Chaco "war," but its acceptance by Paraguay, one of the parties to the conflict, places that country on record against wars of aggression and the acquisition of territory by force. Despite Paraguay's declaration of a state of war on May 10, its legal claim to be acting in self-defense is strengthened. The union of the other states with Paraguay in the treaty is believed correspondingly to weaken the diplomatic position of Bolivia.

The Seventh Pan American Conference, originally scheduled to meet at Montevideo in December, 1932, was postponed to convene in December, 1933. The programme and details for this conference were arranged by the Union. See PAN AMERICAN CONFERENCE.

Among the outstanding exhibits at the Century of Progress International Exposition at Chicago was a model of the Columbus Memorial Lighthouse of the Dominican Republic. Pursuant to a resolution of the Fifth Pan American Conference, a Memorial to the Discoverer, in the form of a lighthouse, is to be erected on the coast of the Dominican Republic, near Santo Domingo, the first permanent European settlement in the New World. The last report of the Director General of the Union recorded the selection of the design for the lighthouse submitted by J. L. Gleave, of England, following a world-wide architectural competition. Because of prevailing economic conditions, the Permanent Committee entrusted with this project proposed and the Governing Board concurred in the suggestion that no efforts toward the collection of funds for the actual erection of the Memorial be made until the economic situation has improved. It is believed that the action of the Dominican Republic in erecting a model of the Memorial at the Chicago Exposition will stimulate interest in the project.

Pan American Day, April 14, instituted by the Governing Board of the Union as a commemorative symbol of the sovereignty of the American nations and the voluntary union of all for the common good, was duly observed throughout the Continent. With each succeeding year, Pan American Day is being celebrated on an ever wider and increasing scale, until it is gradually becoming one of the outstanding events in all the countries, members of the Union. Gratifying reports have been received of the exercises held during the past year, particularly in schools, clubs, and in associations interested in Pan American relations. The President of the United States delivered an address at a special session of the Governing Board which was broadcast throughout the Continent and was an outstanding feature in the celebration of the day. As a part of the programme of the celebration the Minister of Venezuela on behalf of his government presented to the Union

a marble bust of Francisco de Miranda. This was made the occasion of a significant ceremony participated in by the Governing Board as well as by representatives of the universities and public schools of Washington and vicinity.

In December, 1932, the First Congress of the Pan American Institute of Geography and History was held at Rio de Janeiro. This Institute created by resolution of the Sixth International Conference of American States has established a seat at Mexico City, where the government of Mexico has provided an attractive and commodious building for it.

In common with the other nations of the world, the prevailing economic situation has engaged the attention of all the nations of the American Continent. As a consequence, and with a view to bringing about a revival of international trade and a resumption of more normal international commercial intercourse, the past year witnessed a series of important conferences and conversations between representatives of the several countries, and the conclusion of a number of important agreements. These discussions culminated in the conversations which took place at Washington during May and June, as a preliminary to the Monetary and Economic Conference which met at London on June 12, 1933.

During the fiscal year the Pan American Union devoted special attention to the development of closer cultural ties between the Republics of America. There were two notable events, the exhibit of oil paintings by Cesareo Bernaldo de Quiros, the eminent Argentine artist, at the National Gallery of Art, Washington, D. C., in January and an exhibit of woodcuts, etchings, aquatints, lithographs, and dry-points by Argentine artists, at the Corcoran Gallery of Art, Washington, D. C. in April, 1933.

During the year the various Divisions of the Union devoted considerable time to giving effect to the resolutions and recommendations adopted by the various technical conferences of a Pan American nature held during the preceding year, as well as to the resolutions of the Fourth Pan American Commercial Conference which assembled under the auspices of the Union in October, 1931. After the Governing Board had approved the final programme of the Montevideo Conference, work was begun on a series of memoranda on the questions included in the programme. These memoranda were included in a manual for the use of delegates.

In its capacity as the permanent organ of the International Conference of American States, the Pan American Union has spared no effort to secure the ratification by the signatory states of the conventions signed at the Sixth International Conference of American States held at Havana in January, 1928, as well as of those signed at the technical conferences held subsequent thereto.

The principal efforts of the Inter-American Commission of Women, during 1933, were devoted to preparations for the Seventh International Conference of American States, which opened in Montevideo on December 3. The Nationality Committee of the Commission, under the chairmanship of Miss Alice Paul, U. S. A., drew up its report showing existing nationality discriminations and recommending a Pan American treaty guaranteeing equal nationality rights for men and women. This report was adopted by the full Commission prior to the Pan American Conference. The Con-

ference adopted the Commission's report unanimously.

A research committee, headed by Miss Doris Stevens, chairman of the Inter-American Commission, analyzed the legal codes of the twenty-one republics forming the Pan American Union, listing in separate volumes the discriminations, based on sex, discovered in the different current laws. This is the first time an analysis had been made from the point of view of comparing the civil and political rights of men and women in detail. Based on these discriminations, the Inter-American Commission drew up a report recommending the adoption by the Pan American Conference of a treaty guaranteeing equal civil and political rights for men and women. The Conference committee declined to recommend to the full Conference the signature of a treaty, but substituted a resolution of recommendation, which the Conference adopted. Four countries, however, Uruguay, Paraguay, Cuba, and Ecuador, signed such a treaty, and the document was duly deposited with the Foreign Minister of Uruguay, open to the adherence of all nations in the world. The signature of both these treaties was generally regarded as an important contribution to the advancement of women's legal status in the field of international law.

PAN AMERICAN UNION, THE. An official international organization, founded in 1890 as the International Bureau of American Republics and maintained by the 21 republics of the Western Hemisphere for the development among them of good understanding, friendly intercourse, commerce, and peace. It is controlled by a governing board, composed of the Secretary of State of the United States and the diplomatic representatives at Washington of the other republics, and is administered by a director general and an assistant director chosen by the board.

The most important activities of the Union during 1933 were the convening in Montevideo, Uruguay, on Dec. 3, 1933, of the Seventh International Conference of American States (see **PAN AMERICAN CONFERENCE**) and the rendering of the award on Jan. 23, 1933, by the international tribunal in the boundary controversy between Guatemala and Honduras (see **GUATEMALA**). The tribunal, which was created by a treaty signed in Washington July 16, 1930, held its sessions at the Union Building, with the Hon. Charles E. Hughes, Chief Justice of the United States, presiding. The other arbitrators were two distinguished Latin American jurists, Dr. Luis Castro Orefia of Costa Rica and Dr. Emilio Bello Codesido of Chile. The final settlement of this century-old dispute brought to a close another chapter in the impressive history of arbitration and conciliation in the settlement of international differences.

The General Claims Commission, to which was entrusted the task of passing upon unsettled claims of citizens of the United States and Panama arising since the independence of Panama (Nov. 3, 1903), completed its work and adjourned at a session held at the Union on June 30, 1933. The members were Elihu Root, Jr., American commissioner; Dr. Horacio F. Alfaro, Panamanian commissioner; and Baron Daniel van Heeckeren of the Netherlands, presiding commissioner. The Permanent Committee of Washington, created by the terms of the Treaty to Avoid or Prevent Conflicts between the American States, signed at the Fifth Pan American Conference at

Santiago, Chile, in 1923, held a number of meetings during the year with a view to offering its good offices and making available its facilities in bringing about a settlement of the controversy that developed between Colombia and Peru over the Leticia incident. See **PERU** under *History*.

During the week of Oct. 30, 1933, the famous archaeological treasures unearthed at Monte Albán, Mexico, were exhibited to 10,000 visitors at the Pan American Union building in Washington, D. C., through the courtesy of the Mexican government. Concerts of Latin American music sponsored by the Pan American Union were given on the esplanade of the building on June 7 and July 5, by the United States Marine and Army Bands, respectively. Secretary of State Cordell Hull was elected Chairman of the Governing Board of the Union on Apr. 5, 1933, to fill the vacancy left by the retirement of Henry L. Stimson. On Nov. 1, 1933, the Board elected Dr. Pedro M. Arcaya, Minister of Venezuela, as Vice Chairman for 1933-34. The Third Pan American Highway Congress, scheduled to meet in 1933 in Chile, was postponed.

The office of the foreign trade adviser of the Union continued to provide a general commercial information service on all phases of Latin American trade. The division of finance supplied current information on developments in public and private inter-American finance and prepared an annual study on Latin American revenues, expenditures, and public debts. The statistical division prepared reports on the trade of the Pan American nations, as well as a general survey of the commerce of all Latin America. The division of agricultural cooperation was active in promoting the exchange of information on subjects embracing almost the entire range of agriculture, forestry, and animal industry throughout the American continent.

During 1933 the Union issued bi-monthly, in Spanish and Portuguese, four special series of bulletins on agriculture, on education, on social welfare, and on finance, industry, and commerce. The library, known as the Columbus Memorial Library, contains the largest special collection of books and periodicals on Latin America in the world. The director general is Leo S. Rowe, Ph.D., LL.D.; the assistant director, Esteban Gil Borges, LL.D. Headquarters are at the Pan American Union Building, Washington, D. C.

PAN-PACIFIC UNION, THE. An organization founded in 1907 for the purpose of bettering relations among Pacific peoples, chiefly through the calling of frequent conferences in all lines of thought and action in the Pacific area. During the last two decades there have been called international and interracial conferences of scientists, educators, journalists, merchants, agriculturists, food conservationists, and fishery men. Practically each one of these groups, once brought together, has formed its own permanent autonomous Pan-Pacific organization and has called and managed its own Pan-Pacific conferences.

The organization has been supported in part by appropriations from the governments of the Pacific—the United States, Canada, Australia, New Zealand, Japan, China, Siam, the Netherlands East Indies, French Indo-China, and Mexico. It is now urged that these governments take over the machinery of the Pan-Pacific Union, financing it as their official mouthpiece, and that the Union's honorary heads, the presidents, premiers, and governors of Pacific lands, gather periodically in

Honolulu for a friendly conference on Pacific affairs.

During 1933 the director of the Union, Alexander Hume Ford, continued his travels in China, Japan, and the Philippines, organizing student and adult Pan-Pacific clubs which would continue to function as open forums for the peoples themselves. On the death of Wallace R. Farrington in October Walter F. Frear, a former governor of Hawaii, was named acting president. The central executive office is in Honolulu, T. H.

PAPER AND PULP. As stated in the *YEAR BOOK* for 1932, the paper trade suffered greatly in that year under the ruinous practice of cut-throat competition. The effect of those conditions carried over into the early months of 1933; hence, though to some extent previously rectified by the industry, the basic provisions of the National Recovery Act were hailed with relief. By the beginning of 1933, according to *Paper Trade Journal*, from whose annual review number the following article is based, prices had advanced somewhat from the ruinous prices of the previous summer. Kraft paper, for example, had risen to about fifty dollars from the losing price of \$40 a ton of a few months earlier. With the establishment of the code of fair competition, coupled with an improved fall demand, the price advanced in October to \$77.50 a ton, closing the year at that price.

The paper machines of the United States produced during the year 8,893,000 tons of paper, an improvement by 11 per cent over the 7,998,000 tons produced in 1932, although only about 63 per cent of the machine capacity, and about 2,250,000 tons below the peak production of 1929.

Newsprint, the first of the products to feel the effects of increased demand, began a market recovery in April. According to the News Print Service Bureau the total North American output for the year was 3,250,579 tons, the greater portion of which, 2,017,000 tons, was produced in Canada, a gain of 5.3 per cent. The United States production was 946,374 tons, a gain of 6.2 per cent; Newfoundland, 270,830 tons, a decline of 0.4 per cent, and Mexican, 16,370 tons, a gain of 29 per cent. The total continental increase over 1932 was 43,188 tons. The adoption of the code of fair competition by manufacturers in the United States was followed by the formation of the Newsprint Export Manufacturers Association of Canada which cooperated with the Association of Newsprint Manufacturers in the United States in effecting a working of the code. But to prevent dumping by Canadian manufacturers, the United States government required the posting of a bond for each carload imported pending the working out of the application of the code.

The total production of book paper in the United States in 1933 was about 1,200,000 tons, or about 70 per cent below capacity and with little improvement in quantity over the previous year. The code ultimately adopted did not receive Presidential approval until November, and though future prospects looked brighter, the general situation remained but slightly improved over the previous year. The coated-paper division shared the general condition, reflecting a great improvement at the end of the year over the practically stagnant conditions in the first few months.

Estimates of wood pulp production during the year placed the United States in leading position with about 16,000,000 long tons dry weight, or about one-fourth of the world's production, with

Canada second, and Sweden third. Canadian exports of pulp amounted to 12,170,186 cwt. as compared with 9,045,857 cwt. in 1932, and of pulpwood to 651,958 cords as compared with 529,019 cords in 1932.

The total value of imports of paper and manufactures into the United States in 1933 amounted to \$77,446,538, of which newsprint represented 88 per cent. Imports in 1932 amounted to \$94,089,418, a similar percentage being represented by newsprint. Imports of paper base stocks totaled \$85,329,100 (\$54,446,020 in 1932). Exports of paper and manufactures from the United States totaled \$14,599,007 as compared with \$15,407,559 in 1932. Exports of paper base stocks totaled \$3,861,967 (\$2,707,277 in 1932).

PAPUA, pā'pō-ā or pā'pū-ā. A territory of the Australian Commonwealth, comprising the southeastern area of the island of New Guinea and all the groups of small islands between 8° to 12° S. and 141° to 155° E. Total area, 90,540 square miles of which 87,786 square miles are on the island of New Guinea. The population (June 30, 1932) consisted of some 275,000 natives and 1128 whites. Port Moresby, the capital, had 2075 inhabitants. For the fiscal year ended June 30, 1933, revenue amounted to £127,043; expenditure, £128,421; imports, £218,301; exports, £248,712; shipping entered and cleared (1931-32) aggregated 335,858 tons. Lieutenant-Governor in 1933, Sir J. H. P. Murray.

PARAGUAY, pār'ā-gwā. An inland republic of South America. Capital, Asunción.

AREA AND POPULATION. The area of Paraguay, including that part of the Chaco Boreal under dispute with Bolivia, was estimated at 176,000 square miles. The population in 1930 was estimated at 852,000, the people being mainly of Spanish or mixed Spanish and Indian blood. There were about 67,500 residents in the Chaco, including some 15,000 Indians in a savage state. The populations of the chief cities in 1926 was: Asunción, 113,684 (228,600 in 1930); Villarrica, 26,000; Concepción, 11,000; Luque, 13,000; Carapeguá, 12,000; Paraguari, 10,000.

EDUCATION. Primary education is free and nominally compulsory. In 1931, there were 1572 public and private elementary schools, with 108,741 pupils; 48 private secondary schools, with 4372 pupils; a high school at Asunción, with 1121 students; and the National University at Asunción, with 349 students.

PRODUCTION. The principal occupations are agriculture, stock raising, and lumbering. The chief crops are yerba maté (native tea), tobacco, cotton, sugar, corn, rice, and beans. Production figures for the 1931-32 season were: Tobacco, 31,177,000 pounds; cotton lint, 7,546,000 pounds; sugar, 15,400,000 pounds. The 1926 census showed 2,973,000 cattle, 45,483 swine, 195,192 sheep, and 209,901 horses. Quebracho extract (exports, 109,357,000 pounds in 1932) and construction lumber are the chief forest products. Mineral deposits remain largely unexploited. The chief manufactured products are packed meat, animal by-products, quebracho extract, beverages, and shoes.

COMMERCE. Paraguayan imports in 1932 were valued at 6,418,000 pesos (\$3,750,000), compared with 10,081,000 pesos (\$6,729,000) in 1931. Exports amounted to 12,873,000 pesos (\$7,523,000), as against 12,857,000 pesos (\$8,563,000) in 1931. Conversions to dollars were made at the average exchange rate of the gold peso. The value of the main export items in 1932 (in United States dol-

lars) was: Quebracho extract, \$1,943,000; meat extract, \$1,810,000; cattle hides, \$686,000; yerba maté, \$660,000; canned meats, \$517,000. The chief imports were cotton cloth, wheat flour, iron and steel, machinery, and mineral oils. Imports in 1932 came mainly from the following countries: Argentina, \$1,454,000; United States, \$481,000; United Kingdom, \$448,000. The principal export markets were: Argentina, \$7,097,000 (including goods in transit); Uruguay and France. Direct imports from and exports to the United States (1933) were valued at \$450,653 and \$261,931, respectively.

FINANCE. For the fiscal year ended Aug. 31, 1930, total government receipts were 275,096,000 paper pesos (ordinary revenue, 268,656,000 pesos) and total expenditures were 286,549,000 paper pesos (ordinary, 279,028,000). For 1930-31, total receipts were 227,468,000 paper pesos (ordinary 227,099,000) and total expenditures 230,364,000 paper pesos (ordinary, 226,778,000 pesos). The public debt on Nov. 30, 1931, was as follows: External, 695,104 pounds sterling and 56,856 Argentine gold pesos; internal, 93,602,224 paper pesos, of which 65,100,729 represented the consolidated debt. The paper peso previous to 1934 had a par value of \$0.0226 United States currency; the average exchange rate in 1932 was \$0.0137.

COMMUNICATIONS. The main artery of commerce is the Paraguay River, which is navigable as far north as Concepción to vessels of 12-foot draft. Asunción, the main river port, is 950 miles from the Atlantic. In 1931 vessels entering the port numbered 3535; their aggregate tonnage was 392,333 tons. Railway lines extended 632 miles in 1931. There are few highways, transport in rural districts being mainly by bullock carts.

GOVERNMENT. The Constitution of 1870 vests executive power in a President, elected for four years, and legislative power in a Congress of two chambers—the Senate, of 20 members, elected for six years (one-third every two years), and the Chamber of Deputies, of 40 members, elected for four years (one-half every two years). President in 1933, Dr. Eusebio Ayala, who assumed office Aug. 15, 1932. For history in 1933, see **BOLIVIA**, **BRAZIL**, and **ARGENTINA** under *History*; **PAN AMERICAN CONFERENCE**; **LEAGUE OF NATIONS**.

PARATUBERCULOSIS. See **VETERINARY MEDICINE**.

PARIS, FRANCE. See **AQUEDUCTS**.

PARK COLLEGE. A nonsectarian institution for the higher education of men and women at Parkville, Mo., founded in 1875 and cooperating with the Presbyterian Church in the United States of America. The enrollment for 1933-34 totaled 448. The faculty numbered 32. The endowment funds amounted to \$1,718,000, from which the income was \$54,000. Tuition and fees amounted to \$96,400 and donations to \$9000; \$19,000 was yielded from other sources. The library contained 26,000 volumes. There was completed construction of a Y. W. C. A. building, the Meetin' House. President, Frederick W. Hawley, D.D., LL.D.

PARKHURST, CHARLES HENRY. An American clergyman and social reformer, died in Atlantic City, N. J., Sept. 8, 1933. He was born at Framingham, Mass., Apr. 17, 1842, was graduated from Amherst College in 1866, and for two years was principal of the Amherst High School. After studying theology at the University of Halle during 1869-70, he taught for a year at the William Seminary in Easthampton, Mass., and in 1872

was ordained to the Presbyterian ministry. He completed his theological training at the University of Leipzig during 1872-73 and on his return to the United States became pastor of the Congregational Church at Lenox, Mass. In 1880 he was called to the Madison Square Presbyterian Church in New York City, where he remained until the merger of that body with the First Presbyterian Church in 1918.

Notably effective as a preacher, even when in his seventies, Dr. Parkhurst had early attracted attention by sermons practical, terse, and fearless. It was one of these delivered in February, 1892, denouncing the corruption of New York City's government under the Tammany political machine, that resulted in the appointment by the State Senate of the committee, headed by Clarence Lexow, which investigated the conditions of vice existing in New York City under police protection. Thanks to Dr. Parkhurst's awakening of civic consciousness, there was insured the election of William L. Strong as mayor of New York in November, 1894, on a fusion ticket of Republican and anti-Tammany Democrats.

During his presidency of the Society for the Prevention of Crime (1891-1908) Dr. Parkhurst continued to further the cause of civic and social righteousness. His death was coincident with another attempt at the overthrow of Tammany and government reform in New York City. (See **NEW YORK: Political and Other Events**). Among his publications were: *The Blind Man's Creed, and Other Sermons* (1883); *The Pattern on the Mount, and Other Sermons* (1885); *The Question of the Hour* (1886); *Three Gates on a Side* (1887); *What Would the World Be Without Religion?* (1888); *The Fellowship of Suffering* (1891); *Our Fight with Tammany* (1895); *The Sunny Side of Christianity* (1901); *A Little Lower than the Angels* (1909); *The Pulpit and the Pew* (Yale Lectures on Preaching, 1913); and *My Forty Years in New York* (1923).

PARKS, NATIONAL. On June 10 President Roosevelt issued an Executive order which among other consolidations, provided that "All functions of administration of public buildings, reservations, national parks, national monuments, and national cemeteries are consolidated in an Office of National Parks, Buildings, and Reservations in the Department of the Interior, at the head of which shall be a Director of National Parks, Buildings, and Reservations," and that this transfer and consolidation of functions "shall include, among others, those of the National Park Service of the Department of the Interior and the National Cemeteries and Parks of the War Department which are located within the continental limits of the United States." This merger of functions took effect partially on August 10 when officials of the National Park Service became officials of the new Office of National Parks, Buildings, and Reservations, and took over supervision of certain national monuments formerly under the supervision of the Department of Agriculture.

As usual, developments during the year were varied and interesting, according to the annual report of the director from which this article is taken. Outstanding among the achievements was the operation of 175 citizens civilian conservation summer camps in national parks, national monuments, national military parks, State parks, and other related areas. Approximately 35,000 young men carried on this valuable emergency conservation work.

Exclusive jurisdiction over the Hot Springs National Park in Arkansas was ceded to the Federal government by the act of the State legislature approved Mar. 25, 1933. Heretofore the Federal government had been ceded jurisdiction over three separate areas in the park. This newest cession gives exclusive jurisdiction over all lands now or hereafter to be included in the park.

Important among road achievements were the completion and dedication of the Wawona Tunnel and the practical completion of the Wawona Highway in Yosemite National Park, completion and dedication of the Going-to-the-Sun Highway in Glacier National Park, completion of the General Grant unit of the Generals' Highway, and improvement of approach roads to the Southwestern monuments. Noteworthy achievements were made in museum expansion and other phases of the educational work were conducted intensively with reduced personnel. The Division of Wild Life Studies was established as a full-time government activity. Master development plans were completed for most of the national parks and national monuments under the supervision of the National Park Service before consolidation of the various Federal functions took place. Winter sports use of the national parks continued to gain in popularity.

The Stephen T. Mather Appreciation, an organization formed to honor the memory of the first Director of the National Park Service, practically completed its work this year. In all, 18 bronze plaques have been presented to the proper authorities for placement in parks and monuments. Fifteen of these have been fittingly installed and dedicated, many of the ceremonies taking place last year on July 4, Mr. Mather's birthday.

MORRISTOWN NATIONAL HISTORICAL PARK. The first national historical park to be established, as such, was created on July 4, 1933, when the deeds to lands in the Morristown (N. J.) area were accepted on behalf of the United States and formally dedicated to public-park use. Morristown fittingly was chosen as the first national historical park, since throughout the dark days of the Revolutionary War it served as the base hospital of the Colonial Army and during the winters of 1776-77 and 1779-80 was the main camp site of the American armies.

NEW NATIONAL MONUMENTS. Five new national monuments were established during the year, as follows:

Black Canyon of the Gunnison National Monument, Colo., consisting of 11,157.76 acres; established Mar. 2, 1933. This monument takes in 10 miles of the most scenic section of the Black Canyon of the Gunnison River.

Cedar Breaks National Monument, Utah, containing approximately 5,790.05 acres, established Aug. 22, 1933. This area will come under the jurisdiction of the superintendent of Bryce Canyon and Zion National Parks, and with them and the Grand Canyon will tell the story of erosion in the area.

Death Valley National Monument, Calif., containing 1,609,800 acres; established Feb. 11, 1933. In Death Valley, the outstanding desert in the United States and made famous by the early pioneers and prospectors and later by "Death Valley" Scotty, is the lowest point in the United States.

Grand Canyon National Monument, Ariz., consisting of 273,145 acres, and immediately west of and adjacent to the Grand Canyon National Park; established Dec. 22, 1932.

White Sands National Monument, N. Mex., containing an area of 142,987 acres; established Jan. 18, 1933. With its white sand dunes of almost pure gypsum, it is of great interest from a scientific and geologic standpoint.

ADDITIONS TO EXISTING PARKS. During the past year consideration was given to the problem of

adjusting boundaries of existing parks and monuments, to simplify administration by providing natural boundaries along topographic lines, and in some cases to include areas of scenic or scientific importance. These adjustments included:

*Acadia National Park, Me.—*The total area of this park was increased to 12,812.11 acres by the donation of 452.79 acres to the Government. Credit is due John D. Rockefeller, Jr. and Superintendent Dorr of the park for this donation.

*Carlsbad Caverns National Park, N. Mex.—*An area of 9,239.94 acres was added to this park by Presidential proclamation dated Feb. 21, 1933, for administrative and development purposes. The addition of this land makes possible the improvement of the road up Walnut Canyon from the main highway to the caverns' entrance. The total area for the park is now 9,959.16 acres.

*Hot Springs National Park, Ariz.—*Through a re-survey of its old boundaries, 18.79 acres were added to this park, bringing its total area to 949.79 acres.

*Yellowstone National Park, Wyo.—*By Presidential proclamation dated Oct. 20, 1932, 7600 acres were added on the north boundary. The new area is an important winter feeding ground for the Yellowstone elk.

*Petrified Forest National Monument, Ariz.—*The addition of 53,309 acres in the famous Painted Desert, including the Black Petrified Forest and a parkway between the Petrified Forest and the Painted Desert, more than doubled its area, which now has a total of 90,302.87 acres. The new parkway serves a double purpose in that it gives direct access to the Petrified Forest from Highway U S 86, the main transcontinental highway through the State of Arizona. Enlargement of the forest was the result of exchange agreements reached with the Santa Fe Railroad and private individuals owning lands in the newly added areas.

*Grand Teton National Park.—*During the year it was proposed to add to Grand Teton Park a portion of the northern part of the Jackson Hole including more than 30,000 acres of private lands acquired by John D. Rockefeller, Jr., to be granted to the United States, over 40,000 acres of unappropriated public domain, and a tract of national-forest lands including the northern third of the Teton Range, Jackson Lake, and the road to Yellowstone. Misunderstanding of this project continued to the end of the year and the grant was not yet accepted.

WINTER USE. Use of the national parks and monuments during the winter was marked by an increased interest in all forms of winter sports, but notably in skiing. Sixteen of the national parks were open all year, with varying types of accommodations, ranging from hotel and lodge service to camp grounds for travelers carrying their own equipment. These included the Yosemite National Park, Mt. Rainier, Crater Lake, and Rocky Mountain.

EMERGENCY CONSERVATION WORK. As soon as the emergency conservation programme received presidential approval on March 31, 70 emergency conservation camps were established in national parks and monuments, including the military areas, and 105 on State park and allied lands, making a total of 175 camps thus supervised. The personnel of these camps included 35,000 enrolled men and approximately 2300 men in supervisory and advisory capacities.

All work within the areas under the jurisdiction of the National Park Service was carefully planned by experienced landscape architects, park engineers, and foresters, and in the historical and military parks historical technicians were employed to insure the careful preservation and interpretation of the historic values. The establishment of emergency conservation camps within these areas, particularly in the national parks, permitted the accomplishment of work that had been needed greatly for years, but which was impossible and would doubtless have continued impossible of accomplishment under the ordinary appropriations available.

Especially the fire hazard was reduced and the appearance of forest stands greatly improved by clean-up work along many miles of park high-

ways; many acres of unsightly burns were cleared; miles of fire trails and truck trails were constructed for the protection of the park forests and excellent work accomplished in insect control and blister-rust control and in other lines of forest protection; improvements were made in the construction and development of telephone lines, fire lookouts, and guard cabins; and landscaping and erosion control was undertaken.

PATHOLOGY. See BOTANY.

PEACE. When the Oxford Union startled England by voting not to bear arms "for King or country" echoes were soon heard in United States universities. A nation-wide poll on arms-bearing was undertaken by the Student Federation of America, the Brown University *Daily Herald*, which had editorially denounced war, and the Intercollegiate Disarmament Council. The vote showed that in 27 States, at 70 colleges, 22,627 students voted as follows: for downright pacifism, 8938 or 39 per cent; for bearing arms only in case of invasion, 7342 or 33 per cent; for bearing arms in any U. S. war, 6347 or 28 per cent. Most wholeheartedly pacifist were 13 women's colleges (49 per cent against, 23 per cent semi, 28 per cent for) and ten State colleges (42 per cent against, 37 per cent semi, 21 per cent for). Least pacific were 23 universities (37 per cent against, 33 per cent semi, 30 per cent for).

Brown University's attitude led to an investigation by the Rhode Island Legislature. Voting in the poll was forbidden at the University of Nebraska, Hartwick College (Oneonta, N. Y.) and the College of the City of New York.

Judge Joseph N. Ulman of the Superior Court of Baltimore in a formal opinion held that the University of Maryland should reinstate and exempt from drill a Methodist freshman suspended for refusal of military training on conscientious grounds. Ennis H. Coale, son of a Maryland farmer, a member of a rural Methodist church, had been denied exemption first by the college authorities and then by the Board of Regents and was suspended until he would attend R.O.T.C. drill. Supported by his family and his pastor, young Coale appealed to the courts. In a four-day hearing, the University attempted to prove that the training was not military but "citizenship"; that Methodists were not entitled to the treatment granted members of the Society of Friends; that the boy had been guilty of "insubordination" in refusing to go to military classes; and that the compulsory feature of drill was a legitimate college requirement, imposing no undue restraint upon any student. On all points the court ruled against the college authorities. The University appealed the case.

In Ohio, John P. Klassen, a Bluffton College professor, was admitted to citizenship despite the fact that he qualified his oath of allegiance to the United States by a declaration that he could not, in view of his religious convictions, bear arms. This case is likely to precipitate fresh litigation before the Supreme Court. In this instance, the presiding judge said:

The Constitution provides for religious liberty; then we make rules that all citizens must bear arms. In a case like this, the rule is contrary to the Constitution's guarantee of religious freedom. In all our past wars we have allowed our conscientious objectors to serve in the Red Cross or some other body, which does not carry arms, and probably will do so in the future. So why impose future obligations when we don't intend to enforce them?

The Federal Council of Churches, at its Quadrennial Meeting in Indianapolis, in December,

1933, reaffirmed its position with respect to the rights of conscience. The Council said:

God alone is Lord of the conscience. We hold, therefore, that citizenship should not be conditioned upon the willingness to bear arms, contrary to conscience, or to take part as a war combatant, in contradiction to moral convictions. We believe that to base citizenship upon such a test is not only unjust to the individual, but contrary to public welfare and in conflict with the ideals of a nation into whose very structure the principle of political and religious liberty has been built. Our country needs citizens who unwaveringly follow the dictates of conscience, making allegiance to God the supreme guide to life and conduct. Since 62 nations have, in the Pact of Paris, renounced war and pledged themselves to seek only the methods of peace in the settlement of their controversies, applicants for citizenship should not be required to make pledges that conflict with the spirit and intent of this Pact. We recommend such changes in the present laws of the land that citizenship shall not be conditioned upon the willingness to bear arms. Civilian educational institutions should not make military instruction compulsory.

The offer of World Peaceways to exhibit "War the Super-Racket," a one-ton book, at the World's Fair was refused by the Chicago World's Fair on the ground that it was controversial. The giant volume sponsored by World Peaceways was seven feet high and five feet wide, and was filled with signatures to a peace pledge. Loaded on a truck, it was exhibited on a tour through 14 cities.

The National Peace Congress held at Oxford, England, from July 7 to 10, 1933, was the 23rd in a series which began in 1906. Nearly 500 delegates and individual members assembled, drawn from about 120 national local organizations.

The Seventh Annual Conference of the Roman Catholic Association for International Peace was held in Washington, D. C., April 17-18. At its annual conference held at Saffron Walden, England, from August 1 to 8, the Fellowship of Reconciliation faced the challenge of the world situation to Christian people to work out a more righteous as well as a more efficient social order. It was recognized that the chief menace to international peace lies in the "push and grab" spirit which is also the cause of so much social and economic failure.

Arthur Henderson, president of the Disarmament Conference, had conferred on him the Wateler Peace Prize of 1933, for "valuable services in furthering disarmament and promoting the peace of the world." Mr. Henderson was chosen as recipient of the prize by the Carnegie Foundation at The Hague.

The Federal Council of Churches presented a programme for world justice and peace. It was laid before Secretary of State Hull on Apr. 17, 1933, by a delegation of churchmen headed by (Methodist) Bishop William F. McDowell, of Washington. The Federal Council's policies, as explained by Bishop McDowell, were put forward as concrete means of making the Christian interest in world understanding and goodwill effective in the relations of nations. Bishop McDowell, on behalf of the delegation, expressed deep appreciation of the international vision being shown by President Roosevelt and Secretary of State Hull in their handling of pressing national and world problems. The Council's representatives placed in Secretary Hull's hands a copy of the "Statement on Coöperation in International Problems," which had been adopted by the Council's Executive Committee on March 24, as follows:

The Executive Committee of the Federal Council of the Churches of Christ in America believes that the well-being of the United States intimately depends on the well-being of the world as a whole and that this in turn

depends on the unqualified success of the Disarmament Conference in reducing arms and in establishing right conditions for enduring peace. In such an outcome the churches, committed to the gospel of brotherhood and peace, are supremely interested. We accordingly express our earnest hope that our government will authorize its delegation to the Conference vigorously to support large and courageous plans looking toward a drastic reduction of armaments.

The extraordinary menace of aerial warfare to civilian populations creates mental and moral reactions that are peculiarly inimical to right and friendly international relations and to all spiritual values. We therefore believe that the complete abolition of all naval and military aircraft, except for police purposes, is an essential part of any effective disarmament programme. We earnestly hope that our government will cordially cooperate with the nations in such a programme. In order to make this possible we urge cooperation by the United States in perfecting plans for the international supervision of civilian aviation, with a view to preventing the misuse of such aviation for military purposes.

We pledge our hearty support to our government in assumption of its full part in the new system of collective responsibility for world justice, security, and peace. We hold that every international issue should be solved without resort to the sword and that every controversy, whatever its origin or nature, should be submitted for impartial consideration and settlement. In the maintenance of this collective system the United States should cooperate fully. We therefore urge early membership of our country in the Permanent Court of International Justice, official commitment to the obligation of international conference whenever the menace of war may threaten, and the adoption of some plan for continuous, full, active cooperation with the League of Nations.

We believe that the forthcoming World Economic Conference is of crucial importance to the well-being of our own and of other nations and respectfully urge the imperative need of devising such measures through international cooperation as will restore the world's trade and industry.

The Christian principle that we are all "members of one another" and should "bear one another's burdens" should, we believe, be translated into reality in our international life. In keeping with this principle we believe that the economic, moral, and spiritual interests of our people require prompt and favorable response to the requests of foreign nations for reconsideration of the problems arising out of intergovernmental war-debts.

We deeply appreciate the indications already given by President Roosevelt that such considerations as these weigh heavily in his thinking and pledge him that we will exert our best efforts to secure expression of the widespread convictions supporting these objectives.

Turkey and Greece signed an amity treaty at Angora on September 16. This was a part of the plans of Kemal Pasha, the first president of the Republic of Turkey, to stabilize the Balkan situation. The treaty runs for a period of ten years and was believed to be a prelude to a much desired Balkan Union.

Seven states that border on the Soviet Union signed in July a unique pact against aggression. In 1928 nearly all nations signed the Briand-Kellogg Pact "renouncing war as an instrument of national policy," but that defined nothing, least of all aggression, the primary act of war. For the first time in history aggression was defined in a binding treaty which Russia signed along with Poland, Rumania, Turkey, Persia, Afghanistan, Estonia, and Latvia. "There shall be recognized as an aggressor," declared this pact, "that state which shall be the first to have committed one of the following actions:

First—a declaration of war on another state.

Second—invasion by armed forces of the territory of another state even without a declaration of war.

Third—attack by its land, sea, or air forces, even without declaration of war upon the territory, on the vessels or flying machines of another state.

Fourth—a naval blockade of coasts or ports of another state.

Fifth—support accorded armed bands which are organized on its territory and which shall have invaded the territory of another state; or refusal, in spite of the demand of the invaded state, to take on its own territory all steps in its power to deprive the bandits aforesaid of all aid or protection.

The Four Power Pact, signed at Rome on July 15, was considered to be an international paper of the first rank. It was due primarily to the initiative of Signor Mussolini, in whose office at the Palazzo Venezia it was signed by the Duce, and by the Ambassadors of France, of England, and of Germany. This Pact, in the judgment of peace men, resulted in a deeper confidence that peace lies before Europe for at least a period of ten years. See ITALY under *History*.

The International Peace Bureau, with headquarters in Geneva, issued an appeal to the public opinion of the world concerning chemical warfare. The appeal, while disavowing any desire to attempt the "humanization" of war, recalls that there has been a large measure of agreement in the Disarmament Conference in condemnation of the use of poisonous gases and urges citizens of every country to bring the greatest possible weight of public influence to bear on their respective governments with a view to securing a declaration from the Conference on the illegality of all preparation for or use of chemical warfare.

The 105th Annual Meeting of the Board of Directors of the American Peace Society was held at the headquarters of the Society, 734 Jackson Place, Washington, D. C., May 26, 1933, President John J. Esch presiding.

Dr. Nicholas Murray Butler, President of the Carnegie Endowment for International Peace and of Columbia University, broadcast over Columbia Network an appeal to the United States to join in the movement to end the present economic war which is laying waste the world's trade. Dr. Butler is chairman of the National Advisory Council of the League of Nations Association and his address was a feature of the dinner programme at the three-day convention which the League of Nations Association was holding in St. Louis. At this convention the 10th anniversary of the League of Nations Association was celebrated.

The fifth Biennial Conference of the World Federation of Education Associations was held in Dublin, Ireland, from July 29 to August 4. Previous conferences had been held in Edinburgh, 1925; Toronto, 1927; Geneva, 1929; Denver, Colo., 1931. The number of delegates registered was a few hundred in excess of a thousand. In all, 27 countries were represented. The Congress recommended that the educational material gathered together by the Herman-Jordan Committees to be used for the purpose of furthering international understanding and goodwill, should be printed.

PEEK, FRANK WILLIAM. An American electrical engineer, died at Port Daniels, Que., Canada, July 26, 1933. He was born at Mokelumne Hill, Calaveras Co., Calif., Aug. 20, 1881, and six years after his graduation from Stanford University in 1905 received the M.E.E. degree from Union College. Entering the employ of the General Electric Co. at Schenectady, N. Y., in 1905, he was advanced to consulting and research engineer five years later, working with Charles P. Steinmetz. After his transfer to the Pittsfield (Mass.) plant in 1916 he served as consulting engineer in charge of the company's high voltage experimental laboratory, and from 1927 to 1931 was engineer in charge of the general transformer engineering department. There, after Steinmetz's death in 1923, he continued his experiments in the generation of artificial lightning, being credited with the production of as many as 10,000,000 volts. In addition he investigated the various problems connected with high-voltage transmission and formu-

lated the laws of corona, the luminous discharge from a high-voltage conductor produced at the electrodes. At the time of his death he was chief engineer at the Pittsfield plant of the General Electric Co.

Besides being a director and fellow of the American Institute of Electrical Engineers, Mr. Peek represented that society on the National Research Council. The American Society of Civil Engineers awarded him the Thomas Fitch Rowland prize in 1924, and two years later he received the Levy gold medal from the Franklin Institute of Philadelphia in recognition of the paper he read the previous year on "High-Voltage Phenomena." He wrote *Dielectric Phenomena in High Voltage Engineering* (1915, 1929; in French, 1924).

PENANG. See STRAITS SETTLEMENTS.

PENNSYLVANIA. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 9,631,350, as against 8,720,017 in 1920. Philadelphia had (1930) 1,850,961 inhabitants; Pittsburgh, 669,817; Scranton, 143,433; Reading, 111,171; Harrisburg, the capital, 80,339.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame) .	1933	2,424,000	3,107,000*	\$32,624,000
	1932	2,425,000	2,605,000*	24,748,000
Corn	1933	1,280,000	50,560,000	26,291,000
	1932	1,255,000	46,435,000	19,038,000
Potatoes ...	1933	189,000	21,357,000	19,221,000
	1932	195,000	21,450,000	9,652,000
Wheat	1933	878,000	15,783,000	12,784,000
	1932	898,000	13,465,000	7,006,000
Oats	1933	925,000	20,812,000	8,117,000
	1932	944,000	24,072,000	6,740,000
Apples	1933	7,293,000	6,199,000
	1932	9,537,000	5,245,000
Tobacco ...	1933	25,300	26,563,000*	1,455,000
	1932	42,100	46,316,000*	2,401,000
Buckwheat .	1933	141,000	2,679,000	1,818,000
	1932	138,000	2,070,000	807,000
Rye	1933	119,000	1,606,000	1,076,000
	1932	124,000	1,550,000	682,000

* Tons. ♢ Pounds.

MINERAL PRODUCTION. The production of anthracite, 49,900,000 net tons for 1932, fell 16.3 per cent short of that for 1931, which totaled 59,646,000. The output of bituminous coal was more severely reduced, to 75,772,000 net tons (1932), from 97,658,698 (1931), or by some 22 per cent. The production of coke, chiefly in by-product ovens but still to a minor extent in beehive ovens, attained 4,037,810 net tons, in value \$16,131,015. There were produced, in 1932, 2,103,170 gross tons of pig iron, as against 5,036,305 in 1931. The production of petroleum rose to 12,403,000 barrels (1932), from 11,892,000 (1931). The output of natural gas declined to 63,286,242 M cu. ft. (1932), from 74,797,000 M for 1931. Producers' sales of lime decreased to 374,000 short tons (1932) at an average value of \$6.64 a ton, from 497,268 tons (1931), at \$6.79.

EDUCATION. All public schools opened in September under legislation permitting the reduction of teaching salaries for a period of two years in order to meet the difficulties caused by reduced revenues for school purposes. While some of the features of the schools' service had been restricted, few functions, according to the *Journal* of the National Education Association, were entirely eliminated. The commission organized in

1931 to study the State's problems in the field of public education continued its work in 1933.

CHARITIES AND CORRECTIONS. A department of Welfare, created by statute in 1921, exercised in 1933 the central supervisory functions over the State's institutions for the care and custody of persons. It had as its head a Secretary of Welfare (Mrs. I. Albert Liveright), holding office by appointment for four years. The State institutions of care and custody, with their populations of May 31, 1933, were: Eastern State Penitentiary, Philadelphia and Graterford, 3133; Western State Penitentiary, Rockview, 2135; Pennsylvania Industrial School, Huntington, 933; State Industrial Home for Women, Muncy, 184; Pennsylvania Training School, Morgantown, 717; eight State hospitals for the mentally afflicted, situated at Allentown (1518 inmates), Danville (1812), Farview (675), Harrisburg (1732), Norristown (3168), Torrance (1360), Warren (1932), and Wernersville (1292); for the feeble-minded and epileptics, State schools at Pennhurst (1661), and Polk (2808), a State Village at Laurelton (668), and a State Colony for Epileptics at Selingsgrove (378); ten medical and surgical hospitals, chiefly to serve the special needs in the mining districts, situated at Ashland (146), Blossburg (60), Coaldale (90), Connellsville (78), Hazelton (141), Locust Mountain (62), Nanticoke (108), Philipsburg (81), Scranton (212), and Shamokin (91).

LEGISLATION. A regular session of the Legislature convened on January 3 and adjourned on May 6. It included in appropriations for the ensuing year \$45,000,000 for the relief of the needy unemployed and made extensive reductions in public salaries, both under the State government and under the governing bodies of localities. In view of the need to provide money for the State's heavy prospective disbursements for poor-relief several proposals to add to revenue were adopted. A tax on beer by the barrel (see below) was to bring in \$10,000,000 a year, and the Einstein act, designed to render banks liable for the payment of a tax of 4 mills to the dollar on money at interest, was to furnish \$8,000,000. A proposal to raise \$25,000,000 by issue of State bonds was submitted to the voters for their approval on November 7. Economies effected in State expenditure were to reduce yearly disbursements, apart from those for relief, by \$3,000,000. During the session, owing to delay in adopting a full programme to cover the future needs for relief of the needy, it was necessary on April 13 to pass an emergency appropriation of \$5,000,000 to cover support for the needy until June 30.

In the midst of the banking collapse of March an act was passed to enable banks in the State's system to limit withdrawals in emergency, while continuing operation and receiving new deposits that were to be kept segregated and wholly liquid. Additional measures of regulation were enacted to apply to banks and to building-loan associations. The Legislature rejected Governor Pinchot's proposals for amending the code of regulation of public utilities.

To express the State's will on the proposed repeal of the Federal Eighteenth Amendment, a State convention was created, to be composed of 15 delegates at large, who were to be elected by popular vote on November 7. Beer of the alcoholic strength of 3.2 per cent was legalized with provision for a tax of \$1.24 a barrel, licenses for manufacturers, wholesalers, and retailers, pro-

hibition of bars, permission to sell for spot consumption at soda-water stands, and local option as to the permission of retailing. The playing of games of baseball and football on Sundays was made lawful in districts in which voters should declare for it at a later regular election. The mountain laurel was made the State flower. An act was passed to compel the financial responsibility of motorists for damage they might do. Bakeries were placed under a system of licensing and sanitary inspection. The accounts of milk dealers were made subject to investigation by the State secretary of agriculture.

A special session convened on November 13 to create a system of control over traffic in alcoholic drink. A chain of State shops was created and endowed with a monopoly of sales of alcoholic beverages in the unbroken package; licensed hotels, restaurants and clubs were permitted to serve such beverages. A State board of liquor control was to operate the retail shops and issue the licenses. The session also ratified the proposed Federal constitutional amendment as to child labor.

POLITICAL AND OTHER EVENTS. During the banking panic many of the State banks, early in March, restricted their depositors' withdrawals in accordance with an emergency measure of the Legislature. This expedient did not suffice, and the outgo of money from banks was stopped by the declaration on March 4 of a series of legal holidays. The greater part of the banks, State and National, reopened promptly at the end of the period of the Federal suspension of banking and were meeting demands for withdrawal in full by March 15. In Pittsburgh it was necessary to create the Pitt National Bank to take over the sounder part of the assets of the Diamond National and the Monongahela National banks and thus to render available about half of the money of some of these institutions' 14,000 depositors.

A proclamation of Governor Pinchot on March 23 called on creditors not to foreclose mortgages where the debtor was genuinely unable to pay and demanded that courts discourage real-estate executions. Disregarding the State constitution the Interstate Commerce Commission ruled on January 12 that railroads must apply in the State the traffic rates accordant with its rates for interstate traffic, without reference to the State's own prescribed rates within its borders. An emergency board of public works was created in July, to aid in planning and starting projects with a view to reducing unemployment. United States Senator John J. Davis, retired on the charge of having conducted a lottery among members of the Loyal Order of Moose, was acquitted in October.

A strike beginning among the workers of the H. C. Frick Coke Company's collieries late in July spread among soft-coal miners until some 50,000 joined it. It was occasioned largely by discontent with the provisions made for the soft-coal workers in the preparation of a Federal code, under the National recovery act, to govern the soft-coal industry; the miners' leaders were insistent that such a code provide fully for recognition of the union. Rioting rendered it necessary for Governor Pinchot to send National Guard forces into Fayette County on July 28. The Governor arranged for 2000 members of the striking union to cooperate with the troops to prevent disorder. The strikers agreed to resume work on August 9, on the understanding that

they would be fully heard by an adjustment board. The issue was composed by the adoption of a code acceptable to the labor leaders on September 18.

A great number of the miners, however, had failed to return to work; these were particularly the group working for so-called captive mines, operated in connection with the steel industry of the Pittsburgh area. Dissatisfied with exceptions made by the National Recovery Administration with regard to such mines, their workers rejected pleas of their organization leaders to go back to work at the beginning of October.

At the election of November 7 the voters, by a majority of some 4 to 1, chose delegates favorable to the repeal of the Federal Eighteenth Amendment, who met in State convention on December 5 and declared the State's adoption of repeal by way of the superseding amendment proposed by Congress. A proposed bond issue of \$50,000,000 for means to pay a State bonus to war veterans was approved by popular vote but the payment was subject to further needed legislation.

In the local elections of November 7 opponents of the Vane Republican organization were elected in Philadelphia to the offices of city controller and city treasurer, by a combination of Democrats and of independent Republicans having the support of Governor Pinchot. Philadelphia voted to permit Sunday sports. In Pittsburgh William N. McNair, Democrat, was elected mayor. Leaders of the striking employees of the "captive" soft-coal mines (see above) reached an understanding with President Roosevelt on November 3 that the strikers, then said to number 40,000, should return to work with assurance of Federal action to protect them in the event of collective bargaining with their employers.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Gifford Pinchot; Lieutenant-Governor, Edward C. Shannon; Secretary of the Commonwealth, Richard J. Beamish; Treasurer, Edward Martin (until May 1), C. A. Waters (from May 1); Auditor, C. A. Waters (to May 1), Frank E. Baldwin (from May 1); Attorney General, William A. Schnader; Superintendent of Public Instruction, James N. Rule.

Judiciary. Supreme Court: Chief Justice, Robert S. Frazer; Judges, Alexander Simpson, John W. Kephart, William I. Schaffer, George W. Maxey, James B. Drew, William B. Linn.

PENNSYLVANIA, UNIVERSITY OF. A non-sectarian institution of higher education in Philadelphia, founded in 1740. It is composed of the college of arts and sciences, the college of liberal arts for women; the Towne Scientific School (engineering and chemistry), the Moore School of Electrical Engineering, the Wharton School of Finance and Commerce, the school of fine arts (architecture, fine arts, music), the school of education, the graduate school, and the professional schools of medicine, graduate medicine, law, dentistry, veterinary medicine. The 1933 autumn enrollment was 11,805, including all schools and departments. Of those enrolled, 7422 were candidates for degrees; 2189 were candidates for certificates; and 2194 were partial students and auditors. The enrollment for the 1933 summer session was 1466. The faculty numbered 1273. The productive funds amounted to \$18,698,075. The income for the year from all sources, exclusive of hospitals and museums, was \$5,195,-

525. The library contained 797,126 bound volumes and 95,300 pamphlets. President, Thomas S. Gates, Ph.B., LL.B., LL.D. Provost, Josiah H. Penniman, Ph.D., Litt.D., LL.D., L.H.D.

PENNSYLVANIA ACADEMY OF FINE ARTS. See ART EXHIBITIONS.

PENNSYLVANIA RAILROAD. See ELECTRICAL TRANSPORTATION.

PENNSYLVANIA STATE COLLEGE. THE. A nonsectarian institution for the higher education of men and women at State College, Pa., founded in 1855. On Nov. 1, 1933, the undergraduate enrollment totaled 4351. The 1933 summer session enrollment was 2657. The resident faculty numbered 646. The productive funds of the college amounted to approximately \$517,000 and the income for operation for the year to \$3,980,230. The library contained 140,950 volumes. President, Ralph D. Hetzel, LL.D.

PERSIA. A kingdom of southwestern Asia. Capital, Tehran (Teheran); reigning Shah in 1933, Riza Khan Pahlevi (crowned Apr. 25, 1926).

AREA AND POPULATION. Persia has an area of about 628,000 square miles and a population estimated at 9,000,000 on Dec. 31, 1931 (including about 2,000,000 nomads and 6000 Europeans). The estimated population of the chief cities was: Tehran and suburbs, 350,000; Tabriz, 240,000; Meshed, 152,000; Isfahan, 126,000. The bulk of the population are Moslems of the Shiite sect.

EDUCATION. The population is about 90 per cent illiterate. In 1930 there were 97,500 pupils in primary schools, 25,000 in higher grade schools, and 4600 in high schools. About 150 students were maintained in European universities at government expense.

PRODUCTION. A predominantly agricultural country, Persia produces chiefly wheat, barley, rice, tobacco, fruits, wool, opium, gums, cotton, and silk. Estimated production (1930-31) was (in tons): Rice, 350,000; tobacco, 30,000; wheat, 1,420,000; cotton, 46,000. Petroleum is the chief mineral; output in 1932 was 6,513,000 metric tons (5,843,000 in 1931). The Anglo-Persian Oil Company controlled the bulk of Persian production. Iron, coal, copper, lead, manganese, marble, borax, nickel, and cobalt deposits exist, but remain undeveloped. The leading industries are rug making and oil refining. Several sugar and cement factories and spinning and textile mills have been established with government encouragement.

COMMERCE. Persia's merchandise balance of trade, by value, during the fiscal years 1929-30 to 1931-32 is shown in the accompanying table.

PERSIA: IMPORTS AND EXPORTS

Fiscal year *	Imports	Exports	Balance
1929-30 ...	\$77,176,000	\$132,129,000	+\$54,953,000
1930-31 ...	81,600,000	111,250,000	+ 49,650,000
1931-32 ^b ..	30,000,000	70,000,000	+ 40,000,000

* The 1929-30 and 1930-31 figures are for fiscal years ended Mar. 19, 20, or 21. For 1931-32 the fiscal year was changed to end June 21. ^b Approximate.

Figures are converted from krans or rials to dollars at gold parity.

Of the total value of 1931-32 imports, the Soviet Union supplied 42.6 per cent; British India, 17.5 per cent; United Kingdom, 10.5 per cent; and the United States, 6.8 per cent. The United Kingdom took 29 per cent of the value of all merchandise exports; Soviet Union, 15.4; Egypt, 10; British India, 9.7; and France, 9.5 per cent. Cotton piece goods, motor vehicles, sugar, tea, machinery, and iron and steel were the chief import items while the leading export items were mineral oils, wool rugs, rice, opium, raw cotton, almonds, and raisins. Exports to the United States in the calendar year 1933 were valued at \$3,353,303 (\$2,764,428 in 1932) and imports from the United States were \$1,409,005 (\$1,082,481 in 1932), according to U. S. statistics.

Foreign trade was declared a government monopoly on Feb. 25, 1931. On Oct. 21, 1931, a commercial treaty was negotiated with the Soviet Union under which Persia agreed to reserve 51 per cent of the import trade to the Soviet Union in return for the Soviet pledge to purchase an equal amount of Persian products.

FINANCE. According to a statement by the Persian Minister to Washington, government revenues for the fiscal year ended June 21, 1933, reached the equivalent of \$41,000,000, in addition to some \$6,600,000 collected on sugar and tea and diverted to railroad construction. In 1931-32 total revenues were 506,912,227 rials. Budget estimates for 1932-33 were: Revenues, 421,400,000 rials and £787,000; expenditures, 421,399,870 rials and 407,176 pahlevi. The revenues excluded the annual royalty from the Anglo-Persian Oil Company and expenditures excluded certain appropriations for railways and highways. The public debt in August, 1933, amounted to £1,069,397. On Mar. 21, 1932, the Persian government had £2,700,000 on deposit in London, most of it representing petroleum royalties. The actual currency unit in 1933 was the silver rial, with the same value as the obsolete kran (exchange value, \$0.0760 in 1931, \$0.0839 in 1930, and \$0.1007 in 1929).

COMMUNICATIONS. Railway lines in 1933 extended 467 miles and a new trans-Persian railway, connecting the Caspian Sea and the Persian Gulf was under construction. There were approximately 8000 miles of highways, of which 2206 miles had been constructed in the preceding seven years. The Junkers Aircraft Co. discontinued its air services in Persia in 1932, after five years' operation.

GOVERNMENT. Executive power is vested in the Shah, an absolute ruler down to 1906, when he consented to a constitutional form of government, with a parliament or Medjliss of 136 deputies. The actual running of the government was in the hands of a cabinet, appointed and controlled by the Shah. The Medjliss gave legislative sanction to measures and policies adopted by the ministry. Premier at the beginning of 1933, Mehdi Quli Khan Hedayat. For changes in 1933, see *History*.

HISTORY

SETTLEMENT OF PETROLEUM DISPUTE. The Persian government's dispute with the Anglo-Persian Oil Company, which led to the cancellation of the company's concession in Persia in 1932 (see 1932 YEAR BOOK), was settled in Persia's favor early in 1933. The issues were debated before the League of Nations Council in January, followed by private

discussions between the parties under the guidance of Foreign Minister Benes of Czechoslovakia. On February 2 the conferees capitulated to the Persian demand for direct negotiations between the oil company and the Persian government and the British government withdrew from the dispute. Negotiations between Sir John Cadman, head of the company, and Persian government officials commenced in Tehran April 3 and ended with the signing of the new lease on April 30.

The chief terms of the lease were: (1) reduction of the concessioned area from 500,000 to 250,000 square miles immediately and a further reduction to 100,000 square miles in 1938; (2) payment by the company of a royalty of four shillings per ton on all oil sold in Persia or exported; (3) allocation to the Persian government of 20 per cent of the net profits of the company, after payment of £671,000 to the stockholders; (4) additional payments to Persia in case of further depreciation of sterling; (5) tax payments to Persia by the company of £225,000 during the first 15 years and £300,000 during the second 15 years; (6) progressive replacement of the company's foreign employees by Persians; (7) determination of the basic price of oil sold in Persia by prices prevailing in the Gulf of Mexico or in Rumania, whichever might be lower, with a discount of 10 per cent for oil sold to the public from the refinery and of 25 per cent for oil sold to the Persian government. As against these provisions, all favorable to Persia, the Persian government agreed not to cancel the concession for 60 years but to refer all disputes to international arbitration. The new concession was ratified by the Medjliss on May 28, 1933, and came into force when signed by the Shah the following day.

RELATIONS WITH SOVIET UNION. In addition to this favorable settlement with Great Britain, Persia during 1933 extended its treaty relations with its great neighbor, the Soviet Union. The non-aggression agreement signed in 1927 was supplemented on July 3, 1933, by a new non-aggression treaty containing an inclusive definition of aggression. The new treaty was ratified by the Medjliss on September 18. The Persian government continued its commercial agreement with the Soviet Union. Import quotas announced for the fiscal year 1933-34 reserved 51 per cent of the total Persian imports to the Soviet Union and gave Russia a complete monopoly in supplying Persia with imported sugar, matches, and petroleum products (except 50 per cent of lubricating oil imports).

INTERNAL DEVELOPMENTS. The Shah continued his efforts to modernize the country materially as well as politically. Work on railways and highways was pushed, while another blow was struck at the feudal and semi-independent Bakhtiari chiefs, who resisted the authority of the Crown. The arrest of a number of such tribal leaders was reported toward the end of 1933. The severity with which the Shah punished corruption among his officials was exemplified by the treatment accorded Abdul Hussein Khan Timurtash, Minister of the Court and the Shah's chief adviser from his accession to the throne in 1926 to December, 1932. On Mar. 18, 1933, the minister was sentenced to prison for five years and fined \$700,000 for embezzlement, swindling, and extortion.

For reasons unstated, the ministry headed by Mehdi Quli Khan Hedayat resigned on Sept. 13, 1933, and was succeeded by a new cabinet headed

by Mirza Mohamed Ali Khan Foroughi, who was Foreign Minister in the previous cabinet.

PERSONALITY. See **PSYCHOLOGY.**

PERU, pé-roo'. A South American republic. Capital, Lima.

AREA AND POPULATION. Peru has an estimated area of 481,698 square miles, but several of its boundaries are in dispute, notably those with Ecuador and Colombia. The latest official population estimate, that for 1932, placed the total at 6,237,000. The population is about 57 per cent pure Indian, 25 per cent mestizo, 14 per cent white, and 4 per cent Asiatics, Negroes, and others. In 1931, recorded living births were 165,838; deaths, 71,745; marriages, 15,598. The city of Lima had a population of 281,425 in 1931. In 1932, the estimated population of other leading cities was: Arequipa, 70,000; Cusco, 40,000; Chiclayo, 35,000; and Trujillo, 30,000. Spanish is the language of the government and educated classes, but the Indians speak Aymara or Quechua.

EDUCATION. Education is free and nominally compulsory for children between the ages of 7 and 14, but the Indian and mestizo masses remain largely illiterate. In 1930, there were 3562 primary schools, with 342,016 pupils; 36 national secondary schools, with 11,826 pupils; and 4 normal schools, with 1610 students. The principal university was that at Lima (2201 students in 1930), which was closed by the government in 1930. Other universities, with their 1931 enrollment, were: Arequipa, 223; Cusco, 106; and Trujillo, 104.

PRODUCTION. Agriculture supports about 80 per cent of the population, while mining is the most important secondary industry. The production of the chief crops in 1931-32 was: Cotton, 107,913,000 pounds (114,355,000 in 1930-31); sugar, 396,000 metric tons (426,000); rice, 4,985,000 bushels (5,527,000); wheat, 3,485,000 bushels (4,525,000 bushels in 1930-31). The wool output in 1931 was 12,125,000 pounds of sheep's wool and 9,921,000 pounds of llama, alpaca, and other wool. Provisional figures for mineral production in 1932 were: Gold, 1729 kilogrammes; silver, 209,488 kilogrammes; copper, 22,890 metric tons; lead, 1164 metric tons; petroleum, 1,313,207 metric tons. The value of all mineral production was 126,839,359 soles (1 sole = 28 cents at par) in 1931 (183,230,292 soles in 1930). Vanadium, coal, bismuth, salt, and cement are other leading minerals. The mining industry is largely under foreign domination. Manufacturing is confined chiefly to petroleum refining, smelting, and the production of textiles, flour, etc.

COMMERCE. The value of Peruvian imports declined to \$15,852,000 in 1932 from \$27,488,000 in 1931 and \$48,749,000 in 1930. Exports fell off to \$37,376,000 in 1932 from \$55,415,000 in 1931 and \$88,207,000 in 1930. These three years witnessed a decline in the value of imports from the United States to \$4,621,000 in 1932 from \$11,231,000 in 1931 and \$18,646,000 in 1930. At the same time Peru's exports to the United States were reduced to \$6,810,000 in 1932 from \$20,192,000 in 1931 and \$34,684,000 in 1930. Imports from the United Kingdom and Germany were smaller in 1931 than in 1930, but in 1932 and 1933 they showed substantial increases. The United States in 1932 supplied 29.2 per cent of all imports (40.9 per cent in 1931); United Kingdom, 17.8 per cent (12.4 in 1931); Germany, 9.8 (8.8). The United

Kingdom purchased 36.1 per cent of all exports in 1932 (21.9 in 1931); the United States, 17.3 per cent (36.4); Germany, 7.2 per cent (8.7). Petroleum, copper, cotton, sugar, and wool are the chief exports.

In 1933, exports totaled 257,000,000 soles and imports 103,000,000 soles. Imports from and exports to the United States were \$4,985,293 and \$5,472,219, respectively.

FINANCES. Total governmental expenditures in the calendar year 1931 were 135,909,923 soles, including extraordinary expenses of 26,549,330 soles, ordinary expenses of 194,819,139 soles, and debt amortization of 4,541,454 soles. Total revenues amounted to 129,118,555 soles, including ordinary receipts of 99,755,106 soles, extraordinary receipts of 28,203,449 soles, and credits of 1,160,000 soles. The ordinary budget estimates for 1932 balanced at 99,928,290 soles. The public debt on June 30, 1932 totaled 532,011,847 soles (523,517,174 soles on June 30, 1931). Of the 1932 total, 402,411,827 soles represented the external and 129,600,020 soles the internal debt. Interest and sinking-fund payments on all national debts were suspended on May 29, 1931. The monetary unit is the sol, stabilized at 28 cents U. S. in April, 1931. After the abandonment of the gold standard by Peru, May 14, 1932, the exchange value of the sol depreciated to an average of 17.3 cents for the year 1932.

COMMUNICATIONS. Railways in operation in 1931 had 2075 miles of line, including 2373 miles of private and 702 miles of state lines. In 1931 the railways carried 5,399,005 passengers and 2,341,974 metric tons of freight. Highways suitable for motor traffic extended 11,200 miles in 1932. There were 252 miles of new highway built during 1932; the Lima-Cerro de Pasco-Huanuco road, crossing the Andes at the height of 15,912 feet, was completed during the year. Lima is connected by air lines with the other capitals of South and North America, and with the principal Peruvian cities. During 1931, 7567 vessels of 12,174,608 tons entered the ports of Peru and 7537 ships of 12,178,247 tons cleared.

GOVERNMENT. Constitutional government, suspended upon the overthrow of President Leguía in 1930, was restored on Dec. 8, 1931. A Constituent Assembly, elected Oct. 11, 1931, drafted a new Constitution, which was promulgated Apr. 9, 1933. President at the beginning of 1933, Gen. Luis M. Sánchez Cerro, who assumed office Dec. 8, 1931, for a five-year term. For developments during 1933, see *History*.

HISTORY

THE LETICIA DISPUTE. The beginning of the year 1933 found Peru on the verge of war with Colombia over the Amazon river port of Leticia and surrounding territory, which had been seized from Colombia by a group of Peruvian citizens on Sept. 1, 1932. Peruvian troops were being concentrated in Leticia, while a Colombian flotilla was steaming up the Amazon to assist Colombian troops marching overland from Bogotá in driving out the Peruvians. Early in January, Brazil offered to mediate the dispute and proposed that Peru turn Leticia over to Brazilian troops who would then return it to Colombia. The offer, accepted by Colombia, was rejected by Peru. Colombia then appealed to the United States and other signatories of the Kellogg-Briand Pact to restrain Peru, while Peru invoked the aid of the League. However, the United States government,

on January 25, the League Council on January 26, and other American states joined forces in denouncing Peru's action as a violation of its treaty obligations.

Under the nationalistic leadership of President Sánchez Cerro, Peru declined to evacuate Leticia and clashes between the opposing forces commenced on February 14. Three days later Colombia formally invoked Article XV of the League Covenant, which required the Council to attempt to conciliate the dispute and if it failed in this to adopt a report setting forth its recommendations. Through its special committee, the Council on February 25 submitted a comprehensive plan for settlement of the dispute. It involved (1) control of Leticia by a League commission, (2) replacement of Peruvian by Colombian troops, which would function as an international police under the League commission, and (3) direct negotiations between Peru and Colombia for a permanent settlement of the boundary dispute. In a note of Feb. 27, 1933, the U. S. government urged acceptance of this proposal.

Immediately accepted in full by Colombia, the League proposal was accepted by Peru with qualifications tending to nullify it. On March 18, the committee of the Council ended its efforts at conciliation and submitted a report to the Council embodying the same recommendations as in its proposal of February 25. The report asserted that "the presence of Peruvian forces in Colombian territory is incompatible with the principles of international law, with those of the Covenant of the League of Nations, and of the Pact of Paris . . ." Despite protests of the Peruvian delegate, the Council adopted the report and named a committee of 13, with which the United States and Brazil collaborated, to advise it and to secure joint action on the basis of the report. The Advisory Committee instructed its president, Sean Lester of the Irish Free State, to reopen negotiations with Peru and Colombia, and these were in progress when the assassination of President Sánchez Cerro opened the way for settlement of the controversy.

Meanwhile there had been several clashes in the Leticia district. Peruvian planes bombed a Colombian gunboat on the Putumayo River February 14 and the next day Colombian forces captured the town of Tarapaca at the northern end of the disputed Leticia corridor. Preparations for war continued in both countries. Diplomatic relations between Colombia and Peru were severed and the Colombian Legation in Lima was attacked by a mob on February 18. The Colombian Minister, who had not yet left the capital, was forced to take refuge with his family in the Chilean Legation. On March 26, Colombian forces drove 500 Peruvian troops out of Guepi, a settlement on the right bank of the Putumayo River. Colombia had concentrated some 10,000 men in the Leticia region, but following the Council's active measures the offensive was delayed to allow time for further negotiations.

ASSASSINATION OF SÁNCHEZ CERRO. While reviewing 20,000 army recruits conscripted for service against Colombia, President Sánchez Cerro was shot to death in Lima April 30. His assassin was Dr. Abelardo Hurtado de Mendoza, an alleged sympathizer with the revolutionary Aprista party, banned by the President in 1932. Dr. Hurtado was instantly killed by the President's guards.

The killing of President Sánchez Cerro was the

climax of numerous uprisings and one previous attempt at assassination which had marked his short but increasingly arbitrary rule. Less than two months before, the President ruthlessly crushed the last of a series of revolts. This was led by Lieut. Col. Gustavo A. Jiménez, former Provisional President and former Minister of War, who raised the standard of rebellion at Cajamarca, on March 11, supported by the 11th Police Regiment. The revolt failed to gain the expected support and Colonel Jiménez, defeated by government troops at San Cristobal March 14, committed suicide. Five of the officers implicated were executed April 8.

On the day of President Sánchez Cerro's assassination, the Cabinet declared martial law and then hastily elected Gen. Oscar Benavides, commander-in-chief of the Peruvian forces in the Leticia area, to serve out the balance of the presidential term. The new President had had a distinguished career as Chief of Staff of the army, Provisional President in 1914-15, and, after the overthrow of the Leguía régime, as Peruvian Minister in London.

LETICIA DISPUTE SETTLED. One of the first results of the change in the Presidency was the temporary settlement of the Leticia dispute. When President Benavides assumed power the Peruvian cruiser *Almirante Grau* and two submarines were en route to the Leticia district from the west coast via the Panama Canal and the Amazon River. They passed through the canal May 3. Informed by Peru that the ships were headed for the upper Amazon, the League of Nations Advisory Committee requested neutral nations to withhold food, fuel, and other supplies from the flotilla. However, they secured supplies at Willemstad, Curaçao, on May 8 and proceeded, with many delays, up the Amazon.

Meanwhile, on May 6, President Benavides received a telegram from Dr. Alfonso Lopez, a Colombian with whom he had formed a close friendship while the two were serving their respective countries as Ministers in London. The telegram, pointing out the folly of armed conflict, urged a settlement of the Leticia controversy. President Benavides replied by inviting Dr. Lopez to confer with him in Lima. Arriving in Lima May 16, Dr. Lopez reached an understanding with the President, which was approved by the Peruvian Congress in a secret session May 21. On May 24, the Peruvian government notified the League of Nations of its acceptance of new proposals advanced by the League Committee on May 10. These proposals were embodied in a protocol signed May 25 in Geneva by the Peruvian and Colombian delegates there and by the President of the League Council. They provided for evacuation of Leticia by Peru, administration of the Leticia corridor by a League commission on behalf of Colombia, direct negotiations for a settlement of the territorial disputes, and the payment by Colombia of the expense of the League commission. About the same time (May 22) diplomatic relations between Peru and Mexico were restored through the friendly intervention of the Spanish government. These relations had been severed in 1932, when President Sánchez Cerro had demanded the recall of the Mexican Minister in Lima for his alleged friendly association with the Aprista leader, Haya de la Torre.

The League commission named to administer the Leticia corridor pending a settlement of the territorial question involved consisted of Col.

Arthur Brown, U. S. A., president; Capt. Alberto Lemos Basto of the Brazilian Navy; Capt. Francisco Iglesias, Spanish aviator; and Dr. Armando Mencia, of Cuba. Peruvian troops withdrew from Leticia immediately upon the arrival of the Commission June 25. The conference for settlement of the territorial issue opened in Rio de Janeiro October 25. The Peruvian delegates were Dr. Victor Andrés Belaúnde and Dr. Victor M. Maúrtua, both well-known jurists; those of Colombia included Dr. Roberto Urdaneta Arbeláez, Minister of Foreign Affairs; Dr. Luis Cano, and Guillermo Valencia. The negotiations were in progress at the end of 1933.

THE BENAVIDES REFORMS. No less striking than the settlement of the Leticia affair was the new President's success in terminating the fierce party and class strife into which Peru had plunged after the deposition of President Leguía. He pledged his administration to a policy of "peace and concord" and strove to soften the bitter animosities aroused by his predecessors. His government's amnesty bill, unanimously adopted by Congress on August 9, released Victor Raul Haya de la Torre, the Aprista leader, from prison and permitted the return of numerous political exiles. In order to avert the disorders of a political campaign, he induced Congress on September 16 to postpone until the first Sunday in June, 1934, the Congressional elections scheduled for Nov. 5, 1933. *La Tribuna*, organ of the Aprista party suppressed by Sánchez Cerro, was permitted to resume publication early in November and on November 12 the Aprista party, with government sanction, held a huge mass meeting in Lima. Newspaper attacks upon high officers of the army and navy, causing them to demand the reestablishment of the press censorship law, led to the resignation of the Cabinet on November 23 when the demand was rejected. A new ministry was formed November 25, headed by José de la Riva Agüero.

The government announced officially on October 22 that it had frustrated a plot to assassinate President Benavides and arrested eight conspirators. Meanwhile a new political party was in process of organization by followers of President Sánchez Cerro, led by Dr. Clement J. Revilla, president of the Constituent Assembly. It was to be known as the National party.

NEW CONSTITUTION. The new Constitution framed by the Constituent Assembly went into effect April 8, 1933. Despite the many months spent in drawing up the instrument it differed little from the Constitution of 1920, which it replaced. It contained a provision prohibiting the reelection of a President until an interval of five years had elapsed after his leaving the office. Voting was made compulsory for all men between 21 and 60 years of age.

PETERSON, OLOF AUGUST. An American paleontologist, died in Pittsburgh, Pa., Nov. 12, 1933. Born at Hellgum och Rådom, Sweden, Jan. 2, 1865, he received his education there and in 1882 emigrated to the United States with his family. His interest in the subject, in which he was later to become one of the foremost authorities, was stimulated by Othniel C. Marsh, professor of paleontology at Yale University. During 1888-91 he assisted Professor Marsh in his discoveries of fossil vertebrates from the geological formations of the Western States. He was next associated during 1891-96 with Henry Fairfield Osborn, curator of vertebrate paleontology at the

American Museum of Natural History, in his Western explorations. He accompanied to Patagonia, the region of Argentina and Chile lying east of the Andes and south of the Rio Negro, the expeditions sponsored by Princeton University during 1896-1900. After the latter date Mr. Peterson held the post of curator of mammalian paleontology at the Museum of Science of the Carnegie Institute in Pittsburgh. His researches were concerned principally with the evolution of the rhinoceros from the Oligocene period, the camel from the Miocene, and the horse from the Upper Pliocene.

PETROLEUM. The production of crude petroleum for the world during 1933 amounted to 1,417,520,000 barrels according to estimates of the American Petroleum Institute. This indicates an increase of approximately 9.3 per cent over the 1932 production, which amounted to 1,297,478,000 barrels. Approximately 97.5 per cent of the crude petroleum produced in 1933 came from the ten foremost producing countries of the world, United States, Russia, Venezuela, Rumania, Persia, Netherland East Indies, Mexico, Argentina, Peru, and Colombia. Together, it is estimated, these countries produced 1,382,664,000 barrels. The United States remained the world's greatest producer, supplying 63.4 per cent of the total in 1933, against 60.5 per cent in 1932; 62.1 per cent in 1931; 63.7 per cent in 1930; 67.8 per cent in 1929; 68.0 in 1928; and 71.4 per cent in 1927. The output in the United States during 1933 was 898,874,000 barrels, according to the U. S. Bureau of Mines, as compared with 785,159,000 barrels in 1932, an increase of 14.5 per cent. Russia maintained second place ranking with a total of 148,902,000 barrels, or 10.5 per cent of the world total, compared with 149,719,000 barrels in 1932. This indicates a decrease from 1932 of 0.5 per cent. Third place was held by Venezuela with a total of 120,883,000 barrels, or 8.5 per cent of the world total, compared with 119,597,000 barrels in 1932.

In the United States, Texas, as in past years, led in output with 44 per cent of the total production. Oklahoma passed California for second place with 20 per cent of the total, with California a close

third with 19 per cent. Comparisons of the production by states in 1933 with that in 1932 is shown in the attached table from figures furnished by the U. S. Bureau of Mines.

**CRUDE OIL PRODUCTION IN THE UNITED
STATES, BY STATES**
[In barrels of 42 gallons]

	1933	1932

Total United States ...	898,874,000	781,845,000

Aside from increased production, the petroleum industry in the United States was immensely benefited through the operation of the National Industrial Recovery Act. Voluntary proration of crude oil production failed to effect the desired limitation in important producing areas, and prices dropped in the early months of the year to the ruinous price of ten cents a barrel. Upon the announcement of the passage of the Recovery Act in June, a slight improvement was felt, though not satisfactory until in September when, by virtue of the approval of the code of fair competition on August 20, the Secretary of the Interior, Mr. Ickes, took over the supervision of the industry. In his first major effort to keep production in line with consumption, he established an allowable daily production of 2,409,700 barrels to October 1. Successive reductions thereafter brought the allowance to 2,210,000 barrels as of December 1, or about 600,000 barrels per day less than the average unrestricted daily output during August. Prices reflected the improved conditions and reached, in the Mid-Continent field, a top figure of \$1.12 a barrel.

REFINED PRODUCTS. Total crude runs to stills in 1933 amounted to 861,254,000 barrels, of which 35,468,000 barrels were from foreign sources. In

UNITED STATES REFINERY AND CONSUMPTION STATISTICS

PHILIPPINES, fil-ŭ-pĭns, -pĕns, -pĭns. The largest island group of the Malay Archipelago; a possession of the United States, ceded by Spain in the treaty of Apr. 11, 1899. Capital, Manila.

AREA AND POPULATION. The archipelago has a total area of 114,400 square miles. It comprises 7083 islands, the largest of which are Luzon, 40,814 square miles; Mindanao, 36,906 square miles; Samar, 5124; Negros, 4903; Palawan, 4500; Panay, 4448; Mindoro, 3794; Leyte, 2799; Cebu, 1695; Bohol, 1534; and Masbate, 1255 square miles. The population in 1932 was estimated at 13,636,074 (10,314,310 at census of 1918). The people are chiefly of the Malay race; about 91 per cent are Christians (mostly Roman Catholics) and 9 per cent Mohammedans (Moros) and pagans. English and Spanish are the languages of government and commerce, but only about 1,500,000 speak English and about 660,000 Spanish. Tagalog, Ilocano, and Visayan are the chief native dialects. The estimated population of the chief cities in 1932 was: Manila, 341,034; Cebu, 79,008; Iloilo, 43,913; Laoag, 42,046. During 1932, 3088 Filipinos left the Philippine Islands for the United States and insular possessions, of which number 618 went to Hawaii. On the other hand, 12,451 Filipinos arrived in the Philippines Islands from the United States and insular possessions, 7005 coming from Hawaii. Births in 1931 numbered 440,159 (35.44 per 1000 inhabitants); deaths, 240,829 (19.39 per 1000); marriages, 70,182.

EDUCATION. Education is free, secular, and co-educational, with English the language of instruction. Enrollment for the school year 1931-32 totaled 1,213,419 (1,224,548 in 1930-31), of which 1,135,221 were enrolled in elementary and 78,198 in secondary grades, including 16,839 in vocational schools. Private schools numbered 363, with 100,399 pupils. The state-supported University of the Philippines had 7597 students in 1932.

PRODUCTION. Agriculture is the basic industry, cultivated land (1932) totaling about 9,990,000 acres (13.5 per cent of the total area). Agricultural production declined 10.32 per cent in 1932, compared with 1931, although centrifugal sugar output rose 26 per cent due to improved methods of cultivation and manufacture. Crop yields in 1932, with 1931 figures in parentheses, were (in metric tons): Sugar, 1,065,328 (869,121); cleaned rice, 1,359,852 (1,427,159); shelled corn, 414,711

(344,577); copra, 405,188 (419,636); abacá (Manila hemp), 130,394 (162,194); tobacco, 45,138 (43,516); cacao, 1024 (1238); coffee, 1090 (1408); maguey, 8100 (11,411). Livestock (1931) included 2,149,652 buffaloes, 1,282,381 cattle, 319,421 horses, 2,491,245 hogs, 394,367 goats, and 111,670 sheep.

The mineral output in 1931 was valued at 15,887,841 pesos (peso equals \$0.50), including: Gold, 7,524,867 pesos; sand, gravel, and crushed rock, 3,805,283; cement, 2,882,916. Cigars manufactured in 1932 numbered 257,958,585 (274,529,511 in 1931); cigarettes, 3,953,734,473 (4,249,702,393 in 1931); spirits, liquors, and wines, 11,610,746 liters (14,252,204 liters); electricity, 109,177,924 kw.-hrs (106,776,463 in 1931).

Economic and business indices for the Islands during 1932 showed the following percentage declines from the 1931 levels: Average bank debits to individual accounts, 24 per cent; average bank loans, discounts, and overdrafts, 6.26 per cent; average monetary circulation, 12.21 per cent; corporate investments, 7.70 per cent; foreign trade, 13.99 per cent; total gross sales, 23.42 per cent; average wholesale prices, 17.14 per cent; building construction, 3.24 per cent. Freight loadings, on the other hand, increased 17.15 per cent.

COMMERCE. The decline in the trade of the Philippines during the world depression is shown in the accompanying table from the *Annual Report* of the Insular Collector of Customs.

PHILIPPINE IMPORTS AND EXPORTS
[In pesos, equivalent to 50 cents]

	Imports	Exports	Surplus of exports
1929	294,320,549	328,893,685	34,573,136
1930	246,185,907	266,334,255	20,148,348
1931	198,357,437	207,944,148	9,586,711
1932	158,790,170	190,676,161	31,885,991
1933	149,472,000	211,542,000	62,070,000

Imports from the United States in 1932 were 102,595,499 pesos (124,279,366 in 1931) and exports to the United States were 165,295,733 pesos (166,844,793 in 1931). Imports from other countries amounted to 56,194,671 pesos (74,078,071 in 1931) and exports to other countries were 25,380,428 pesos (41,099,355 in 1931). The United States thus took 86.69 per cent of all Philippine exports, by value, in 1932 (80.25 per cent in 1931) and supplied 64.61 per cent of the imports (62.65 per cent in 1931). The chief imports in 1932 were: Cotton goods, 33,523,243 pesos (32,802,095 in 1931); iron and steel, 19,977,574 pesos (26,729,765); mineral oils, 13,718,021 pesos (18,935,275); meat and dairy products, 8,128,254 pesos (12,150,885); automobiles, parts and tires, 8,058,776 pesos (9,030,872); tobacco products, 5,386,142 pesos (5,443,428). The value of the principal 1932 exports was: Sugar, 119,603,769 pesos (99,926,210 in 1931); coconut oil, 15,302,287 pesos (30,070,644); tobacco products, 12,800,118 pesos (14,841,675); copra, 10,266,454 pesos (18,300,808); abacá, 10,031,204 pesos (17,885,813).

Imports from the United States in 1933 were valued at \$44,781,832, against \$44,968,230 in 1932, a decline of 14.5 per cent. Exports to the United States amounted to \$93,037,796, compared with \$80,877,402 in 1932, an increase of 10.5 per cent. Imports from Japan were valued at 19,000,000 pesos, an increase of 56 per cent over 1932.

FINANCE. Actual revenues (ordinary and extraordinary) during the fiscal calendar year 1932 totaled \$37,358,386 and expenditures \$39,848,444,

leaving a deficit of \$2,490,058. Subtracting the deficit from the balance of \$31,961,288 on hand on Jan. 1, 1932, there remained a balance of \$29,471,231 at the beginning of 1933. Total revenues from ordinary sources in 1932 were \$28,295,158, a decrease of \$4,586,165 (about 16 per cent) from 1931. Proceeds of the sales tax declined 23 per cent; income-tax receipts, 12 per cent. Ordinary expenditures were \$32,860,824, a decrease of \$5,349,925 (16 per cent) from the previous year. The budget estimates for 1933 and 1934, as passed by the Legislature, balanced at \$30,500,000 and \$27,037,151, respectively.

On Dec. 31, 1932, the total outstanding bonded indebtedness of the Islands, consisting of \$64,463,500 insular and \$9,128,500 provincial and municipal bonds, amounted to \$73,592,000. The net balance of insular bonded indebtedness was \$52,696,118.

COMMUNICATIONS. There were 837 miles of railway line in 1932, the chief systems being the Manila Railroad (705 miles on Luzon) and the Philippine Railroad Co. (132 miles on Panay and Cebu). The Manila Railroad reported a deficit of \$48,688 in 1932. During the same year 289 miles of first-class highways and 163 miles of second-class roads were built, making a total of 9106 miles of all classes of highways in existence. Motor vehicles registered during 1932 numbered 41,585. Radio telephone service between Manila and Washington was inaugurated Mar. 30, 1933. During 1932, 1258 vessels of 5,263,001 net tons entered Philippine ports in the foreign trade and 1279 vessels of 5,279,047 net tons cleared. Official air-mail service between the Islands and Europe, via Hong Kong, Saigon and other points en route was inaugurated May 1, 1933, by the Philippine Bureau of Posts through an arrangement with the French postal authorities.

GOVERNMENT. Executive power rests in a governor-general, appointed by the President of the United States, and in six departmental secretaries, all Filipinos except the vice-governor, who is also secretary of public instruction. A senate of 24 members and a house of 96 members are elected by popular vote (except for 9 representatives and 2 senators appointed by the Governor-General). A council of state, headed by the Governor-General, serves as a link between the executive and legislative branches. Governor-General Theodore Roosevelt, who was appointed Jan. 20, 1932, resigned effective Mar. 24, 1933. He was succeeded on June 15, 1933, by Frank Murphy, former mayor of Detroit, Mich. Vice-Governor, John H. Holliday, reappointed Mar. 7, 1933.

HISTORY

INDEPENDENCE BILL PASSED. On Jan. 13, 1933, President Hoover vetoed the Philippine independence bill passed by the United States Congress in December. (For provisions of the bill and the reasons for its passage, see *INTERNATIONAL YEAR BOOK* for 1932.) The President's veto message objected to the measure on three grounds. He declared it weakened the authority of the United States "to a point of practical impotence" during the transition period of 12 years without relieving the American government of its responsibilities. Secondly, it placed the Filipinos at the mercy of stronger Asiatic nations, who threatened them with "infiltration or invasion." Thirdly, Mr. Hoover considered the transition period too short. He charged that the measure, if adopted, would project the Philippines "into economic and social

chaos, with the probability of a breakdown in government, with its consequences in degeneration of the rising liberty which has been so carefully nurtured by the United States."

Within two hours after its reception in the House, the veto message was overridden by a vote of 274 to 94. It was likewise rejected by the Senate on January 17, by a vote of 66 to 26, after Senators Borah, La Follette, Bingham, and others had defended the bill against the President's charges. The fate of the independence act now rested with the Philippine Legislature, whose approval was necessary before the act could go into effect.

LEGISLATURE REJECTS MEASURE. In the Philippines the question of the acceptance or rejection of the Hawes-Cutting independence bill precipitated an unexpectedly violent political strife. It disrupted the Islands' most powerful political party and resulted in a complete reorganization of the government personnel. The measure had been passed by the United States Congress largely because it was approved by the Philippine independence mission, headed by Acting Senate President Sergio Osmena and the Speaker of the House, Manuel Roxas. The mission contained the majority and minority floor leaders of both houses. Moreover, the measure was supported by Camilo Osias, Philippine Resident Commissioner at Washington.

On the other hand, certain provisions of the measure had been vigorously criticized by Manuel Quezon, President of the Senate and one of the Islands' most powerful political leaders. When his objections were disregarded by the independence mission, and the bill was passed, Quezon announced that he would oppose it to the end. The return of the mission to the Philippines was the signal for the commencement of a bitter political conflict between Senator Quezon and the Osmena-Roxas group. Quezon met their challenge to his leadership of the Nacionalista party by forcing a showdown in the Legislature. Osmena and Roxas were defeated by Quezon's well organized political machine and were forced to resign their legislative posts.

Osmena and Roxas now demanded that the issue of the acceptance or rejection of the Hawes-Cutting bill be submitted to popular vote. The proposal for a referendum was accepted by Quezon, who insisted, however, that the electorate be presented with the alternatives of voting for the Hawes-Cutting bill or for immediate independence. His opponents opposed this proposal, pointing out that immediate independence had not been offered and that the sole question at issue was the acceptance or rejection of the Hawes-Cutting measure. To stave off a referendum in the form desired by Quezon, the Osmena-Roxas group moved for a vote on the independence bill in the legislature. Their motion favoring acceptance of independence under the terms of the Hawes Cutting Act was defeated in the Senate on October 7 and in the House on October 10. This action was followed on October 11 and 12 by legislative rejection of the Act, in its existing form, as "inacceptable to the people of the Philippine Islands." On October 13, the Senate authorized the dispatch to Washington of a new mission, headed by Mr. Quezon, to seek amendments to the Hawes-Cutting Act before that measure lapsed on Jan. 17, 1934.

Senator Quezon and his independence mission sailed from Manila November 4. They were authorized to work for amendments to the Hawes

Law or for other new legislation satisfying to the aspirations of the Filipino people. In a speech at Tokyo on November 15, he said he would demand "either complete independence, with the Philippines maintaining their own defenses and responsible to themselves for national survival, or, if a probationary period is necessary, then maintenance of the present economic ties with the United States during that period."

Arriving in Washington in December, his mission found Congressional leaders indisposed to reopen the independence issue. They conferred with President Roosevelt December 27 in an effort to enlist his support for modification of the Hawes-Cutting Act.

NEW POLITICAL PARTY FORMED. Meanwhile the Osmena-Roxas group on December 17 had formally seceded from Senator Quezon's Nacionalista party and launched a new party called the Nacionalista Party for Independence. Senator Osmena was elected president and Mr. Roxas vice-president of the executive committee. The previous day the once defunct Democratic party was revived. Later an alliance between the two new parties was concluded and a campaign inaugurated to secure control of the Legislative Assembly at the June, 1934, elections. They made Senator Quezon's opposition to the Hawes-Cutting Act the main issue in their campaign.

LEGISLATION. A second special session of the Philippine Legislature was called by Governor-General Roosevelt on Jan. 16, 1933, and continued to January 31. The special session devoted itself to a consideration of means of balancing the budget without discontinuing public works, a measure providing gratuities for government employees dismissed in connection with governmental reorganization, a law governing the relationship between tenants and owners, and a law providing for arbitrators in the Department of Justice.

The session of the Legislature extending from the second week in July to November 9 was devoted largely to the struggle over the Hawes-Cutting measure. The unexpected adjournment left some 600 bills awaiting legislative action, including the public works bill and a measure extending a franchise for an air service by the Pan American Airways. Bills passed included those providing for a balanced budget, woman's suffrage, limitation of sugar output, and the reorganization of administrative procedure. The suffrage law, effective Jan. 1, 1935, placed women upon the same electoral basis as men. To vote they must be 21 years of age, able to read and write, and own property worth at least \$250. The Philippines thus became the first Oriental country to adopt woman suffrage.

Governor-General Murphy vetoed 24 and signed 59 of the bills adopted by the Legislature during the session, arousing much criticism for his extensive use of the veto power. Among the bills rejected was the sugar limitation bill. The Governor-General declared that it not only did not limit production but practically guaranteed a larger crop the next year. A bill providing a basic eight-hour day for industry was approved.

OTHER DEVELOPMENTS. Upon his arrival in Manila June 15, 1933, Governor-General Murphy announced his intention to give the Islands a business administration, while warring "on human exploitation, on ignorance, on disease, on dishonesty and on injustice in any form." This promise he attempted to keep by inaugurating a

far-reaching public welfare programme, based on four months of study.

The Governor-General also studied the possibility of a more satisfactory policy for the peaceful development of the Moro provinces and the pacification of outlaws. A few months after his arrival six members of the constabulary and 13 Moros were killed in an encounter in Jolo. During the year ended Sept. 30, 1933, clashes with the Moros resulted in 101 deaths.

PHILLIPS UNIVERSITY. A coeducational institution of higher learning at University Station, Enid, Okla., founded in 1907. The enrollment for the autumn of 1933 in all departments was 396. The attendance at the 1933 summer session was 190. The faculty numbered 32. The productive endowment amounted to \$641,887. The income for the year was \$99,798. The library contained 21,500 volumes, exclusive of public documents. President, Isaac Newton McCash, D.D., LL.D.

PHILOLOGY, CLASSICAL. The best way to gain a fair conception of the more important contributions to classical philology during the year 1933 is to examine lists of articles, books, reviews, or abstracts of them, or both, given in certain periodicals—*The American Historical Review*, *The American Journal of Philology*, *Antiquity*, *The Classical Journal*, *Classical Philology*, *The Classical Quarterly*, *The Classical Review*, *The Classical Weekly*, *Greece and Rome*, *Historical Outlook*, *Language* (the organ of The Linguistic Society of America), *The Journal of Hellenic Studies*, *The Journal of Roman Studies*, *Speculum* (the organ of The Mediaeval Academy of America), *History*, *Athenaeum* (published at Pavia, Italy), *Rivista di Filologia Classica*, *L'Antiquité Classique* (this replaces *Le Musée Belge*), *Les Études Classiques*, *Philologische Wochenschrift*, *Gnomon*, and *Revue de Philologie*. The reviews, too, in these periodicals are very helpful.

In addition to the periodicals listed above may be named certain monographs that appear with a fair degree of regularity. Especially valuable is *Bibliotheca Philologica Classica*, *Beiblatt zum Jahresbericht über die Fortschritte der Klassischen Altertumswissenschaft*, whose aim is to cover all publications, both articles and books (except such as are definitely pedagogical in character), in the whole field of classical philology. No attempt is made, however, to indicate the relative importance of items listed. A very valuable feature of this work is the "Namenverzeichnis," which gives in alphabetical order the names of the scholars whose articles or books are listed in the body of the work, with references back to the numbered items which describe articles or books. The latest volume of this work is Volume 57, which covers the publications of the year 1931. In France a work of like value is published under the title *L'Année Philologique et Analytique de l'Antiquité*; its editor is J. Marouzeau.

The Year's Work in Classical Studies, published in England, lists material that appears between July 1 and June 30, under such captions as "Greek Literature," "Latin Literature," "Greek History," "Roman History," "Greek and Roman Religion," "Ancient Philosophy," "Greek Archaeology and Excavation," "Italian Archaeology and Excavation," "Papyri," and "Roman Britain."

To *The Loeb Classical Library* (see the In-

INTERNATIONAL YEAR BOOKS, 1911-1932), additions were made, on the Greek side, of versions of Aristotile, *The Metaphysics*, books i-ix, H. Tredennick; *Pausanias* (the third of six volumes), W. H. S. Jones; and *The Geography of Strabo*, H. L. Jones (the eighth and concluding volume. Pages 217-510 of this volume present an "Index of Names, Places, and Subjects" to all eight volumes). On the Latin side there were added a version of Cicero, *De Natura Decorum*, and *Academica* (in one volume), H. Rackham.

During the year progress was made on several lexicographical projects of the highest importance.

Of the tenth edition of Liddell and Scott, *A Greek-English Lexicon*, part vii was published (seven parts out of ten have now appeared, with a total of 1392 pages; the Lexicon has been carried well into the letter Pi). Of the *Thesaurus Linguae Latinae* three parts, each of 160 columns (80 large pages), appeared: vol. v, first series, fascicle x (*donec . . . duco*), vol. v, second series, fascicle iii (*elaboro . . . emetior*), vol. vi, second series, part xi (*gloria . . . gratificor*).

Of A. Walde, *Lateinisches Etymologisches Wörterbuch*, third edition, by J. B. Hofmann (see the INTERNATIONAL YEAR BOOKS, 1931-1932), part vi appeared. This carries the work into *ferre*.

Professor G. Lodge's *Lexicon Plautinum* was completed by the publication of vol. ii, part x. The two volumes of this work contain 1863 large pages. All scholars rejoice at the completion of this work. It is worth while to repeat here what was said in the INTERNATIONAL YEAR BOOK for 1931 about this work: "This work, the fruit of over 40 years of devoted labor, is the most extensive undertaking that any American classical scholar has thus far, single-handed, essayed and accomplished. By this work Professor Lodge has made the fact concerning Plautus's vocabulary and syntax accessible to all, in convenient form; in so doing he has rendered a service of the highest importance not only to students of Plautus but also to all students of early Latin. Since Plautus is the first Latin author whose writings have come down to us in anything like complete form, the facts about his usage of words and his syntax bulk large in any view of the vocabulary and the syntax of early Latin."

In *The American Journal of Philology*, liv, appeared "Insomnia in the Lexica," R. J. Getty (a study of the Latin words *insomnia* and *insomnium*); "On the History of the *Cum*-Construction," H. C. Nutting; "Die Älteste Attische Kleruchie," W. Schwahn; "Durative and Aoristic," C. W. Peppler (the author lays stress on some of the meanings of the durative tenses in Greek, and maintains that a knowledge of these meanings can be made very helpful in determining the text of various passages of Greek authors); "On Some Financial Legislation of the Sullan Period," T. Frank; "Herodotus on the Pelasgians in Attica," A. G. Laird (the author holds that there is no evidence in Herodotus for a late Pelasgian settlement in Attica. Certain expressions of Herodotus which have been interpreted to mean 'settled with' really mean 'dwelt with.' "The Pelasgians driven from Attica to Lemnos were in his <Herodotus's> view a remnant of the original population from whom the Hellenized Athenians 'split off'"); "Quirinius and the Census of Judaea," Lily R. Taylor (a presentation of "the evidence for the reliability of <St.> Luke's account (2, 1-5) of the census

of Judaea"); "Some Notes on the War with the Homonadeis," T. R. S. Broughton (a discussion of part of Tacitus, *Annales*, iii 48); "Some Traces of Serfdom in Cicero's Day," R. M. Haywood; "Galen and Posidonius' Theory of Vision," H. Cherniss ("Arranged from notes left by the late Roger M. Jones"); "An Interpretation of Cato, *Agriultura*, 136," T. Frank; "The Mythological Paradigm <παράδειγμα, exemplum> in Greek and Latin Poetry," H. V. Canter; "Divinity and Deliberation," E. B. Stevens (a discussion of a question much mooted in ancient Greek writers, Did the gods deliberate, or have the faculty of deliberation?); "Statius' Adulation of Domitian," K. Scott; "On Suetonius' Life of Terence," T. Frank (Professor Frank discusses the meaning of *Afer* in the name of the comic poet, P. Terentius Afer; he refuses to accept the view, often held, that Terence was of Berber stock; he holds that *Afer* = 'Carthaginian,' and that Terence was born at Carthage and had his *cognomen* from Carthage. He hazards various guesses concerning the way in which Terence came to be born a slave at Carthage); "Vergil's Use of *Interea*, A Study of the Treatment of Contemporaneous Events in Roman Epic," O. W. Reinmuth; "Critical Notes: Seneca's Dialogi I-VI," W. H. Alexander.

From *Classical Philology*, xxviii, may be mentioned "The Financial Activities of the Equestrian Corporations, 200-150 B.C.," T. Frank; "Fear in Spartan Character," P. H. Epps (the author marshals evidence in support of a view set forth long ago by J. P. Mahaffy, that the Greeks were as a whole "a very warlike but not a very courageous people," and that "Spartan valor was an artificial and factitious thing"); "The Traditional <Fixed> Metaphor in Homer," M. Parry (the author sums up thus: "There is not a verse in Homer that does not become clearer and greater when we have understood that he too was a traditional poet. This way lies <sic!> all true criticism and liking of his poems"); "Classical Rhetoric and the Mediaeval Theory of Preaching," H. Caplan; "The Four Elements in the *Prometheus Vincit*," S. M. Adams; "The Types of Counsel and Deliberation in Prephilosophic Greek Literature," E. B. Stevens; "Lucan and Civil War," Eva M. Sanford (the author inclines to believe that those medieval commentators on Lucan are right who hold that his purpose was to "describe the civil war and to dissuade Romans from civil wars by showing the misfortunes on both sides"); "The Memoirs of Rutilius Rufus," G. L. Hendrickson; "The Ins and Outs of the Three-Actor Rule," A. C. Schlesinger; "Quintilian's Use of Earlier Literature," M. M. Odgers; "A Grammatical Papyrus," H. M. Hubbell (the author discusses an abstract of Greek grammar, "written in a large, clumsy, school hand," on the back of a papyrus that can be dated in 9-12 A.D.); "The Origin of the Syllogism Again," P. Shorey; "The Mutual Borrowings of Catullus and Lucretius and What They Imply," T. Frank; "The Constitution of the Peloponnesian League," J. A. O. Larsen; "Simonides on the Fallen of Thermopylae," C. M. Bowra; "Poggio's Manuscripts of Livy—Alleged and Actual," B. L. Ullman; "Non-Assertive Elements in the Language of the Roman Historians," J. J. Schlicher.

In *The Classical Journal*, xxvii, xxviii, appeared "The Wooden Horse at the Gate of Troy," W. F. J. Knight; "Persius as a Literary Critic," W. C. Korfmacher; "Ancient Universities and

Student Life," C. A. Forbes; "The Two Younger Tullii," J. Stinchcomb; "Reflection of Character in Art," H. N. Couch; "Terence and Menander Once More," R. C. Flickinger; "Nature-Imagery in Vergil's Aeneid," A. L. Keith; "The Ancient Military Writers," O. L. Spaulding, Jr.; "Roman and Modern Military Science," L. K. Born; "The Frogs of Aristophanes as a Type of Play," A. M. Young; "Terentianus Maurus, Metrical Metriician," R. M. Geer; "Fate and Freedom in Greek Tragedy," W. M. Agard.

The Classical Weekly, xxvi, xxvii, contained the following articles: "Classical Mythology in Contemporary American Poetry," J. Stinchcomb; "Some Motives in Greek Tragedy Which Can Be Classified As Belonging to the Poetry of Escape," W. F. J. Knight; "The Loeb Classical Library: Thirty Recent Additions," C. Knapp; "Latin Poems <Original>," F. G. Moore; "Horace and Edgar Allan Poe," J. P. Pritchard; "Remarks on Lucan's Pharsalia," H. C. Nutting; "The Early History of the Greek People and the Indo-Germanic Migrations During the Second Millennium B.C.," F. Bilabel; "The Origin of the Actio per Formulam," E. J. Urch; "The Uses of Pendeo and Suspendo in Latin Poetry," J. H. Mozley; "The Perusine War," M. Reinhold; "American Doctoral Dissertations in Classics, 1922-1930," C. Knapp; "Greek and Roman Weather Lore of the Sea," E. S. McCartney; "Statius as an Imitator of Vergil and Ovid," J. H. Mozley; "Remarks on Lucan's Pharsalia: Second Group," H. C. Nutting; "The Influence of Astrology on Life and Literature at Rome," E. Riess.

In *Transactions and Proceedings of the American Philological Association*, lxiii, which contains the papers read before the Association at its meeting of December, 1932, the following articles appeared: "The Scene of the *Persians* of Aeschylus," A. Harmon; "Magical Motives in Seneca's *Troades*," W. F. J. Knight; "Witchcraft in the Lecture Room of Libanius," C. Bonner; "A Further Study of the Letters of Symmachus, based on a New Manuscript of the *Florilegium* Group," Olivia N. Dorman; "The Art of Terence's *Eunuchus*," E. K. Rand; "Cicero's Legacies," S. L. Mohler; "The Significance of the Speech of Maecenas in Dio Cassius, Book LII," M. Hammond; "Criteria of Originality in Plautus," H. W. Prescott; "The Problem of Macedonian Holdings in Epirus and Thessaly in 221 B.C.," J. V. A. Fine; "The Elder and Younger Pliny on Emperor Worship," K. Scott; "Notes on the History of Epicureanism," N. W. DeWitt; "On the Origin of Diana," A. E. Gordon; "The Decree of Demophilus, 340-345 B.C.," A. Diller; "Observations on Sabbadini's Variorum Edition of Vergil," H. R. Fairclough; "The Accounts of Wages Paid in Kind in the Zenon Papyri," Elizabeth Grier; "Zeus Didymaeus," J. E. Fontenrose; "The Dating of the *Lex Naronensis*," Aline Louise Abacherli; "The Interdiction of Magic in Roman Law," C. Pharr.

There remains only space enough to mention a very few of the more important books that have come to the writer's attention. Since it is, in general, clear from its title to which field of classical philology each book belongs, the books are listed in the alphabetical order of their authors' names:

Bailey, C., *Phases in the Religion of Ancient Rome*; Barbagallo, C., *Storia Universale, Volume ii, Part 2, Roma Antica, L'Impero* (49 A.C.-476 D.C.); Boak, A. E. R., *Papyri from Tebtunis,*

Part I; Brehaut, E., *Cato the Censor on Farming, Translated*; Buck, C. D., *Comparative Grammar of Greek and Latin*; Bush, D., *Mythology and the Renaissance: Tradition in English Poetry*; Burton, H. W., *The Discovery of the Ancient World*; Casson, S., *The Technique of Early Greek Sculpture*; Cook, A. S., Adcock, F. E., Charlesworth, M. P., Editors, *The Cambridge Ancient History*, vol. ix (this volume contains 21 chapters, by various scholars, describing "The Roman Republic 133-44 B.C.");

Dickinson, R. E., and Howard, O. J. R., *The Making of Geography*; Dodds, E. R., *Proclus, The Elements of Theology, a Revised Text, With Translation, Introduction, and Commentary*; Drexler, H., *Plautinische Akzentstudien*, 3 volumes; Fairbanks, A., *Greek Art*; Farnell, L. R., *Pindar, Complete Works, With Translation, and Critical Commentary*; Ferguson, W. S., *Athenian Tribal Cycles in the Hellenistic Age*; Frank, T., *Rome and Italy of the Republic* (this is volume 1 of *An Economic Survey of Ancient Rome*); Gernet, L., and Boulanger, A., *Le Genie Grec dans la Religion*; Glotz, G., *Mélanges Gustav Glotz*, 2 volumes; Gomme, A. W., *The Population of Athens in the Fifth and Fourth Centuries B.C.*; Groag, E., and Stein, A., *Prosopographia Imperii Romani, Pars I (A-B)*, second edition; Greene, W. C., *The Achievement of Rome: A Chapter in Civilization*;

Hammond, M., *The Augustan Principate*; Hansen, Hazel D., *Early Civilization in Thessaly*; Harry, J. E., *Greek Tragedy, Emendations, Interpretations, and Critical Notes*, vol. i (this volume deals with Aeschylus and Sophocles); Haywood, R. M., *Studies on Scipio Africanus*; Jones, L. W., and Morey, C. R., *The Miniatures of the Manuscripts of Terence*, 2 volumes; Laidlaw, W. A., *A History of Delos*; Miller, W., *Daedalus and Thespis: The Contributions of the Ancient Dramatic Poets to our Knowledge of the Arts and Crafts of Greece*, 2 volumes; Murray, G., *Aristophanes: A Study*; Parke, H. W., *Greek Mercenary Soldiers from the Earliest Times to the Battle of Ipsus*; Powell, J. U., and Barber, E. A., *New Chapters in the History of Greek Literature, Third Series. Some Recent Discoveries in Greek Poetry and Prose of the Classical and Later Periods*;

Richardson, Bessie E., *Old Age Among the Ancient Greeks. The Greek Portrayal of Old Age in Literature, Art, and Inscriptions*; Ross, A., *Greek Geometric Art, Its Symbolism and Its Origin*; Seltman, C. T., *Attic Vase-Painting*; Seltman, C. T., *Greek Coins: A History of Metallic Currency and Coinage Down to the Fall of the Hellenistic Kingdoms*; Shorey, P., *What Plato Said*; Stein, E., and Rittlering, *Beiträge zur Verwaltungs- und Heeresgeschichte von Gallien und Germanien*; Taylor, A. E., *Socrates*; Tod, M. N., *A Selection of Greek Historical Inscriptions to the End of the Fifth Century B.C.*; Walbank, F. W., *Aratos of Sicyon*; West, R., *Römische Porträt-Plastik*; Winter, J. G., *Life and Letters in the Papyri*.

PHILOLOGY, MODERN. In our discussion of the progress of philology during the year 1932, special attention was called to the publication of the late Prof. Henri Hubert's *Les Celtes et l'Expansion celtique jusqu'à l'époque de la Tène* (Paris, 1932). It was there predicted that this remarkable compendium of the achievements made since the War by archaeological research in the Celtic field would have a marked influence on

the future course of philology. Subsequent events have, however, exceeded our most glowing expectations, inasmuch as the influence of this carefully prepared study is far from being limited to philology alone.

An example may be cited here. Ever since the 7th century of our era and, especially, since Benoît de Sainte-Maure's *Roman de Troie* (written circa 1165), through Jean Lemaire de Belges' *Illustrations de Gaule et Singularitez de Troie*, a prose epic in three books dating from 1510 to 1513, and Pierre de Ronsard's unsuccessful epic poem, *La Franciade* (1572) in four books, the French have cherished the idea that their legendary cultural ancestry derived from Troy,—or, in other words, Greece. Thus, Francio, according to Lemaire, or Francus, according to Ronsard, who was supposed to have been the son of Hector and grandson of Priam, outwitting the Greek conquerors, escaped, with a large following, from Troy, and, after having wandered through various countries, settled in France. In this manner the earlier poets and chroniclers explained the name of their country, France, for they did not desire to attribute it to the Franks, their real conquerors in the 5th century of our era, inasmuch as they considered the latter to be barbarians—and what people would want to claim descent from such uncultured folk?

Having realized the fancifulness and improbability of this legend, the French, since the 17th century, have firmly adhered to the equally unfounded tradition that they are to the modern world what the Greeks were to the ancient world, i.e., that their culture knows no superior. It may be added that this somewhat naïve nationalistic pride is more or less common to all modern nations, for do not the present-day Germans—taking their cue from their own philologists—insist that they are the direct modern descendants of the Indo-Germanen, or Aryans? Similarly, the Italian Fascists maintain that they go back to Julius Cæsar, whereas the Spaniards hold that the source of their national culture is to be found in the venturesome spirit of the *Conquistadores*, who had assimilated the loftiest traits that the Moors—and, hence, the Arab civilization—had to offer. Other examples could easily be cited.

So, the Frenchman loved to believe that, while his governmental institutions, laws, etc., might be Roman in origin, his culture was derived from a more refined people, those whom even their Roman conquerors admired and imitated, i.e., the Greeks. Any suggestion that the Celts might also have been contributory factors would have been hailed, even as late as the end of the 19th century, with derision—"for how could it have been possible," a Frenchman would ask, "for such an uncultured race to have exercised any influence of that sort?"

But the 19th century offered some startling revelations, at least so far as Celtic was concerned. First, back in the 30's and 40's, Francis Bopp, the founder of comparative philology, deigned to give Celtic attention in the original German edition of his famous *Comparative Grammar of Sanskrit, Zend, Armenian, Greek*, etc. (published 1833-52); then Johann Kaspar Zeuss (1806-56) published in 1850 his *Grammatica Celtica*, which was revised by his pupil, Hermann Wilhelm Ebel (1820-75) in 1871; next the *Revue Celtique* was founded in 1870 by Henri Gaidoz; finally, Jules Ferry, then French Minister of Public Instruction, established in 1880, at the

Collège de France, the first chair of Celtic to be created in any European university or educational institution, and the following year (1881) when he became Premier, sent the occupant of that chair, Henri d'Arbois de Jubainville (1827-1910), to the British Isles to catalogue all the Celtic MSS to be found in their libraries and archives. The consequence of all these events was that Celtic became recognized at once as an important field of study by all European scholars.

So, when d'Arbois completed issuing, in the 1890's, his now celebrated *Cours de Littérature celtique* in eight substantial volumes, the French people began to realize that the Gauls, or Celts, were far from being the barbarians that they had always imagined them to be. D'Arbois' great work was followed by Prof. Camille Jullian's masterly *Histoire de la Gaule* in eight volumes (1884-1926), then by Joseph Déchelette's *Manuel d'Archéologie préhistorique celtique et gallo-romaine* (3 vols., 1908-10),* and, lastly, by the work of M. Hubert, mentioned above. And what has been the result? Last June, an opera, entitled *Vercingétorix*, was given at the Grand Opéra in Paris. The authors of the libretto were M. Étienne Clémentel, a former Minister of State, and M. Louwyck, and the composer, M. Canteloube. This "épopée lyrique nationale" was then presented under the most auspicious circumstances—before President Lebrun and his Conseil d'État. French musical and literary critics hailed with enthusiasm this "monument patriotique," citing at the same time the above-mentioned works as well as the discovery in February, at Clermont-Ferrand, of the immense Gaulish *oppidum*, or town, which has been identified as Gergovia where Vercingetorix defeated Julius Cæsar in 52 B.C., and for which, says a critic, "on a vu le public français se passionner." And Vercingetorix, theretofore considered as a mere insignificant chief of a tribe of ferocious barbarians, was at once transformed into the national hero, or, to quote the words of André George, "l'incarnation du sens national, en face des résistances locales et du 'défaitisme' de ses rivaux." Thus, the modest contributions of philologists and archaeologists have succeeded in toppling over the Trojan-Greek idol before which the French have so insistently worshipped for more than a thousand years—a fact that would have appeared hopelessly incredible even as late as 25 years ago.

In fact, the year 1933 marked an epoch in the history of Celtic research, for at no time in the past was such widespread interest manifested for this subject. Indeed, it may well be said that, if much of Europe was "war-minded" at this time, the Celtic nations were distinctly "culture-minded." Thus, the first important Celtic Congress was held at Dinard, Brittany, from Sept. 4th to 9th. The delegates not only succeeded in perfecting an organization for conducting work in all of the six Celtic languages, but voted unanimously a resolution requesting the French government that Breton might be officially taught in the state schools of Lower Brittany. Among the important papers read was one by Miss M. R. Dobbs, of Cushendall, Ireland, on "The Lost Folk Songs of Celtic Literature" and by Prof. Tomas OMáille, of University College, Galway, on the "Dialect Survey of Ireland," undertaken by the Committee of Irish Studies of the Royal Irish

* Special attention was given to these works, at the time of their publication, in these columns. Cf. the NEW INTERNATIONAL YEAR BOOK of those dates.

Academy with funds provided by the Free State. According to Prof. O'Máille, in three sessions of 15 days each, 215 records were made, providing typical specimens of the three principal dialects. This survey will be continued until every vestige of dialectal variation is recorded.

In Ireland itself the same fervor for scholarship was evident on all sides. The MSS Commission has undertaken to publish facsimiles, with transcription and translation, of all the MSS in existence in Ireland. And new MSS are continually being discovered. Thus, the *Bretha Crolige*, or "Judgments on Blood-Lyings," a valuable Old Irish law tract of the 8th century, hitherto believed to have been lost, turned up in an Irish medical MS recently acquired by the National Library of Ireland. This MS supplies additional information to the *Senchas Mor*, the great collection of Irish customary law compiled at the beginning of the 8th century, for it deals with the primitive system of compensation for non-fatal injuries which imposed on the injurer the duty of providing for the nursing of his victim back to health and supplying him with medical attendance.

The Folklore Society of Ireland is gathering the folklore not only of that country but also that of the Irish people in foreign countries, especially in America. Though founded in 1927, the Society has heretofore been hampered by lack of funds in making a systematic effort to collect the fast-disappearing oral traditions of the Irish people. In cooperation, then, with the government-aided Irish Folklore Institute, established in 1930, the Society has succeeded in the past two years in recording verbatim more than 2000 popular tales, related in various Irish dialects. Next, a great impetus to Irish archaeology has been given by the excavations made by the second Harvard University Archaeological Mission to Ireland, which have revealed that the little island is a veritable mine of untouched archaeological treasures. This mission, which aims to make a systematic survey of the entire country, has discovered that Ireland is very rich in monuments dating back to the Bronze Age (2000-350 B.C.) and has, further, come across evidence that the first immigrants to the island arrived there about 7000 years ago and "that they probably came from the continent by land bridges then existing." The pronounced success of this mission has resulted in plans for the establishment of an American School of Celtic Studies in Ireland under the auspices of the National Museum. Finally, it may be noted that the general use of the Irish language is spreading rapidly in all parts of the Free State. This will no doubt be encouraged by the publication of Dr. Hans Hensen's *Irish Lexicon, a Concise Dictionary of Early Irish with Definitions in German and English*, of which the first fasciculus appeared at Halle in 1933. When completed this valuable work, edited by Séamus Caomhánach, Dr. Rudolf Hertz, V. E. Hull, and Gustav Lehmacher, S.J., with the assistance of many collaborators, will contain more than 800 pages. In all of the above undertakings scholars in Ireland have received the indefatigable cooperation of the large and influential American Irish Historical Society (132 E. 16th St., New York), which, under the administration of its able and efficient President-General, James McGurrian, and his zealous co-workers (notably former Justice Daniel F. Cohalan), has become, through its many activities and productions, the

outstanding historical society, devoted to a racial element, in America.

Economic depressions may be transitory, but—and most fortunately for us!—discussions on language and its use never cease. Thus, in the very midst of our recent financial crisis Prof. R. L. Ramsay, of the University of Missouri, maintained, in the March issue of *American Speech*, that there are only some 250,000 "legitimate and authoritative" words in the English language, and "over 50,000 of these are obsolete." Not satisfied with having reduced English to this limited quota, which any one might have thought a sufficiently large task, Professor Ramsay becomes a world-arbiter and fixes definitely the amount of words a foreigner may use in his own tongue. Hence, we are told that "a careful and conservative estimate of the largest published dictionaries of foreign languages gives approximately 71,750 for German without counting compounds, or 184,704 with recorded compounds; 93,032 for French, 70,683 for Spanish, 69,642 for Italian, 51,686 for ancient Latin, 96,438 for ancient Greek, and 41,142 for Anglo-Saxon." But Professor Ramsay overlooks one vital fact in his estimates for French, Spanish and Italian, and that is that there are no adequate or complete dictionaries existing for those tongues, or, in other words, that it would be necessary to bring together two or more dictionaries in each language in order to arrive at a fair evaluation of the numbers of words used by the combined population. Thus, the *Dictionnaire Général de la Langue française*, which is, excepting the antiquated Littré and the encyclopedic dictionary of Larousse, the only work approaching a standard lexicography in French, is limited not only to so-called living words, but represents, more or less, the choice of one editor, Antoine Thomas, since he carried on the undertaking most of the time alone. Nevertheless, this dictionary was advertised as containing more than 100,000 words in its original edition. And as for its inadequateness, that can easily be discovered by reading any French magazine, literary work, or daily journal and looking up the words used in that dictionary. If we now return to English we find that a noted and experienced lexicographer, Dr. Frank H. Vizetelly, fails to agree with Professor Ramsay. In an illuminating historical article published in the *New York Times* of March 5, Dr. Vizetelly points out that—to cite only one example of the many included in his list—"the present vocabulary strength of Funk and Wagnalls *New Standard Dictionary* is 455,000 words," and that "the publishers have in reserve for the consideration of its editors, for future editions, not less than 125,000 more terms, a number that can be swelled almost indefinitely, depending entirely upon where the bars of exclusion are let down." And since Professor Ramsay had challenged Dr. Vizetelly's estimate of 1,000,000 words in the English language as well as that of two to three millions made by Mr. Harold Wentworth, former associate editor of Webster's *New International Dictionary*—"these astonishing figures," says Professor Ramsay, "backed by imposing names and indorsed by standard publications, seem hitherto to have gone unchallenged"—Dr. Vizetelly finds himself in accord with Mr. Wentworth, for, in making his estimate, he "did not take into account any of the variations," such as verbal inflections, comparisons of adjectives and adverbs, irregular plurals of nouns, etc., referred

to by Mr. Wentworth. Finally, Dr. Vizetelly remarks that, in the *New English Dictionary on Historical Principles*, which contains a total of 414,825 terms, Dr. Murray was obliged by the Clarendon Press to limit himself to "the literary vocabulary" and to exclude "the vast vocabulary of the sciences." As an example of the rapid growth of the scientific vocabulary in one phase alone, the present writer recalls that when, in 1899, Gen. (then Lieut.) C. D. Willcox sent him a copy of his new *French-English Military Technical Dictionary* (Washington, Government Printing Office), it contained less than a half-dozen words pertaining to aviation. Scarcely 16 years later this vocabulary had grown to some 3000 words. And the same may be said of the automotive industry, of the moving picture, radio, psychology, etc. How suddenly and rapidly the scientific vocabulary has grown may be seen in the storm that raged in the British press, shortly after the last meeting of the British Association for the Advancement of Science, about the "New Jargon of Science." In fact, in an address on "Technical Language" delivered before the London Authors' Club on October 23, Dr. Francis Aveling, Professor of Psychology at London University, stated that much complaint was made at the British Association meeting this year "that some of the communications of the younger men were couched in terms so obscure and befogging that many even of the older men of science were unable to understand them." He attributed this to "the immense complexity of inter-related detail which is nature," which is so difficult "to grasp in human thought and to translate into words," rendering the ordinary vocabulary in current use insufficient and requiring, for the sake of exactness, the invention of "a terminology like that of chemistry, or a symbolic notation such as those of mathematics or statistics." Is it astonishing then that archaeologists and ethnologists, as stated in recent news dispatches, are finding it necessary to systematize and prepare dictionaries of their nomenclature? And what is true of science is also true of philology and linguistics, where scholars are likewise striving to arrive at more exact shades of meaning in describing the inter-relations of words and ideas. Consequently, Prof. J. Marouzeau, of the University of Paris, has issued recently a *Lezique de la Terminologie grammaticale et linguistique* (Paris), which contains 182 pages.

It is obvious, therefore, that all attempts to introduce an artificial international language such as Esperanto are bound to fail, because, first, most of them consider language as static—and how far could we get along to-day with the vocabulary used in the '90's of the past century?—and, secondly, if they admit growth in language their vocabularies become as great as—if not greater than—those of existing languages. And so, notwithstanding the great gains claimed for Esperanto at the Congress held at Cologne on July 30-31, a first showing was made of a new picture language, *Mundaneum*, which, according to its inventors, presents economic and social facts understandably to all peoples. On the other hand, the eminent French grammarian, Ferdinand Brunot, President of the Academy of Inscriptions, maintains that "the universal tongue that will be developed by the extension of world relationships will probably be a kind of language analogous to algebra." Already, he said, the languages of the different important nations

had assumed an extension—due to the culture they represented—far beyond the sphere of their natural domain and were becoming merged. It is possible, then,—if we accept the view of Professor Brunot—that at some distant future date our present-day languages will go the way of Etruscan and Berber. But, for the time being, English, by reason of its great flexibility and rich borrowings, has, in the parlance of the race-track, the pole, and may yet win the great race of universality.

GENERAL. Among the general works on linguistics, the following merit attention: Karl Bühler, *Die Axiomatik der Sprachwissenschaft* (Berlin), in which the author examines linguistics in comparing it with the *ideas* of Plato, the *forms* of Aristotle, and the modern conception of *structure*, especially the distinction between *language* and *speech*; Charles Bally, *Linguistique Générale et Linguistique française* (Paris), in which the author holds that "la langue parlée est une abstraction"; Karl Vossler, *The Spirit of Language in Civilization* (New York), a translation from the German of a study on the philosophy of language; Valéry Larbaud, *Technique* (Paris), which, though containing an arraignment of some of the methods of philologists, reveals an enthusiastic admiration for the results obtained; L. Bloomfield, *Language* (N. Y.), a revised and enlarged edition of the author's *Introduction to the Study of Language*, first published in 1914; A. Cuny, *La Catégorie du duel dans les langues indo-européennes et chamito-sémitiques* (Brussels), in which the author seeks to trace a genetic relationship between the formations of the dual in Indo-European and Hamito-Semitic; J. Lohmann, *Genus und Sexus, eine morphologische Studie zum Ursprung der indogermanischen nominalen Genus-Unterscheidung* (Göttingen), which is a further development of Antoine Meillet's thesis that the feminine gender is of more recent origin, having been superimposed upon the animate, or masculine, and the inanimate, or neuter, genders; A. von Blumenthal, *Die Iguvinschen Tafeln: Text, Übersetzung, Untersuchungen* (Stuttgart), another attempt to interpret the Umbrian Tables of Iguvium; H. N. Shenton, *Cosmopolitan Conversation* (ib.), a survey of the language problems of international conferences; C. O. S. Mawson, *International Book of Names* (ib.), a pronouncing dictionary of proper names; C. N. Gould, *Oklahoma Place Names* (Norman, Okla.), an account of their origins and meanings; W. R. Halliday, *Indo-European Folk-Tales and Greek Legends* (N. Y.), a comparative study of the origin of legends; S. Thompson, *Motif-Index of Folk Literature* (vols. i, ii, Bloomington, Ind.), a classification of narrative elements in folk-tales, ballads, myths, local legends, etc., going through the letter E; Mary Entwistle, *There Was Once* (N. Y.) a collection of folklore and legends; A. F. Bentley, *Linguistic Analysis of Mathematics* (Bloomington, Ind.), a study of the language, symbols, and expressions used in mathematics; and L. H. Bailey, *How Plants Get Their Names* (N. Y.), a study in botanical nomenclature with a self-pronouncing list of generic names.

AFRICAN. The most important contributions to this field of research include W. H. Worrell, *Coptic Sounds* (Ann Arbor, Mich.), of which Part I deals with the main currents of their history; J. H. Breasted, *The Dawn of Conscience* (N. Y.), a study in the beginnings of moral

consciousness in ancient Egypt; S. R. K. Glanville, *The Egyptians* (ib.), an account of history, life, and art in ancient Egypt; K. S. Sandford and W. J. Arkell, *Paleolithic Man and the Nile Valley in Nubia and Upper Egypt* (Chicago), a study of the region in Pliocene and Pleistocene times, forming volume ii of the *Prehistoric Survey of Egypt and Western Asia*; W. F. Edgerton, *The Thutmosid Succession* (Chicago), a study in Egyptian dynastic history; L. Spence, *Myths and Legends of Ancient Egypt* (New York); A. S. Yahuda, *The Language of the Pentateuch in its Relation to Egyptian* (vol. i; ib.), a new approach to higher criticism of the Old Testament; H. G. Evelyn White, *The Monasteries of the Wadi 'N Natrān: The Architecture and Archaeology* (ib.), the third and final volume of the late author's studies on these Coptic monasteries, issued by the Metropolitan Museum of Art; C. Meinhof and N. von Warmelo, *Introduction to the Phonology of the Bantu Languages* (Berlin); and R. Lenton, *The Tanala, A Hill Tribe of Madagascar* (Chicago), an anthropological and cultural study.

CHINESE AND JAPANESE. Among the interesting studies devoted to Chinese we may note L. Cranmer-Blyng, *The Vision of Asia: An Interpretation of Chinese Art and Culture* (New York), revealing the art of life the Chinese developed, by an authority on Oriental philosophy; M. Granet, *Festivals and Songs of Ancient China* (ib.), an interpretative study, translated from the French; F. T. C. Werner, *Myths and Legends of China* (ib.), a study in folklore; Genevieve Wimsatt, *The Lady of the Long Wall* (ib.), a translation of *Meng Chiang Nu*, one of the *Ku Shih*, or Drum Songs, of China, a collection of ageless narratives which have only recently been set down in writing; Pearl S. Buck, *All Men are Brothers* (ib.), a translation of the classic fifteenth century Chinese novel, *Shui Hu Chuan*; *Chinese Rhymes for Children* (ib.), a collection of Chinese rhymes, including some from Japan, India, and Korea, translated by I. Taylor; *Careers for Students of Chinese Language and Civilization* (Chicago), a symposium on vocational opportunities, edited by L. Hodous; E. D. Harvey, *The Mind of China* (New Haven, Conn.), a study of the national psychology; R. H. Tawney, *Land and Labour in China* (N. Y.), an economic study of the traditional agricultural and industrial systems in China; and H. J. Coolidge, Jr., and Theodore Roosevelt, *Three Kingdoms of Indo-China* (ib.), a record of the Field Museum's expedition to Southeastern Asia.

Japanese is represented by K. K. Kawakami, *Manchoukuo, Child of Conflict* (New York), a discussion of recent developments in Manchuria; Sven Hedin, *Jehol, City of Emperors* (ib.), a history and description of the Mongolian city; Lady Murasaki, *The Bridge of Dreams* (Boston, Mass.), the sixth and last volume of the 1000-year old classic, *The Tale of Genji*, translated by Arthur Waley; A. L. Sadler, *The Art of Flower Arrangement in Japan: A Sketch of its History and Development* (N. Y.); M. Anesaki, *Art, Life, and Nature in Japan* (Boston, Mass.), a description and interpretation of art in the everyday life of the Japanese; and W. H. Erskine, *Japanese Festival and Calendar Lore* (Tokyo), an almanac dealing with Japanese customs.

INDIA. Contributions to this extensive and intriguing field of research include the following: G. Morgenstierne, *Report on a Linguistic Mission*

to North-Western India (Oslo, Norway), a valuable survey; H. Courbin, *Grammaire élémentaire du Sanskrit classique* (Paris), which, though useful, is far inferior to the standard work of W. D. Whitney; P. L. Vaidya, *The "Prākṛta-Prakāśa" of Vararuchi* (Poona, India), a study of a well-known text; C. V. Joshi, *A Manual of Pali* (ib.), an outline of an important ancient language; R. V. Jahagirdar, *An Introduction to the Comparative Philology of the Indo-Aryan Languages* (ib.), a general study; R. Carlyle, *The Psalms of Krishna* (Los Angeles, Calif.), a metrical version of the *Bhagavad-Gita*, translated from the Sanskrit; S. Dasgupta, *Indian Idealism* (New York), a collection of essays on Indian philosophy; C. Bragdon, *An Introduction to Yoga* (ib.), an explanation of the meaning of Yoga, with advice and instruction for the practice of "Raja" Yoga; R. J. Minney, *India Marches Past* (ib.), an account of India, its history and present problems; D. G. Mukerji, *The Master Monkey* (ib.), a legend from the folklore of India; Ian Hay, *The Great Wall of India* (Boston, Mass.), an account of a trip to the Northwestern frontier of India; H. C. E. Zacharias, *Renascent India* (N. Y.), a résumé of the Indian problem during the past century; and one work on Tibet, viz., Henrietta S. Merriek, *Spoken in Tibet* (ib.), a description of life in Tibet.

PERSIAN. Antoine Meillet's splendid *Grammaire du Vieux-Perse* (Paris), although originally published as recently as 1915, had nevertheless become antiquated by reason of the new light thrown upon the ancient language of Persia by the important archaeological discoveries as revealed in V. Scheil, *Les Inscriptions des Achéménides à Suse* (Paris, 1929), F. W. König, *Der Burgbau zu Susa* (Leipzig, 1930), R. G. Kent, *The Recently Published Old Persian Inscriptions* (Philadelphia, 1931), E. Herzfeld, *Arch. Mitt. aus Iran* (III, 29-124, Berlin, 1931), and W. Brandenstein, *Die neuen Achamenideninschriften* (WZfKdM, XXXIX, 7-97, 1932). Consequently a new edition, utilizing the fresh material found in the Susian and other inscriptions as well as the Iranian material found in transcription in the Aramaic documents of Elephantine, was greatly desired, and this has now been supplied in a second edition of the Grammar, revised and enlarged by the brilliant pupil of the great philologist, E. Benveniste.

Other works, dealing with Persia, include Sir Arnold Wilson, *Persia* (New York), which contains a survey of the country, its history, customs, and peoples and of the present transition; Eleanor F. Noxon, *Rubā'iyāt of the Twentieth Century* (Philadelphia), a new translation of Omar Khayyam's poem; *The Rubā'iyāt of Omar Khayyam* (N. Y.), a new metrical version by David Eugene Smith, based upon a verbatim translation by Hashim Hussein; Laurence Binyon, *Persian Miniatures* (London), a magnificent volume, prepared with the cooperation of J. V. S. Wilkinson and Basil Gray; S. Katchadourian, *Persian Fresco Painting* (N. Y.), a catalogue of paintings reconstructed from the seventeenth century originals in Isfahan and published by the American Institute for Persian Art and Archaeology; and M. A. Sohrab and Julie Chanler, *Living Pictures* (ib.), an account of the origin and spread of the Bahā'ī movement in Persia in the nineteenth century.

CELTIC. As has already been indicated in the introductory section of this survey, there was

extraordinary activity in this field during the year 1932. A few characteristic works may here be added. Thus, on Irish we have E. Henry, *La Sculpture irlandaise pendant les douze premiers siècles de l'ère chrétienne* (Paris), a very valuable contribution; J. F. Kenney, *St. Patrick and the Legend*, a reprint from *Thought*, in which the author shows that the celebrated saint was born before 389 and traces the course of the legend that grew up about him; P. Grosjean, S.I., *La Christianisation de l'Irlande et la Méthode de Saint Patrice*, reprinted from *La Semaine de Missiologie de Louvain* (Belgium), as well as the author's *La Prophétie de S. Malachie sur l'Irlande*, which proves that Dr. J. F. Kenney was right when he stated, in his *Sources of Early Irish History* (1, 767), that the alleged prophecy of St. Malachy regarding English domination in Ireland was "quite obviously a modern concoction" and *Le Martyrologe de Tallaght*, dealing with one of the triptych of ancient Irish martyrologies, both of which studies have been reprinted from the *Analecta Bollandiana* (Brussels); Dom Louis Gougaud, *Christianity in Celtic Lands: A History of the Churches of the Celts, Their Origin, Their Development, Influence, and Mutual Relations* (London), translated and expanded from the French edition of 1911 by Miss Maud Joynt; D. Mathew, *The Celtic Peoples and Renaissance Europe* (New York), a study of Celtic and Spanish influences on Elizabethan history; W. A. Phillips, *History of the Church of Ireland* (ib.), a survey; Padraic Colum, *Other Roads in Ireland* (ib.), the third volume of his series on travels in Ireland, the other two being *Crossroads in Ireland* and *The Road Round Ireland*; E. E. Somerville and M. Ross, *Irish Memories* (ib.), a popular-priced edition, and the same authors' *The Smile and the Tear* (Boston, Mass.), containing sketches of Irish hunting life and the Irish peasantry; W. F. P. Stockley, *Essays in Irish Biography* (N. Y.), supplying studies on Thomas Moore, Canon Sheehan, and Dr. Henebry; W. Moss, *Political Parties in the Irish Free State* (ib.), a description of the growth, organization, and methods of these parties; and D. Gwynn, *De Valera* (ib.), outlining the life and career of the President of the Irish Free State. A few works on the Irish in foreign lands may be added to the above, viz., G. F. Donovan, *The Pre-Revolutionary Irish in Massachusetts, 1620-1775* (Webster Groves, Mo.), a doctoral dissertation; W. F. Adams, *Ireland and Irish Emigration to the New World* (N. Y.), a pioneer work of the utmost value; *The Journal of the American Irish Historical Society* (ib.), containing the record of the thirty-fourth annual meeting, with a collection of historical papers; and P. S. Cleary, *Australia's Debt to Irish Nation-Builders* (ib.), an account played by the Irish in settling and governing Australia.

Scottish, Welsh, and Cornish are represented by Sir William A. Craigie, *A Dictionary of the Older Scottish Tongue, from the Twelfth Century to the End of the Seventeenth* (Chicago), of which Part III includes words from *Berk to Broke*; H. C. Dieckhoff, *A Pronouncing Dictionary of Scottish Gaelic* (Edinburgh), based on the Glengarry Dialect according to oral information obtained from natives born before the middle of the last century; John Rolland of Dalkeith, *The Sevin Seages translatit out of prois in Scottis meter* (Glasgow), edited by Dr. George F. Black from the unique copy of the first edition of 1578,

now in the Huntington Library at San Gabriel, Calif., with an introduction, notes, and a comprehensive glossary of nearly 4000 words, for the Scottish Text Society; G. G. Coulton, *Scottish Abbeys and Social Life* (New York), revealing the distinctive characteristics of Scottish monasticism and its influence upon civilization and social life; F. R. Fraprie, *Castles and Keeps of Scotland* (Boston, Mass.), a new edition of this descriptive and historical study; A. Cunningham, *The Loyal Clans* (Cambridge, Eng.), in which the author attempts to prove the rationality of Highland Jacobitism; H. F. Wallace, *A Stuart Sketch Book, 1542-1746* (New York), being a review of the House of Stuart in Scotland, with sketches of places associated with them; C. Mackenzie, *Prince Charlie* (ib.), a biography of the Young Pretender; John Buchan, *The Massacre of Glencoe* (ib.), a narrative of the massacre of the MacDonald clan of Glencoe in 1692; H. V. Morton, *In Scotland Again* (ib.), a companion volume to *In Search of Scotland*; Jane D. Harding, *The Arthurian Legend* (Chicago), a check list of books and other monographic material in the Newberry Library, dealing with this famous Welsh legend; A. H. Dodd, *The Industrial Revolution in North Wales* (N. Y.), a study in economic history; A. K. H. Jenkin, *Cornwall and the Cornish* (ib.), an account of Cornish social life and folklore from the Elizabethan period to modern times; and the same author's *Cornish Seafarers* (ib.), a history of the smuggling, wrecking, and fishing life of Cornwall, with an introduction by Sir Arthur Quiller-Couch.

SLAVIC. The *Grundriss der Slavischen Philologie und Kulturgeschichte* (Berlin), edited by Profs. R. Trautmann of Leipzig and M. Vasmer of Berlin, which not long ago issued such valuable works as N. van Wijk's *Geschiede der Altkirchenslavischen Sprache*, S. Mladenov's *Geschichte der Bulgarischen Sprache* and D. Zelenin's *Russische (Ostslavische) Volkskunde*, has now added to its collection of philological manuals D. Ainalov's *Geschichte der Russischen Monumentalkunst der Vormoskovitischen Zeit*. Unfortunately, however, this *History of Russian Monumental Art in the Pre-Muscovite Period*—to give the title in English—which was originally intended as the first volume of a four-volume history of Russian art, has not come up to the standard established by the works mentioned above—in fact, it is decidedly inferior to L. Réau's *L'Art russe* (Paris), for which Professor Ainalov does not hesitate to express his disdain. But, in spite of its shortcomings, the present *History* will prove valuable to students of primitive and medieval Russian art and architecture. The splendid *Histoire de Russie* (3 vols., Paris), by P. Milliukov, Charles Seignobos and L. Eisenman, will no doubt rank as one of the most valuable contributions ever made to the subject. W. E. D. Allen, *A History of the Georgian People from the Beginning Down to the Russian Conquest in the 19th Century* (London), is also valuable especially for the 10th and 11th centuries. Mention should be made, finally, of Stephen Graham's two biographies, both published by the Yale University Press (New Haven, Conn.), i.e. *Ivan the Terrible*, relating the life and times of Czar Ivan IV, and *Boris Godunof*, devoted to the sixteenth-century Czar.

On the other Slavic languages we have M. Spinka, *A History of Christianity in the Balkans* (Chicago), being a study of the spread of

Byzantine culture among the Slavs; E. C. Corsi, *Poland, Land of the White Eagle* (New York), a history of the country from the earliest times; Lucia M. Borski and Kate B. Miller, *The Gypsy and the Bear* (ib.), a volume of fairy tales translated from the Polish; F. Schevill, *The History of the Balkan Peninsula* (ib.), a revised and enlarged edition of a work first published in 1922; and Henrietta Leslie, *Where East Is West* (ib.), a description of life in Bulgaria. Finally, the attention of the reader should be called to the *Wörterbuch der Latawischen Schriftsprache* (vol. i; A-K; Heidelberg), a Lithuanian-German dictionary, edited by M. Neidermann, A. Senn and F. Brender; and O. Stepanek, *Simplified Czechoslovak Grammar and Conversation Book* (Omaha, Nebr.).

ENGLISH. The indefatigable lexicographer and grammarian, Dr. Frank H. Vizetelly, added during the year two new volumes to his long list of publications, viz., *How to Speak English Effectively* (New York) and *How to Use English* (ib.). The former is a handbook on modern speech, while the latter not only includes advice on the manner of detecting the important shades of meaning in words by everyday examples, but also helps to build an impressive vocabulary. In fact, the extensive material it contains is arranged in alphabetical order so that the volume may be used "as a dictionary, as a book of synonyms, as a guide to correct usage," to quote the *New York Times*. During his long editorship of the section entitled "The Lexicographer's Easy Chair" in *The Literary Digest*, Dr. Vizetelly selected from the thousands of questions submitted regarding the origin and use of the English language those that appeared to him most apposite and most important. The results achieved are well expressed as follows, in *The American Mercury*: "His immense erudition is always visible. Nothing that has ever been said or written about English lexicography seems to be unfamiliar to him. His judgments, in the main, are conservative, but he welcomes changes and innovations when they seem to add anything to the vividness of the language." Other works along the same line are W. L. Mason, *How to Say It Correctly* (ib.), also a handbook of correct speech; Janet R. Aiken, *A New Plan of English Grammar* (ib.), a textbook; and *Picturesque Word Origins* (Springfield, Mass.), a study in semantics. Of a philological nature are F. Holthausen, *Altenglisches Wörterbuch* (Lief., 3 and 4, Heidelberg); J. F. Bense, *A Dictionary of the Low Dutch Element in the English Vocabulary* (The Hague); E. Dieth, *A Grammar of the Buchan Dialect (Aberdeenshire), Descriptive and Historical* (vol. i, Cambridge); and *Dialect Notes* (vol. iv, part v; vol. vi, part vi; New Haven, Conn.), the latter containing Part IV of R. H. Thornton's "An American Glossary."

Among dictionaries we may mention M. M. Mathews, *A Survey of English Dictionaries* (New York), a brief history; *A New English Dictionary on Historical Principles* (Oxford), by J. A. Murray, H. Bradley, W. A. Craigie, and C. T. Onions, which, though it contains an Introduction, Supplement, and Bibliography, is, in fact, the concluding volume of what is often known as *The Oxford Dictionary*; W. Little, C. T. Onions, and H. W. Fowler, *The Shorter Oxford English Dictionary* (ib.), an abridgment of the above work; Gov. J. G. Pollard, *A Connotary* (New York), a brief collection of humorous defini-

tions not usually found in standard dictionaries; George McDonald, *McDonald's Electrical Dictionary* (Boston, Mass.), an explanatory vocabulary of electrical terms; and Eric Partridge, *Slang Today and Yesterday* (New York), which is not only unreliable, but very naïve at times, since the author inserts therein, as specimens of American slang, imaginary words taken from a "phony" "Lexicon of a Fight Manager," created by an American sports writer for the delectation and amusement of his readers.

Anglo-Saxon and Old English are represented by G. P. Krapp, *The Paris Psalter and the Meters of Boethius* (New York), which forms the fifth volume of *The Anglo-Saxon Poetic Records*; E. T. De Wald, *The Illustrations of the Utrecht Psalter* (Princeton, N. J.), a facsimile edition of the ninth-century manuscript, with explanatory text on the illustrations; *The Exeter Book of Old English Poetry* (London), with introductory chapters by R. W. Chambers, M. Förster and R. Flower; D. D. Egbert, *The Tichhill Psalter* (N. Y.), a descriptive and historical study of an English illuminated manuscript of the early fourteenth century, issued by the New York Public Library; Carleton Brown, *English Lyrics of the Thirteenth Century* (ib.), with introduction, glossary, and notes; W. O. Wehrle, *The Macaronic Hymn Tradition in Medieval English Literature* (Washington, D. C.), a doctoral dissertation of the Catholic University of America; G. R. Owst, *Literature and Pulpit in Medieval England* (N. Y.), a study of the influence of medieval preaching on English literature; Dorothea W. Singer, *Philobiblon of Richard de Bury* (Berkeley, Calif.), a reprint of a work written between 1281 and 1345; S. Painter, *William Marshall: Knight-Errant, Baron and Regent of England* (Baltimore), a biography of a typical Knight of the twelfth century; J. Clayton, *St. Anselm* (Milwaukee, Wis.), a biography of Anselm, Abbot of Bec and Archbishop of Canterbury under William II; and C. Stephenson, *Borough and Town* (Cambridge, Mass.), a study of urban origins in England, issued by the Medieval Academy of America.

Chaucer continued to be the dominating author of medieval literature, as shown by the following works: the late Sir William McCormick and Mrs. J. E. Hazeltine's edition of *The Manuscripts of Chaucer's Canterbury Tales* (Oxford), in which the 57 MSS and 28 fragments of the *Canterbury Tales* were collated, and the points of variation from the standard edition were noted; *The Complete Works of Geoffrey Chaucer* (Boston, Mass.), edited with notes, introduction, and glossary for the Cambridge Edition of Poets by Prof. F. N. Robinson; Chaucer's *Troilus and Criseyde* (New York), a modern verse rendering of the poem, by Prof. G. P. Krapp; and R. Krauss, H. Braddy and C. R. Kase, *Three Chaucer Studies* (ib.). Belonging to the same period is *A Survey of the Manor of Wye* (ib.), a fifteenth-century text in Latin describing a Kentish manor house, edited, with introduction and notes, by Helen E. Muhlfield.

Finally, a few works on the English Renaissance deserve to be mentioned, viz., D. Sargent, *Blessed Thomas More* (New York), a biography; G. Constant, *The Reformation in England: Henry VIII (1509-1547)* (ib.); M. Creighton, *Queen Elizabeth* (ib.), a new edition of a biography first published in 1896; Mona Wilson, *Queen Elizabeth* (ib.), a new title in the

Appleton Biographies series; Emma M. Denking, *Elizabeth and Leicester* (ib.); D. M. Henderson, *The Crimson Queen* (ib.), a life of Mary Tudor; E. Linklater, *Mary, Queen of Scots* (ib.), another new title in the Appleton Biographies; Iris Brookes, *English Costume in the Age of Elizabeth* (ib.), a detailed description of sixteenth-century costume; G. T. Buckley, *Atheism in the English Renaissance* (Chicago), an analysis of unbelief in England in the sixteenth century, its sources, development, and some famous examples; Clara L. Gebert, *An Anthology of Elizabethan Dedications and Prefaces* (Philadelphia); Brittons Bowre of Delights, 1591 (Cambridge, Mass.), a facsimile reproduction of the Huntington Library copy of the first edition of this Elizabethan miscellany of poetry, edited by H. E. Rollins; Thomas Lodge and Other Elizabethans (ib.), containing five biographical studies by C. J. Sisson; M. Eccles, and Deborah Jones; *The Voyage and Trauail of Syr Iohn Maundeville, Knight* (N. Y.), an edition reprinted from the English edition of 1568; B. E. C. Davis, *Edmund Spenser* (ib.), a critical study; and *The Works of Edmund Spenser, Volume I: The Faerie Queene* (Baltimore), a variorum edition, with commentary, based on the 1596 edition, by E. Greenlaw, C. G. Osgood, and F. M. Padelford.

GERMAN AND SCANDINAVIAN. Among the important contributions to the language, literature, and history of Germany the following may be mentioned: F. Loewenthal, *Bibliographisches Handbuch zur deutschen Philologie* (Halle), a brief bibliography of linguistics; K. Bergmann, *Deutsches Wörterbuch* (Leipzig); H. Paul, *Deutsches Wörterbuch* (4th ed., Halle), revised by Dr. K. Euling; F. Dornseiff, *Der deutsche Wortschatz synonymisch geordnet* (Berlin and Leipzig), a dictionary of synonyms; K. Wichmann, *Miniature Dictionary of the German and English Languages* (New York), containing German-English and English-German vocabularies; C. J. Kullmer and E. Thelin, *German Vocabulary Drill Book* (Syracuse, N. Y.), a vocabulary of 850 words based on the technique of the "memory drum" system; C. C. Barber, *Die vorgeschichtliche Betonung der germanischen Substantiva und Adjektiva* (Heidelberg); J. Dal, *Die germanischen Pronominalkasus mit N-Formen* (Oslo); F. Gennrich, *Grundriss der Formenlehre des mittelalterlichen Liedes* (Halle); H. Pinnow, *History of Germany* (New York), a translation from the German of a history of the people and the state since the tenth century; E. N. Johnson, *The Secular Activities of the German Episcopate, 919-1024* (Lincoln, Neb.), a historical study of medieval Germany; *Wolframs von Eschenbach Parzival und Titivel* (3 vols., Leipzig), the fourth edition of Karl Bartsch's edition, revised by Marta Marti; *Wolfram von Eschenbach, Parzival* (Paris), edited by Prof. M. Wilmotte; *Middle High German Translations of the Regula Sancti Benedicti* (Cambridge, Mass.), the eight oldest versions edited, with an introduction, a Latin Middle High German Glossary and facsimile pages, by C. Selmer for the Mediæval Academy of America; John Erskine, *Tristan and Isolde* (Indianapolis, Ind.), a new rendering of the German version of the old romance; L. Spence, *Hero-Tales and Legends of the Rhine* (New York); E. P. Booth, *Martin Luther, Oak of Saxony* (ib.), a biography; L. Schrott, *Pioneer German Catholics in the American Colonies (1734-1784)* (ib.), a his-

torical monograph, containing an article on "The Leopoldine Foundation and the Church in the United States (1829-1839)" by T. Roemer, prepared for the United States Catholic Historical Society; F. Bertaux, *Panorama of German Literature* (ib.), a translation from the French of a study presenting the main tendencies of German literature during the past forty years; and A. Elsesser, *Modern German Literature* (ib.), a study of the background and aspects of German literature during the past seventy years, translated from the German.

The Scandinavian countries are represented by W. Krause, *Beiträge zur Runenforschung* (Halle); J. Jakobsen, *An Etymological Dictionary of the Norn Language in Shetland* (2 vols.; London); G. Bach, *A History of Scandinavian Literatures* (New York), an account of the literatures of Norway, Sweden, Denmark, Iceland, and Finland from their origins to the present day; C. M. Smith, *Northmen of Adventure* (ib.), a history of the Vikings from the earliest times to the Norman conquest; T. Jorgenson, *History of Norwegian Literature* (ib.), a study which begins with the ancient runes, but which stresses the literature of the twentieth century; O. J. Falnes, *National Romanticism in Norway* (ib.), a study in Norwegian literature, folklore, and philology; *Norwegian-American Studies and Records, Volume III* (Northfield, Minn.), a collection of articles concerning Norwegian pioneers in America, prepared by the Norwegian-American Historical Association; K. Gjerset, *Norwegian Sailors in American Waters* (ib.), a study in the history of maritime activity on the Eastern seaboard; Henrik Ibsen, *Peer Gynt* (New York), a new translation, with introduction and critical notes, by G. Hult; J. Falkberget, *Broomstick and Snowflake* (ib.), a collection of fairy stories, translated from the Norwegian; J. Roosval, *Swedish Art* (Princeton, N. J.), the Kahn Lectures for 1929; and Elsa Beskow, *The Sun-Egg* (N. Y.), a fairy story translated from the Swedish.

Finally, a few studies dealing with the folklore and literature of Holland and Switzerland may close this list, viz., C. Hollis, *Erasmus* (Milwaukee, Wis.), a new biography appearing in the Science and Culture Series; F. Muirhead and L. R. Muirhead, *Holland and the Rhine* (New York), a new volume in the Blue Guides Series; Marian King, *The Golden Cat Head* (Chicago), a collection of Dutch legends and hero tales; H. W. Van Loon, *An Indiscreet Itinerary* (N. Y.), a guide to the picturesque country of Holland for the unconventional traveler; G. R. de Beer, *Alps and Men* (ib.), a tableau of Switzerland from 1750 to 1850, based on tourists' diaries of the times; and M. D. Hottinger, *The Stories of Basel, Berne and Zurich* (ib.), an addition to the Mediæval Towns Series.

ROMANCE. General. W. Meyer-Lübke's *Romanisches Etymologisches Wörterbuch* (Heidelberg), which is now going through a third revision, reached its twelfth Lieferung (*talaik to verbasum*). It consists of an etymological dictionary of all the Romance languages. The most interesting contribution of the year, however, is I. Iordan's *Introducere in Studiul Limbilor romanice, Evolutia si Starea actuala a lingvisticii romanice* (Jassy, Rumania), which may be translated into English as follows: *Introduction to the Study of the Romance Languages, The Evolution and Present State of Romance Linguistics*.

This admirable work not only contains a lengthy analysis of Romance philology from its very inception to the year 1900—including medieval groupings, grammars and lexicons of the Renaissance, Romanticism and Romance linguistics, the influence of classical philology, the foundation of Romance studies, phonetic laws, etc.—but stresses the three principal contemporary currents in the following order: Karl Vossler's "idealistic" method, J. Gilliéron's linguistic geography and F. de Saussure's French School. Thus, Vossler, who founded his "idealistic" method about thirty years ago—drawing his inspiration from Humboldt and Croce—distinguishes his school from what he calls the old "positivistic" system (cf. his *Positivismus und Idealismus in der Sprachwissenschaft*, Heidelberg, 1904) in the following terms: "Positivism," says Dr. Jordan, "means, for Vossler, to study language phenomena as a means in itself, and, thus, make of the respective works a very rich collection of material; idealism, on the contrary, tries to establish causality connections between linguistic facts. The Positivists believe that subdivision of grammar into phonology, morphology, syntax, etc., is something more than a practical method for the more commodious and systematic study of language. They ignore the essential: that the sounds, words, and phrases are simple articulations of human speech with the aid of which it can move freely. . . . In the idealistic conception, language appears as an expression of the human soul; and history of the language signifies, thus, the history of the forms of expression, and, consequently, the artistic history in its fullest meaning. According to this definition, grammar belongs to the history of style and literature, which, in its turn, branches out into cultural history." Next, Dr. Jordan characterizes the theory of Gilliéron's *Atlas linguistique de la France* as follows: "Gliding of sound and analogy, which the neo-grammarians used exclusively to explain, from an historic point of view, the customary linguistic material, are insufficient when it is a question of explaining the extremely complicated state of affairs offered by popular dialects. That is the reason why Gilliéron is compelled to have recourse to other causes of change in language, all springing in general from the tendency of the speaking individual to express himself clearly and, consequently, avoid confusion." Among these homonymy and popular etymology play the most important part. Finally, with regard to the late Ferdinand de Saussure's school he says: "Saussure makes a trenchant distinction between 'language' (*langue*) and 'speech' (*parole*). . . . 'Language' is a lexical and grammatical system which exists virtually in the conscience of individuals belonging to the same linguistic community. Without a larger or smaller group of men who talk, one cannot imagine the existence of 'language' . . . 'Speech' means the action by which the individual uses the 'language' to express his ideas. It is, thus, of an individual nation, and contains in itself also the emission of sounds. Consequently, its study must needs be psycho-physiological." And as a further development of this tendency he cites Prof. Antoine Meillet's "Sociologic direction in linguistic studies." As the above movements have divided, for many years, the philologists in Europe, it is important to have thus succinctly presented to us the fundamentals of their theories.

FRENCH. Special attention must be called to J. G. Anderson's *Le Mot Juste: An Anglo-French Lexicon with Verbal Illustrations* (New York), which is indispensable to scholars, students of French or English, translators—in fact, to all who must work accurately in the two tongues. We have noted in these columns in the past two works, viz., *Les Faux Amis* and Professor Boillot's *Le Vrai Ami du Traducteur*, which warn the unsuspecting of the dangerous pitfalls offered by cognate words in French and English. But, whereas the above-mentioned works are mainly negative in conception, Mr. Anderson's vocabulary—the result of thirty years of study and containing suggestions from the French side by Professors Fort and Cazamian—fills in the gap in a constructive manner by informing the English reader precisely what words or locutions to use in a given case.

Among the works dealing with the history of the French language and literature the following may be noted: O. Bloch and W. von Wartburg, *Dictionnaire étymologique de la Langue française* (2 vols., Paris), which is now complete; A. Tabachovitz, *Étude sur la Langue de la Version française des Serments de Strasbourg* (Upsala), a study of the earliest monuments of the French language, which bears the date of Feb. 14, 842; M. A. Pei, *The Language of the Eighth Century Texts in Northern France* (New York), a linguistic study of Merovingian and early Carolingian monuments; L. Constans, *Chrestomathie de l'ancien français* (3d ed., Paris), a revised edition of this useful manual; P. Russell, *William The Conqueror* (New York), a biography; W. Förster, *Wörterbuch zu Kristian von Troyes' Samtlichen Werken* (Halle), of which this second edition has been revised by H. Breuer; R. Levy, *Recherches lexicographiques sur d'anciens textes français d'origine juive* (Paris), a lexicography of 815 medieval Judeo-French words, mostly Biblical glosses; K. Voretzsch, *Altfranzösisches Lesebuch* (2d ed., Halle); J. R. Strayer, *The Administration of Normandy Under Saint Louis* (Cambridge, Mass.), a historical study of thirteenth-century Normandy, issued by the Medieval Academy of America; G. Grober, *Geschichte der mittelfranzösischen Literatur* (Berlin-Leipzig), a second edition, revised by S. Hofer; Sister Mary A. Savoie, *A "Plantaire" in honor of the Blessed Virgin Mary Taken from a French Manuscript of the XIVth century* (Washington, D. C.), containing the text and introduction; Katharine Fedden, *Manor Life in Old France* (New York), a description of French provincial life based on the day-book of the Sire de Gouberville for the years 1549–1562; H. Brown, *Rabelais in English Literature* (Cambridge, Mass.); Pousset de Montauban, *Les Aventures et le Mariage de Panurge* (1674) (Baltimore), a dramatic adaptation of Rabelais in the seventeenth century, with a study of de Montauban's life and other plays by Marion F. Chevalier; and *The Essays of Montaigne* (New York), a one-volume edition according to the famous translation by John Florio.

Finally, miscellaneous studies include A. Ewert, *The French Language* (London), containing a study of the history, phonology, orthography, morphology, and syntax and vocabulary of French; M. Rameau and H. Yvon, *Dictionnaire des Anonymes ou Contraires* (Paris); E. H. Truslove, *Dictionary of the French and English Languages* (New York), revised and enlarged;

A. Mendel, *Dictionary of the French and English Languages* (ib.); *Heath's New French and English Dictionary* (Boston, Mass.), revised by E. A. Baker, with pronunciation based on the system of the Association Phonétique Internationale; Simone Chamoud, *Picture Tales from the French* (New York), a collection of French folk tales; J. K. Ditchy, *Les Acadiens Louisianais et leur Parler* (Baltimore), a doctoral dissertation; N. Serban, *Grammaire française à l'usage des étrangers* (Jassy, Rumania), an excellent manual of an unusual character, prepared by a professor in the University of Jassy; and H. P. Thieme, *Bibliographie de la Littérature française de 1800 à 1930* (3 vols., Paris), a most valuable bibliography edited by a well-known American scholar.

ITALIAN. Important contributions to the study of Italian dialects are G. Rohlfs, *Dizionario dialettale delle tre Calabrie* (Halle), which has now gone through the letter C; and G. Bottiglioni, *Atlante linguistico etnografico italiano della Corsica* (Pisa). A useful small dictionary is E. Stokes, *Dictionary of the English and Italian Languages* (New York), issued in the E. F. G. Pocket Series of Dictionaries, edited by G. F. Barwick. Other works of interest include G. K. Chesterton, *Saint Thomas Aquinas* (ib.), which shows the Saint as opening a new channel for thought to flow in; *La Divina Commedia di Dante Alighieri* (ib.), consisting of a revision of the text, edited and annotated by Prof. C. H. Grandgent; Dante Alighieri, *La Divina Commedia* (ib.), a one-volume edition with Italian text by H. Oelsner, and English translations by J. A. Carlyle, T. Okey and P. H. Wicksteed; *Dante's Inferno* (ib.), a translation in the Spenserian stanza by G. Musgrave, which first appeared in 1893; *Dante's Inferno* (ib.), an edition of the text, with a translation into English triple rhyme by Laurence Binyon; Gertrude Leigh, *The Passing of Beatrice* (London), which consists of a study in the heterodoxy of Dante; *The Paradiso of Dante Alighieri* (New York), with a translation into English triple rhyme and an introduction by G. L. Bickersteth; Ralph Roeder, *The Man of the Renaissance* (ib.), containing studies of Savonarola, Machiavelli, Castiglione, and Aretino; Alice Cameron, *The Influence of Ariosto's Epic and Lyric Poetry on the Work of Amadis Jamyn* (Baltimore), a study in the history of sixteenth-century French verse; *The Works of Aretino* (2 vols., New York), consisting of the "Dialogues" and "Letters and Sonnets," translated from the Italian by Samuel Putnam; M. David, *Who Was "Columbus"?* (ib.), in which the author analyzes the evidence pointing to the identity of Columbus as Cristóbal Colón, a Spanish Jew; V. Thaddeus, *Benvenuto Cellini and His Florentine Dagger* (ib.), a biography; Gertrude R. B. Richards, *Florentine Merchants in the Age of the Medici* (Cambridge, Mass.), a poorly edited selection of letters and documents from the Selfridge Collection of Medici Manuscripts, issued by Harvard University; G. F. Young, *The Medici* (New York), an addition to the Modern Library Giants Series; *The Pentamerone of Giambattista Basile* (2 vols., ib.), a new edition of this famous collection of fairy tales and folklore, translated from the Italian of Benedetto Croce and edited with a preface, notes, and appendices by N. M. Panzer; Corrado Ricci, *Beatrice Cenci* (ib.), a new title in the Black and Gold Library series; L. Collison-Morley, *The*

Story of the Borgias (ib.), a history of the family from Calixtus III (1378-1458) to Saint Francesco Borgia (1610-1572); R. C. Garlick, *Philip Mazzei, Friend of Jefferson* (Baltimore), a study of his life and letters; and B. Roselli, *Vigo: A Forgotten Builder of the American Republic* (Boston, Mass.), a biography of the Italian pioneer who played an important part in the campaign in Vincennes, Ind., and other movements in the Central West in the eighteenth century. Among miscellaneous works we may note *Classical Cities of Sicily* (New York), a descriptive and historical study of Taormina, Syracuse, and other places, issued by the Italian Tourist Information Office; *Magna Graecia* (ib.), a descriptive and historical study which, like the one mentioned above, has been translated from the Italian; and *The Craftsman's Handbook of Cennino d'Andrea Cennini da Colle de Val d'Elsa* (New Haven, Conn.), a technical handbook of the medieval painter's craft, translated by D. V. Thompson, Jr.

CATALAN, PORTUGUESE AND RUMANIAN. The outstanding contributions in Catalan are, first of all, the splendid *Diccionari Català-Valencià-Balear* (Palma de Mallorca), which is edited by Antonio M. Alcover and Francesc de B. Moll. In its first 576 pages it has reached the word *bractea*. Next in order comes J. Massó-Torrens, *Repertori de l'Antiga Literatura Catalana* (Barcelona), of which the first volume is entitled *La Poesia*; and, finally, the *Miscelanea filològica dedicada a Don Antonio M. Alcover* (Palma de Mallorca), containing articles by some thirty scholars. Among the noteworthy contributions thereto is a study on the phonology and vocabulary of the dialect of the old capital of Minorca, entitled "Estudi fonetich y lexical del Dialecte de Ciutadella" (pp. 397-460) by F. de B. Moll; F. Krüger, "Worfeldn und Verwandtes in den Pyrenäen" (pp. 509-524); G. Rohlfs, "Le Patois de Lescun (Basses-Pyrénées)" (pp. 353-387); and S. Gili Gaya, "Estudi fonetich del parlar de Lleida."

Portuguese is represented by J. da Providencia Costa, *Goethe e Portugal* (Coimbra), a valuable contribution; Goethe, *Dedicatória (Fausto)* (ib.), containing verse-translations from the German into Portuguese by A. Garrett, A. de Ornelas, A. F. de Castilho, A. de Quental and E. de Castro, issued by the Instituto Alemão of the University of Coimbra; and Elizabeth Barrett Browning, *Sonnets from the Portuguese* (New York), a new edition, with introduction and notes, by Charlotte Porter and Helen A. Clarke.

The most important study on Rumanian is, without doubt, the long-awaited second part of O. Densusianu's valuable *Histoire de la Langue roumaine* (Paris).

SPANISH. A new review entitled *Investigaciones Lingüísticas* was founded in Mexico City during the summer for the purpose of studying the dialects of Mexico. Along the same lines we have M. de Toro, *L'Évolution de la Langue espagnole en Argentine* (Paris). Among dictionaries we may note E. Macragh, *Amaltea Dictionary of Spanish and English* (Barcelona), containing slang, idioms, localisms, cantos, dialects and words in general, hitherto not to be found in English-Spanish dictionaries; M. E. Bean, *Handbook of Spanish-English and English-Spanish Legal Words and Phrases* (New York); and *Dictionary of the Spanish and English Languages* (ib.), included in the E. F. G. Pocket Series of Dictionaries, edited

by G. F. Barwick. Other works deserving mention are R. S. Willis, Jr., *The Relationship of the Spanish "Libro de Aleandre" to the "Alexandreis" of Gautier de Chatillon* (Princeton, N. J.), a study in comparative literature dealing with the celebrated medieval legend on Alexander the Great, published in the Elliott Monographs Series; C. R. Post, *A History of Spanish Painting* (vol. iv, Parts I and II, Cambridge, Mass.), containing a detailed survey of the Hispano-Flemish style in Northwestern Spain, beginning in the latter part of the fifteenth century; *Catalogue of Sculpture (Thirteenth to Fifteenth Centuries)* and *Catalogue of Paintings (Nineteenth and Twentieth Centuries)*, both issued by the Hispanic Society of America (New York); F. Calcott, *When Spain Was Young* (ib.), presenting accounts of five legendary heroes who lived in Spain between the years 700 and 1000 A.D.; J. B. M. Zabara, *The Book of Delight* (ib.), a translation of a Spanish Jewish narrative of the twelfth century; Sadie E. Trachman, *Cervantes' Women of Literary Tradition* (ib.), a study of the various types of women found in sixteenth-century Spanish literature in relation to Cervantes' conceptions, issued by the Instituto de las Españas; Lorna Rea, *The Armada* (ib.), an account of the destruction of the Spanish Armada; Helen Simpson, *The Spanish Marriage* (ib.), the story of Mary Tudor's determination to marry Philip of Spain; C. E. Kany, *Life and Manners in Madrid, 1750-1800* (Berkeley, Calif.), a study in Spanish civilization of the eighteenth century; A. F. G. Bell, *Contemporary Spanish Literature* (New York), a revised edition; and R. A. Cram, *The Cathedral of Palma de Mallorca* (Cambridge, Mass.), a chronological and architectural study of the cathedral, issued by the Medieval Academy of America. A few titles on Spanish America may close this section: T. A. Willard, *The Lost Empires of the Itzaes and Mayas* (Glendale, Calif.), a history of ancient civilization in Yucatan; C. E. Chapman, *Colonial Hispanic America: A History* (New York), a history of Hispanic America from the fifteenth to the nineteenth century; L. J. Ragatz, *A Guide for the Study of British Caribbean History, 1763-1834* (Washington, D. C.), a bibliography issued by the United States Government Printing Office; S. E. Leavitt, *Hispano-American Literature in the United States* (Cambridge, Mass.), a bibliography of translations and criticisms; *Theses on Pan-American Topics* (Washington, D. C.), a second edition, revised and enlarged, of this bibliography; J. E. Thompson, *Mexico Before Cortez* (New York), an account of the daily life, religion, and ritual of the warlike race that ruled Mexico before the Spaniards arrived; A. P. Newton, *The European Nations in the West Indies, 1493-1688* (ib.), a study of West Indian history as a factor in international events of the times; J. D. M. Ford and M. I. Raphael, *A Bibliography of Cuban Belles-Lettres* (Cambridge, Mass.); S. E. Leavitt, *A Tentative Bibliography of Peruvian Literature* (ib.), another addition to the series of the Harvard Council on Hispano-American Studies; and *A Bibliography of the Liberator Simon Bolivar* (Washington, D. C.), compiled in the Columbus Memorial Library of the Pan-American Union in commemoration of the 150th anniversary of Bolivar's birth, July 24, 1783.

PHONETICS AND UNIVERSAL LANGUAGE. Contributions to phonetics include Sara M. Stinchfield,

Speech Disorders (New York), a physiological study of the various defects of speech; C. E. Parmenter and S. N. Treviño, *Vowel Positions as Shown by X-Ray*, reprinted from the *Quarterly Journal of Speech*, and the same authors' *An X-Ray Study of Spanish Vowels*, reprinted from *Hispania*; A. J. Barthold, *Student's Practical Manual of French Pronunciation* (New York), a method of phonetic instruction for the beginner; and *French Dictation Exercises* (ib.), exercises for introductory classes in French.

Finally, on universal language we have W. S. Benson, *Universala Esperanto Metodo* (Newark, N. J.), a textbook for students of Esperanto.

PHILOSOPHY. The philosophical literature of 1933 shows a decided trend toward ethics and social philosophy, for though many thinkers have remained true to those abstract investigations which Plato and Aristotle regarded as the highest human enterprise, the majority, in this country at least, have chosen to concern themselves in these critical times with the more immediate, practical problems. Of course, every thorough-going social analysis or programme presupposes a metaphysics. The more serious books will have to examine the categories of thought and being on which their concrete conclusions depend.

Thus we find a good deal of metaphysics in Professor Whitehead's new volume *Adventures of Ideas* which is concerned with the history of "the transmission of civilization from the Near East to Western Europe" and with those executive ideas which dominate humanity within this strand. Here the *Sociological*, the *Cosmological* (Parts I and II) and *Civilization* (Part IV) are substantiated by the *Philosophical* (Part III), in which *Objects and Subjects, Appearance and Reality, Past, Present, and Future*, and other topics presupposed in the book, are examined.

The unity of Whitehead's book is rather organic than logical, and it takes some time to see those threads upon which his brilliant discernments and interpretations are strung. Certain attitudes concerning history and world-sociology, however, seem to dominate, viz.: "the slow issue of general ideas into practical consequences" due either to the inefficiency of human character or to the immaturity of the world. Closely related to this dictum is his distrust of sudden social changes. Disregarding the recent sharp transitions of social systems in various countries he agrees with Burke that "successful progress creeps from point to point, testing each step" and he is willing to concede that: "It may be impossible to conceive a reorganization of society adequate for the removal of some admitted evil without destroying the social organization and the civilization which depends on it." Progress, he takes to be the *gradual* realization of Christian ideals, and he believes that the dominant figures in "the new Reformation" will be the leaders of the Protestant clergy. The author is also opposed to the finality of closed systems in social matters, religion, or science. "The collapse of nineteenth-century dogmatism is a warning that the special sciences require that the imaginations of men be stored with imaginative possibilities as yet unutilized in the service of scientific explanation." We must envisage ideas and ideals against the time when the world will endure them. Closed systems like Aristotle's serve their purpose and then give up the ghost while the Platonic vision of possibilities lives on as an ac-

tive force. He is equally opposed to positivists and anti-intellectualists, "who boast that they uphold no system. They are a prey to the delusive clarities of detached expressions which it is the very purpose of their science to surmount." Whitehead's principle here, which distinguishes him so sharply from Russell, and his early colleagues at Cambridge, is "the connectedness of things" (the Idealists called it "coherence") which implies the falsity of any such doctrine as logical atomism.

Although the author opposes the anti-intellectualism of Bergson he adopts it in another sense. "Knowledge is always accompanied with accessories of emotion and purpose," and "the basis of experience is emotional." He employs the words "concern," "feeling" and the earlier terms, "prehension," "taking account of," etc. to indicate a primitive non-cognitive, affective phase of our reactions to relevant things. This important step allies him with the anti-intellectualism of Scheler and permits him to give a plausible account of ethical progress. The author's complex and sensitive analysis of the experience of time is reminiscent of Bergson, but more of Husserl, while his assertion that the most important thing about a proposition is not whether it is true, but whether it is interesting, makes a graceful bow to pragmatism. It becomes obvious that what he is opposing is not "intellectualism" but a false simplification of mental life which has borne that name.

Another book covering much the same field, Ortega y Gasset's *The Modern Theme* shows the influence of Spengler, Meyer, and other German writers, which was missing in Whitehead's book. The analysis of the revolutionary spirit is new and instructive, especially, since the writer believes modern nations are on the eve of a revolutionary era, which had its counterpart in Greece and is inevitable in every culture. What is required for revolution is that heroism and vanity, "these two affective forces must function in a spirit saturated with faith in pure reason," which is invariably a rigid, geometrical, uncompromising, over simplified rationalism. Since every revolution sweeps away not only abuses but many positive values as well, counter-revolution is inevitable. Between the revolution and counter-revolution is a transitional stage called "reaction," a period of disillusion contrasting with the glorious era of certainty and illusion which preceded it. (The author's Hegelian or Spenglerian fatalism blinds him to the fact that Fascist or Communist organization may effectively block any counter-revolution.) While psychologists are coming to doubt the very existence of instincts many philosophers such as Ortega y Gasset assume that what men did in the past they will do again. Meanwhile, Maurice Hindus in his *The Great Offensive*, contends that human nature is being transformed in Russia.

Though Whitehead dismisses Marx with the comment that economists believe him unsound, Prof. Sidney Hook in his *Towards an Understanding of Karl Marx* maintains that the real Marx provides the only solution to present problems. His exposition of dialectical materialism and his criticism of heresies is clear and admirable, but his pragmatism and ethical relativism appear to undermine his revolutionary programme. (The revolutionary, Ortega y Gasset would say, is never a skeptic.) If one ethical position is as true as another, how persuade people to sacrifice their lives

for the revolution? For the revolution is not inevitable, Hook says, but requires the will of the masses. It is not, therefore, a logical or economic, but a moral, necessity. The revolutionist will have to convince the workers that their claims are right, not only from their point of view, but from any point of view. *The Coming Struggle for Power* from the pen of the eminent British economist Strachey, like Hook's book, is in complete agreement with Marx.

Horace Kallen's *An American Way of Life* (1933) written before the N.R.A. began operations, praises the individualism and liberalism of American traditions. G. R. Geiger's *The Philosophy of Henry George*, with its account of this great American thinker's relation to Socialism, his correspondence with Spencer and others, seems much more up to date.

Two much needed volumes appearing this year, one by a philosopher the other by a lawyer, carry over ethics into a professional field. Professor Morris R. Cohen's *Law and the Social Order* and Felix S. Cohen's *Ethical Systems and Legal Ideals* both argue against the separation of law from ethics and the consequent formalism, the class-bias or irresponsibility, of the legal mind.

For the more technical aspects of ethics we may turn to H. Osborne's *The Philosophy of Value*, a brief polemical volume which rejects the traditional arguments for every type of value theory. Not one of them can be proved or disproved, he contends. Psychological theories which define value as the object of biological interest (R. B. Perry) or which make it depend on the psychological states of the individual (Stern), reduce to relativism, since right and wrong, good and evil, will vary as much as individuals vary. It follows that there can be no more dispute about morals than about taste; but this *reductio ad absurdum*, the author states, is not a refutation. The realist (G. E. Moore) who takes value as indefinable, is in no better case, since he relies upon his intuition which is not shared by most authorities. The arguments of the one side against the other are ineffective since each assumes its own premises which the other rejects, and hence all they prove is the incompatibility of the two theories, one with the other. G. E. Moore, who often anticipates and outstrips his critics, long ago saw the weakness of the arguments in question and would doubtless agree with much that the author says. What Osborne seems to forget is that every system has its intuitive premises and that unanimity is not a requisite. He concludes with a cautious defense of the idealist theory which defines positive value as "the property of being an object toward which moral agents ought to experience positive mental states (desire, approval, etc.)." This definition has a number of advantages, he thinks. It does not identify value with a part of nature, nor reduce to relativism, as do the psychological theories, nor does it need to assume with realism two indefinables, "ought" and "value," but only the former. Unfortunately, it has unique defects which the author would have considered had he been aware of the new tradition in value theory sponsored by Scheler and Hartmann.

The appearance of Max Scheler's *Schriften aus dem Nachlass I* with its brilliant and exhaustive analysis of ethical concepts is another reminder that while the best British philosophers confine themselves to the foundations of ethics, it is the Germans and particularly the phenomenologists

who with rigor and insight really advance the subject. Scheler's first essay is concerned with "death." Modern man, misled by biologism and the notion of progress, he points out, no longer regards death as a natural event rounding off the cycle, but as a meaningless accident, a misfortune. He no longer thinks of it seriously. Concerning life after death, the author maintains that science can never disprove it and that phenomenological analysis discloses laws of the mind which are independent of physiological laws. Thus love and personal time are unconditioned by physiological processes and, hence need not be co-terminous with them. Kant's claim for immortality rested upon a consciousness of endless *ought* (*Sollen*), Goethe's, on a consciousness of endless *can* (*Können*) a sense of infinite power and energy. The sinking of the consciousness of potency (*Potenzbewusstsein*) in skeptical eras suggests that Goethe was right psychologically. Scheler's book also contains the most elaborate analysis of "shame" ever written. One conclusion he reaches is that this emotion always involves a generalizing and an individualizing intention. Thus, if the lover treats his sweetheart for a moment like a member of the class of all women or the artist treats his model for a moment like an individual person, the woman in either case feels shame. His analysis shows that shame is necessary to love and that shamelessness results in disgust.

Professor W. P. Montague in his Carus lectures (delivered at Chicago during the World's Fair) made an eloquent appeal for a new philosophy emulating the great systems of the past which were all, he contended, rich in vision, but poor in proof. Philosophers should not be frightened by the advance of science into barren logistics or mere historical recollection but should find their true métier in the envisaging of the Platonic world of possibilities. His second and third lectures were entitled *Democritus and the Vision of a World of Atoms* and *Plato and the Vision of Eternal Things*.

Sir William Mitchell's *The Place of Minds in the World* (Gifford Lectures at the University of Aberdeen 1924-26) is also concerned with two other places. "One place is the world about us, where we feel at home; the other is the cavity of the skull, where we should feel in prison." Now minds exclude nature and nature excludes minds. How then is knowledge possible? he asks. How can a thing outside my head come to be known inside? Mitchell's answer is that the question is artificial since it makes the false assumption that our minds are in our brains, and he attempts to explain the origin of this preposterous theory so popular among the materialists and behaviorists to-day. His conclusion is that though minds are not spatially related to brains or to nature, and though the three are quite unlike, there is a more or less complete correlation between them, and one is needed for the explanation of the others. He denies accordingly that the space we see is a space in the brains which see it, and naturally he rejects every form of the "copy theory" of knowledge.

After dealing with several epistemological dilemmas, the author turns to the practical or ethical "gulf," the conflict of reason and life. How persuade reason to sacrifice? According to Adam Smith rational egoism, without sacrificing anything, promotes the public interest, but this doctrine, the author says, is now discredited.

In Germany Hegel reduced egoism to a mere moment in the universal harmony while in France biology was blamed for its depressing picture of human nature. In England, however, there was no such belief in ideas "that we blamed them for anything,—and our writers fell with one accord on our social system for assuming we are selfish—" But in spite of all that has been said "the civil wars for comfort and luxury are more flagrant than ever." The explanation is that though every one admits that the higher values are higher, and that there are enough of them to go around, hardly any one can be persuaded to forego those vivid lower values which however only the few can enjoy. The solution for valuing, the author claims, is the same as that for knowing. A man must *understand* the better knowledge if he is to give up his vivid illusion, and he must *understand* the higher value before it can compel him to give up the seductive lower. The ideal, often attained, is absorbed self-forgetfulness in the higher things.

As the author proceeds "from the surface to the depth in nature" and in mind he confronts many of the problems of Whitehead, Russell, and Broad, such as the relation of percepts to scientific objects. His method, meanwhile, is quite original and his style, even more so, is often reminiscent of Gertrude Stein.

The publication of McTaggart's *Nature of Existence* has occasioned a number of critical articles and much discussion especially at Cambridge, but it was not until this year that the depths of this intricate and exciting book were fully sounded. C. D. Broad's *Examination of McTaggart's Philosophy* is the most thorough and rigorous criticism ever accorded a 20th century philosopher. This first volume is concerned with the first volume of the *Nature of Existence* and attempts to show that the long concatenation *a priori* arguments by which McTaggart supports his idealistic system—a timeless, changeless system populated only by minds—has many links which crumble at the touch of logic. The crux of the whole matter, the proposition on which McTaggart's system stands or falls, is the Principle of Determining Correspondence. To understand this we must consider certain preparatory principles. McTaggart holds (1) that every particular has parts and, hence, parts of parts to infinity; (2) that every particular must have a "sufficient description," i.e. a description distinguishing it from every other particular, but *not* by referring to other particulars for this would give rise to a vicious regress. A would be uniquely determined by its relation to B and B, by its relation to C, and so on. This is impossible. And so ultimately we must come to a particular which is uniquely determined by its own parts. Some part of each series of parts of any particular must have a sufficient description uniquely determining all its parts and their parts—*ad infinitum*. For if the parts of a particular are not distinguishable from everything else in the world, they cannot exist (according to the Principle of the Identity of Indiscernibles which McTaggart accepts) and if the parts of a particular do not exist, it itself cannot exist, since every particular must have parts. McTaggart thus argues that only a society of minds perceiving their own and each other's perceptions, but nothing else, could provide the sufficient descriptions necessary for existence, and that, therefore, such a society is

the only possible world. Idealism appears to be established by a new and subtle argument.

Broad replies by giving a geometrical example which answers McTaggart's requirements for a possible world quite as well as the "society of minds" does. He contends also that McTaggart did violence to ordinary psychology in order to make this pet idea fit his requirements. If one took equal liberties with customary doctrines of the material world, this too might be made to conform. But Broad has already questioned a score of propositions on which McTaggart's argument (above) depends. Thus, the Principle of Identity of Indiscernibles is doubtful. We can easily conceive of two particulars (e.g. minds) which are diverse without *any* difference. Similarly, "that every particular has parts" is not self-evident. Orthodox mathematics accepts the existence of extensionless points without falling into contradiction. Again, "that every particular *must* have a sufficient description" is false, since it presupposes the doubtful Principle of the Identity of Indiscernibles, and it is also open to other objections.

It is interesting to note that these principles are also being discussed by mathematical philosophers (the intuitionists, formalists, and logicians). Thus, Zermelo's "Principle of Selection," which has considerable prominence these days, requires that one term of each of the infinitely numerous subclasses of a given class should have "sufficient description" and intuitionists are ready to reject certain parts of mathematics which do not seem to meet that requirement. Among this year's papers discussing such matters is Helen Ambrose's "The Logic of Mathematics" in the *Philosophical Review*.

A discussion of another point at issue between McTaggart and Broad occurs in the May number of the *Review*. De Witt Parker there maintains that since a relation by definition has at least two terms, no term can be related to itself. (The argument, of course, is not new.) The related question in Broad's book is whether a particular can be uniquely determined by a reflexive relation. Suppose there are only two particulars in the world, A and B. Each respects himself and despises the other. Are they uniquely determined? Yes, says Broad, if only reflexive relations exist, but this he doubts. The theory that no term is related to itself has other consequences. It seems to give new grounds for accepting the Theory of Types which asserts that classes, propositions, relations, etc., cannot significantly retain the reflexive property. On the other hand, if no term can be related to itself $x = x$, which plays such an important part in *Principia Mathematica*, must be discarded or reinterpreted, and philosophers will now have to defend, not only the law of Excluded Middle, but the Law of Identity as well.

The Law of Identity is rejected for other reasons by Alfred Korzybski in his *Science and Sanity, An Introduction to Non-Aristotelian Systems and General Semantics*. He maintains that A does not equal A anywhere in the world since every A is in constant flux (a man cannot step twice into the same river) and he regards this conclusion as so important that he has enlisted the service of a number of eminent specialists in order to rewrite linguistics and science in general in Heraclitean terms. It would appear that the statue is too large for the pedestal.

The widespread interest in the work of Charles Sanders Pierce will be gratified by the publica-

tion of vol. iii of his *Collected Papers*, entitled *Exact Logic*. Though these papers *On the Algebra of Logic, The Logic of Relatives*, etc., have all been published previously, the collection fills a gap in the history of mathematical logic and displays the importance of "the greatest American logician." C. A. Mace's *The Principles of Logic*, a work greatly influenced by W. E. Johnson and other contemporary English logicians, is an important addition to the recent more popular books on the subject. Chapman and Henle's text also essays to acquaint the public with the new logic. *Invitation to Philosophy* by Durant Drake (q.v.) undertakes the same commission for philosophy as a whole, a dangerous and thankless task, but inestimably important, since no discipline can so little afford to appear a mere scattering of detached investigations.

PHOSPHORIC ACID. See **CHEMISTRY, INDUSTRIAL OR APPLIED.**

PHOTOGRAPHY. The practice and science of photography advanced slowly but definitely during 1933. Perhaps the most interesting and

significant development was the improvement made in the sensitiveness and color sensitivity of roll film for amateur use. In December, 1931, the first of a new group of panchromatic emulsions of greatly increased sensitiveness was introduced, coated on glass plates. Since that date, the quality of these newer panchromatic emulsions was improved steadily and they were made available during that time, first, as motion picture film, then as sheet film, as aerial film, and more recently, as roll film.

A simple process of color photography, whereby an amateur can take pictures with short exposures in a small camera and make direct prints in color easily and economically, was still to be found. A new print process was developed, however, which offered some promise of realization of this age-old dream of the photographer. It had not had sufficient commercial application, however, for an accurate judgment to be passed on its effectiveness. Natural color photographs, however, were being used more often in advertising work and for illustrations in several magazines.

A decided improvement in sound and picture quality was noted in connection with cinematographic productions. Very silent camera mechanisms were coming slowly into use, displacing the bulky housings which had been used for several years to absorb extraneous noise. Improved lighting, acoustics, and developing facilities contributed in some portion to make possible the final result—better technical quality. The use of color in motion pictures was still rather limited although excellent examples of color cartoon work were being produced.

In the technical field, several types of ultra-speed cameras were available for rapid motion analysis. The astronomer and the spectroscopist could select from a wide range of materials the specific ones to fit definite conditions. Plates sensitive to infra-red radiation were being used for deciphering charred or faded documents, to detect flaws in textiles, and to reveal disorders related to human skin tissues. In fact, hardly a branch of technical investigation was known which did not already use the camera or for which the camera could not be adapted.

APPLICATIONS OF PHOTOGRAPHY. Man soared to new conquests with the camera in 1933 in four epoch-making flights. On April 3, two British planes flew over Mt. Everest and the surrounding Himalaya territory and many valuable photographs were secured. During a second flight on April 19, many square miles of this inaccessible territory were mapped successfully (*Nat. Geog. Mag.* 64, 1933, p. 127). On the other two flights, the camera was carried higher than ever before by balloonists who penetrated the stratosphere. Three Russians claimed to have ascended to over 62,000 feet (11.8 miles) on September 30, and two Americans reached 61,237 feet (11.5 miles) on November 20. On both flights records of radiation and other scientific data were obtained.

Earlier in the year, a remarkable aerial photograph of Greater New York was made at an altitude of 26,000 feet. An area estimated to be more than 3000 square miles was encompassed in this single picture (*Nat. Geog. Mag.*, 64, Nov., 1933, Photog. Supp.).

Two extensive aerial photographic surveys were announced; the former, covering 20,000 square miles in the Sudan and Uganda, had been completed for the Egyptian government; the

latter, covering 80,000 square miles, is to be made to locate gold mining areas in Western Australia (*Brit. J. Phot.* 80, Sept. 1 and 8, 1933, pp. 514 and 534). The National Air Corps of Chile were engaged in mapping that long and narrow mountainous country (*Camera*, Phila., 46, June, 1933, p. 427). The Canadian Topographical Survey Library was reported to contain about 600,000 aerial and 20,000 ground photographs (*Brit. J. Phot.* 80, June 2, 1933, p. 323).

Photography played a large part in many of the exhibits of the Century of Progress Exposition at Chicago both in the form of still photographs and motion pictures. The first National Soviet Conference on Photographic Science was held in Leningrad in November, 1932, and attracted 350 persons. Over 30 papers were presented which dealt with many aspects of the photographic industry (*Prod. Photo J.*, 1933, p. 43). The next five-year plan calls for large increases in photographic sensitive film and paper production and in the number of motion picture theatres.

About two-thirds of the world's 62,000 motion picture theatres were reported to be wired for sound motion pictures by the end of the year. Over eleven million persons could attend the "movies" at one time in the United States. Approximately 1200 theatres were equipped with the new extended frequency sound equipment introduced in 1932 (see *NEW INTERNATIONAL YEAR BOOK* for 1932, p. 664), which meant that the patrons of these theatres could listen to the ultimate that had been realized in sound quality by the sound-on-film process.

A sound film project initiated by the University of Chicago in 1932 for the purpose of presenting the subject of natural science to the entire student body by means of lectures only, was reported to be successful. Plans were being made for the preparation of additional films covering social, biological, and physical science. A project for education, using sub-standard 17.5 mm. films and phonograph disc reproducing equipment, was being inaugurated in Italy (*Kinemat. Weekly* 193, Mar. 9, 1933, p. 37). More than a hundred amateur 16 mm. sound-on-film projectors were purchased by the U. S. government for instruction and entertainment of members of the Citizens Conservation Corps camps (*Movie Makers* 8, November, 1933, p. 466).

Two cameras for ultra-rapid photography were announced during the year. Both cameras drive the film continuously and employ optical compensation. One type, of German design, used 35 mm. film; the other, an American product, made 2500 pictures per second and used 16 mm. film. An auxiliary device provided for simultaneously recording an illuminated clock face registering time to one-hundredth second.

An improved method of crime detection consists in photographing fingerprints by the phosphorescence given off by the print when dusted with zinc sulphide and excited by exposure to a tungsten arc lamp (*Nature* 132, Aug. 5, 1933, p. 208). Photographs are used for identification of messengers carrying negotiable securities for the New York Stock Exchange (*Camera*, Phila., 46, June, 1933, p. 386).

Lee and Spencer reported promising results of a photomicrographic study of motor fuel sprays for use in aerial motor carburetors (*Report No. 454*, U. S. National Advisory Com. for Aeronautics). A photographic study was made

by Gawthorp of the disturbance sent out by the firing of commercial detonators (*J. Frank. Inst.* 214, December, 1932, p. 467). Edgerton and Gernsheim exhibited at the Royal Photographic Society in September several examples of their stroboscopic photography at exposures of $\frac{1}{75,000}$ sec. (*Rev. Sci. Instr.* 3, October, 1932, p. 535). An analysis of golf club strokes was made by the same investigators with exposure times of $\frac{1}{200,000}$ second duration (*Amer. Golfer* 37, November, 1933, p. 17).

The availability of infra-red plates of greatly increased sensitivity apparently stimulated the interest of many investigators in the use of these materials. Bendikson demonstrated the possibility of deciphering charred documents (*Library J.* 85, Mar. 15, 1933, p. 243); Cunliffe showed that defects may be detected in dark textiles by photographing them with infra-red radiation (*J. Soc. Dyers and Colorists* 49, March, 1933, p. 73); early Egyptian documents on dark brown leather were deciphered at the British Museum (*Brit. J. Phot.* 80, May 26, 1933, p. 311); plant diseases were studied by Bawden (*Nature* 132, July 20, 1933, p. 168); and human skin conditions were recorded which showed that these materials may have great promise in the field of pathology.

A motion picture made by infra-red radiation of subjects in complete darkness was demonstrated by Bloch on October 9 for an audience at the Gaumont-British Theatre in London, England (*Brit. J. Phot.* 80, Oct. 13, 1933, p. 611).

That the motion picture film may assume an important part in future television was demonstrated recently when a motion picture negative, rapidly developed and fixed in 10 to 15 seconds, replaced the "flying spot" scanning of an actual subject (*Tech. cinemat.* 4, January, 1933, p. 15; also *Phot. J.* 73, August, 1933, p. 377).

No commercial use was known to have been made of lenticulated films on standard 35 mm. stock but the large number of patents issued to firms and inventors on improvements in this process, particularly methods of printing such color records, showed that much experimental work was being done. The availability of film of this width for use in still cameras, such as the Leica and Contax, was announced (*Phot. Ind.* 31, 1933, p. 926). Such records presumably would be projected similarly to slide films.

Additional releases of three color animated sound cartoons were produced by Disney, using the Technicolor imbibition process. These productions in their composition, color work, and story represented one of the highest forms of artistry thus far developed in motion pictures. Their production was described by Garity (*J. Soc. Mot. Pict. Eng.* 20, April, 1933, p. 309).

A large number of patents were taken out by Gaspar of Berlin, Germany, relating to a process for the direct production of color prints on paper, from either a screen plate transparency or a set of color separation negatives. The printing paper contains three successive coatings arranged one below another to produce blue, yellow, and red images respectively. The bottom layer is sensitive to infra-red. The color is produced by dyes or dye-forming substances incorporated in the different layers (*Brit. J. Color Supp.* 27, Aug. 4, 1933, p. 29; *ibid.* Oct. 6, 1933, p. 37, and Nov. 3, 1933, p. 41). Exposure time required was claimed to be about the same as for gas-light paper. The process is said to lend itself to the production of color motion pictures.

Another color print process known as *Duochrome* is of interest. The process employs pigmented films of gelatin-bromide coatings on a cellulosic support having dyes blended in the emulsion. The films are printed through the back (from color separation negatives), developed in a tanning developer, and washed in hot water, and the silver image is bleached out, leaving the dye image. The three dye image sheets are assembled on a paper support (*Brit. J. Color Supp.* 27, Oct. 6, 1933, p. 39).

A record of the Ruttledge expedition's attempt to climb Mt. Everest, including the last stages at an altitude of 27,800 feet, was made on 16 mm. panchromatic film. The small cameras worked well under severe temperature conditions which prevailed and assisted materially in reducing the weight of equipment (*Brit. J. Phot.* 80, Sept. 15, 1933, p. 537).

Files of newspapers may be made conveniently and permanently in the future by reducing them to 35 mm. film with the aid of a new copying apparatus described at the Special Libraries Association convention in Chicago in October. A fifty-page newspaper could be recorded on film requiring a storage space of $3\frac{5}{8}$ by $3\frac{5}{8}$ by $1\frac{1}{2}$ inches (*Editor and Publisher* 66, Oct. 28, 1933, Sect. 2, p. 3).

Henry reported that the Library of Congress has copied more than a million pages of manuscript on safety film using the Lemare camera (*Library J.* 58, Mar. 15, 1933, p. 237).

All welded joints of the steel penstocks of the Hoover Dam totaling more than 100 miles in length were subjected to radiographic inspection representing one of the most extensive uses ever made of X-rays on a single industrial enterprise (*Radiography* 9, April, 1933, p. 12). Cottenot described a new form of instrument for making an X-ray of the heart and lungs at a certain point in the cardiac cycle (*Amer. J. Roentgenol.* 29, May, 1933, p. 175).

Failures in color reproduction by continuous tone methods were shown by Bull, Oliver, and Spencer to be due almost solely to faulty technique and to the poor choice of colors for reproduction (*Phot. J.* 73, August, 1933, p. 358). Although these authors state that the limitations of the half-tone process necessitate considerable fine etching, Murray exhibited at the Royal Photographic Society examples of work wherein no fine etching was used. Color correction on both a three-color plate and a four-color plate was done photographically by the masking process ascribed to Albert. Improved color reproduction with a new set of inks was demonstrated by Aron (*Phot. J.* 73, May, 1933, p. 197).

PHYSICAL MEASUREMENTS. Ten years ago the development of motion picture film in most laboratories throughout the world was entirely a manual operation whereas nearly all modern laboratories use machines operating at speeds of about 90 feet per minute. Precision measurements of solution composition and performance are therefore necessary. Huse described such details in connection with the standard procedures used in the laboratories at Hollywood, Calif. (*J. Soc. Mot. Pict. Eng.* 21, July, 1933, p. 54). Chambers and Wratten also reported on the performance of one type of sensitometer used in several laboratories as a control instrument (*J. Soc. Mot. Pict. Eng.* 21, September, 1933, p. 218). A sensitometer produced by a German firm was designed to meet the requirements of the German photo-

graphic industry (*Phot. Ind.* 30, Dec. 28, 1932, p. 1275).

Two new instruments for the measurement of photographic densities were described. A simple, visual comparator designed by Cartwright measured areas 2 mm. in diameter (*Phot. J.* 73, February, 1933), and a microphotometer using two photoelectric cells was described by Schutz (*Phys. Z.* 34, 1933, p. 566).

In an extension of their work on wave form analysis, Sandvik, Hall, and Streiffert studied the relation between the sensitometric conditions and the per cent of harmonic content of variable width sound records and found that the former are much more critical and the latter increases at the higher frequencies (*J. Soc. Mot. Pict. Eng.* 21, October, 1933, p. 323).

It is well known that photographic exposures vary over a wide range depending on the nature of the subject being photographed. It is generally assumed for most types of photographs that equal densities will be produced provided equal values of energy (intensity of illumination multiplied by the exposure time) affect the photographic emulsion. Jones and his co-workers have investigated this phenomenon during the past decade and reported that in general photographic materials do not obey this law which is called the "reciprocity law." Furthermore, a continuous exposure of a definite energy value does not produce the same photographic energy as another exposure given intermittently. This phenomenon, known as the "intermittency effect," was studied further by Webb who found that, provided the frequency of the intermittent flash exposure was above a minimum critical value, no difference existed in the photographic effect compared with a continuous exposure. The reciprocity law failure for radiations of different wave length throughout the visible spectrum was also examined with a non-color sensitized emulsion and with a panchromatic emulsion. It was concluded that the effect of light energy in exposures of equal time and density is the same for radiations of any wave length (*J. Opt. Soc. Amer.* 23, May and September, 1933, pp. 157, 316).

MANUFACTURE OF SENSITIZED MATERIALS. Panchromatic roll films of high speed and color sensitiveness combined with fine grain were made available for the amateur. The fine-grained emulsions were intended primarily for use in miniature cameras necessitating enlargement of the pictures most desired.

A special motion picture negative of fine grain was also announced for use in the projected background process whereby a suitable background is projected on a screen behind a motion picture set during the photography of the action (see *NEW INTERNATIONAL YEAR BOOK* for 1932, p. 665).

Our knowledge of the mechanism of ripening of photographic emulsions was stated to be incomplete by Heyne who reviewed the history of photographic gelatins (*Phot. Korr.* 69, March, 1933, p. 41). Methods of testing gelatins for photographic use were described by Fuchs (*Phot. Ind.* 31, Mar. 8, 1933, p. 254), and factors influencing photographic emulsions were reviewed by Charriou (*Sci. ind. phot.* 4, June, 1933, p. 177). Numerous patents were issued to several well-known firms relating to sensitizing dyes for green, yellow, orange, red, and infra-red sensitization of emulsions. Several papers dealing with the preparation of emulsions were presented to the photo-

graphic convention held in November, 1932, in Leningrad (*Kinophoto Ind.* 1, 1932, p. 70; also *Kinophoto Inst.* 1, 1932, p. 128; *ibid.* 2, 1933, p. 127).

The preparation and structure of tricarbocyanines was described by Fisher and Hamer (*J. Chem. Soc.* 1933, p. 189). Recent advances in infra-red sensitizing dyes were discussed by Brooker, Hamer, and Mees (*J. Opt. Soc. Amer.* 23, June, 1933, p. 216), and by Dieterle, Dürr, and Zeh (*Brit. J. Phot.* 80, Oct. 27, 1933, p. 624).

The improvements made in photographic plates by the introduction of these new dyes have been of incalculable value to the spectroscopist and astronomer. Examples of the results obtained with the new plates won for Mt. Wilson Observatory a well-deserved medal from the Royal Photographic Society (*Illustrated Catalogue* 78th Annual Exhib. Roy. Phot. Soc., September, 1933, p. 32). New spectral lines and better separation of existing lines is now possible. Adams and Dunham photographed the planet Mars in November, 1932, when it was approaching the earth and again in May, 1933, when it was receding from the earth and proved that the atmosphere of the planet contains only about 1 per cent as much oxygen as the earth's atmosphere. They also found that the atmosphere of Venus contains large quantities of carbon dioxide which shows that there is no life of any kind on this planet. Jupiter, on the other hand, was found to have ammonia gas in its atmosphere which is difficult to explain. Menzel and Boyce recently showed that three of the five strongest coronal lines of the sun were due to neutral oxygen atoms (*Sci. News Letter* 24, Nov. 4, 1933, p. 293).

Research on film support appears to expand each year if the number of patents granted on various cellulosic compositions may be regarded as a measure of the work being done in this field. Talbot gave a useful review of the problems entering into the manufacture of photographic paper (*Phot. J.* 73, July, 1933, p. 292).

NEW APPARATUS. An aroused interest in fine-grained small-size negatives was encouraged by the introduction of improved miniature cameras fitted with wide aperture lenses, high precision shutters, range finders, etc. One firm supplied rigid tubes of a cellulosic composition for developing roll films (*Focus* 43, Dec. 24, 1932, p. 416). Several designs of enlargers were made available for enlarging small negatives (*Amat. Phot.* 74, Dec. 28, 1932, p. 597; *Photo Woche* 23, Nov. 29, 1932, p. 242).

In England, a new portrait camera known as "Polyfoto" attracted attention. It produced 48 pictures on a 5 by 7 in. plate in one minute, enlargement to cabinet size or greater of certain selected ones then being made for the customer (*Brit. J. Phot.* 80, July 21, 1933, p. 421).

The motion picture cameras in use in the larger studios were gradually emerging from their blimp housings and assuming more familiar shapes again. Several well-known firms introduced completely silenced cameras that were satisfactory for sound pictures (*Amer. Cinemat.* 13, October, 1932, p. 17; *ibid.* 13, January, 1933, p. 16; *Internat. Phot.* 5, March, 1933, p. 8). Special cameras were equipped and tested under extreme cold conditions for the Mt. Everest flight (*Brit. J. Phot.* 80, June 30, 1933, p. 375).

A few additional wide aperture lenses were introduced working at F/2, F/1.5, and F/0.85. The last named lens was designed particularly

for the exacting requirements of X-ray cinematography of live organs in the body (*Brit. J. Phot.* 80, Mar. 10, 1933, p. 128).

Improved lighting equipment was marketed for the professional and amateur cinematographer, the commercial worker, and the technician. Large and small size photoflash lamps were made available as well as a new size of over-volted incandescent lamp of the photoflood type.

Significant improvements were noted in sound recording and reproducing equipment for motion picture work. A technical description of a method of variable width recording equipment was published (*J. Soc. Mot. Pict. Eng.* 20, May, 1933, p. 396) and papers describing a system of variable density recording were presented at the October meeting of the Society of Motion Picture Engineers held in Chicago. Small compact camera dollies with short crane arms and ball-bearing rubber wheels were finding extensive use in the studios (*Amer. Cinemat.* 13, May, 1933, p. 8).

H. E. Ives demonstrated an experimental apparatus for the projection of motion pictures in relief. A series of 32 posed still pictures was made using a large diameter concave mirror to image them on a transparent concave rigid screen which, in turn, was imaged on lantern slides. Positives from these negatives were mounted on the periphery of a slowly rotating disk in the slide plane of a projector. The projector image (using a flashing mercury lamp source) was received on one side of a translucent convex ridged screen. When viewed from in front, a stereoscopic relief is exhibited according to various observing positions (*J. Soc. Mot. Pict. Eng.* 21, August, 1933, p. 106).

Progress was noted in the amateur cine field, particularly in regard to the quality of sound-on-film reproduction although this quality was generally considered to fall short of that obtainable with disk or 35 mm. sound-on-film records.

THE PHOTOGRAPHIC PROCESS. A new method of physical development was of interest to every one concerned with the production of negatives having minimum graininess. A hypo-silver nitrate-sulphite solution was used to which an amidol solution was added for use. An exposure increase of five times was necessary and development required $1\frac{1}{2}$ hours. A modified system reduced the development time to 45 minutes (*Camera*, Phila., 46, April, 1933, p. 217). The problem of fine-grain development was discussed by many writers but with very little experimental data to support their statements. Developers containing paraphenylene diamine were recommended by several workers, even though most of them seemed to be aware of the reputedly poisonous action of this chemical on the skin.

A committee of motion picture engineers made useful recommendations on the care and development of motion picture film with reference especially to film preservation (*J. Soc. Mot. Pict. Eng.* 20, March, 1933, p. 183).

A method of securing a more uniform degree of development throughout the life of a developer was stated to be possible by using two developer baths in succession (*J. Soc. Mot. Pict. Eng.* 21, July, 1933, p. 21). A paper by Davis and Neeland of the U. S. Bureau of Standards dealt with a comparison of several developers and the specification of relative sensitivity (*Bur. Stand. J. Research* 11, September, 1933, p. 379).

In a paper given before the 1931 Photographic Congress in Dresden, Reinders and Benker

showed that the properties of a developer were dependent largely on the hydrogen ion concentration. This work has now been confirmed by two Russian investigators, Faermann and Shishkina (*Trans. State Opt. Inst. Leningrad* 9, 1933, Pt. 89, p. 1).

The introduction of boric acid into a potassium alum fixing bath containing acetic acid and sodium sulphite was shown by Russell and Crabtree to extend the hardening life and minimize greatly the tendency for sludge formation (*J. Soc. Mot. Pict. Eng.* 21, August, 1933, p. 137).

Hickman and Weyerts devised a new method of optical intensification of silver images which consisted in exposing silver halide or sulphide images to light while immersed in solutions of sodium silver sulphite or nitrite (*Brit. J. Phot.* 80, Aug. 18, 1933, p. 482).

Two interesting research papers by Carroll and his co-workers, Hubbard and Kretschman, dealt respectively with the mechanism of hypersensitization and photographic reversal by desensitizing dyes. (*Bur. Stand. J. Res.* 10, February, 1933, p. 211; *ibid.* 10, April, 1933, p. 449).

PHOTOGRAPHIC THEORY. Experiments were continued by Bullock on the phenomenon of the continuing action of light in silver halide emulsions. With certain of these materials, over a considerable exposure-age range though not indefinitely, the rate of increase of the developable image varies inversely as the time of keeping in the dark after exposure. Upon this relation is based a view of the mechanism of latent image formation in which an essential feature is the assumption of spherical spreading of activation energy through the grain (*Sci. ind. phot.* 2nd Ser. 4, January-February, 1933, pp. 6 and 33).

An aggregate of silver atoms was believed by Reinders and Hamburger to act as a nucleus for development only when it attains or exceeds the critical size of 3 or 4 atoms (*Z. wiss. Phot.* 31, 1933, p. 265). The data, however, are neither compatible with the assumed necessity of larger germ sizes nor with Bullock's assumption that isolated silver atoms are developable.

Hilsch and Pohl have discussed further the photographic elementary processes in the salts of the alkali metals and of silver respectively. Based on the work of Stasiv who showed that the coloration of alkali metal crystals by alkali metal vapor could be caused to move in an electric field like negative charges, they give the following differentiation in alkali metal salts and silver salts. In the former the metal atoms remain individual and are only aggregated by heat. In the silver halides, in consequence of a freer movement of the electrons in the lattice, aggregation follows immediately on formation of the metal atoms by light absorption (*Z. Phys.* 77, 1932, p. 421).

Seyewetz tested three aromatic azimides and reported two of them to be useful anti-fogging agents although they also dyed a chloride emulsion image a blue color (*Phot. Korr.* 69, May, 1933, p. 67).

Gelatin on prolonged heating at sufficiently elevated temperatures was observed by Sheppard and Houck to lose its swelling power and its solubility in warm water. From the temperature coefficient of insolubilization, the "critical increment" of insolubilization was found to be 23,000 calories. The insolubilization effect of exposure to ultraviolet radiation was found to be similar

and to have a greater velocity (*J. Phys. Chem.* **36**, December, 1932, p. 2885).

The reduction potential of developing agents determined from the bromide depression has represented for many years a useful measure of their relative photographic characteristics. Recently Shiberstoff and Berkin, after a comparative study of a number of developing agents, concluded that reduction potential is not entirely satisfactory and advanced two new quantities, namely, "A," the practical activity of the developer derived from the inertia and fog value, and "W," the degree of perfection. The practical value of a developer was further defined by Shiberstoff as being directionally proportional to the degree of perfection and inversely to the optimum time of development (*Kinophoto Ind.* **1**, 1933, pp. 101 and 141).

BIBLIOGRAPHY. Accounts of photographic progress are published each year by the *British Journal of Photography* (London) and the Society of Chemical Industry (London). Cinematographic progress is reviewed annually by the Society of Motion Picture Engineers. New apparatus is described in the *British Journal Almanac* (London), *Deutscher Kamera Almanac* (Berlin), and *Photofreund Jahrbuch* (Berlin).

Four new photographic publications were initiated during 1933, namely, *The Miniature Camera* (New York), *Travel and Photography* (Sydney, Australia), *Photo Art Monthly* (San Francisco), and *The Gallery* (London). *Motion Picture Projectionist* (New York) was combined with *International Projectionist* (New York). *Personal Movies* (Canton, Ohio), which was initiated in June, 1932, was continued. Work was in progress to establish a national photographic association in the United States and Canada to be called the *Photographic Society of America*.

An index to volumes 1 to 10 was published for *Photographic Abstracts* by the Royal Photographic Society, London.

The more notable books of the year were: D. Charles, *Commercial Photography*, 2d ed. (Greenwood & Co., London); G. W. French, *Photography for the Amateur*, 2d ed. by L. I. Snodgrass (Falk Publishing Co., New York); W. Heering, *Das Rollicflex Buch* (Knappe, Halle); J. Price, *News Photography* (Industries Publishing Co., New York); R. C. Bayley, *The Complete Photographer*, 10th ed. (Methuen & Co., London); K. Wolter, *Photographieren mit Drei-Vier und Vier-Vier* (Knappe, Halle); A. Hammond, *Pictorial Composition in Photography* (American Photographic Publishing Co., Boston); B. T. J. Glover, *A Guide to Successful Portraiture* (British Periodicals, Ltd., London); *Photography Without Failures* (Routledge & Son, London); W. H. Daring, *Photo-fehler A bis Z* (Knappe, Halle); F. Loescher and K. Weiss, *Landschafts Photographie* (Union Deutsche Verlags, Berlin); Wm. Alexander, *Modern Photography with Modern Miniature Cameras* (Fountain Press, London); G. L. Hawkins, *Pigment Printing* (Greenwood & Co., London); P. E. Sabine, *Acoustics and Architecture* (McGraw-Hill Book Co., Inc., New York); J. S. A. Salt, *Surveying from Air Photographs* (H. M. Stationary Office, London); G. H. Sewell, *Commercial Cinematography* (Pitman & Sons, London); K. M. MacIlvain, *Sound Picture Recording and Projection* (International Text Book Co., Scranton, Pa.); J. Eggert and R. Schmidt, *Einführung in die Tonphotographie* (Hirzel, Leipzig); R. Dahlgren, *Tonfilmwiedergabe*

(Union Deutsche, Verlags, Berlin); B. Brown, *Talking Pictures*, 2d ed. (Pitman & Sons, London); J. Marette, *La Lumière dans la Projection Cinématographique* (Gauthier-Villars, Paris); *Theater and Motion Pictures* (Encyclopædia Britannica, London); A. E. Singer, *The Visual Fatigue of Motion Pictures* (Amusement Age Publishing Co., New York); J. R. Cameron and Others, *Motion Picture Projection and Sound Pictures* (Cameron Publishing Co., Woodmont, Conn.); M. Burgess and A. Lovell, *Amateur Cine Movement in Great Britain* (Sampson, Low, Marston & Co., London); B. Brown, *Amateur Talking Pictures and Recording* (Pitman & Sons, London); P. J. Rulon, *The Sound Motion Picture in Science Teaching* (Harvard University Press, Cambridge); A. Stuler, *Filmtricks und Trick filme* (Knappe, Halle); S. O. Rawling, *Infra-red Photography* (Blackie & Sons, London); F. Volla and F. Porro, *Fotografia aerea negli usi civili e militari* (V. Hoepli, Milan); C. W. Gamble, *Modern Illustration Processes* (Pitman & Sons, London); R. F. Reed and P. W. Dorst, *The Albumin Process of Photolithography* (Lithographic Technical Foundation, New York); K. F. Bonhoeffer and P. Harteck, *Grundlagen der Photochemie* (Steinkopff, Dresden).

A partial list of the handbooks and annuals appearing during the year is as follows: *Ausführliches Handbuch der Photographie*, edited by J. M. Eder and A. Hays, Knappe, Halle. Vol. ii, part 4 (3d ed.). *Die theoretischen und praktischen Grundlagen der Autotypie; Handbuch der wissenschaftlichen und angewandten Photographie*, edited by A. Hay and M. von Rohr, 9 vols., Springer, Vienna. Vol. vi, pt. 2, *Mikrophotographie* (edited by T. Peterfi); *Jahrbuch für Photographie, Kinetographie, und Reproduktionsverfahren für die Jahre, 1928-1929*, vol. xxxi, pt. 2, edited by J. M. Eder, E. Kuchinka, and C. Emmermann, Knappe, Halle; *American Annual of Photography-1934*, American Photographic Publishing Co., Boston; *Photofreund Jahrbuch, 1933-34*, Photokino Verlags, Berlin; *British Journal Almanac*, Greenwood, London; *Studies from the Emulsion and Colloid Laboratory*, vol. i, 1932, Kinophoto Institute, Moscow; *Veröffentlichungen des Wissenschaftlichen Zentral-Laboratoriums der Photographischen Abteilung-Agfa*, vol. iii, Hirzel, Leipzig; *Deutscher Kamera Almanac*, Berlin; *Kinematograph Year Book*, London; *Jahrbuch des Kino-Amateurs*, 1934, Photokino Verlags, Berlin; *Penrose's Annual*, London.

PHOTOPLAYS. See MOTION PICTURES.

PHOTRONIC CELL. See ELECTRICAL ILLUMINATION.

PHYSICAL ANTHROPOLOGY. See ANTHROPOLOGY.

PHYSICS. Advances in physics during 1933 were notable for variety, interest, and importance. Confirmation of the discovery of the positron (positive electron) alone would have made the year memorable. Transmutation became laboratory routine with gamma rays as by-products. Superpenetrating cosmic rays were reported. The neutron, proton, and deuteron became transmutation projectiles in the laboratory. The Van de Graaf 10,000,000 volt spheres were completed and used to produce relatively steady 20-kw direct current for experimental transmutation of atomic nuclei. Quite unexpectedly "heavy water" (made from the heavier isotope of hydrogen) was found fatal to various

forms of life. Nine forms of water appear possible, ranging in molecular weight from 18 to 22, i.e., from H^1 to H^2 and O^{16} and O^{18} . The interest in "heavy water" grows rapidly.

The Nobel prize (q.v.) for the year 1933 was awarded jointly to Paul A. M. Dirac, Lucasian professor of mathematics at the University of Cambridge, and to Erwin Schrödinger, until recently professor of theoretical physics at the Friedrich Wilhelm Universität, Berlin, for their work on atomic theory. Physicists were gratified at the appointment of Lyman J. Briggs as Director of the U. S. Bureau of Standards.

A notable new record of approach toward absolute zero was made. Bromine for photography was extracted from sea-water in tonnage lots. Long-range weather forecasting made marked progress based on rhythmic components of solar records. The discovery of a cosmic source of radio impulses opens a new chapter of interest. Ultra-short waves now used for quasi-optical purposes offer possibilities not fully realized even by experts. Television has notably advanced. Electronic music was active in new and successfully demonstrated devices.

Philosophy. A note of mysticism—when physical theory fails—is to be noted in current physics. The computation of mathematical forms of the universe continues, it being still uncertain whether the universe is expanding, contracting, or remaining constant in size, if that is a reasonable interpretation of the mathematics. Some think that to the positivist probability has become the keyword in place of certainty. This seems to confess that physics is inadequate even in its own field to account for cosmic phenomena. Rarely is the centennial of a curve celebrated. In 1933, however, occurred the notable centenary of the discovery of the normal probability curve by de Moivre—the place of which in modern science and technology has become almost supreme. The uncertainty principle still holds sway in atomic physics. Lemaitre points out that this principle gives as the only determined field the average field during a time in which the electron makes ten billion revolutions. Prunier, however, interprets Dirac's wave theory and finds a relationship between wave functions and electromagnetic field which, Prunier believes, suggests that the probability interpretation of quantum mechanics may be escapable. The impasse into which sub-atomic physics has fallen in recent years may yet be resolved.

Heat. One more step toward absolute zero was made when De Haas, Wiersma, and Kramers reached .27 degree Kelvin by the use of cerium fluoride placed in a magnetic field giving a negative potential energy. When the field was removed the substance cooled adiabatically to .27 degree in the earlier experiments and in the latter to the new record minimum temperature .085° C. above the absolute zero. Atkinson and Hautermans found that above a few million degrees temperature, penetrating collisions occur. The heat energy produced by atomic synthesis should account for stellar temperatures of 20,000,000 degrees.

Velocity of Light. A somewhat sensational press notice came late in 1933 that the velocity of light may not be constant. The velocity of light is held to be, perhaps, the most fundamental constant in all nature. The measurements were made in a one-mile vacuum tube, exhausted to 2 millimeters pressure. The presumption that the

velocity of light (in a vacuum) may be a variable was promptly disclaimed by the director of the Mt. Wilson Observatory. The unexplained apparent discrepancy amounts to 20 kilometers per second.

Gheury reported that he finds evidence that the velocity of light has been changing since the beginning of this century according to the analysis of determinations made during that period. Shapley regards the apparent change in the velocity of light as due merely to periodic fluctuations in the forces exerted on the earth by the sun and moon in certain positions. Pease believes that the variation is too regular and too large to be accounted for by the usual sources of error in the method, equipment, or operation. However, he is at present engaged in the reexamination of sources of error.

Variable Refractive Index of Air. An apparent variation in the refractive index of air is reported by Tilton. In a historical study of the various determinations of the refractive index of air he found that a curve connecting the averages year by year showed the same rhythm as the double sun-spot cycle—about 23 years—the so-called magnetic cycle. Sunspots are by habit bipolar, the polarity of the forward spot changing with each eleven-year period. Tilton suggests that during quiet parts of the cycle relatively more of the heavy (optically denser) gases settle to the earth's surface. The Pearson correlation coefficient was found by Tilton to be $-.52$. Abbot found a 22.6 year cycle in terrestrial weather, corresponding to Hale's solar magnetic cycle of the same period. Twenty-three year cycles are found from the clay deposits of ancient rivers which have dried, receding more each year, leaving clearly marked lines or varves, which mark the rainy years.

Short Radio Waves. The invasion of the short-wave end of the radio spectrum progressed notably during 1933. Special interest attaches to this trend because of the number of potential broadcast and experimental channels in this region. A thousand channels might be assigned between 5 and 8 meters, and 8000 channels between 1 and 5 meters. Already such waves have been applied to interesting experimental developments. Their quasi-optical properties and freedom from static forecast a brilliant future in their application. Extra-terrestrial echoes of radio still puzzle the physicist. A new mystery has just been reported by Jansky—atmospherics of very short wave lengths from a definite direction in space. The direction is determinable to within a half degree in the sky. The source seems to be right ascension, 18 hours, and declination, -20° .

Kintner using a new radio tube has produced a 9-cm wave with one-watt output. Such waves may be reflected like light and penetrate smoke and fog unimpeded. The detection of locations of thunder storms has been studied by Watt by means of cathode ray oscillograms. The atmospherics during thunder storms permit two stations working in cooperation to detect at times hundreds of storms within a radius of 3000 miles.

Schereschewsky reports lethal effects from high-frequency electromagnetic radiation, especially between 66,000 and 18,000 kilocycles.

The uses of short waves in cooking forms a novel application—for example, baking bread without crust by high-frequency short-wave electrical energy. Another application of short waves is in the control of air traffic between London and

Paris by means of 17-cm waves used in radio communication.

Television (q.v.). The two leading television journals of England and America agree that 1933 was a year of marked progress toward the television of our dreams. One editor says: "The men who know are talking television more optimistically than ever before." Outstanding in the year's achievements are the use of ultra-short waves and the success of the cathode ray tube and screen especially in the new iconoscope. Other advances include wide band transmission, more intense light, large screens, and pictures of outdoor news scenes. In screen portrayal a notable 1933 triumph of television was the ballet *Petrouchka*. Baird's full-size screen pictures were especially successful. The theory and practice of both electromagnetic and electrostatic electron focusing made substantial progress during the year. Nine-inch cathode ray screens with electromagnetic deflection are on the market.

The Zworykin iconoscope is in effect a television camera and makes practical outdoor television. Zworykin uses methods of electron quasi-optics, focusing beams of electrons much as a lens focuses a beam of light. Scanning with a stream of negative electrons nullifies the positive charge in each little condenser. It is reported that it permits practical outdoor television. The surface is made up of little eyes (3,000,000 in all), each being a globule of photosensitive matter deposited on a thin sheet of mica. Each globule is insulated from the other, and all are insulated from the metal backing by the mica. Each globule forms a condenser. Each condenser is positively charged in proportion to its emission, so the charge is stored until released. An editorial significantly remarks: "Television may have some surprises for the conservatists before another twelve months have rolled around,—so the television optimists insist."

Sound. Schutkowsky's new device spells audibly the letters on a printed page. With his principle of "optical congruence" if the "A" in the book covers the "A" in the machine, the loud speaker pronounces the letter "A" and only then. The device seems designed to be usable by the blind with little practice.

In the field of electronic music interesting developments are in progress. Karapetoff has designed an electronic musical device for producing a wide range of tonal qualities, permitting reproducible records of his own performance which may be superadded, making it possible for him to play duets with himself and "produce the music of an entire orchestra," he being the sole performer.

Taubman's electrone furnishes a superior kind of electronic music, using the beat notes from tube-driven high-frequency tuned circuits. The pitch is varied by moving the hand relative to a short metal rod—moving the playing hand toward the rod raises the pitch and withdrawing it lowers the pitch. A foot pedal controls the volume from pppp to ff instantly.

Radioactivity. A study of neutrons and the masses of nuclei by Swietoslowski showed that a uranium atom loses 0.033 of its initial mass by transmutation to lead, a result in accord with .0441 deduced from heat emissions. Wait reports that an air molecule may be ionized by reason of radioactive matter in the air, in the soil of the earth, or by the action of cosmic rays. Air ions thus formed by radioactive substances account

for 75 per cent of the air ions, 25 per cent being due to cosmic rays. Two thousand ions per cu. cm.—the theoretical expectation—are rarely found. The average over sea is 500 and over cities may be as low as 100. Wait is studying the factor responsible for this discrepancy.

Any Climate Anywhere. Another triumph of applied physics still in its infancy is air-conditioning. More than 36 separate aspects of environment which require control have been listed. The chief items at present are freedom from dust, and suitable temperature and humidity. The movement for the control of indoor air conditions is gaining headway. Noteworthy examples are Radio City Music Hall, New York, and Sears Roebuck Store in Chicago. Other examples include cafés, trains, theatres, hospitals, stores, and homes. The latest development is an experimental air-conditioned sedan being driven through crowded New York streets with air being delivered free from city dust, cooled to comfort temperature and properly humidified. If air delivered to the engine of our car needs to be purified, why should not the air taken into human lungs be made dust free and germ free?

That new factors—new and unexpected—are bound to arise in the complete physical control of indoor air conditions received additional confirmation during the year 1933. Hershey reports that nitrogen and oxygen appear not to be able to support life alone. In a mixture of nitrogen and oxygen in the ratio of 79 to 21 per cent (free from rare gases) all the test animals died. He also showed that rats, monkeys, pigeons, cats, and guinea pigs cannot live more than five days in an atmosphere of pure oxygen.

The remarkable uses of hydrogen ion control in specific researches at the Bureau of Standards add evidence that such control is essential in making permanent paper and that acidity is an active cause of deterioration in leather, textiles, and paper. The Folger Shakespeare Library in Washington is the first to avoid atmospheric acidity by a specification based upon research, which protects the books and other paper records in this valuable collection from its most serious enemy.

An interesting possibility suggested by Height is his electrode based upon the Lodge-Cottrell principle. The purpose is to keep airports clear of fog. McAdie, an expert in meteorology, believes that the early morning fogs of New York harbor can be dissipated by electrified sprays.

Electrodeposition of Rubber Latex. The electrodeposition of rubber by scientifically controlled measured conditions is developing a whole group of industries. Tank vessels are now carrying the liquid latex direct from plantations to the point of manufacture. The coloring matter and vulcanizer are mixed directly with the latex and the mixture electrodeposited on metal forms. An excellent example is the production of seamless gloves of high quality for surgical and laboratory use. At the opening of this century Crookes pointed out the real prospect of a wheat famine through the exhaustion of natural nitrate deposits. The danger has been made forever impossible by research on synthetic nitrates mined from the atmosphere. In somewhat similar manner the study of new sources of rubber, natural and synthetic, have made impossible a rubber famine, modern plants producing high-grade rubber at five or six cents a pound.

Cosmic Physics. Isostasy was challenged after

a study by Glennie of the undulations in the compensated geoid. It was agreed that the real test will be the correlation of further geological facts. Interesting records were obtained from the Long Beach earthquake. Record analysis at the Coast Survey located a severe earthquake in China long before cable and news service announced the news. Radio proved a new and useful resource in speeding up the study of the variation of longitude through the movement of the pole of rotation about the pole of figure of the earth (about a meter a year).

Takeuchi discussed the red shift as involving Einstein's cosmological term. Eddington's theoretical value, 137, was closely confirmed by Shiba, who obtained the equation $hc/2\pi e^2 = 136.94 \pm .5$. De Sitter supposes minimum value 5×10^9 years ago when the galaxies were comparatively close together.

Eddington and Regener stated that a body in space acquires radiant energy giving a temperature of 3.18 degrees Kelvin from the light of all stars and cosmic rays. Belot reported densities: of Antares 10^{-8} , dark nebulae 10^{-10} , luminous nebulae 10^{-15} .

Menzel and Shapley find oxygen in excited state the cause of the green light in the corona of the sun. Slifer found that the earthshine reflected from the dark of the moon is distinctly blue. Wildt confirms Durham's announcement that Jupiter and Saturn have atmospheres containing ammonia. Slifer also reports oxygen on Mars and dioxide on Venus.

A new correlation was reported by Archenhold—the 27-day solar halo frequency and the 27.3-day rotation of the sun. The Century of Progress literally hitched its wagon to a star when light from Arcturus was made to open the Chicago Exposition by a photo-cell device ingeniously set up.

Abbot from his studies of the rhythmic components of the solar radiation curve predicted the 1933 and 1934 curve after announcing the close parallel between predicted and actual values for 1931 and 1932. Abbot's periodometer was applied to detecting rhythms in solar radiation.

The stratosphere has now been reached for a third time. The highest flight was made by the Russians and the next by the Americans (11.5 miles). Recording instruments for cosmic rays were used and quartz windows permitted ultraviolet studies. The last flight showed a fifty-mile-an-hour drift in the stratosphere. The sky was deep blue (not black) and at 90° from the sun skylight was plane polarized to within 5 per cent.

Bromine Mined from the Sea. Bromine is a key material in photography. During the year the feared shortage of bromine was made forever impossible through the commercial recovery of this valued gas from sea water. A cubic mile of sea water contains 300,000 tons of bromine. The Kure Beach plant has a capacity of 250 tons a month; 26,000 gallons of sea water being handled per minute day and night, the water remaining in the plant less than one minute.

Great interest was shown in the prediction and discovery of "heavy water" (formed by the heavier hydrogen isotope). A literature of more than a hundred articles appeared in the journals on this subject, touching upon such topics as electrolytic isotopic fractionation, mobility of ions in H_2 , the lethal effects of "heavy water" on organisms. The latter came as a surprise.

This unexpected discovery adds new interest

to the subject. Washburn and Smith found "heavy water" in the Salton Sea and in rasorite. Lewis and Ashley found the nuclear spin of H^2 to be twice H^1 , from a study of the alpha bands of H^2H^2 .

Disintegration Products. Curie and Joliot showed that high-energy photons produced positive electrons by impact with atomic nuclei and also that positive electrons result from the artificial disintegration of aluminum and boron, and that neutrons and gamma rays are emitted by F, Na, and Al on bombardment by alpha particles from polonium. Dirac holds that photons should become positrons and electrons. Millikan secured 1400 photographs of tracks indicating that photons of cosmic or gamma rays eject positrons and electrons from the nucleus of an atom. Neddermyer and Millikan studied these 1400 tracks caused by the impact of gamma rays from thorium upon lead nuclei. Ten per cent were direct hits on the nucleus and of these 40 per cent ejected both positrons and electrons and the remainder positrons only. Gamma rays, by-products of transmutation experiments, are an important means of checking the energy equivalents in such transformations.

Ultra-High Energy Cosmic Rays. Kolhörster reported cosmic rays of minimum energy exceeding one hundred thousand million electron volts. In the salt mines of Strassfurt he found that they penetrated a half mile of water or its equivalent, hence they are four times more penetrating than any cosmic rays reported by Regener. The rays reach the earth vertically. Kolhörster believes these to be "primary cosmic radiation" with properties "capable of maintaining the electric charge of the earth."

The Neutron. Rabi studied 10 elements as sources of neutrons and found the radius of the neutron to be $1.32 \times 10^{-13} \pm 0.2$. Pollard determined the specific polarizability of the neutron. Crane and Soltan designed and used a "neutron mill" to "blast neutrons" from beryllium nuclei. Neutrons rate second to cosmic rays for penetrating power. Lacking a charge they slip through all forms of matter. Impact seems to be their only discernible aspect. Harkins considers that the neutron is a unit of matter which should head the periodic table. It penetrates 4 inches of lead whereas a million-volt X-ray is unable to penetrate 1 inch of lead.

Electronic Phenomena. DuMond reports that the atom behaves toward radiation as though it contained electron momenta, which impresses Doppler broadening on an initially sharp X-ray line. Kappitza and Dirac report the reflection of electrons from standing light waves. The pencil falls obliquely on the nodal surface of the standing waves, producing a reflected electron pencil for the angle of incidence given by the Bragg law for crystals, with a constant equal to half the wave length. Franzini found that the cooling of a tungsten filament by thermionic emission is in harmony with the theory of a Maxwellian distribution of the initial velocities of emitted electrons except that at higher temperatures electrons of greater velocities are picked up from the field.

In contrast to the speculative atom of hydrogen of a mass comparable to that of the electron comes a new interest in hydrogen atoms of double mass. Their nuclei form a heavier bullet than the proton for atom smashing. Lamar and Duhr have devised an apparatus for this purpose.

High-Voltage Sources. High-voltage devices for

transmutation experiments are being installed at various places. The largest are the Van de Graff spheres at Round Hill, Mass., 15 feet in diameter. These are large enough to serve as a working laboratory and they generate a relatively steady direct current potential of ten million volts with a power of twenty kilowatts capable of giving 40-foot sparks at 7,000,000 volts. It is reported that similar spheres will be installed by the Tennessee Valley Authority for experimental nitrate production and research.

Discovery of Positive Electron Confirmed. The discovery of the negative electron nearly forty years ago was matched by the confirmation of the reported discovery of the positive electron (positron) having the same mass (but opposite charge) as the negative electron. Anderson's now famous photograph of Aug. 2, 1932, was in question and is now confirmed as the first proof of the existence of a positive electron. The two ultimate particles of equal mass and of equal (but opposite) charge now give us for the first time the means for constructing a hydrogen atom of one one-thousandth the mass of the H atom as hitherto known. If this is possible (in the opinion of this reviewer) a whole series of the chemical elements having one-thousandth the mass of the elements as hitherto known may conceivably be created. It remains to be seen whether such a synthesis is experimentally possible and what would be the physical and chemical properties of such ultra-light elements in view of the vastly reduced mass of their atoms. The way is open for a new field of experiment and speculation.

Sources of Positrons The Joliot's report that Po-Be 5-million electron volt photons eject 40 positive electrons for each 100 negative electrons from uranium, 30 from lead, 18 from copper, and 5 from aluminum. They reported obtaining 8 positives for each 100 negatives from lead with 2.6-million volt photons from Th C'. Chadwick obtained 35 positive electrons per 100 negatives from lead using 5 million electron volt photons from Po-Be. These and other sources seem to be ample for present experimental purposes. An interesting comment anent "atom smashing" is Eddington's remark "No experiment is worthy of acceptance until it is supported by a good theory."

Oppenheimer stirred great interest by his theory of the transformation of "intangible radiation" into "tangible matter."

Formulas. To the familiar formulas of ordinary chemical reactions the literature of experimental transmutation is adding such formulas of nuclear chemistry as $\text{Li}^7 + p = 2 \text{He}^4$; $\text{F}^{15} + p = \text{O}^{16} + \alpha$; $\text{Be} + p = \text{Li} + \alpha$. These transmutation formulas are made specific by indicating the particular isotopes involved, the proton and alpha particles sharing in the process.

Some Disintegration Results. Boron disintegration particles resulted in 60,000 electron-volts for boron and 30,000 for lithium. Theory predicted a 9×10^6 energy emission in the disintegration of B^{11} . The disintegration of boron indicated a value of 1.011 as the mass of the neutron. Henderson found that the alpha particle yield of lithium disintegrated by protons increased linearly above 400,000 volts. The result fitted theory. The diameter of the lithium nucleus (the distance at which the inverse-square law breaks down) is calculated to be 4×10^{-13} cm. 109 protons and 10⁶ volts produced forty disintegrations.

Russell pointed out that protons and nuclei repel each other (both being positive), at distances

over one one-thousandth of the atom diameter. Neutrons penetrate the barrier especially of light nuclei of low charge. Pollard reported that the alpha particle enters the nitrogen nucleus over a barrier of 4.1 and 4.4×10^6 electron volts.

LITERATURE. The number of titles on physical subjects is increasing. The American physical Society is coöperating in a policy of shorter papers giving essentials only. The importance of physics to chemistry is evidenced by the completeness and promptness with which *Chemical Abstracts* is listing articles on physical subjects. In sub-atomic physics alone these number about ten a day; for astronomy and biology new physical devices, methods, and principles are in increasing application. Notable researches on the acceleration of plant growth and the control of vital processes by physical methods are outstanding.

Dependable and interesting is a popular series of books edited by Crew and published by Williams and Wilkins Co. for the Century of Progress: Sheard's *Life-Giving Light*; Baker's *The Universe Unfolding*; Cox's *Time, Space, and Atoms*; Bell's *The Queen of the Sciences*; Mantell's *Sparks from the Electrode*; Redman's *The Romance of Research*.

Notable in the year's literature is the 1933 revised and enlarged edition of the Smithsonian Tables, an important reference work for physicists. High spots of physical interest are Rutherford's review of *The Transmutation of the Atom*, Darrow's illuminating account of the *Discovery and Early History of the Positive Electron*, and Loeb and Adam's *The Development of Physical Thought*.

Among the quotable comments of the year is one by the editor of *Nature*: "To no one more than the man of science is society entitled to look for the courage, confidence, and vision which are adequate, not merely to prevent us from slipping back into destructive individualism, but also to lead humanity forward to the full enjoyment of those rich resources with which science has endowed us."

PHYSIOLOGY. See BOTANY.

PICHON, pè'shòn, STÉPHEN (JEAN MARIE). A French statesman, died at Vers-en-Montagne, Sept. 18, 1933. Born at Arnay-le-Duc, Aug. 10, 1857, he was educated at the University of Paris, but abandoned a medical career in 1880 to join the staff of Clémenceau's journal *La Justice*. About the same time he entered Paris politics, becoming a member of the municipal council in 1882 and serving several times as secretary of that body. In 1885 he was elected to the Chamber of Deputies and during 1889-90 was its secretary. His diplomatic career began in 1894 and during the next 10 years he was successively chargé d'affaires in Haiti, Minister to Brazil and China (being stationed in the latter country during the Boxer rebellion), and resident-general in Tunis with virtually the rank of governor.

Pichon was elected Senator from Jura in 1906. The next year he received the portfolio of Foreign Affairs in Clémenceau's cabinet, and held the same post under Briand during 1910-11 and under Barthou in 1913. He then resumed his journalistic duties as editor of *Le Petit Journal*, but in 1917 was requested by Clémenceau to be Minister of Foreign Affairs in the cabinet whose courage carried France victoriously through the last years of the War. At the Paris Peace Conference Pichon firmly demanded, like his chief, adequate reparations from Germany and permanent military

security for France and, when obliged to retire from public life in 1920 on account of a nervous breakdown, continually lamented his failure to achieve these aims. He wrote *La Diplomatie d'église sous la troisième république* (1892).

PINEDO, FRANCESCO, MARCHESE DE. An Italian aviator, died suddenly in New York City Sept. 2, 1933. Born in Naples in 1890, he attended the Royal Naval College and on the entry of Italy into the World War in 1915 joined the destroyer section of the Navy. His interest in aviation dated from 1917 when he was attached to the Navy's aviation section, and upon the formation of the Royal Air Force in 1923 he became a squadron commander. Advanced to the rank of colonel in 1925, he made that year one of the most important flights demonstrating that a well-built seaplane with a trustworthy engine was capable of going almost anywhere and at all seasons. Leaving Rome on April 21, he traveled in the course of 6½ months 35,000 miles, crossing Iraq, India, the Malay Peninsula, Australia, and the Philippines to Japan. The return trip from Tokyo on October 27 was via Rangoon, Bangkok, and Calcutta and thence by the straightest line to Rome, the return distance of 15,000 miles being accomplished in 21 days.

De Pinedo made his most famous flight in 1927 when, completing a 25,000-mile aerial journey, he twice flew the Atlantic and crossed some of the wildest, unexplored regions of South America. Accompanied by his navigating officer, Capt. Carlo Delprete, and a mechanic, Vitalo Zacchetti, he left Ostia February 13 in the seaplane *Santa Maria II* and after a stop at the Cape Verde Islands flew the distance of 1432 miles to the Island of Fernando de Noronha, Brazil, in 12 hours. From Rio de Janeiro, which he reached on February 26, he flew to Asunción, Paraguay. He then turned northward, flying by way of Havana to New Orleans where he arrived on March 29. While continuing to Los Angeles, however, his plane was destroyed by fire after lighting on the Roosevelt Dam in Arizona April 6. After a new plane had been sent to him from Italy De Pinedo completed his tour of the United States, and on May 23 again crossed the Atlantic from Trepassy, Newfoundland, his route being via the Azores, Lisbon, and Barcelona to Ostia where he landed on June 16. In recognition of this achievement he was made chief of staff of the Royal Air Force with the rank of general.

In 1929 De Pinedo led 24 monoplanes in flight formation to Asia Minor, but later in that year was assigned to the Italian embassy in Buenos Aires as air attaché an account of an alleged quarrel with the Minister of Air, Gen. Italo Balbo. According to some accounts also, he had incurred the King's displeasure by his friendship with Princess Giovanna, who was later married to King Boris of Bulgaria. Although he had retired from the service in December, 1932, he made another attempt to add to Italy's aviation glory on a non-stop flight from New York to Bagdad, hoping thereby to win back past favor. His death resulted in the ensuing crash when he lost control of his monoplane *Santa Lucia*, as it took off from Floyd Bennett Field, New York City.

PISTOL SHOOTING. See SHOOTING.

PITTSBURGH, UNIVERSITY OF. A nonsectarian institution of higher education for men and women, comprising 17 schools and divisions, in Pittsburgh, Pa., founded in 1787. The total autumn enrollment for 1933 was 8328, distributed as follows: College, 2108; engineering, 438; mines, 85; business administration, 508; education, 715; Johnstown Junior College, 292; Erie Center, 223; graduate school 1131; downtown division, 1890; medicine, 259; law, 289; pharmacy, 185; dentistry, 192; retail training, 7; extension division, 842. The 1933 summer session enrollment was 2651. There were 930 members on the faculty for the year ending June 30, 1933. The amount of endowment was \$2,175,986 and the income from endowment during 1932-33 was \$90,690. The library contained 160,000 volumes. There was under construction during 1933 the Heinz Memorial Chapel, erected at a cost of \$800,000 by the children of H. J. Heinz. Chancellor, John G. Bowman, LL.D.

PLATT, CHARLES ADAMS. An American architect, painter, and etcher, died at Cornish, N. H., Sept. 12, 1933. He was born in New York City, Oct. 16, 1861, and studied at the schools of the National Academy of Design and the Art Students League and in Paris under Boulanger and Lefebvre during 1882-86. His paintings, largely views of New England, were truthful in color and sympathetically handled. Among the best were "Clouds," which was awarded the Webb prize offered by the Society of American Artists (1894), and "Snow," which won a bronze medal at the Paris Exposition of 1900. As an etcher he produced some excellent work, especially in his treatment of water, selecting his subjects principally from the life of Dutch fishermen and from scenes in Holland. Later Mr. Platt turned to landscape gardening and architecture, designing the Freer Art Gallery in Washington, some of the buildings at the University of Illinois, Phillips Andover Academy, and Deerfield Academy, and more than 100 country homes. He was elected an associate of the National Academy of Design in 1897 and an academician in 1911, and after 1928 was president of the American Academy in Rome. He was also a member of the American Academy of Arts and Letters and wrote *Italian Gardens* (1892).

POLAND. A central European republic, established Nov. 9, 1918. Capital, Warsaw (Warszawa).

AREA AND POPULATION. Poland in 1933 had an area of 149,960 square miles and a population estimated at 32,600,000 (32,120,020 at the census of Dec. 9, 1931). At the 1931 census, 27.2 per cent of the population resided in urban communities. Populations of the chief cities (1931) were: Warszawa, 1,178,211; Łódź, 605,287; Lwów, 316,177; Poznań; 246,578; Kraków, 221,260; Wilno (Vilna), 197,049; Katowice, 127,841. Living births in 1932 numbered 932,116; deaths, 487,125; marriages, 270,277. The birth rate per

1000 inhabitants in 1932 averaged 28.7, compared with a yearly average for 1927-31 of 31.6; death rate, 15.0 (16.3 in 1927-31). Emigrants in 1932 numbered 21,400 (76,006 in 1931); immigrants, 38,800 (87,700 in 1931). In 1931, 69 per cent of the population spoke Polish and 31 per cent other languages. Of the total population, Jan. 1, 1932, 74.9 per cent were Roman Catholics, 12.5 per cent Russian Orthodox, 9.6 per cent Jews, and 2.7 per cent Protestants.

EDUCATION. All education is free and elementary education is compulsory. In the school year 1931-32 there were 26,939 elementary schools, with 4,245,626 pupils; 742 secondary schools, with 201,548 pupils; 224 teachers' colleges, with 32,736 pupils; and 754 professional schools, with 70,035 pupils. There were 22 universities and high schools, with 1699 teachers and 49,770 students (14,210 women).

PRODUCTION. The 1931 census showed 63.8 per cent of the population engaged in agriculture, forestry, and fishing; 15.4 per cent in industry and mining; 9.5 per cent in trade and transport; and 11.3 per cent in other occupations. During the period 1927-31, Poland stood second among the countries of the world (excluding the Soviet Union) in the production of rye and potatoes, fifth in oats and sugar beets, seventh in barley, and fourteenth in wheat. The output of the chief crops in 1932 was (in metric tons): Wheat, 1,346,428; rye, 6,110,461; barley, 1,400,837; oats, 2,390,831; potatoes, 29,974,529; sugar beets, 2,378,389. Livestock in 1932 included 3,938,455 horses, 9,457,265 cattle, 2,784,820 sheep, and 5,830,655 swine. Forests covered 20,563,853 acres, of which 7,494,973 acres were state owned.

The production of mines and foundries (1933) in metric tons was: Petroleum, 550,945; pit coal, 27,339,000; potassium salts, 299,800; salt, 449,900; iron ores, 161,500; zinc and lead ores, 351,400; pig iron, 305,625; steel, 817,077; rolled steel, 504,432.

Mineral and metallurgical production in 1932, with 1931 figures in parentheses, was (in metric tons): Bituminous coal, 28,835,000 (38,265,010); lignite, 33,400 (41,100); petroleum, 557,000 (630,484); natural gas, 437,000,000 cubic meters (473,820,000); salt, 472,000 (561,288); potassium salts, 299,000 (261,320); iron ore, 77,000 (284,653); zinc, 82,600 (130,756); pig iron, 190,000 (347,000); raw steel, 530,000 (1,037,000); rolled steel, 370,000 (753,000). Textiles, chemicals, timber, iron, and refined petroleum are the chief manufactured products. In 1932, some 30 refineries produced 541,140 metric tons of petroleum products and 69 sugar refineries 775,600 tons of sugar. The index for yearly average industrial production (Base: 1928 = 100) stood at 69.3 for 1931 and 53.7 for 1932. Employees in industrial establishments of 20 or more workers numbered 622,655 in August, 1933 (507,358 in February, 1933).

FOREIGN TRADE. Polish imports in 1932 were valued at 861,983,000 zlotys (1,468,242,000 zlotys in 1931) and exports at 1,083,802,000 zlotys (1,878,597,000 in 1931), excluding bullion and specie. The surplus of exports over imports was 221,819,000 zlotys in 1932 (410,355,000 in 1931). The United Kingdom and the Irish Free State took 16.4 per cent of the value of all exports in 1932 (16.9 per cent in 1931); Germany, 16.2 per cent (16.8 per cent in 1931); Austria, 8.0 per cent (9.3); Sweden, 5.9 per cent (4.8); and France, 5.7 per cent (5.5). Germany was the chief

source of Polish imports, supplying 20.1 per cent of the total in 1932 (16.8 per cent in 1931), followed by the United States, 12.1 per cent (10.6); United Kingdom, 8.7 (16.9); France, 6.9 per cent (5.5). The chief import items in 1932 were (in 100,000 zlotys, worth \$0.1122 at par): Raw and waste cotton, 86.2; raw wool, 66.0; chemical products, 51.4; foodstuffs and beverages, machinery, tobacco, paper, and manufactures. Leading export items were (in 100,000 zlotys): Coal, coke, and briquets, 218.5; meat and game, 98.3; cereals and flour, 83.6; semi-manufactured wood, 77.3; eggs, 56.6.

Imports for 1933 amounted to 826,994,000 zlotys and exports to 959,643,000 zlotys, leaving a favorable balance of 132,649,000 zlotys. Imports of Poland and Danzig from the United States (1933) were valued at \$15,113,975 (\$7,108,136 in 1932); exports to the United States were \$2,685,564 (\$1,255,848 in 1932).

FINANCE. The Polish fiscal year extends from April 1 to March 31. State revenues and expenditures during the period 1929-30 to 1933-34 are shown in the accompanying table. The figures are final unless otherwise indicated.

POLISH NATIONAL ACCOUNTS

[In millions of zlotys]

	Revenues	Expenditures	Surplus (+) or deficit (-)
1929-30	3,030.7	2,992.7	+ 38.0
1930-31	2,750.4	2,813.9	- 63.5
1931-32 *	2,262.1	2,466.1	- 204.0
1932-33 *	2,001.7	2,243.0	- 242.2
1933-34 *	2,058.9	2,458.0	- 399.1

* Provisional returns. * Estimates.

Excluding a new Polish national loan, the national debt on Oct. 1, 1933, totaled 4,253,100,000 zlotys (3,823,500,000 zlotys of foreign and 429,600,000 zlotys of internal indebtedness). On Dec. 31, 1931, the external debt was 4,569,838,000 zlotys; internal debt, 458,646,000 zlotys. The unit of currency is the zloty (par value, 11.22 cents gold), which exchanged at an average of 11.20 cents in 1931 and 11.18 cents in 1932.

COMMUNICATIONS. On Dec. 31, 1932, Poland had 12,417 miles of railway line (10,976 miles of main line), which during the year 1932 carried 113,521,533 passengers and 48,905,224 metric tons of freight. The new railway line extending 297 miles from Herby-Nowe in Upper Silesia to Gdynia on the Baltic was opened to traffic Mar. 2, 1933. In November, 1933, 250 miles of additional line were under construction. There were some 28,520 miles of highways and 1700 miles of navigable waterways.

The Polish mercantile marine on Jan. 1, 1932 comprised 33 ships of 67,834 gross tons, compared with 51 vessels of 212,890 gross tons registered in Danzig (q.v.). The Polish lines in 1932 carried 1,086,000 metric tons of cargo and 11,795 passengers (exclusive of cruise passengers). In the same year 3610 vessels of 2,831,600 net registered tons entered Gdynia and 3604 vessels of 2,838,600 tons cleared.

GOVERNMENT. The Constitution of Mar. 17, 1921, amended in July, 1926, vested executive power in a president chosen by both houses of the National Assembly for seven years. Legislative power rests in the National Assembly, consisting of the Senate of 111 members and the Lower Chamber (Sejm) of 444 members. Both bodies were elected for five years by general suffrage. The President was authorized to dissolve

the Sejm on advice of the Cabinet, issue decrees with the force of law during dissolution, and to exercise other extensive powers. President in 1933, Ignace Moscicki. The Cabinet at the beginning of 1933 was headed by Alexander Prystor. For changes in 1933, see *History*. The Non-Party Union, or government bloc, which controlled 247 seats in the Sejm and 74 in the Senate, was in turn controlled by Marshal Joseph Pilsudski.

HISTORY

DOMESTIC AFFAIRS. Marshal Pilsudski's dictatorship strengthened its internal position during 1933, despite Opposition hopes that the world economic depression would pave the way for its collapse. The government recognized early in the depression that the major threat to its security was the plight of Polish agriculture, which in 1933 was suffering from a 55 per cent drop in prices since 1929. Accordingly the government's internal policy during the year was concerned mainly with the continuation of its measures to restore the balance between agricultural and industrial prices. Under the laws of Dec. 20, 1932, and Mar. 24, 1933, a series of decrees were issued (on Feb. 6 and June 26, 1933) providing for the reduction of interest or the prolongation of redemption periods of agricultural loans. Extensive government aid and other facilities for lightening the burden of these loans were provided. The government established control of industrial cartels by the law of Mar. 28, 1933, which authorized it to regulate production, prices, and the general conditions of commodity exchange. These powers were used to force reductions in prices of industrial products when they appeared excessive. The Cartel of Cement Industries was dissolved by the Minister of Commerce and Industry during the third quarter of the year on the ground that its prices were out of proportion to the prices of other industrial and agricultural products.

While granting agriculture additional tariff protection in the new customs tariff effective Oct. 11, 1933, the government pursued a resolute deflationary policy with regard to finances and maintained the zloty on a stable gold basis throughout the year. The effort to bring agricultural and industrial prices into closer balance met with some success. The index of retail prices of foodstuffs (Base: 1927 = 100) was 59.5 for December, 1932, 62.4 for June, 1933, and 57.6 for September. The index of retail prices of industrial articles (Base: 1927 = 100) was 83.3 for December, 1932, 75.6 for June, 1933, and 74.4 for September. The state's financial situation was stabilized by the successful internal 120,000,000-zloty 6 per cent loan of September 6, the subscriptions to which totaled more than 327,600,000 zlotys. This loan not only insured budgetary equilibrium for the 1933-34 fiscal year, but enabled the government to close the estimated budget for the ensuing year with but a small deficit. Moreover the general index of national production (Base: 1928 = 100) increased from 49.2 in December, 1932, to 58.8 for September, 1933.

Undeclared in the economic field, the government on December 15 introduced its proposed amendments to the Constitution designed to greatly strengthen the executive powers at the expense of Poland's already badly crippled parliamentary democracy. Marshal Pilsudski's adherents had been at work on the proposals for

constitutional revision for several years. The amendments empowered the President, without the government's consent, to appoint the Premier, the President of the Supreme Court, and the Commander-in-Chief of the Army, to dissolve Parliament, veto legislation passed by Parliament, impeach Cabinet ministers, and to designate his own successor. The Premier was to be responsible only to the President. The lower chamber (Sejm) was to continue as an elective body, chosen by popular vote for five years. But the Senate was to be given equal rights with the Sejm, except in initiating bills; one-third of the 120 members were to be appointed by the President, the remainder being chosen by the holders of military decorations won in Poland's struggle for independence.

These proposals were being considered by Parliament at the end of 1933. They required a two-thirds majority to pass, whereas the government bloc controlled only a bare majority in the Sejm.

Meanwhile, Marshal Pilsudski's candidate, President Ignace Moscicki, had been reelected at the presidential election held in Parliament May 8. He received 333 votes against three votes for a Communist candidate. The bulk of the Opposition refrained from voting. The Cabinet was reorganized on May 10 when Col. Alexander Prystor retired for reasons of health. He was succeeded by Maj. Janusz Jedrzejewicz, who retained practically all of the former Ministers.

The University of Warsaw was closed indefinitely by order of the Ministry of Education on Oct. 27, 1933, following severe rioting between the Nationalist students, who controlled the Students' Brotherhood, and the pro-Pilsudski League of Youth. For the first time firearms were used in the student clashes and five students were seriously injured. On November 10, the Warsaw Agricultural and Technical Schools and the Commercial Academy were closed due to Nationalist attacks upon Jewish students.

FOREIGN RELATIONS. Poland at the beginning of 1933 exhibited a markedly independent attitude toward France, with which it had hitherto maintained close cooperation in foreign policy. The Polish representative, for instance, openly opposed the French plan introduced in the Disarmament Conference. This attitude was inspired by distrust of the Radical Socialist governments in France and fear that the Quai d'Orsay was preparing to abandon Poland in order to reach a settlement with Germany.

The accession of Hitler to the Chancellorship of the Reich, however, increased the tension which long had marked German-Polish relations and threw Poland back into the arms of France. For more than a decade Hitler had been demanding the recovery of the Polish Corridor. On the eve of the Reichstag election of March 5, the Nazis lighted bonfires on the German side of the boundary to symbolize the "burning frontier" to the German electorate. The Poles responded by strengthening their border defenses and landing 100 additional guards at the Polish munitions base in Danzig harbor.

Shortly afterward, on March 19, Premier Mussolini's proposal for a Four-Power pact (see *ITALY* under *History*) aroused new and graver apprehensions in Warsaw. The Poles believed the plan masked an effort to establish Italo-German hegemony of Europe, with British approval, and that the spoliation of Poland would be one of the first results. Foreign Minister Beck of Poland

joined with the Foreign Ministers of the Little Entente in protesting vigorously against the Four-Power pact, while the military authorities of the four powers made arrangements to co-ordinate their activities in anticipation of a possible German attack. Under pressure of its Eastern allies, France insisted on modifications of the pact which satisfied the Little Entente. But two days after the signing of the pact on June 7, Foreign Minister Beck declared that Poland would not acknowledge any decision affecting its interests which was arrived at on the basis of the pact.

That Poland resisted the invitation to join the Little Entente was due largely to the conciliatory policy which Herr Hitler adopted following the Reichstag election. He maintained a reserved attitude toward the crisis in Danzig caused by the introduction of additional Polish troops, in violation of Poland's treaty commitments. Foreign Minister Beck admitted before a special meeting of the League Council on March 14 that Poland's action was illegal. He agreed to the immediate withdrawal of the extra troops, while the Danzig authorities guaranteed the protection of the Polish munitions depot in the Free City. Under instruction from Berlin, Polish-Danzig relations became more cordial following the victory of the Nazis in the Danzig election of May 28.

The Nazi President of the Danzig Senate visited Warsaw in July. He inaugurated negotiations which resulted in the signature on August 5 and September 18 of agreements settling most of the serious disputes between Danzig and Poland. The agreements regulated the use of the port of Danzig by Poles, the rights of Polish citizens in Danzig, and the rivalry between Danzig and the new Polish port of Gdynia. Poland agreed that thereafter 45 per cent of her foreign trade via the Baltic would pass through Danzig and 55 per cent through Gdynia. See DANZIG.

Meanwhile, Hitler had given further evidence in direct negotiations with Poland that he desired friendly relations, temporarily at least. Hitler and the Polish Minister in Berlin conferred on May 3, after which it was announced that both countries intended to act strictly within the framework of existing treaties. A temporary agreement to end the Polish-German tariff war was reached in the middle of October. A month later, following another conference between Chancellor Hitler and the Polish Minister, a communiqué was issued stating that the two countries "in the interest of consolidating peace in Europe, . . . renounce any use of force in their mutual relations." This declaration, regarded as equivalent to an unwritten non-aggression pact, was reiterated by Marshal Pilsudski to the German Minister in Warsaw.

These developments led sections of Polish opinion to hope that Hitler would permanently abandon his demand for revision of the Polish boundary. But these hopes were dimmed toward the end of 1933 by Germany's withdrawal from the League and the Disarmament Conference and by Hitler's demand for an increase in the German army to 300,000.

The rapprochement between the Polish and Soviet governments, inaugurated with the signing of a non-aggression pact in 1932, appeared to have a more substantial basis. There were numerous gestures of friendship during 1933. On September 15, Warsaw and Moscow simultaneously ratified the new non-aggression pact

signed by Poland, the Soviet Union, and six other nations in London on July 3. This pact went beyond the Polish-Soviet pact of 1932 in specifically defining an aggressor. Subsequent developments lent color to the rumor that a Polish-Soviet military understanding in anticipation of a possible war with Germany was in process of negotiation. Poland's military agreement with Rumania, formerly directed mainly at the Soviet Union, was reported to have been revised with a view to the preservation of the territorial status quo as against the anti-treaty powers.

Poland defaulted on the June 15 and December 15 war-debt installments due the United States government during 1933 (see REPARATIONS AND WAR DEBTS). A new Polish-American commercial treaty went into effect June 9, 1933. John F. Cudahy of Wisconsin was appointed Ambassador to Poland by President Roosevelt.

POLAR METEOROLOGY. See METEOROLOGY.

POLAR RESEARCH. ANTARCTIC. Interest in polar exploration during 1933 focused chiefly on two expeditions from the United States, headed by Rear-Admiral Richard E. Byrd and Lincoln Ellsworth, respectively, both of which were threading their way through the ice fields fringing the Antarctic continent at the close of the year. The ships of both expeditions were heading for the Bay of Whales on the Ross Sea, from which both leaders planned to explore unknown areas of the continent by airplane. Lincoln Ellsworth, with Bernt Balchen as pilot, planned to make a 3000-mile non-stop flight from the Bay of Whales to the Weddell Sea and return. Many explorers, beginning with Shackleton, had previously attempted to explore this territory because of its scientific interest.

Admiral Byrd's expedition—his second to the Antarctic—consisted of 70 men, including the crews of his two vessels, the *Bear* and the *Jacob Ruppert*. He carried a new twin-engined airplane and hoped to use also the two airplanes which he left behind him at Little America in 1930. The aims of his expedition were to explore, claim and map previously unexplored land areas, particularly the unknown sector east and south of the Edsel Ford Mountains. Scientists of his party were to determine what natural resources were available to man and to study weather and geological formations. The National Geographic Society contributed \$10,000 toward the cost of the expedition, which planned to remain two years in the Antarctic.

The Norwegian explorer, Capt. H. J. Riiser-Larsen, landed on the ice east of Princess Ragnhild Land on Mar. 5, 1933. Equipped with dogs and supplies, he planned to explore by sledge part of the territory included in Ellsworth's objectives. However, he lost his dogs and supplies when the ice broke up unexpectedly. Riiser-Larsen and his two associates, Hallvard Devold and Olav Kjelbotn, were rescued by the whaler *Globe Five* but were forced to abandon their trip. The British research ship *Discovery II*, especially built for scientific observations in the Antarctic, sailed from London in October, 1933, to study habits of the whales and to continue the exploration of the southern oceans.

ARCTIC. The most intensive exploration work in the Arctic in 1933 occurred in Greenland, where studies had been under way for several years as to the feasibility of establishing an air route from Europe to North America via Greenland. The University of Michigan-Pan-American Airways Greenland Expedition, headed by Dr. Ralph L. Belknap, and including Evans Schmeling and Max Demorest, continued its work until November, before returning to the United States via Copenhagen. Headquarters were maintained at Peary Lodge, from which systematic meteorological and aerological observations were made throughout most of the year. The surrounding area was examined geologically and considerable portions of it were mapped. Radio reception was studied and a botanical collection made. About June 11 a station was established at Lat. 74°, 39' N. and Long. 47°, 28' W., near the top of the northern summit of the Greenland ice cap. Dr. Belknap remained at the camp alone until August 19, making meteorological and other observations. Meanwhile similar activities were carried on at Lake Fjord, on the East Coast, 100 miles north of Angmagssalik by members of the British Arctic Air Route Expedition, headed by J. R. Rymil. Meteorological and other observations were made to determine if a large lake at the head of the fjord could be used as an alternative airplane base for the Europe-America route. This work was carried on from the middle of January to the end of August, 1933.

A British and a French scientific expedition reached Greenland on the *Pourquoi Pas?* August 1. The British group, known as the Cambridge Zoological Expedition, included G. C. L. Bertram, D. L. Lack and B. B. Roberts. They left the ship at Jameson Land, East Greenland, and spent the remainder of the summer studying the land and fresh-water animals in the country around Hurry Inlet. The French scientists sailed on to Milne Land at the head of Scoresby Sound, where important geological studies were made, and then evacuated the Polar Year Expedition which had been working at Rosenvinge Bay since August, 1932.

During the winter of 1932-33 scientists of many nations maintained observation posts in polar regions for the study of magnetic, meteorological and geophysical phenomena (see 1932 YEAR BOOK). Several such stations on Greenland were evacuated during the summer of 1933. Dr. Lauge Koch, the Danish explorer, spent another summer exploring the East Greenland coast from Scoresby Sound north, using the steamer *Godthaab* and an airplane. Returning to Copenhagen September 25, he reported the discovery of the longest and deepest fjord in the world, with a length of nearly 200 miles and a depth of more than 4500 feet. From the air Dr. Koch saw what appeared to be new land between Greenland and Svalbard (Spitzbergen). He collected some 2000 fossilized specimens of fish and four-legged stegoccephali.

Eighteen members of the Oxford University Arctic Expedition, divided into four groups, spent 11 weeks in Svalbard (Spitzbergen) during the summer of 1933. They surveyed the Treurenberg and Wijde Bay regions, the main peak of the Chydenius Mountains, and the interior and east of northern New Friesland, besides making a topographical and geological survey of about 400 square miles of Dickson Land. Data on marine biology and ornithology were collected. Capt.

Robert Bartlett and Arthur J. Norcross made another trip to the Canadian Arctic on the schooner *Morrissey*. Sailing north through Hudson Strait and Fox Channel they attempted to pass through Fury-and-Hecla Strait but were balked by pack ice.

The Soviet government continued its vigorous efforts to open up the northern regions of the Union and a number of expeditions were in the field. The commercial ship *Chelyuskin* completed during the 1933 season the trip from Archangel to Vladivostok. The first vessel to make this trip in one season was the icebreaker *Sibirskov*, in 1932. Several other freighters were conveyed by icebreakers as far east as the mouth of the Lena River, carrying provisions for newly established settlements in Northern Siberia. A number of Soviet geological and meteorological expeditions were in the field. See EXPLORATION.

POLISH CORRIDOR. See DANZIG, POLAND, and GERMANY under *History*.

POLITICAL AND SOCIAL SCIENCE, THE AMERICAN ACADEMY OF. A national forum for the discussion of political and social questions, founded in Philadelphia in 1889 and incorporated in 1891. The organization does not take sides upon controverted questions, but seeks to secure and present reliable information to assist the public in forming an intelligent and accurate opinion. The thirty-seventh annual meeting, held Apr. 7-8, 1933, considered the general subject "American Policy in the Pacific." A meeting held on Nov. 22, 1933, dealt with the general topic "The Monetary Policy of the United States." The *Annals* is issued bimonthly as the official organ of the Academy, each publication being devoted to a study of a particular topic of economic, political, or social importance. In 1933, the following topics were considered: Essentials for Prosperity; The International Labor Organization; The Administration of Justice; American Policy in the Pacific; The Crisis of Democracy; and Social Insurance. The Academy has established a monograph series, the first of which was a study on Private Police, with special reference to Pennsylvania, prepared by J. P. Shalloo and published in November, 1933. The officers in 1933 were: president, Ernest Minor Patterson; secretary, J. P. Lichtenberger; treasurer, Charles J. Rhoads; and vice-presidents, the Hon. Herbert Hoover, Carl Kelsey, and Charles G. Haines. Headquarters are at 3457 Walnut Street, Philadelphia, Pa.

POLITICAL ECONOMY. Subjects in the field of applied economics are treated in this volume under the following heads: BANKS AND BANKING; BUSINESS REVIEW; FINANCIAL REVIEW; CHILD LABOR; COÖPERATION; LABOR ARBITRATION AND CONCILIATION; LABOR LEGISLATION; MATERNITY PROTECTION; MINIMUM WAGE; OLD AGE PENSIONS; STRIKES AND LOCKOUTS; UNEMPLOYMENT; WOMEN IN INDUSTRY; WORKMEN'S COMPENSATION. See also such articles as: CHILD WELFARE; LABOR, AMERICAN FEDERATION OF; STATISTICS; SOCIALISM; TRADE UNIONS; WELFARE WORK. See also the article on AGRICULTURE and the various crops. Further discussions are to be found in articles on the several industries, minerals, public utilities, etc. Books on political science and economics for the general reader are to be found listed in the article LITERATURE, ENGLISH AND AMERICAN, under *Economics and Politics*.

POLITICAL SCIENCE, ACADEMY OF. An international learned society for advancing the political sciences and their application to political,

economic, and social problems, founded in 1880 in New York City and incorporated in 1910. Its membership on Dec. 31, 1933, numbered 6340, of whom eight were honorary members, 224 life members, 4932 individual members, and 1176 subscribing members, chiefly libraries and organizations. At the semi-annual meeting on April 28 in New York City "Tariffs and Trade Barriers" was discussed. At the fifty-third annual meeting on November 8 the topic under discussion was "Current Problems of Unemployment and Recovery Measures in Operation." A special meeting in honor of George Bernard Shaw was held at the Metropolitan Opera House, New York City, April 11. The officers for 1933 were: Alanson B. Houghton, president; Albert Shaw, Jackson E. Reynolds, and R. C. McCrea, vice-presidents; Parker T. Moon, secretary and editor of publications; George A. Plimpton, treasurer; and Miss Ethel Warner, director and assistant treasurer. Headquarters are in Fayerweather Hall, Columbia University, New York City.

POLITICS, INSTITUTE OF. See PUBLIC AFFAIRS, INSTITUTE OF.

POLO. In the absence of an international series with England, usually held every three years, but not held in 1933 because of financial reasons, 1933 instituted a new event, the most important occurrence in polo in modern years, the East-West matches. At a fiercely fought series at the Onwentsia Club in Chicago, Western polo usurped national supremacy by outriding the Eastern representatives in two of the three games. The three games, rough and sparkling, have not been excelled for excitement and hard, fast playing in this country since the close of the war. The significance of the Western victory was to prove that the sport has become truly nationalized and to foster the recognition of the American-bred polo mounts as the equal of the foreign bred horses. The winning Western team was composed of Cecil Smith, Elmer Boeseke, Eric Pedley, H. W. (Rube) Williams and Aidan Roark. The losing Easterners were Thomas Hitchcock, Jr., Winston Guest, Michael Phipps, Earl A. S. Hopping, and Raymond Guest. The West took the first game, 15 to 11; the East the second, 12 to 8; and the West the rubber game, 12 to 6. In the first and third games the American-bred mounts of the Westerners showed marked supremacy over the South American and English-bred mounts of the Eastern players.

Pedley, No. 1 on the United States international four in 1930, flew from Los Angeles to Chicago to take his place in the Western line-up for the third game, after Williams's leg had been broken in the second game. Hopping replaced Phipps in the Eastern line-up after the first game. The series developed an unusual amount of rough play, twenty-five fouls being called against the East in the three games and fifteen against the West. Williams, Hitchcock, Smith, and Boeseke all had bad falls and Williams and Hitchcock were seriously injured, Hitchcock's injury keeping him out of the game for the rest of the season. All of the Western players showed remarkable ability but the play of Smith and Boeseke was outstanding, Smith at times reaching heights which no player has gone beyond. It was almost a certainty that these two players would be placed on a par with Hitchcock as the ten-goal players of the world when the United States Polo Association handicap committee met in January.

Boeseke also dominated the season after the

Chicago series, riding on the Aurora team, winner of both the open championship and the Monty Waterbury Memorial Cup, leading handicap event. Playing with Boeseke were Seymour Knox, Elbridge T. Gerry, and James P. Mills. Gerry and Mills also were on the winning team in the junior championship tournament, riding with W. Averell Harriman and Robert Gerry on the winning Aknusti four. Princeton's team of J. L. Kemmerer, M. S. Kemmerer, W. H. Sullivan, and Raymond Firestone captured the intercollegiate title in June at the Westchester Country Club, defeating Harvard in the final, 10 to 9.

The sensation of polo abroad was the victorious invasion of England by the team from India led by the Maharajah of Jaipur. This splendidly mounted team carried off all six of England's major trophies.

In view of the Western conquest at Chicago, the National Polo Pony Society show in the fall had a special class for American-breds, won by Applesauce, bred by W. Averell Harriman at his Arden, N. Y. farm. Fairy Story, Stephen Sanford's English-bred, won top honors in the show, with Boeseke's American-bred Red Ace as reserve winner.

The national indoor polo championships were contested in Chicago, the opening sports event of the crowded Chicago season. The Optimists, with Winston Guest, Stewart Iglehart, and Michael Phipps, won the open championship, and with Harvey Shaffer riding in Iglehart's place took Class A honors. The Class B title went to the Chicago Riding Club team of J. H. Hannah, Arthur Lorber, and Frank Bering. The 112th Field Artillery team of Orange, N. J., took the Class C laurels with Captain Frank McGowan, Lt. J. T. Wilson, and Captain A. P. Moore in the line-up. The Cleveland Riding Club with J. P. Graham, A. J. O'Neill, and J. Evinger won in Class D. Harvard's riders defeated West Point, 10½ to 1 in the intercollegiate final and Culver Military Academy won in the interscholastic ranks.

PORTER, HOLBROOK FITZ-JOHN. An American mechanical engineer, died Jan. 25, 1933, in New York City where he was born Feb. 28, 1858. On his graduation from Lehigh University in 1878 he began his career as draftsman with the Delamater Iron Works in New York City. Four years later he entered the employ of the New Jersey Steel and Iron Co. in Trenton as an assistant engineer. In connection with the construction of Columbia University's new buildings on Morningside Heights in New York City he held the posts of engineer from 1884 to 1886 and superintendent of buildings and grounds from 1886 to 1890. In 1891 he was appointed assistant mechanical engineer in preparation for the World's Columbian Exposition in Chicago and while the fair was in progress during 1893-94 acted as assistant chief of the machinery department.

On becoming connected with the Bethlehem Steel Co. in 1894 Mr. Porter served successively during the next seven years as its Western representative in Chicago and as its Eastern representative in New York City. He was vice-president and general manager for the Westinghouse Nernst

Lamp Co. in Pittsburgh during 1902-05, and then entered on a consulting practice as industrial engineer in New York City, specializing in installing safety and hygienic measures in industrial establishments and in introducing scientific management based on better coöperation between employer and employees. In 1912 he was commissioned by the Russell Sage Foundation to make a survey of industrial hygienic conditions in Pittsburgh. After the tragic Triangle factory fire in New York City he served as an expert during 1912-14 to the New York State Factory Investigating Commission on Fire Hazards and was said to have devised the "fire wall," the first practical means of aiding bedridden hospital patients to escape. He installed fire prevention measures in city hospitals in New York City. During the World War he was retained by the Hercules Powder Co. of Wilmington, Del., as consulting engineer on employment management at its several plants.

Mr. Porter founded the Efficiency Society in 1911 and served as its first secretary. After 1918 he was secretary of the National Museum of Engineering and Industry, whose plans at the time of his death envisaged the construction in Washington, under the direction of the Smithsonian Institution, of a museum similar to the German Museum of Natural and Technical Sciences in Munich, tracing the progress of practical science. Such institutions as the Museums of Science and Industry of New York and Chicago and the Franklin Institute Museum in Philadelphia were to serve as branch museums.

PORTS AND HARBORS. Probably the outstanding American work of this type undertaken during the year was the great pier construction on the North River at New York City. These piers are sufficient in size to accommodate the largest ocean liners, as they are 1200 feet long and have a depth of 46 feet in the slips. While there is nothing unusual in their design, their construction involved a difficult piece of rock excavation and cofferdam work which is described under FOUNDATIONS.

During the year U. S. Army engineers, who are responsible for most of the river and harbor work in the United States, continued dredging operations in the channels maintained through the shoal water at the outside entrance to New York Harbor. The Ambrose Channel will, of course, have to be extended in order to accommodate such great vessels as the new French liner *Normandie* of 75,000 tons and the new British Cunarder of 73,000 tons.

Several interesting port developments were under way abroad, particularly in England and France.

SOUTHAMPTON DOCKS. King George opened the great dry dock at Southampton (see previous YEAR BOOKS) on July 26. At that time the work was not fully completed and it was not until August that the great sliding caisson gate, which closes the dock entrance, was put in position.

This construction, which was begun in May, 1931, was planned primarily to accommodate the Cunard liner *Princess Elizabeth* of 73,000 tons, then building at Clydebank. The French liner *Normandie* of 75,000 tons was rapidly nearing completion and another great dry dock, built to accommodate this vessel, was opened at St. Nazaire in 1932. The Southampton Dock, however, is the longest dry dock in the world (1200 feet) while that at St. Nazaire has the greatest entrance width and the great dock at Le Havre, opened in

1927, due to the high tidal range, can afford the greatest depth over its sill and blocks.

The other great work at Southampton—the new 1½ mile long deep-water quay—was also nearing completion. The last great monolith for the wall was sunk in July and the last section of the quay wall was under construction. In fact the great German liner *Bremen* docked at this new quay on May 14; the first great ship to make use of the new structure.

ELDERSLIE DOCK. While the new graving dock at Elderslie on the Clyde, opened in January, is not of outstanding size (length 620 ft., width at entrance 85 ft., depth over sill, 28 ft.) the type of entrance gate adopted is of unusual interest. It is a "box" flap gate turning about a hinge at sill level and was the subject of a special article in the February 17 issue of *The Engineer* (London).

DUNKIRK. Among the many French harbor and port improvements of recent years the jetty construction at Dunkirk stirs up memories of the great French engineer of Louis XIV, the famous Vauban. Vauban made this unpromising site into a great naval base by the construction of jetties, probably the first great work of this kind in the world, which, however, were destroyed under the treaty with the British in 1712. To-day, Dunkirk has become the third great port of France, exceeded only by Rouen and Marseilles, and French engineers have been adding to and improving the jetty system which now maintains an entrance through the shallow sandy shore.

MARSEILLES. Progress on the great deep-water basin, the Bassin du Pharo, is proceeding slowly but steadily. The great breakwater, over a mile in length, which protects the basin has been constructed in part up to sea level. The more northerly Bassin Mirabeau, with the extension of its breakwater into water about 100 feet deep, is also under way. Finally, the development of the Etang de Berre, the great inland deep-water lake northwest of Marseilles, into another basin is also under way. A large connection now exists with the lake by means of the Rove tunnel, but a navigable entrance from the Gulf of Fos is proposed.

PORTUGAL. A republic in southwestern Europe. Capital, Lisbon.

AREA AND POPULATION. Portugal has an area of 35,880 square miles (34,604 on the continent and 1276 in the Azores and Madeira). The population, estimated at 6,760,000 in 1932, totaled 6,660,852 at the census of 1930. In 1932 living births numbered 208,062; deaths, 118,895; marriages, 45,388. Birth and death rates per 1000 of population were 30.8 and 17.6, respectively. The chief cities, with 1930 populations, were: Lisbon (Lisboa), 594,390; Oporto (Pôrto), 232,280; Coimbra, 27,313; Braga, 26,962. School attendance in 1930-31 was: Primary, 422,624; secondary, 15,847; university, 5641. There were 4,277,341 persons unable to read or write in 1920.

PRODUCTION. Agriculture is the primary and mining and manufacturing the secondary industries. Of continental Portugal about 59 per cent was under cultivation in 1933, 20 per cent under meadows, 16 per cent uncultivated but cultivable land, and 5 per cent waste. The chief crops in 1932 (thousands of bushels, except as specified), with 1931 figures in parentheses, were: Wheat, 18,138 (12,999); rye, 6411 (5070); barley, 2398 (2025); oats, 7355 (5331); corn, 15,976 (17,543); potatoes (1931), 22,216; wine (seasons of 1932-33 and 1931-32, in gallons), 158,502 (198,341); olive oil (in 1932-33 and 1931-32, gal-

lons), 9549 (19,763). Cork production was 80,000 metric tons in 1932 (74,288 in 1931).

The 1932 mineral production, in metric tons (1931 figures in parentheses), was: Coal, 257,930 (227,000); iron pyrites, 237,846 (280,176); wolframite (tungsten ore), 258 (249); cement, 120,920 (94,829). Industrial production in 1932 (1931 figures in parentheses) was: Paper, 12,364 tons (8769); cotton (net imports), 47,139,000 pounds (32,597,000); pairs of shoes, 146,543 (143,345). About 5 per cent of the population was engaged in manufacturing industries.

COMMERCE. Portuguese imports in 1932 were valued at 1,759,667,000 escudos (\$56,309,000), against 1,727,956,000 escudos (\$73,265,000) in 1931. Exports amounted to 788,113,000 escudos (\$25,220,000), as compared with 811,730,000 escudos (\$34,417,000) in 1931. (Conversions were made at average gold exchange rates—\$0.0424 in 1931 and \$0.0320 in 1932; the 1933 average was \$0.0305.) Leading 1932 imports were machinery, instruments, tools, \$4,020,000; raw cotton, \$3,994,000; coal, coke, and briquets, \$3,543,000; codfish, \$3,505,000; and heavy iron and steel, \$3,412,000. The chief export items were: Port wine, \$5,387,000; canned sardines, \$4,903,000; cork, \$2,936,000; and cotton fabrics, \$1,201,000. The United Kingdom supplied 24.5 per cent of the 1932 imports; United States, 14.4; Germany, 12.7; and Portuguese colonies, 10.8. The percentage distribution of exports was: United Kingdom, 20.7; France, 15.9; Portuguese colonies, 13.9; Germany, 0.6.

Trade with the United States (1933) was: Imports, \$5,808,699; exports, \$3,368,013.

FINANCE. Revenues of the Portuguese government for the fiscal year ended June 30, 1933, totaled 2,031,000,000 escudos and expenditures were 1,948,000,000 escudos.

The revenues included about 87,000,000 escudos derived from loans, leaving a deficit of about 6,000,000 escudos. For 1931-32 the results were: Revenue, 2,007,000,000 escudos; expenditures, 1,857,000,000 escudos; surplus, 150,000,000 escudos. The 1931-32 receipts included loan funds of about 107,000,000 escudos, the actual surplus being 43,000,000 escudos.

The total public debt on June 30, 1931, was equivalent to \$462,799,000. During the five years ended June 30, 1933, the total net debt was reduced by over 250,000,000 escudos. The consolidated debt during this period increased by 1,637,000,000 escudos, but the net floating debt was reduced from 2,046,000,000 escudos to 157,000,000 escudos.

COMMUNICATIONS. Portugal in 1931 had 2128 miles of railway line (824 miles state-owned), all operated by a private company. In 1931 the lines carried 23,577,990 passengers and 3,864,722 tons of freight. Highways extended about 9940 miles. The merchant marine (1931) consisted of 261 vessels of 276,357 tons (excluding vessels under 100 tons). In 1932, 5141 vessels of 15,582,000 gross tons entered the ports in the coastal and international trade; clearances, 5059 vessels of 15,528,000 tons.

GOVERNMENT. A dictatorship was established by Gen. Antonio O. de Fragoao Carmona in 1926. Parliament was closed indefinitely and the government was administered by a military-civilian directorate. General Carmona was elected President Nov. 29, 1926, was reelected without opposition Mar. 25, 1928, and in 1932 his term of office was extended by decree for two more years. A new Constitution was adopted Mar. 19, 1933 (see *History*). Prime Minister and Minister of Finance

in the Cabinet formed July 5, 1932, Dr. Antonio de Oliveira Salazar.

HISTORY

The new constitution designed to replace the dictatorship, which had been published in draft form May 28, 1932, was adopted at a popular referendum held Mar. 19, 1933. The government announced that some 60 per cent of the eligible electorate favored the new constitution, while only 5 per cent opposed it. Thus 35 per cent failed to vote. The Opposition forces had previously announced that they would boycott the polls, but the President decreed that all persons on the eligible list who failed to vote would be recorded as voting for the Constitution.

The Constitution provided for the election by the voters of a President, authorized to select and dismiss the Cabinet, which was not responsible to the Legislature. It gave the Prime Minister powers inferior only to those of the President. The Legislature consisted of a single Chamber of 90 Deputies, half elected and half appointed by local bodies. The Chamber was to meet three months each year and its acts were subject to executive review. The franchise was restricted to "educated heads of families" (male or female). Strikes and lockouts were forbidden and arbitration was recognized as the orthodox method for settling international disputes.

When the new Constitution went into effect Apr. 12, 1933, the Cabinet was reorganized, with but few changes. Oliveira Salazar retained the Premiership and Finance portfolio. On October 20, the government announced that it had elaborated machinery for the establishment of a corporative state. The system outlined was a combination of the Italian Fascist and British parliamentary systems. Besides the President, Cabinet and National Assembly, it called for an advisory Council of State, a Corporative Chamber, and corporative courts of justice. In November six decrees were issued, putting the corporative system into effect in both the economic and political fields (*New York Times*, Dec. 3, 1933).

Behind these constitutional forms, the dictatorship remained all-powerful. Criticism of the proposed Constitution led to the removal of Gen. Vicente Treitas, former Prime Minister, as president of the Municipal Chamber of Lisbon in February. A revolutionary outbreak, scheduled for November 20, was frustrated by the arrest of Col. Sarmento Beires and other officers.

The bulk of the Portuguese people were reported to be content with the material results achieved by the dictatorship. The country was relatively prosperous, with but 18,000 unemployed reported in November, 1933. Despite an extensive programme of public works, the budget had shown repeated surpluses and the floating debt had been reduced. The government announced in 1933 that after July 1 all Treasury bills would be redeemed as they fell due and no new ones would be issued.

The Portuguese were excited during the year by repeated rumors that the powers were discussing the distribution of their colonial empire, which was the third largest in the world, in order to appease German and Italian demands for colonial outlets. British officials denied that they had discussed the matter. Nevertheless the Portuguese took steps to consolidate their hold on the colonies. A conference of all colonial governors and high commissioners was held in Lisbon early in the summer, with this end in view.

PORTUGUESE EAST AFRICA. See MOZAMBIQUE.

PORTUGUESE GUINEA, gin'1. A colony of Portugal on the west coast of Africa, entirely surrounded on the land side by French territory. It includes the archipelago of Bijagoz, together with the island Bolama in which is situated the capital Bolama (4000 inhabitants). Area, 13,944 square miles; population (1930), 364,929. For 1932-33 revenue was estimated at 21,583,863 escudos; expenditure at 21,417,962. The chief port is Bissac, with 1000 inhabitants. Governor in 1933, J. F. Vellez Caroco.

PORTUGUESE WEST AFRICA. See ANGOLA.

POSITRON. See PHYSICS; CHEMISTRY.

POST, WILEY. See AERONAUTICS.

POTASH. See FERTILIZERS.

POTATOES. The 1933 potato production of 26 countries reporting to the International Institute of Agriculture, not including the crop in the Soviet Republics, was estimated at 5,011,149,000 bushels, a decrease of 7.7 per cent from the preceding year's production and .6 per cent below the annual average yield for the five years 1927-1931. The area devoted to the crop by these countries, 29,361,000 acres, was only .8 per cent below the acreage of the preceding year and 3 per cent above the five-year average. The production of the leading European potato-growing countries was reported as follows: Germany 1,602,937,000 bushels, Poland 1,036,155,000 bushels, France 552,040,000 bushels, Czechoslovakia 294,024,000 bushels, and Spain 152,348,000 bushels. The Soviet Republics reported an average annual yield of over 1,650,000,000 bushels and an average annual area of more than 13,650,000 acres for the five years 1926-1930. The production of Canada in 1933 was estimated at 69,237,000 bushels which was 12.4 per cent below the average annual production for the five years 1927-1931.

The potato crop of the United States in 1933 was estimated by the Department of Agriculture at 317,143,000 bushels produced on 3,184,000 acres at an average yield of 99.6 bushels per acre. The production in 1933 was 40,866,000 bushels less and the acreage 197,000 acres smaller than in 1932. The average farm price per bushel on Dec. 1, 1933, was 70.2 cents per bushel making the total farm value of the crop \$222,667,000 as compared with \$126,264,000 the year before when the crop amounted to 358,009,000 bushels and the corresponding price per bushel was only 35.3 cents. The production of the 30 States producing the late maturing crop was placed at 258,491,000 bushels and of these the 18 States producing a surplus was assigned a yield of 229,175,000 bushels. The intermediate crop produced in 7 States was estimated at 28,345,000 and the early crop of 11 States at 30,307,000 bushels. The late potato crop was about 21,000,000 bushels and the intermediate crop about 7,000,000 bushels smaller than in 1932 while the early crop was slightly larger. The States ranking first in production and their yields were reported as follows: Maine 42,000,000 bushels, New York 24,600,000 bushels, Michigan 20,670,000 bushels, Idaho 19,504,000 bushels, and Wisconsin 16,730,000 bushels. These States, all growing late potatoes, produced over 52 per cent of the country's total yield.

The certified seed potato production was estimated at 8,737,297 bushels, larger by 1,816,500 bushels than the preceding crop and the largest production since 1928. The production in Maine

of 3,852,796 bushels was 32 per cent above the yield in 1932 and constituted about 44 per cent of the total certified seed potato production of the country. North Dakota, Minnesota, Nebraska, and Colorado ranked next to Maine in yield.

During the fiscal year ended June 30, 1933, the United States exported 973,000 bushels and imported 26,408,000 pounds of potatoes, comparing respectively with 816,000 bushels and 89,577,000 pounds in the preceding fiscal year. A study conducted at Greeley, Colorado, by the Colorado Experiment Station in conjunction with the Department of Agriculture showed that tubers going into storage uninjured had a much better keeping quality than bruised tubers.

POULTRY. See LIVESTOCK.

POWER DEVELOPMENT. See POWER PLANTS; STEAM TURBINES; WATER POWER.

POWER PLANTS. According to the five-year census of the Electric Light and Power Industry, the compilation of which was recently released by the United States Census Bureau, the total number of private power companies reporting declined from 2137 in 1927 to 1627 in 1932, a reduction of 23.9 per cent. During the same period the number of municipal plants decreased from 2198 to 1802. This decline was due largely to consolidations of private companies and to municipal plants acquired by private systems.

During these five years the total generating capacity, according to Census figures,* increased from 25,811,305 kilowatts to 34,624,068 kilowatts, an increase of 34.1 per cent. The corresponding outputs of electricity were 74,686,378,919 kilowatt-hours in 1927 and 79,657,431,657 kilowatt-hours in 1932. The latter figure represents a marked recession from the peak year of 1929 in which the output was over 92 billion kilowatt-hours.

Statistics compiled by the Edison Electric Institute (which is the successor to the National Electric Light Association), indicate the capacity of private utility generating stations in the United States to be 33,517,300 kilowatts,* divided into steam, 24,053,000 kilowatts, water power, 9,002,800 kilowatts and internal combustion engines, 460,600 kilowatts. The total kilowatt-hours produced by central stations in 1933 was approximately 79 billion kilowatt-hours.

The central-station load reached a low level in the spring of 1933, took a decided spurt during the summer months, and receded to some extent during the fall. The large decline of industrial load that occurred in 1932 was partly recovered and there was a substantial increase in domestic load, despite a reduction in electric rates in many localities. The gross revenue of the central-station industry was approximately \$1,917,000,000, or about 3.2 per cent under that of 1932.

Lack of activity in new power-plant construction during the past two years has afforded central-station engineers an opportunity to study design and operation with a view toward the attainment of still better efficiency, refinements in layout and reduced construction costs; all of which are likely to be embodied in such plants as are built in the near future. Due to increased reliability of equipment, the unit arrangement of one boiler per turbine is gaining favor and one large station now under construction, the

* The Census figures and those of the Edison Electric Institute are not in full agreement as the former includes some large industrials that sell power for public use. Also the reports are not strictly coincident.

Port Washington Station of the Milwaukee Electric Railway, Light & Power Company, will employ this idea. While 1200 to 1400 pounds steam pressure for base-load stations, employing reheat between the high- and the low-pressure elements of the turbine, still has many adherents, there is a noticeable trend toward medium pressures, 600 to 750 pounds, and high steam temperatures, without incurring the expense and complication of reheat equipment. The average pounds of coal per kilowatt-hour for 1933 was 1.45 which, compared with 3.2 pounds for 1919, reflects the steady improvement in power-plant efficiency during the past fourteen years. It is estimated that the utmost possibilities of the steam cycle are between 10 and 15 per cent better than is now being obtained in the most efficient stations.

Inasmuch as the Census of Manufacturers is not coincident with the Census of the Electric Light and Power Industry, no late figures are available concerning industrial power. The last published statistics showed over 19 million horsepower of generating capacity installed in industrial plants in the United States. There is a trend toward private generation of power in those large industrial plants that have considerable need for process steam. Such plants are employing higher steam pressures, 400 to 600 pounds, and generating power as a by-product in turbines exhausting to process. While the exchange of surplus power between large industrials and central stations has found relatively few such applications, the plan appears to have received new impetus in recent discussions among engineers. So many factors are involved, however, that each case presents an individual problem and no generalizations can be applied.

During the past year there has been some reaction toward the private generation of power in hotels, department stores, and office buildings. Also, loans to municipalities by the Public Works Administration will probably lead to a small increase in the number of municipal power plants, chiefly in small towns. Several of the large projects to be undertaken with Federal funds are water-power developments in the West in localities where it may require a number of years to absorb the available power.

An important project in the field of power supply was the formation of the Tennessee Valley Authority (see section on WATER POWER) which, as a part of its plan for developing that section of the South, proposes to make Muscle Shoals power available over a large area at low rates. To this end it has already started construction on the Norris Dam and the Joe Wheeler Dam, which will supplement the power already available at Wilson Dam to a total of over 600,000 horsepower. This venture of the government into the power business is arousing widespread attention and the results are likely to have a dominant effect on the much-discussed question of private versus public supply of power.

Only one important central station went into service during the year. This was the Buzzard Point Station of the Potomac Electric Power Company at Washington, D. C. This station has an initial capacity of 35,000 kilowatts, uses steam at 650 pounds and 825° F., and embodies many refinements such as slag-tap furnaces, fly-ash recovery and special provision against oil fires in the turbine room. From the start this station has shown exceptionally high economy with an overall performance of 12,200 B.t.u. per kilowatt-

hour. As the equipment becomes tuned up, it is anticipated that this figure will be bettered.

Some new units were added to existing stations during 1933 and the Detroit Edison Company is engaged in rebuilding its Connors Creek Station to incorporate higher steam pressures, larger boilers and larger turbines. While present capacity of the central-station industry appears ample for the immediate future, a return to normalcy will necessitate the modernization of many present plants and the construction of some new ones. The collapse of the financial structures of many holding companies has retarded the financing of new construction.

Several new central heating plants were put into service, notably, that supplying the group of new government buildings in Washington, and others in Chicago, Cincinnati, and Duluth.

The mercury-steam plants at the Schenectady Works of the General Electric Company and at the Kearny Station of the Public Service Electric and Gas Company of New Jersey, both went into operation during the year. Heat rates of around 10,000 B.t.u. per kilowatt-hour are anticipated. One advantage of the mercury-steam combination is that it can produce about twice the quantity of by-product steam for the same power output as a high-pressure turbine operating on the steam cycle alone.

In a paper presented at the Annual Meeting of the American Society of Mechanical Engineers, P. W. Thompson and C. T. VanDuzen reported on experiences with the 1000° F. steam installation at the Delray station of the Detroit Edison Company. Aside from a few minor troubles, all of which have been overcome, this high-temperature unit presents no greater operating problem than would a unit employing the usual temperatures of 750 to 825° F. In fact, this unit has operated for long periods at 1100°. The alloy steels necessary in the construction of the turbine and the piping and fittings make it considerably more expensive in first cost than a unit designed to operate at a lower steam temperature. Because of this it was the authors' conclusion that such high-temperature units would hardly be justified until advances in production practice brought down the cost of such alloy steels.

In the industrial field a small number of new plants were installed and a larger number modernized. Toward the end of the year several large industrials placed orders for new power equipment, which may be taken as indicative of renewed activity in the field for 1934.

A considerable number of plants, both industrial and central-station, changed from coal to oil as fuel to take advantage of the low fuel-oil prices prevailing early in the year. With prospects of increased prices for both oil and coal as a result of the NRA Codes, it is likely the new year will see greater attention given to the efficient generation of steam and power, which will probably result in considerable modernization of fuel-burning equipment.

Lack of funds somewhat restricted research in various branches of the field, although investigations of alloy steels, feedwater studies and certain phases of pulverized-coal burning were carried forward. Experiments were also carried on, at West Burlington, N. J., with wind power employing the now well-known "Fletner Effect" by which Fletner, a few years back, propelled a ship across the Atlantic. Credit for application of the

idea to the generation of stationary power is due Doctor Madaras who, with the backing of several utility companies, has erected a 90-foot, 28-foot diameter experimental tower of duraluminum rotated by an electric motor, for the purpose of studying wind effects. The idea calls for a number of such towers, each mounted on a truck, and all of which would travel on a circular track. They would be connected electrically and the varying power generated by each tower in its travel around the track would feed into a central point. The experiments are said to be progressing favorably, although no results in the form of data have yet been given out.

In England two or three stations neared completion and in May construction was started on the new Sir John North Power Station of the Swansea Corporation. This will contain four 625-pound, 850° boilers, burning pulverized coal, and supplying 60,000 kilowatts in generating capacity. Like most new British stations, it will be provided with a complete dust-recovery system. The ultimate capacity will be 240,000 kilowatts.

An event of international importance to the field was the Sectional Meeting of the World Power Conference, held at Stockholm, Sweden, in June at which 170 papers were presented by delegates and engineers from all over the world. Another notable gathering was the joint Engineering Congress held the same month in Chicago.

PRAIRIE PROVINCES. The name applied to the three Canadian Provinces of Manitoba, Saskatchewan, and Alberta. Population (1931 census), 2,353,529. See CANADA.

PRATT INSTITUTE. A nonsectarian educational institution in Brooklyn, N. Y., founded in 1887 and composed of four schools: Fine and applied arts, household science and arts, science and technology, and library science. The 1933 autumn enrollment amounted to a total of 4126. There were 181 members on the faculty and 12 special lecturers. The library contained 145,000 volumes. President, Frederic B. Pratt, A.M., LL.D.

PRESBYTERIAN CHURCH. The Presbyterian Church, with the Reformed churches, rests on features of the Reformation brought forward by Zwingli and Calvin. It consists of bodies in the United States, the British Isles, and elsewhere, following the doctrinal and ecclesiastical system developed in Holland and France and more fully in Scotland under John Knox. Organizations in the United States bearing the Presbyterian name are: The Presbyterian Church in the United States of America; Presbyterian Church in the United States (South); United Presbyterian Church of North America; Cumberland Presbyterian Church; Cumberland Presbyterian Church, Colored; Reformed Presbyterian Church; Reformed Presbyterian Church, General Synod; Associate Synod of North America, also known as the Associate Presbyterian Church; and the Associated Reformed Presbyterian Synod. The Presbyterian churches of the United States have official affiliations with the Alliance of Reformed Churches throughout the World Holding the Presbyterian System.

PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA. This is the largest body of the denomination and is represented by churches in every State of the Union and by official mission stations in Alaska, Cuba, Puerto Rico, and foreign lands. In 1933 its churches in the United States were organized into

46 synods and 290 presbyteries. Statistics for the year ending Mar. 31, 1933, showed a total communicant membership of 1,968,788. The Sunday school enrollment totaled 1,600,460. The number of churches was 9172 and of ministers 9893.

Contributions during the year totaled \$38,034,203, of which \$30,929,990 was for congregational and organization expenses and \$7,695,213 for benevolences. The board of national missions received \$1,923,051, the board of foreign missions \$2,438,220, and the board of Christian education \$480,264. The denomination maintains 52 colleges and 13 theological seminaries. It conducts two national official periodicals, *Everyone* and *Women and Missions*. Three national weeklies, *The Presbyterian*, *The Presbyterian Advance*, and *The Presbyterian Banner*, are privately owned but officially recognized.

The 1933 general assembly was held in Columbus, Ohio, May 25-29. The Rev. John McDowell, D.D., of New York City, secretary since 1919 of the board of national missions, was elected moderator, while Ruling Elder L. Irving Pollitt of Baltimore, Md., was made vice-moderator. The assembly settled a controversy over the doctrinal loyalty of its board of foreign missions by declaring its confidence in the official board by an overwhelming majority. It recommended a policy of progressive disarmament for the United States as an example to the world; stood for the rights of conscientious objectors to war; reaffirmed a standard of moral, social, and industrial relations, with the teachings of the Gospel applied thereto; urged enforcement of anti-liquor laws; and dedicated a new Hymnal.

The offices of the general assembly are in the Witherspoon Building, Philadelphia, Pa., in charge of the Rev. Lewis Seymour Mudge, stated clerk. The board of Christian education, the board of pensions, and the department of history are also housed there. The board of foreign missions and the board of national missions have their headquarters in the Presbyterian Building, 156 Fifth Avenue, New York City.

PRESBYTERIAN CHURCH IN THE UNITED STATES (SOUTH). This division of the Presbyterian denomination covers the territory commonly known as the Southern States. It was composed in 1933 of 17 synods and 90 presbyteries, with 3545 organized churches, 2436 ministers, and 469,310 members. The ruling elders numbered 16,081 and deacons 18,037. Contributions for current expenses amounted to \$6,604,595, and for benevolences to \$2,532,278. In 1933 the church was supporting 409 missionaries in Africa, Brazil, China, Japan, Korea, and Mexico; these missionaries were assisted by 4027 native workers. In the mission field there were 59,026 church members and 103,457 Sunday school members.

The church maintains four theological seminaries, one training school for lay workers (white), one training school for lay workers (colored), 18 colleges, 13 junior colleges, 12 secondary schools, 19 mountain schools, two Mexican mission schools, and 15 orphans' homes and schools. It publishes the *Presbyterian Survey*, which is the medium of communication of all departments with the membership of the Church. Privately owned papers of the denomination are the *Christian Observer* and the *Presbyterian of the South*.

The general assembly met at Montreat, N. C., May 26, 1933. The Rev. Ernest Thompson, D.D.,

of Charleston, W. Va. was elected moderator to succeed the Rev. William Crowe, D.D., of St. Louis, Mo. The offices of the general assembly are located at 1027 Kirby Bldg., Dallas, Texas. The Rev. J. D. Leslie, D.D., is stated clerk.

PRESBYTERIAN CHURCH OF NORTH AMERICA, UNITED. A member of the family of Presbyterian churches, of Scottish origin, formed by the union of the Associate and the Associate Reformed Churches in Pittsburgh in 1858.

The general assembly convened in First Church, Pittsburgh, Pa., June 28, 1933. On that date there were in the United States 11 synods, 56 presbyteries, 874 congregations, 883 ministers, 5088 ruling elders, and a church membership of 177,265. The total membership, including missionary fields, was 242,996. The Sabbath school enrollment was 203,116, while the young people's societies numbered 1033 with a membership of 26,856. Contributions for the year 1932-33 totaled \$4,103,954, and missionary contributions \$1,365,094.

The outstanding feature of the year was the celebration of the church's diamond jubilee. Three national meetings were conducted on this occasion in Pittsburgh, the women's general missionary convention, the national young people's convention, and the general assembly itself. The report of the anniversary committee on findings was unanimously adopted, declaring "a reaffirmation of the fundamental matters of our faith, a determination to set ourselves anew to a revival of soul-saving personal religion, to our corporate obligation to carry to all men the Evangel, to an awakened and reconsecrated church and the application of our Christianity to the solution of civic and social problems." Action on the plan of union with the Presbyterian Church in the United States of America was held in abeyance on account of the necessity of attention to denominational matters of prime importance.

The denomination supports 615 men and women in four foreign fields and 300 men and women in homeland mission fields. It carries on medical work in 32 foreign hospitals and dispensaries, conducts educational work in 369 schools at home and abroad, and last year reached and influenced the lives of 36,703 young men and women in its schools and colleges. Three denominational journals are maintained: *The United Presbyterian* for adults, *The Christian Union Herald* for young people, and the *Women's Magazine*.

The moderator of the general assembly for 1933-34 was the Rev. W. B. Anderson, D.D., LL.D., of Philadelphia, Pa., and the stated clerk was the Rev. O. H. Milligan, D.D., Avalon, Pa. The headquarters of the board of administration are at 705 Publication Bldg., Pittsburgh, Pa.

PRESIDENTS OF COLLEGES. See article on each college; **UNIVERSITIES AND COLLEGES.**

PRINCE EDWARD ISLAND. An island north of Nova Scotia constituting one of the Maritime Provinces of Canada. Total area, 2184 square miles; population (1931 census), 88,038. Charlottetown, the capital, had 12,361 inhabitants. In 1931, births numbered 1879; deaths, 912; marriages, 490. There were 17,506 students enrolled

in the primary and secondary schools for the year 1931.

Approximately 90 per cent of the population is engaged in agriculture and 94.2 per cent of the farmers own their own farms. Stock raising, fishing, and silver-fox breeding are other leading industries. Field crops valued at \$6,393,000 were harvested from 476,200 acres in 1932. The estimated gross agricultural wealth of the Province in the same year amounted to \$60,643,000. Live-stock (1931 census): 29,956 horses, 100,487 cattle, 78,478 sheep, 40,586 swine, 926,119 poultry. The marketed value of the fisheries amounted to \$988,919, of which lobsters represented \$750,039; other important fish caught were herring, smelt, and cod. The value of fur-bearing animals on the 648 fur farms amounted to \$1,038,242 in 1931. Pelts of fur-bearing animals taken in 1931-32 were valued at \$693,314. With 290 manufacturing establishments, representing a capital investment of \$4,019,288, and 1170 employees, the gross value of products was \$4,136,576 and the net value was \$1,787,209.

For the fiscal year ended Dec. 31, 1931 ordinary revenue amounted to \$1,149,570; ordinary expenditure totaled \$1,453,191 including expenditure on capital account. The bonded indebtedness on Jan. 1, 1933 was \$3,504,000. Government is administered by a lieutenant-governor, appointed by the Dominion, and a legislative assembly of 30 members elected for four years. In the Dominion Parliament the Province is represented by four members in the senate and four members in the House of Commons. Lieutenant-Governor in 1933, Charles Dalton; Premier, J. D. Stewart.

PRINCETON UNIVERSITY. A nonsectarian institution of higher learning for men at Princeton, N. J., founded in 1746. The total enrollment in the autumn of 1933 was 2602, of whom 2309 were undergraduates and 293 were graduate students and fellows. The faculty numbered 309; there were also 18 assistants and 36 administrative officers. The endowment in 1933 was \$27,733,679; the total income \$2,813,038; and the total expenditures, including reserves, \$2,782,160, leaving an operating surplus of \$30,878. Bequests and gifts amounted to \$93,084 for endowment, \$174,876 for current expenses, \$19,593 for student aid, and \$34,940 for buildings. The library in 1933 contained about 700,000 volumes, exclusive of pamphlets, broadsides, and manuscripts. President, Harold Willis Dodds, A.M., Ph.D., LL.D.

PRIZEFIGHTING. See BOXING.

PROHIBITION. So suddenly that the United States has not yet recovered from its surprise, the year 1933 saw the legalization of beer, the passage of a new amendment to the Constitution (the Twenty-first) repealing the Eighteenth Amendment, and finally by November 5 its adoption by the thirty-sixth convention of the separate States. Thus, the prohibition experiment, which had been inaugurated 13 years ago with so much certainty by the American people, was dramatically terminated. These columns in previous years have narrated the ups and downs of the experiment. It was plain in the beginning that Prohibition had the support of a very sizeable proportion of the American population in the belief that the abolition of the liquor traffic would bring positive economic gains. It was generally declared, and from very few quarters was any dissent voiced, that with the closing of the

saloon and the termination of the manufacture, transportation and sale of alcoholic beverages, the American population would, because of its increased sobriety, have available a larger portion of the national income for the expenditure on new consumption goods and that increased savings could be utilized for the higher education of children, provision for old age, greater leisure, and the like. Undoubtedly, too, great support for Prohibition came from certain industrialists who had become convinced that temperance would add to the larger efficiency of the American working population by the elimination of industrial accidents and greater productivity per man power so that in turn benefits would redound to the working population in the form of higher wages and shorter working hours. During the whole decade of the twenties, despite increasing skepticism from certain groups in the population, no serious efforts were made to discard the experiment because with the continuance of prosperity it was felt that there did exist, even if incapable of statistical measurement, a correlation between high wages and general employment on the one hand and the abolition of the saloon and the termination of the liquor traffic on the other.

The collapse of prosperity, however, served to sharpen the outlines of the inadequacies of Prohibition enforcement. Then, critics, who before had been crying in the wilderness, were increasingly given serious attention. It came to be seen that the great increase in crime was undoubtedly a direct outgrowth of the creation and operation of the illicit liquor traffic with its whole machinery of rum runners, wild cat breweries, and illegal stills, hi-jackers, speakeasies, beer flats, and the gangs of racketeers who were necessary to act as a kind of private police force for the protection and conduct of the industry. Again, with increasing pressure being made on public funds, the argument was presented that the return of the legal liquor industry would open up an important revenue source for Federal and local jurisdictions. Finally, it no longer could be declared that Prohibition was one of the factors in the maintenance of the era of prosperity.

All these forces converged at once so that the successful election of President Roosevelt, who had pledged himself to the immediate legalization of beer and the submission by Congress to the States of a repeal amendment, plainly indicated that the year 1933 was to see a definite effort made to terminate the Prohibition experiment. The first step was taken on February 16, when the Senate of the newly-elected Seventy-third Congress, called in special session by President Roosevelt, passed by a vote of 63 to 23 the so-called Blaine resolution for the repeal of the Eighteenth Amendment. This resolution embodied the submission of a new amendment to the Constitution for ratification by conventions of the several States. On February 20, by a vote of 289 to 121, the House followed the Senate's example. In the Senate 29 Republicans, 33 Democrats, and 1 Farmer-Laborite voted for the resolution, while 14 Republicans and 9 Democrats voted against it. In the House 109 Republicans, 179 Democrats, and 1 Farmer-Laborite voted for the resolution while 89 Republicans and 32 Democrats voted against. The following is the new Twenty-first Amendment which, as a result of the passage of the repeal resolution was, therefore, submitted to the States to be passed upon by conventions duly elected for this purpose:

Section 1. The Eighteenth Article of Amendment to the Constitution of the United States is hereby repealed.

Section 2. The transportation or importation into any State, Territory or possession of the United States for delivery or use therein of intoxicating liquors, in violation of the laws thereof, is hereby prohibited.

Section 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by conventions in the several States, as provided in the Constitution, within seven years from the date of submission hereof to the States by Congress.

The second step in the amazing assault on Prohibition came on Mar. 15, 1933, when the House, by a vote of 316 to 97, legalized the manufacture and sale of beer, ale, lager beer, and porter of 3.2 per cent alcoholic content by weight or 4 per cent by volume. The party division for the bill was as follows: 230 Democrats, 73 Republicans, and 5 Farmer-Laborites for; 58 Democrats and 39 Republicans against. The bill also levied a tax of \$5 a barrel of 31 gallons, which, it was estimated, would yield \$125,000,000 to \$150,000,000 a year. In addition, the bill left to the States all regulatory and control measures; protected dry States by reenacting the Webb-Kenyon law, which prevented interstate shipment of beer into a Prohibition State; placed a tax on brewers of \$1000 annually for each brewery; retained the existing law which required wholesalers to take out annual permits at \$50 each and for retailers at \$20 each; and allowed advertising by newspapers, magazines, radio, and by other methods. On March 20, the Senate, by a vote of 43 to 36, passed a bill which was substantially similar to the House measure, the only important difference being the inclusion of wine of the same alcoholic content as that of beer among the legalized beverages. The following was the party division in the Senate: 33 Democrats and 10 Republicans for the bill; 19 Democrats and 17 Republicans against the bill. It was pointed out, when the President signed the bill legalizing the sale of beer on March 22, that in at least 14 States beer could be sold upon the termination of the 15 days fixed in the Federal statute. These were Arizona, California, Illinois, Indiana, Kentucky, Missouri, Montana, Nevada, New Jersey, New York, Oregon, Pennsylvania, Washington, and Wisconsin. In the following States beer could be sold after the indicated dates: North Dakota, July 1; West Virginia, May 9; Wyoming, May 18. In Maryland and Delaware beer could be sold in only parts of the States. In some States dry laws had already been repealed but the sale of beer could not take place until licensing or control legislation had been passed.

Despite the suddenness of this action, the brewery industry was prepared. Because of the existence of some 164 breweries which had been licensed by the Prohibition Unit to make near beer, apparatus and materials were available for the immediate preparation of the legalized beverage. In New York City alone there were 19 such breweries; in Pennsylvania there were 31; in New Jersey there were 10; and in the St. Louis area there were 8, which as soon as the announcement was officially made began the resumption of activities. Hiring began immediately and there was great activity in the refurbishing and the equipping of bottle works. Trucks were bought and before very long in those areas where the sale of beer was unhampered by special State enactments, billboards, and newspapers broke out into a veritable rash of posters and advertisements. There quickly appeared throughout the country a great variety of beer inns, beer taverns,

and beer parlors where the beverage was served to customers with and without food depending upon the particular local provisions for the dispensing of beer. While it was impossible to tell, when the year terminated, what had been the actual economic results of legalization as far as reemployment in the brewing and dispensary industries, the investment of new capital and the amount of federal and local taxation collected, there was no question that the psychological result had at any rate lived up to every expectation. The return of beer in April, just as the United States was beginning to emerge slowly out of a three-year depression, seemed to many to be a happy augury for the future.

The next step in the overthrow of the Prohibition system was the signature by President Roosevelt on March 31 of a bill removing virtually all restrictions from the prescription of liquor by physicians. This meant in effect that the drug stores were in a position to supply hard liquor in bottled form to all persons who were able to present prescriptions made out by duly registered doctors.

Meanwhile the various States were acting on the repeal amendment as prescribed by the resolution which both houses had adopted in February. Michigan was the first State to vote on ratification of the repeal amendment on April 3 when its convention voted for repeal by a vote of 3 to 1. The next day Wisconsin went 5 to 1 for repeal. Rhode Island, which had never ratified the Eighteenth Amendment, ratified the Twenty-first Amendment on May 1 by a majority of 7 to 1. Six to one was the ratio in Wyoming on May 15; and in New Jersey, the next day, only 2 dry delegates out of 226 were elected. New York voted 8 to 1 for repeal on May 23. On May 26 Delaware and Nevada went wet. Illinois gave repeal a 7 to 1 vote on July 5, and the next day Indiana went wet by 2 to 1. Massachusetts voted wet by 5 to 1 on June 13, electing all repeal delegates to the convention. Connecticut, which also had never ratified the Eighteenth Amendment, voted 6 to 1 wet, electing all repeal delegates, on July 20. On the same day New Hampshire voted wet 2 to 1 and Iowa 3 to 2. The rest of the roster of repeal victories follows: West Virginia, June 26, 3 to 2; California, June 27, 3 to 1, all repeal delegates elected; Alabama, July 18, 3 to 2; Arkansas, July 18, 3 to 2; Tennessee, July 20, close; Oregon, July 21, 2 to 1; Arizona, August 8, 3 to 1, all repeal delegates elected; Missouri, August 19, 3 to 1, all repeal delegates elected; Texas, August 26, 2 to 1, all repeal delegates elected; Washington, August 29, 2 to 1; Vermont, September 5, 2 to 1, all repeal delegates elected; Maine, dry for 82 years, September 11, 2 to 1; Colorado, September 12, 2 to 1; Minnesota, September 12, 2 to 1, all repeal delegates elected; Maryland, September 12, 5 to 1, all repeal delegates elected; New Mexico, September 19, 3 to 1; Idaho, September 19, 3 to 2; Virginia, October 3, 2 to 1, all repeal delegates elected; Florida, October 10, 4 to 1, all repeal delegates elected.

On election day, November 7, the six States of Kentucky, South Carolina, Pennsylvania, Ohio, Utah, and North Carolina also voted on the repeal amendment. Early returns indicated that Utah had been carried by the wet forces by about 5 to 4; Ohio had been carried by a vote of 2 to 1; Maine had been carried by a vote of 2 to 1; Pennsylvania had been carried by a vote of 4 to 1;

while North and South Carolina had been won by the drys.

The Eighteenth Amendment to the Constitution of the United States was officially terminated on December 5 when the Twenty-first Amendment was ratified by the convention of Utah, the thirty-sixth State required for the purpose. On the same day Mr. William Phillips, the Acting-Secretary of State, issued the formal proclamation necessary by law to certify to the adoption of the Twenty-first Amendment repealing Prohibition. Early in the same day Pennsylvania had ratified as the thirty-fourth State, and Ohio as the thirty-fifth. President Roosevelt, in another proclamation, proclaimed repeal and urged temperance upon the nation, calling upon the American people to see that "this return to individual freedom shall not be accompanied by the repugnant conditions that obtained prior to the adoption of the Eighteenth Amendment and those that have existed since its adoption."

With the termination of the experiment on December 5, the following was the legal drinking status of the nation on the basis of information collected by the Associated Press: *Alabama*—no; *Arizona*—only with meals in restaurants or hotels; in packages from drug, grocery, and regular liquor stores, unlimited; *Arkansas*—no; *California*—only wine and beer with meals; hard liquor in packages for off-premises consumption; *Colorado*—beer and wines in restaurants, hotels, and dining cars; hard liquor in packages for off-premises consumption; *Connecticut*—beer in taverns; wine and beer in hotels and restaurants; hard liquor in packages; *Delaware*—no bars; hotels, restaurants, and clubs may sell for consumption in dining rooms, tap rooms and bedrooms; grocery and delicatessen stores to sell in packages for consumption off premises; *Florida*—no; *Georgia*—no; *Idaho*—no; *Illinois*—unrestricted except in Chicago, where local ordinance prohibits perpendicular drinking; legislature at work on control law; *Indiana*—whisky can be bought only in packages at drug stores; wines in cafés, etc.; *Iowa*—no; *Kansas*—no; *Kentucky*—no native drinking; distilleries operate for other States; *Louisiana*—anything goes; *Maine*—no; *Maryland*—control bill passed; *Massachusetts*—sale by bottle or glass provided, with local option to decide licensing of taverns; *Michigan*—3.2, until legislature acts; *Minnesota*—no; *Mississippi*—no; *Missouri*—no, until legislature acts; *Montana*—State to vend liquor, not yet ready with stocks; *Nebraska*—no; *Nevada*—anything goes except where dry by local option; *New Hampshire*—no; *New Jersey*—saloons and bars under commission control; *New Mexico*—no bars; any firm under same management three years may sell; *New York*—no bars; drinking with or without meals in hotels, restaurants, or on vessels and dining cars; licensed liquor stores, engaged in no other business, may sell up to three quarts of hard liquor or three gallons of wine per person; *North Carolina*—no; *North Dakota*—no; *Ohio*—3.2, until legislature acts; *Oklahoma*—no; *Oregon*—control unsettled; *Pennsylvania*—State takes over sale of hard liquor in packages on January 2; hotels and restaurants may sell in meantime; *Rhode Island*—drinking only with meals in hotels; licensed stores to sell package goods; drug stores limited to one quart per person; *South Carolina*—one quart per month per person may be imported on application to county judge; *South Dakota*—no; *Tennessee*

—no; *Texas*—no; *Utah*—no; *Vermont*—no; *Virginia*—no; *Washington*—State control unsettled; large cities to control by ordinances; stores city-owned in Seattle; legislature convened; *West Virginia*—no; *Wisconsin*—anyhow, anytime, anywhere until legislature acts at session beginning December 11; *Wyoming*—no; *United States Territories*—no, until Congress acts.

With the passing of Prohibition there were many vexing problems that still remained and called for solution. It must be remembered that the United States, while it did in one form and another permit the legal dispensation of liquor, did favor the spirit of the temperance movement. There was no question, therefore, that one of the most pressing problems of the near future would be the creation of workable systems for the control of the liquor traffic, the checking of intemperance, and the sale of alcoholic beverages to minors. How was liquor to be sold? Was it to be openly dispensed in saloons or was its sale to be restricted only to persons seated at tables and purchasing liquor as a beverage to accompany meals or, on the other hand, was it to be made available only in packages as in Scandinavian countries and, therefore, for home consumption purely? Again, who was to be the dispensing agency? It was being argued that in order to control effectively the liquor traffic, State monopolies ought to be established. An example of such a programme of State control was that of Montana where the State was selling all liquor within its own borders. This was being done through State stores in each county seat and in some of the towns, the stores being open from noon to 8 P. M. every day, except Sundays, holidays, and election days. All profits and tax revenues went to the State with the exception of federal taxes. No liquor was to be sold to any person without a permit issued by the State and was to be used only for home consumption. It was to be unlawful to drink liquor in any public place. Again, how was the liquor traffic to be dissociated from its old partner, the local political machine? The *American Observer* pointed out on November 15, that "the commissions already appointed give evidence of an intention to give these bodies a high standing and free them from political influences. The Connecticut Liquor Control Commission, for example, consists of three members appointed by the governor for overlapping six-year periods, not more than two members to be of the same political party. In New York, the State board is composed of five members appointed for five-year terms by the governor, with the consent of the Senate. A provision regarding their political parties applies in the same way as in Connecticut."

Jouett Shouse, president of the Association Against the Prohibition Amendment, spoke as follows in an address he made on the eve of Virginia's vote on repeal:

The most important phase of the whole business is that the right kind of men and women shall have the authority and be charged with the duty and responsibility of administering the law. If a high-class control board is created in each State, composed of outstanding citizens and vested with the power to revoke licenses without court action, no matter what the plan of retail distribution, more can be done to prevent abuse than through the writing of any laws that the wit of man can devise.

Another important question that the American public had to face was, how would the Federal government carry out its responsibility of pre-

venting the transportation or importation of intoxicating liquors into States which chose to remain dry. The Federal government's previous inability to enforce the Webb-Kenyon Act, which had been passed for a similar purpose in 1913, indicated some of the difficulties in handling the problem. Fully 20 States, by the end of the year, had neither State-wide nor local Prohibition laws on their statute books. In this group there were included the 11 States which had already made provision for liquor control laws as follows: Arizona, California, Colorado, Connecticut, Delaware, Montana, Nevada, New Mexico, North Dakota, Rhode Island, and New York. To prevent the flow of liquor from these wet States into the dry States was a problem that was seriously preoccupying an interdepartmental committee which President Roosevelt had set up for the purpose of studying the matter from various angles and laying its report before the next session of Congress.

The New York State Alcoholic Beverage Control Board, on December 10, issued an elaborate code of liquor regulations for the sale, consumption, and taxation of liquor in the State. The following is a summary of these regulations indicating how carefully States are making an effort to keep the liquor traffic under rigorous supervision: Saloons and speakeasies are prohibited and the table will succeed the bar as the gathering place. Liquor may be served only at tables in legitimate restaurants, hotels, clubs, railroad cars, and ships. Bars are not outlawed, but drinking at bars is. Licensed dispensers of drinks, who are bona fide food vendors, are permitted to serve drinks to be consumed on the premises to customers who order no food. Instead of the cordial shops of Prohibition, there will be retail dispensaries modeled after the Canadian liquor stores. These stores will sell package goods for consumption off the premises. Stores will be limited in number and confined to business thoroughfares. Department stores can qualify. No customer may buy more than three quarts of liquor at once. All-night drinking is forbidden—except in the home. Liquor-serving places must close at 3 A. M. and liquor shops at 8 P. M. The distiller's license is \$5000; the wholesale liquor dealer's, \$1500. Retail liquor licenses for hotels, clubs, and restaurants range from \$250 to \$500 in proportion to the city's population and, for retail liquor stores, from \$166.67 to \$400. Wine license fees for the interim period cost manufacturers \$166.67, wholesalers, \$66.67, and shops, \$16.67. To qualify for liquor licenses, restaurants must have been in business for a year, selling more food than beverages. Drug stores will be taken out of the liquor business, except for filling prescriptions of a pint or less. Women, as well as men, may buy drinks. Minors, intoxicated persons, and habitual inebriates must be turned away. Drinks must be sold for cash only; no credit is to be allowed, for credit tempts drinkers to "have another." The new regulations will be in effect until Apr. 1, 1934.

The Federal administration itself quickly came into action in an effort to foil the bootlegger and the profiteer. In order to assure low price legitimate alcohol the government began to allow the withdrawal of old bonded whiskies from warehouses for blending and shipment to all parts of the country. Thus, by December 5, when the sale and consumption of liquor was legalized, there was available at least 3,000,000 gallons of whis-

ky, most of which could be sold for as low as \$2 a quart. Also the administration made it known late in December that it would oppose all efforts on the part of Congress to impose high taxes on distilleries and distilled liquors, thus again striking at the bootleggers and preventing their competition with legitimate manufacturing and dispensing agencies. In line with its intention to bring the traffic under more complete governmental control, this time using the powers vested in it under the National Industrial Recovery Act, the administration, on November 22, prepared a code for the distilled spirits industry which in effect created a government monopoly over the industry with ownership, of course, in private hands. The following were the chief features of this code which was formally promulgated on November 27 with its signing by President Roosevelt: Creation of a Federal Alcohol Control Administration, consisting of five members, one, as director, to supervise the code's operations. No one will be permitted to engage in the industry except under a permit, which is conditioned on observance of the code and regulations issued under it. Permittees may not use plant equipment additional to that in use at the time of repeal, or on the effective date of this code, if earlier, or new equipment, except under certification by the administration, as needed by increased demand. If the economic condition of the industry should require it, the administration may limit the production and distribution of distilled spirits and allocate and/or provide for same; and also fix prices. Distilled spirits shall be sold in bottles only except to rectifiers, vendors, and publicly operated dispensaries or agencies. Standards of fill, identity, and quality are to be regulated by the administration, and misbranding, false advertising and mislabeling are to be prohibited by regulations. The holding of interests in retail outlets or aiding retailers in any manner is prohibited. Members of the industry, from time to time, shall severally, upon request, make such reports as may be deemed necessary to make the code effective, and shall severally permit examination of their books and records and those of affiliates or subsidiaries. Promulgation of the code or issuance of license gives no vested right to continue in the industry or as to any standard of profits. A forty-two hour six-day maximum week and an eight-hour day are fixed, with the usual exceptions. Basic minimum pay is set at \$14-\$16, or 40 cents an hour, and time and a third pay for overtime. The promulgation of the code meant virtually complete Federal control of the liquor traffic, at any rate until the meeting of Congress and determination by it of its own policy. Mr. Joseph H. Choate, Jr., was named director of the Federal Alcohol Control Board, and thus became in effect the Federal dictator of the distillery industry.

PROTESTANT EPISCOPAL CHURCH.

A religious body representing the Anglican communion in the United States, of which the Church of England is the parent church, and which was brought to America by the Jamestown colonists in 1607. Despite the absence of a colonial episcopate the church, under English clergymen, maintained a firm foothold for 170 years. In 1784 the first American bishop was consecrated in Scotland. Early in 1787 two more were consecrated in Lambeth Chapel, England. The church completed its organization at a convention in Philadelphia in October, 1789, at which the con-

stitution and name were adopted and the Book of Common Prayer was set forth.

In 1933 the total number of communicants of the Episcopal Church, in 8222 parishes and missions, was 1,341,805, an increase of 22,622 over the preceding year. The clergy numbered 6356; 178 priests were ordained during the year, while the 15 theological seminaries of the church reported 517 candidates for orders. In the 5000 church (Sunday) schools 506,571 pupils were enrolled. Baptisms during the year numbered 62,963, and confirmations 68,895. The government of the church centres in a general convention which meets triennially, the next session (the fifty-first) to be held in Atlantic City, N. J., in October, 1934. The affairs of the church between sessions are conducted by a National Council composed of 24 members, 16 of whom—4 bishops, 4 presbyters, and 8 laymen—are elected by the general convention for six-year terms, while eight members are elected by each of the provincial synods.

Operating on a balanced budget, the church in 1932 reported total expenditures amounting to \$3,266,883. Of this sum, the total expenditure for missions by the Domestic and Foreign Missionary Society was \$2,434,205, divided in practically even amounts between the two fields. The foreign-mission fields included Japan, China, Liberia, Mexico, the Philippines, Alaska, Hawaii, Brazil, the Canal Zone, Cuba, Puerto Rico, Haiti, the Dominican Republic, the Virgin Islands, and Palestine; in addition, there were establishments in 10 important European centres. Domestic missionary activities included work among the foreign born, Indians, Negroes, mountaineers, mill workers, in addition to a wide range of social service. American missionaries abroad numbered, men and women, respectively, 191, and 232; native staff abroad, 1260 and 708. During the year, 35 new missionaries were appointed. The Rev. George Van B. Shriver, who sailed in August with his wife to undertake work among the Telegus in the diocese of Dornakal, was the first missionary appointed to India.

The National Council is assisted by auxiliaries and cooperating agencies, including the Woman's Auxiliary; the Brotherhood of St. Andrew; the Church Army; the Daughters of the King; the Guild of St. Barnabas (for nurses); the Girls' Friendly Society in the United States (for girls and young women); the Young People's Fellowship (for young men and women); the Church Mission of Help; the Seamen's Church Institute of America; and the American Church Institute for Negroes. Official periodicals are *The Spirit of Missions* and *Bulletins* of the National Council, together with material dealing particularly with each department of the council. Several independently owned publications make an important contribution to the life of the church: *The Living Church*, *The Churchman*, *The Witness*, *The Southern Churchman*, weeklies; *American Church Monthly* and *The Chronicle*, monthlies.

Under a rule adopted by the house of bishops at the general convention of 1928, the house held its second annual meeting at Davenport, Iowa, Nov. 7-9, 1933, as the guests of the Rt. Rev. Harry S. Longley, Bishop of Iowa. The house received and accepted the resignations of the Bishops of Missouri, Fond du Lac, Duluth, and Sacramento, each of whom were thereupon succeeded in their respective jurisdictions by their coadjutors: The Rt. Rev. A. W. Noel Porter (Sacramento); the Rt. Rev. William Scarlett (Mis-

souri); the Rt. Rev. Benjamin T. Kemmerer (Duluth); and the Rt. Rev. Harwood Sturtevant (Fond du Lac). Among the reports received by the house were preliminary statements from two important commissions appointed to consider the placement of clergy, and missionary districts and aided diocese.

Four bishops died during 1933: The Rt. Rev. W. W. Webb, D.D., Bishop of Milwaukee, who was succeeded by his coadjutor, the Rt. Rev. B. F. P. Ivins; the Rt. Rev. J. M. Horner, D.D., Bishop of Western North Carolina; the Rt. Rev. H. L. Burleson, D.D., assistant to the Presiding Bishop and formerly Missionary Bishop of South Dakota, and the Rt. Rev. Henry Bond Restarick, retired Missionary Bishop of Honolulu. The headquarters of the National Council, of which the Presiding Bishop, the Rt. Rev. James DeWolf Perry, D.D., of Rhode Island, is president, are in the Church Missions House, 281 Fourth Avenue, New York City.

PROTOZOA. See ZoöLOGY.

PRUSSIA, *prüsh'a*. The largest constituent republic of the German Reich, with a total area of 113,036 square miles and a population (1933 census) of 39,958,073. Births in 1931 totaled 655,334; deaths, 461,432; marriages, 325,055. Chief cities with Jan. 1, 1933, census returns: Berlin, 4,227,000; Cologne, 741,000; Essen, 648,000; Breslau, 618,000; Frankfurt-on-Main, 534,000; Dortmund, 533,000. Public and private elementary schools in 1931 enrolled 4,700,671 students; middle schools enrolled 191,550. There were 54,116 students enrolled in 14 universities in 1931-32; and 504,224 students in various other secondary and preparatory schools in 1926.

Agriculture, mining, and manufacturing are the principal industries. The chief crops (1931), with production in metric tons, were: Wheat, 2,610,214; rye, 4,979,575; barley, 1,659,692; oats, 4,287,789; potatoes, 29,653,175; hay, 11,812,656. In the same year 38,377 acres of vineyards yielded 14,770,595 gallons of wine valued at 17,137,320 Reichsmarks. Livestock (1931): 10,787,707 cattle, 2,310,216 sheep, 16,226,451 swine, 1,484,481 goats, 2,376,710 horses, and 59,057,833 head of poultry. The production (1931) of the chief minerals in metric tons was coal, 115,351,758; lignite, 111,368,437; iron ore, 1,709,927; salt, 1,091,196. For the year 1932-33 the budget was estimated to balance at 3,133,528,320 Reichsmarks. On Apr. 30, 1932, the public debt stood at 596,378,125 Reichsmarks.

For the government of Prussia see GERMANY under *History*.

PSYCHICAL RESEARCH. The year 1933 was marked by considerable activity in the (English) Society for Psychical Research. The only work in psychical research outside its limits that was notable was the formation of the American Psychical Institute and the publication of its first *Bulletin*. This consists largely of a report by Mr. Hereward Carrington of an experiment on psychological lines with the trance medium Mrs. Garrett. The technique, suggested some years ago by Mr. Whately Carrington (formerly Whately Smith), consists of the application of the psychogalvanic reflex test to the normal personality of the medium, and then to the trance personality, the comparison of the two sets of records, and the calculation of the degrees of similarity or dissimilarity between them. Mr. Hereward Carrington considers that the results so obtained indicate that Mrs. Garrett's trance-personality is distinct from her own, i.e., is prob-

ably what it claims to be, the surviving spirit of a man who once lived on earth. So revolutionary a conclusion must naturally be scrutinized in the most minute fashion before it can be accepted as a definitive contribution to knowledge. In the meanwhile experiments on similar but on more extended and in some respects more exact lines have for some time past been conducted by the S.P.R. with several mediums, and will be duly reported in course.

Attempts have frequently been made to study these "spirit" Controls of mediums by the direct inspection of their voices and other characteristics. There has always been great difficulty in doing this, since it would obviously have been improper to generalize on the basis of the fleeting impressions obtained at sittings. This difficulty has now been overcome by the S.P.R.'s successful experiment in obtaining a first instalment of gramophone records of three such voices speaking through the leading trance medium, Mrs. Leonard. The voices are those of the Mrs. Leonard Control "Feda," supposed to be an Indian girl, and of two Communicators, one a woman and the other a man. These records are thus extremely valuable; they are available for purchase from the Society.

A yet further line of investigation in the same department was tried by the Society, by means of an ingenious application of electrical direction finding technique. The object was to test the actual source of voices alleged to be independent of the medium. This was done by using two pairs of sensitive microphones arranged at right angles to each other, each microphone being separately wired to the ear of an observer. The investigation showed that the supposition of independence was unfounded in the case of Mrs. Leonard, who does not, however, claim to be a direct voice medium. It is hoped to experiment later with a medium specializing in this phenomenon.

Yet another experiment with the same medium was the attempt, by so-called proxy sittings, to obtain evidential material for persons not present at the sittings and unknown to the sitter and medium. A measure of success was achieved, and has been reported on by the Rev. C. Drayton Thomas in the *Proceedings* of the Society.

Theodore Besterman reports on a so-called book-test obtained with an amateur medium in Norway, who succeeded in quoting verbatim several words from a book in his pocket. This remarkable success was obtained in good conditions and by no means stands alone.

Mr. Besterman also reports on an extensive inquiry into prophetic dreams, intended to test the theory of Mr. J. W. Dunne, according to which dreams of the future occur as frequently as do dreams of the past. This theory he had supported by a series of personal experiences. The result of the experiment appears to show that this theory is unfounded, Mr. Dunne himself failing to produce evidence for it in his own dreams.

Another report, by Maj. Rampling Rose and Mr. Barlow, finally destroys the claims of the spirit-photographer Hope, and with it renders in the highest degree improbable, as has always been supposed by critical investigators, that spirit-photography has any basis in fact.

During the year few valuable books have been published. George Lawton's *The Drama of Life after Death* is a praiseworthy attempt at a "psychology" of spiritualism, but fails to achieve

any real understanding. The late Baron von Schrenck-Notzing's *Die Phänomene des Mediums Rudi Schneider* consists of extracts from the records only. Mr. Besterman has translated books by Prof. Hans Driesch and Dr. E. Osty under the titles, respectively, of *Psychical Research: the Science of the Supernormal and Supernormal Aspects of Energy and Matter*.

PSYCHOANALYSIS. See **PSYCHOLOGY**.

PSYCHOLOGY. NEWS AND NOTES. The forty-first annual meeting of the American Psychological Association was held at the University of Chicago from September 7 through September 10. There was a registered attendance of 825 persons, a considerable increase over the attendance at the 1932 meetings. The presidential address delivered by Prof. L. L. Thurstone, University of Chicago, on "The Vectors of the Mind," was a discussion of a new statistical way of determining multiple factors in the organization of personality. The newly elected president for the year 1933-34 was Prof. Joseph Peterson, George Peabody College for Teachers. An invitation was accepted from Columbia University to hold the 42nd annual meeting in New York City, Sept. 5-8, 1934.

A matter of business having special interest because it related to the employment situation was the report of the Committee on Standard Requirements for the Ph.D. in Psychology, which was an analysis of "supply and demand for psychologists."

One hundred and thirty-two papers were read in a series of twenty sessions. As before, Animal Psychology took the lead, with three sessions devoted to twenty papers. Two sessions were taken up with fourteen papers on Child Psychology. Nine papers apiece were contributed on Sensation and Perception, Human Learning, Mental Tests, and Social Psychology, and the remaining single sessions considered from three to eight papers each on Abnormal, Clinical, Industrial, and Physiological Psychology, the field of Personality, the Psychology of Reading, and on the special topics of Psycho-physics, Galvanometric Studies and Aesthetics. There was also a session devoted to the exhibition of eight research films, evenly divided between Child Psychology and Animal Psychology. The amount of time devoted to Child Psychology at the meetings showed that this field, considered in connection with related interests, has had a marked gain in activity and interest in the United States.

At the meeting of the National Academy of Sciences held at Washington, D. C., April 24-26, psychology was represented by M. F. Washburn, E. L. Thorndike, and C. E. Seashore, who presented papers. The programme of the American Association for the Advancement of Science listed 37 papers under Section I, Psychology. These meetings took place at Harvard University, Cambridge, Mass., December 28-30. There were six sessions and a neurological demonstration at the Boston City Hospital. The chairmen were: W. R. Miles, W. S. Hunter, E. G. Boring, J. P. Nafe, C. L. Hull, and J. E. Anderson. Occasional addresses were given by the retiring vice-presidents Walter S. Hunter, Section I, psychology, and Stuart A. Courtis, Section Q, education. As at the American Psychological Association meetings, moving pictures were extensively used.

German psychology has been feeling the full impact of disorganizing forces which have affected German science generally. In consequence of the political situation the Deutsche Gesellschaft für

Psychologie, which was scheduled to meet at Dresden in April, postponed its time of meeting to October 15, and the place to Leipzig. The general theme of the altered meeting was announced as "Central questions of present-day German life." William Stern, David Katz, and Kurt Koffka were forced to resign as president, vice-president, and literary editor of the Society, and their places were filled respectively by F. Krueger, W. Poppelreuter, and G. O. Klemm. Besides these changes, members of the Society have been expelled. The Gesellschaft für Aesthetik und allgemeine Kunstwissenschaft also postponed its meeting, planned for October 7-10 at Vienna, to some time in 1934. Professor Stern, who has been joint editor with Otto Lipmann of the *Zeitschrift für angewandte Psychologie* for many years, was forced from this post at about the time of Lipmann's death, and also from his editorship of the *Zeitschrift für Pädagogische Psychologie*. Many German psychologists have lost their places on University faculties, and several are in exile. Professor Theodor Lessing met his death by political violence in Marienbad, Czechoslovakia. The New School for Social Research in New York City formed a "University in Exile" to employ German scholars. This is a graduate school of political and social sciences. The psychologists Max Wertheimer and Erich von Hornbostel joined its faculty. Heinz Werner received an appointment to the University of Michigan's faculty, Kurt Lewin to Cornell University, and David Katz to the University of Manchester, England.

Because of economic conditions in the United States the radio broadcasts which had been presented for the past two years by the National Advisory Council on Radio in Education, and which included addresses on psychology, were discontinued. The committee of the Council on the Broadcasting of Psychology was, however, continued in office, under the chairmanship of Walter V. Bingham, in anticipation of resuming its programmes. The Committee on Public Relations of the Association of Consulting Psychologists, Norman Powell, chairman, arranged a series of broadcasts from Station WEVD, under the University of the Air, on Wednesday evenings from March 8 to April 5. The speakers in this series were E. T. Barr, M. Chappell, D. Fryer, D. Mitchell, and G. Tallman, introduced by R. H. Paynter, president of the Association. Other radio broadcasting was conducted under the direction of Prof. Carl Seashore from local stations near the State University of Iowa.

Professor Donald A. Laird of Colgate University organized a laboratory of sleep and fatigue at the Century of Progress Exposition. This venture, reminiscent of the bureau of psychometrics conducted by Dr. Joseph Jastrow at the Chicago 1893 World's Fair, was conducted by Robert Mason, a Colgate graduate student.

At New Haven, Conn., was held the 25th anniversary of the founding by C. W. Beers of the Society for Mental Hygiene. President J. R. Angell of Yale gave the address at the exercises. Mr. Beers was presented with a medal of the National Institute for Social Science.

NECROLOGY. The following prominent psychologists have died during the year: G. W. A. Luckey, formerly of the United States Bureau of Education, March 30; Irwin G. Priest, of the Bureau of Standards, July 19, known for his work in colorimetry, and formerly connected with the Munsell Company; Eleanor A. McC. Gamble,

Professor of Philosophy and Psychology at Wellesley College, August 30, one of Titchener's early graduate students, who contributed to the literature many articles on taste and smell as well as on other topics, and who did pioneer work in the application of Weber's law to smell; Theodor Lessing, of the faculty of the Technische Hochschule at Hanover, in the latter part of August, formerly known as an economist but later interested and productive in the field of characterology, editor and author of works on this subject; Dr. Martha Muchow, *Docent* in the Psychological Laboratory, University of Hamburg, September 29, for many years co-worker with W. Stern in research in child psychology; Otto Lipmann, Director of the Institut für Angewandte Psychologie, Neubabelsberg, Prussia, October 7, since 1907 co-editor of the *Zeitschrift für angewandte Psychologie*, author of more than a hundred articles on the applications of psychology in industry and associated topics; Shepherd Ivory Franz, Professor of Psychology at the University of California, October 14, well known for his research in sensation, brain functions, and abnormality, and who recently published a textbook on psychology. Previously unreported in this YEAR-BOOK is the death of Ludwig Reinhold Geissler, Professor of Philosophy and Education at Randolph-Macon Women's College, on Dec. 15, 1932. Professor Geissler, who was also director of the Psychological Laboratory at Randolph-Macon, was a co-founder of the *Journal of Applied Psychology*, and active in the field of industrial psychology.

The Psychological Exchange, a bi-monthly publication edited by James Hargan, and published at 507 Fifth Ave., New York City, entered upon its second year with the April-May issue. This journal, besides carrying items of news, has served as a medium for the discussion of problems in the teaching and practice of psychology, and serves as a clearing-house of information in regard to research being undertaken, literature in manuscript form, the placement of psychologists, etc.

The Modern Psychologist also completed its first year. This is a popular monthly edited by Dr. Dagobert D. Runes, with editorial offices at 310 Riverside Drive, New York City. It contains a wide variety of articles on the application of psychology to problems of living, accounts of recent psychological research, and reviews of psychological literature.

A second edition of the *Handbook of Child Psychology* was issued by the Clark University Press. Besides containing revisions of most of the articles appearing in the first edition (Clark University Press, 1931) it is augmented by many articles from new contributors.

Announcement has been made of the publication of a *Rivista de Psicologia i Pedagogia* by the General Psychotechnical Institute and Pedagogical Seminary of Catalunya University, Barcelona, Spain.

Several textbooks suitable for general use were published during the year. Gardner Murphy's *General Psychology* (Harper's, 1933) deals with psychology as the interaction of the world with the organism. It contains 28 chapters and 657 pages. *Psychology*, by Shepherd Ivory Franz and Kate Gordon, has eight collaborating contributors. It is an eclectic elementary textbook, divided into five general sections. In connection with it is published a *Psychology Work-Book* (McGraw-Hill

Co.), containing elementary laboratory exercises, demonstrations, and questions on the text. *Seven Psychologies* (twelfth in the Century Psychology Series) is intended by the author, Edna Heibredner, of Minnesota, for elementary students. It considers prescientific and scientific psychology, structuralism, the psychology of James, functionalism, behaviorism, dynamic psychology, Gestalt psychology, and Freudian psychology.

Judging from the nature of recent research it appears that the lines of demarcation between the various fields of psychology were much less sharply drawn during 1933 than has been the case in other periods. Greater activity occurred in the fields of social, educational, and genetic psychology, with many instances of work belonging at once to more than one of these divisions. The point of view of Social Psychology in particular permeated all the fields to a great extent.

GENERAL AND THEORETICAL PSYCHOLOGY. In theoretical psychology the general tendency is toward the digesting of the rich literature of recent years, to the accompaniment of minor controversies. Organismic conceptions of various kinds still hold the place of greatest interest, and functional psychologies are making strong headway. "Purposive" theories of behavior and German dynamic views continue to attract discussion. The majority of articles in the *Psychological Review* for the year consist of such discussion. Kurt Lewin has clarified the relationship of his own views to those of Tolman in *Vectors, Cognitive Processes, and Mr. Tolman's Criticism. Journal of General Psychology*, 1933, vol. viii, pp. 318-345, finding, beyond verbal differences, a slight disagreement of emphasis in regard to the "situational field." With a strong theoretical interest in the dynamic properties of the organism basic to much of the discussion, the problems of motivation were prominent not only in the theoretical papers but in a great many experimental investigations. Somewhat in contrast to the prevailing trend of the emphasis on motivation, was Max Meyer's challenging of the validity of the concept "emotion" in the *Psychological Review*, 1933, vol. 40, pp. 292 ff.

Another instance of the tendency to digest, summarize, and clarify, may be seen in the publication by L. N. Munn of an *Introduction to Animal Psychology, the Behavior of the Rat* (Houghton Mifflin, 1933), which brings together many of the contributions to this favorite field of research.

The German "Understanding Psychology" was advanced by A. Pfänder's *Die Seele des Menschen: Versuch einer verstehenden Psychologie* (Halle: Niemeyer); and a less philosophical work, more closely related to the trend of American psychology, was *Zur Grundlegung einer Bedürfnispsychologie* by David Katz, *Zeitschrift für Psychologie*, 1933, vol. 129, pp. 292-304.

A systematic contribution to theoretical psychology was E. G. Boring's *The Physical Dimensions of Consciousness* (Century, 1933). This work, a psychophysiological version of existential psychology, considers the possibilities of finding neurological correlates for the so-called "conscious dimensions," and is based in part on suggestions found in the work of the physiologist E. D. Adrian.

SOCIAL PSYCHOLOGY. The year's activity in social psychology fell largely into the divisions of practical social problems, personality study, and consideration of the individual as a social being. A work of general interest is Floyd H.

Allport's *Institutional Behavior* (University of North Carolina Press, 1933), which examines institutionalism as a psychological product of individuals. Interest in special social problems and in modern society is strong. *Research in Social Psychology of Rural Life*, published under the editorship of J. D. Black by the Social Science Research Council, is a handbook of theories and methods, with projects for research. An investigation of unemployment by M. Lazarsfeld and H. Zeisl, *Die Arbeitslosen von Marienthal, Psychologische Monographien*, 1933, No. 5, is an analysis of a small community nearly all of whose members are chronically unemployed. Comparative standards of living, social and anti-social habits, attitudes, and outlooks within the group are studied exhaustively. Three attitudes were found to divide the population into as many groups: resignation, relative cheerfulness, and desperation. There is a section on the technique of the "sociographic" method for making such studies.

The field of personality drew the attention of many investigators, who applied measuring scales not only to traits of personality and elements of character, but also to *attitudes and prejudices*. The national election of a year ago resulted in a study, *Trends of the Voter's Mind*, by Edward S. Robinson, *Journal of Social Psychology*, 1933, vol. iv, pp. 266-284. Another social question of current interest was investigated in *A Study of Racial Attitudes of College Students*, K. C. Garrison and V. S. Burch, same journal, pp. 230-235. The interest in attitudes, it may be noticed, is related to the prevailing interest in motivating forces of personality. H. Cason and A. Chalk contributed a study of *Annoyance and Behavior*, *Journal of Social Psychology*, vol. iv, pp. 143-156. The question of *The Personality and Emotions of Men* was the subject of research by E. G. Fleming, *ibid.*, p. 187. A typical study of traits of personality was that of Carney Landis and John H. Ross, *Humour and Its Relation to Other Personality Traits*, *ibid.*, pp. 156-176. In connection with the study of personality there was a discussion of the way in which judgments of personality are made. Thus P. E. Vernon, in *Some Characteristics of the Good Judge of Personality*, *Journal of Social Psychology*, 1933, vol. iv, pp. 42-57, determined some of the qualities of the good judge of the personality of (1) oneself; (2) friends and associates; (3) strangers. A new bibliography, *Studies in Character and Personality in German Psychological Literature*, *Psychological Bulletin*, 1933, vol. 30, p. 209 ff. was compiled by J. B. Maller.

An investigation of personal behavior by objective methods was *Studies in Expressive Movement* by G. W. Allport and P. E. Vernon (Macmillan, 1933). Besides including much interrelated material on expressive movements this work contains a chapter on *Matching Sketches of Character with Script* by Edwin Powers. Largely under the influence of Robert Saudek the investigation of judgments of personality by graphology continues to advance, as is indicated by the second volume of *Character and Personality* of which he is editor.

An important contribution to the theory and measurement of personality was *The Theory of Multiple Factors* (Univ. Chicago Press), by L. L. Thurstone, an exposition of a mathematical method for analyzing the personality.

Charlotte Bühler published *Der menschliche Lebenslauf als psychologisches Problem* (Leip-

zig: Hirzel), which is a study of the lives of 200 people of importance. It is in a sense an attempt to establish laws of biography. Five biological and five psychological periods of life are distinguished. Every career, the author finds, is definitely steered or ordered by a self-selected goal.

A translation of V. Bechterev's *General Principles of Human Reflexology* (London: Jarrolds) has appeared, containing an account of the fundamentals of social psychology from the point of view of Russian behaviorists.

With a constantly increasing interest in child psychology, especially of the preschool age, there is growing up in social psychology a department devoted to the social development of very young children. Much of the work is undertaken with methods adapted to the facilities of institutions in which the best controls can be secured. Thomas, Loomis, and Arrington have completed the first volume of their *Observational Studies of Social Behavior* (Yale University). This volume, entitled *Social Behavior Patterns*, determines the reliability with which the behavior of young children can be observed and interpreted. A critical extension of this work is offered by Jersild (*Amer. J. Psychol.*, vol. 45, no. 1).

In 1933 James H. Leuba, dean of American psychologists of religion, retired from the Department of Philosophy and Psychology at Bryn Mawr College and went to Switzerland for an extended stay. During the year he published *God and Man*, a work relating to the present-day philosophy of religion and to psychology. The semidecennial report on the literature of the psychology of religion was made in the *Psychological Bulletin* (vol. 30, no. 5) by Abraham Cronbach. Anthropological and ethnological studies, which are for the time being on the increase, and which include comparative investigations of American Indian tribes, Alaskan Indians, etc., have given added impetus to interest in racial psychology. An investigation which may be mentioned in this connection is *A Study of the Emotional Attitudes of Indians Possessing Different Degrees of Indian Blood*, by S. L. and L. C. Pressey, in the *Journal of Applied Psychology*, 1933, vol. xvii, pp. 410-416.

EDUCATIONAL PSYCHOLOGY (including *Mental Tests*). As was the case with general psychology, the year's progress both in educational psychology and in child psychology included the publication of new textbooks. Harry L. Hollingworth's *Educational Psychology* (Appleton, 1933) contains four sections, dealing respectively with the general principles of learning and motivation, problems of instruction, problems of special school subjects, and general educational problems. Robert S. Woodworth published *Adjustment and Mastery: Problems in Psychology* (Baltimore: Williams and Wilkins), in which the means of adjustment are presented in relation to the situations which demand the development of special abilities and the general ability to meet life. Also in this field was S. L. Pressey's *Psychology and the New Education* (Harper's, 1933).

The *Psychological Bulletin*, vol. 30, no. 7, gives references to tests and testing. In general, work in the field of tests involved much productive criticism and re-examination of the nature and province of psychological tests. The mathematical theory of testing (and, of course, of personality investigation) was worked over extensively, representative contributions being made by Spearman, Thorndike, Garrett, Lee, and Segel, notably in the

October number of the *Journal of Educational Psychology* (vol. xxiv).

The interest in motivation, noticed earlier, appeared in educational psychology in work on incentives and rewards, usually in connection with the problem of learning. A sample study is *The Influence of Increase and Decrease of the Amount of Reward upon the Rate of Learning*, by E. L. Thorndike and George Forlano, *Journal of Educational Psychology*, vol. xxiv, pp. 401-411. A bibliography on human learning by John A. McGeech, appeared in the *Psychological Bulletin*, vol. 30, no. 1, and a bibliography on *Conditioned Responses in Animals other than Dogs*, by G. H. S. Razran, no. 4.

A work having to do with learning, child psychology, animal psychology, and social psychology, was *The Ape and the Child* (Whittlesey House, 1933), by W. N. and L. A. Kellogg. The subtitle of this book is *A Study of Environmental Influence upon Early Behavior*. It consists of a comparison between the progress of an ape and a child brought up in the same household.

Arthur T. Gerslind is the author of a new *Child Psychology* (N. Y.: Prentice Hall, 1933). A work written in popular style for parents is *Child Upbringing and the New Psychology* by R. A. Howder (London: H. Mulford, 1933). A *Genetic Psychology* (Ronald Press), by A. R. Gilliland, treats of developmental problems in psychology. S. Isaacs is the author of *Social Development in Young Children: A Study of Beginnings* (London: G. Routledge and Sons). Maud E. Watson published *Children and Their Parents*. The study of adolescence was advanced by Elsie M. Smithies, *Case Studies of Normal Adolescent Girls* (Appleton, 1933). This work contrasts with both the abundant studies of adolescent abnormality that have appeared in the past, and with the purely theoretical studies which endeavor to fix the laws of adolescence.

ABNORMAL PSYCHOLOGY (including *Psychoanalysis*). Much interest was taken in a new work by W. A. White called *Forty Years of Psychiatry*, published as Monograph no. 57 of the *Nervous and Mental Disease Monographs*. Though not a large book (154 pages) it includes material of theoretical value in addition to a record of experiences.

Clark L. Hull brought together the results of his experimental work in hypnotism and suggestion in *Hypnosis and Suggestibility: an Experimental Approach* (Century, 1933). The emphasis in this work is more on hypnotism than suggestibility. The phenomena of suggestion are taking a more and more important position outside of the abnormal field, as indicated by the recent studies of prejudice and attitudes in social psychology, and by the extensive investigation of advertising and advertising media in applied psychology.

Havelock Ellis published *Psychology of Sex, a Manual for Students* (New York: Ray Long and Richard Smith, 1933). This work of 337 pages combines the literary skill and aptness in research for which the author, long recognized as an authority in the field, is noted. Its usefulness is not confined to those groups for whom its title indicates it to have been written. An increasing demand for works on education in sex may be noticed as a recent trend. This demand is connected with the interest in the theoretical psychology of sex differences as well as with the study of the psychology of sex adjustment.

The Mind of the Child, a Psycho-analytical Study is a translation by Eden and Cedar Paul from the French of C. Baudouin. It is another example of overlapping within the fields of psychology; significant developments in psychological theory are combined with Freudian conceptions. The impression is growing that the psychology of psychoanalytic schools may at last be assimilated into general psychology, partly through the elaboration of appropriate experimental techniques.

Sigmund Freud's *New Introductory Lectures on Psychoanalysis* appeared in German and English, the translation being by W. J. H. Sprott. W. W. Norton is the American publisher.

A practical interest within the abnormal field is the investigation of crime and criminals. An extensive work has been undertaken by Dr. B. Karpman of Washington. The first volume of his *Case Studies in the Psychopathology of Crime* (Washington, D. C.: The Mimeoform Press, 1933) has been published. This volume, which contains 1926 pages (large octavo), consists of a study of five criminal cases, with exhaustive accounts of their history and development. Although its approach is systematically genetic, the work is not psychoanalytic. Similar case studies were made in Germany, following the example of investigations made in recent years by Italian and Spanish psychologists. The *Zeitschrift für angewandte Psychologie* for 1933 contained such studies.

APPLIED PSYCHOLOGY. In this field as well as in others, changes in the social and economic order influenced the interests of investigators and the direction of their research. Perhaps the most imposing single contribution to applied psychology was the completion of a two-year survey of advertising by the Psychological Corporation. Under the direction of Prof. S. N. Stevens of Northwestern University, this survey, conducted over the country as a whole with large numbers of graduate students as investigators, consisted of the questioning of consumers about the influence of advertising on their purchases. As in other studies made elsewhere, such as that undertaken by the Psychological Institute at the University of Vienna, the results of this large survey indicated that the advertising message is of primary importance. The form of the layout, in the case of advertisements in the press and through posters, and the use of pictures and color, which have been objects of careful attention in the past, were found to be of lesser importance in making the advertisement effective. American women were found to be most impressed by straightforward appeals of evident sincerity, and were also affected favorably by dramatic values contained in such appeals.

The study of the efficacy of radio broadcasting for commercial purposes has been prosecuted extensively in recent years as part of a general programme of radio-research. C. Kirkpatrick published the results of his research in this field, finding that listening to the radio is a "middle class habit," that the materials of greatest interest to the average listener were news, information, music, and dramatics. Kirkpatrick's work is published as a *Report of Research into the Attitudes and Habits of Radio Listeners* (St. Paul: Webb Book Publishing Company). Other studies of the radio which are in progress indicate that a large new field has been opened in applied psychology and other branches as well. The third volume of *Education on the Air*, a yearbook pub-

lished at Ohio State University, made its appearance.

The second *Year Book* of the Association of Consulting Psychologists was also published. This Association met on May 6 at Philadelphia. One item of widespread interest was the report by Ethel Cornell on the movement to license psychologists. This movement was undertaken in the interests of psychologists, of organizations making use of psychologists' services, and of the general public.

Psychology Applied is the title of a book by George W. Crane (pub. Northwestern University Press). It shows the relation of psychology to a wide range of life problems.

Former United States Commissioner of Education, Dr. William John Cooper, has conducted a national survey of secondary education which is of psychological interest; the findings report the need of definite psychological guidance in schools. The work will be reported in twenty-eight monographs to appear in the future.

Psychologists are coming, in a sense, to apply psychology to psychology. There is a great deal of interest in, and criticism of, the teaching of psychology. One representative study is that of A. R. Gilliland, *The Nature and Aims of the Introductory Course in Psychology*, *Journal of Applied Psychology* 1932, vol. 16, pp. 614-622. During 1933 a symposium was held in the *Psychological Exchange* on the value of the work on the physiology of the nervous system that has always been a part of elementary courses in psychology. In the same journal the question of the advisability of using the points of view of abnormal psychology and mental hygiene as bases for elementary courses, instead of the present mixture of theories and experimental results, constituted another popular symposium to which many teachers contributed.

PUBLIC AFFAIRS, INSTITUTE OF. An organization inaugurated in 1927 at the University of Virginia for the purpose of advancing the popular understanding of public questions and stimulating in the public mind a more vital interest in public matters, particularly the domestic problems of the United States. The attendance at the 1933 session, held from July 2 to 15, consisted of 654 registered members and delegates, and 914 registered visitors from 30 States, the District of Columbia, Australia, China, Chile, Cuba, Czechoslovakia, Japan, Norway, Siam, and Wales. Membership in the institute is open to men and women who have taken part in public life and to those who are interested in any phase of public affairs.

The programme of the 1933 session was planned in accordance with the announced purpose of the institute to limit its discussions primarily to a study of governmental problems of national, State, and local concern, and to certain economic and social conditions underlying them. In addition, however, because the Institute of Politics at Williamstown was closed, three round tables in international relations were included: "Our Latin-American Relations"; "The Relations of the United States with the League of Nations"; and "The United States and the Far East." In the future programmes will be devoted to both domestic and international affairs. The programme dealt also with the following subjects: "The Country Church and Agriculture"; "County Government"; "The Money, Banking, and Financial Situation in the United States"; "Unemploy-

ment Insurance"; and "Religious Education." There were five special conferences on "Adult Education"; "Club Activities and Problems of the Federation of Women's Clubs"; "Municipal Administration"; "Roadside Beauty"; and "Parent-Teacher Training Course." In addition to the leaders of these round tables and conferences there were 106 invited speakers before the round tables and 28 speakers before the general sessions in the evening.

The officers of administration in 1933 were: John L. Newcomb, president of the University of Virginia; Charles G. Maphis, director of the institute and Marjorie McLachlan, secretary of the institute. Headquarters are at the University of Virginia, Charlottesville, Va.

PUBLIC FINANCE. The serious conditions in Federal public finance which had become so strongly marked during the year 1932, assumed a new phase during the latter part of the fiscal year following. During the latter part of that year (March-June, 1933), a new management of public affairs had come into office. The immense fiscal deficit, amounting to \$3,153,097,507 for the fiscal year ending June 30, 1932, had attracted close attention. It had formed a major subject of discussion during the political campaign which occupied the latter part of 1932 and had formed the topic of positive pledges on the part of the new administration during its pre-election period. These pledges had included a positive promise that the budget be balanced, that taxation be re-adjusted, and that economies in the actual conduct of affairs be introduced at Washington, particularly through the ending of demand for a bonus payable to the ex-enlisted men of the World War—the so-called "veterans." This programme, of course, could not, under the most favorable conditions, be immediately carried into effect; and consequently the latter half of the fiscal year 1933 (January-June 30, 1933), proved nearly as disappointing and alarming as its predecessor—the deficit amounting to about \$1,880,000,000. At the same time, there was, during the winter of 1932-33, little tendency toward business expansion or recovery, and hence no improvement in revenue. It was only after advance in activity had begun to make itself apparent, during the spring, that some betterment was noted. Accordingly, the fiscal year 1933 ending June 30, 1933, must be regarded as a survival from the conditions of the Hoover régime as modified only very slightly during the first quarter of that year.

The new administration, however, assumed, early in its career, the task of carrying out some of the pledges it had undertaken; and as a result it shortly decided against the immediate payment of the soldiers' bonus. This endeavor was successfully carried through; and then the balancing of the budget was undertaken. Here political expediency soon proved too strong for the new government. The incoming administration had pledged a 25 per cent cut in actual running expenses, and this promise was shortly made effective by marked reductions (15-30 per cent) in salaries of civil servants, and of retired army officers, and other pensioners. Great irregularities and injustices occurring in these endeavors, readjustments proved needful, but in substance an attempt was made with more or less genuine success to fulfill the pledges of the campaign. But here the success ended and to effect the promised ideal of a balance, the discredited European

device of an ordinary and an extraordinary budget—the latter to include all sums paid out on public works, relief, and the like—was resorted to. Only to the extent of interest and other carrying charges necessitated by the new budget, was it deemed needful to charge the ordinary budget with new burdens. Thus the extraordinary session of Congress, which had been summoned immediately upon the advent of the new administration came to an end, with an equivocal adjustment of the budget situation.

Congress, however, had found it needful, in spite of the unpopularity of its course, to make at least a gesture of provision of new sources of income. It had, accordingly, adopted an amended form of the income-tax, applicable for the return covering the year 1933 (returns due March, 1934), in which limitation was provided for the deduction of losses and in which certain additions were made to rates so that the final result was a burdensome impost in some respects more severe than the war revenue taxation. This legislation moreover, added some hastily conceived nuisance

cement, the Treasury department whose management had, meantime, been changed, submitted to the Ways and Means committee of the House of Representatives, then studying legislation with a view to the forthcoming session to open early in January, 1934, a new programme for taxation designed to render the income tax a still more severe burden, and to make it press still more heavily upon the taxpayers subject to it. Particularly was the effort made to close the avenues which, as Senatorial investigation into investment banking had shown, were permitting large taxpayers to make extensive legal deductions from the amount of their incomes subject to taxation. This programme had been taken under advisement at the end of the year, and many other suggestions had been given attention, but no action definitely taken. The year 1933 was thus a period of many promises, but of no performance, although steps had been taken and action determined upon, which, in the near future, must bring considerable changes into the income situation of the Federal government.

ORDINARY RECEIPTS, FISCAL YEARS 1920 TO 1933

[On basis of daily U. S. Treasury statements (unrevised)]

Year ending June 30—	Customs	Income and profits taxes	Miscellaneous internal revenues	Miscellaneous revenues, including Panama Canal Proceeds from foreign obligations	All other	Total *
1920	\$322,902,650	\$3,944,949,288	\$1,460,082,287	\$ 74,296,622	\$892,834,542	\$6,694,565,389
1921	308,564,391	3,206,046,158	1,390,379,823	114,821,206	605,121,383	5,624,932,961

* General, special, and trust funds combined.

taxes—one a tax of 5 per cent upon all dividends, to be deducted at source by the dividend-paying corporation, another a tax upon the capital stock of corporations, while several relatively minor changes and adjustments rendered taxation extremely inquisitorial and heavy. Some attempt to mollify the taxpayer was seen in the provision that, in the event of the repeal of the Eighteenth Amendment to the Constitution, providing for prohibition of the manufacture and sale of alcoholic liquors, these nuisance taxes should end (as of Dec. 31, 1933). The electorate having voted, through the usual machinery of State conventions, to repeal the Eighteenth Amendment, prohibition came to a close on Dec. 5, 1933, and the recall of the nuisance taxes was accordingly ordered made effective at the close of the year.

Meantime, the extraordinary appropriations of Congress, and the amazing extravagance of the administration at Washington, including the creation of many useless bureaus, and offices, was calling attention once more to the need of revenue. The liquor taxes, long heralded as an almost illimitable source of income, were speedily seen to be likely to yield only a very moderate amount of revenue, and the changes in the income tax structure made by Congress had not only produced dissatisfaction, but had failed to make the yield much larger than during the preceding year—so far as the current year's returns were disclosing. Accordingly, at the beginning of De-

FEDERAL INCOMES. Total incomes for the fiscal year ending June 30, 1933, including trust funds, were about equal to those of the preceding period, amounting to \$2,238,356,180, and were thus relatively better than for 1932, which had shown a marked falling off from 1931. Expenditures for 1933 amounted to \$5,306,623,054 compared with \$5,274,325,513 for 1932. There was thus deficit of \$3,068,266,874. Receipts from personal incomes and corporation income taxes, were respectively \$352,573,620 and \$394,217,784, while customs duties continued to fall as foreign trade progressively declined, amounting for the fiscal year to only \$250,750,251. Income throughout the United States was, in fact, progressively shrinking. This was fundamentally due to the unemployment which resulted in corresponding reduction in the output of wealth. Among that small class subject to income taxation, the fall in money income resulted from the gradual falling of corporation profits, which was so marked a feature of 1932, accompanied as it was by further decrease of dividend outlays during the forefront of the current year (January-June, 1933). Revival of business in a halting and partial way held out better prospects of income, and increased some items of internal revenue, while the restoration of legalized beer brought in some small additions, not previously available, though nothing to compare with the extravagant anticipations held out by opponents of prohibition. On the other hand,

RECEIPTS AND EXPENDITURES FOR THE FISCAL YEAR 1933, ON THE BASIS OF DAILY TREASURY STATEMENTS (UNREVISED), AND ESTIMATED RECEIPTS AND EXPENDITURES FOR THE FISCAL YEARS 1934 AND 1935

NOTE—Excess credits in italics to be deducted.

¹ Receipts for the temporary revenue provisions of the National Industrial Recovery Act are estimated for the periods prior to their termination following the proclamation on Dec. 5, 1933, of repeal of the Eighteenth Amendment.

² The total amounts owing to the United States on account of obligations of foreign governments are \$328,000,000 and \$335,000,000 for the fiscal years 1934 and 1935, respectively. To the extent that receipts from foreign governments exceed amounts included in the estimates, there will be a corresponding increase in total receipts.

³ Additional expenditures on these accounts for the fiscal years 1934 and 1935 are included under "Federal Emergency Administration of Public Works."

⁴ The classification of general expenditures for public-building construction and sites, Treasury Department, and for War Department (nonmilitary) prior to the fiscal year 1934 is not available, and such expenditures for the

RECEIPTS AND EXPENDITURES FOR THE FISCAL YEAR 1933, ON THE BASIS OF DAILY TREASURY STATEMENTS (UNREVISED), AND ESTIMATED RECEIPTS AND EXPENDITURES FOR THE FISCAL YEARS 1934 AND 1935—(Continued)

[This statement does not include contingent liabilities resulting from the issue of debentures by the Reconstruction Finance Corporation]

fiscal year 1933 are therefore included in general expenditures under Treasury Department and National Defense—Army, respectively.

* Revised to adjust \$1,112,941.82 credit in special deposit account of Farm Loan Bureau now Farm Credit Administration.

† Included under Department of Commerce.

* Revised to adjust \$8,773,569.75 for Emergency Conservation Work included in daily Treasury statements in 1933 under National Defense, Army.

‡ Exclusive of \$8,773,569.75. See note *.

* On and after May 27, 1933, repayments of loans made from agricultural marketing fund—Federal Farm Board, and interest thereon, are reflected as credits in the expenditures of the Farm Credit Administration.

† Exclusive of \$1,112,941.82. See note *.

* Emergency expenditures prior to the fiscal year 1934 (except Reconstruction Finance Corporation) are included in general expenditures, the classification of which emergency expenditures is not available for comparison with emergency expenditures for the fiscal year 1934. Therefore, neither the totals of general expenditures nor the totals of emergency expenditures for the fiscal year 1934 are comparable with the totals for prior fiscal years.

* No allotment has yet been made for 1935. Estimate of expenditures is included in the figures relating to unallotted funds.

* The estimates of expenditures of the Reconstruction Finance Corporation are contingent on the enactment of legislation extending the Corporation's authority to incur obligations to June 30, 1934. If the authority is not extended, the estimated expenditures for 1934 will be reduced by \$903,000,000, and the net repayments for 1935 will be reduced by \$74,000,000.

* Of the emergency expenditures made up to and including the fiscal year 1935, it is roughly estimated that \$2,500,000,000.00 represents loans that will be repaid to the Government during the fiscal year 1936 and subsequent years, which repayments will be available for reduction of the public debt.

* Total expenditures and excess of expenditures for the fiscal year 1933 include expenditures made by the Reconstruction Finance Corporation, whereas total expenditures in previously published statements for 1933 did not include Reconstruction Finance Corporation expenditures.

* The classification of receipts and expenditures on account of contributed funds prior to the fiscal year 1934 is not available. Such receipts and expenditures were classified as special funds and are included in the receipts and general expenditures under General and Special Funds for the fiscal year 1933.

the undertaking of a huge programme of public works estimated to cost some \$3,300,000,000; and the provision of some \$1,000,000,000 additional for the Reconstruction Finance Corporation's issues gave promise of a still deeper plunge into deficit financing.

The second half of the calendar year, from July to December, 1933, afforded some improvement in actual revenue conditions. Beer and (just at the close of the year) "hard liquor" taxes, began to bring in some substantial incomes—still far below promises held out by advocates of liberal drink legislation. The corporation dividend and capital stock taxes, enacted in May, likewise yielded moderately, and customs duties late in the year were slightly increased. For the first half of the fiscal year 1934 (July 1, 1933 to Dec. 31, 1933) ordinary receipts were \$1,468,897,941 which was about \$446,000,000 more than for the same period of the preceding year.

FEDERAL EXPENDITURES. Congress had assembled for the special session in March, 1933, eager for large government subsidies payable to all sorts and conditions of voters. It not only made the huge appropriations for relief and public works already briefly described, but it speedily appropriated substantial sums for the payment of bonuses to farmers in return for the "plowing under" of undesired cotton, abandonment of "excess" acreage destined to wheat, and the wanton slaughter of farm animals in the effort to end an existing (alleged) surplus of meat products. Fantastic expenditures of every sort abounded in the appropriation bills of the spring, and in the actions of the Reconstruction Finance Corporation during the same period and money was prodigally provided for the establishment of the administrative mechanism called for in the enforcement of the various schemes of recovery and relief which had originally been thought of as palliatives, or as sedatives for uneasy bodies of voters. Expenditures for the years 1920-1933 are shown in the accompanying table on column 2.

BANKING POLICY. As the deficit situation con-

tinued to grow in seriousness, the administration of the Treasury Department naturally found itself obliged to consider with increasing gravity the question of relationships with the banks. President Roosevelt, in his campaign addresses, had called sharp attention to the practice of his predecessor in relying upon heavy bank borrowing as the means of providing himself with funds for current necessities and had advocated the adoption of a policy of funding. This proposal had been strongly approved by the financial community, and had been urged as a first step to be taken during the early months of the new management. The weak excuse that banking conditions did not permit any such step to be taken

ORDINARY RECEIPTS, EXPENDITURES CHARGEABLE AGAINST ORDINARY RECEIPTS, AND SURPLUS 1920 TO 1933*

[On basis of daily Treasury statements (unrevised)]

Fiscal year	Total ordinary receipts	Expenditures chargeable against ordinary receipts	Surplus

rently increasing the amount of public securities held by banks, in about the same proportion that the deficit grew, and this added materially to the anxieties of the financial public; but the year closed without any effort to place the floating debt in the hands of the general public. The only effort at any general policy of the sort was afforded by an announcement of intent to refund the 4¼ per cent Fourth Liberty loan, still outstanding, into 3¾ per cent longer term bonds, in October, 1933. The offer at first bade fair to succeed, but the adoption of the gold-buying policy for inflation purposes quickly checked the partial success thus enjoyed, and the undertaking came to an unsatisfactory close—with only a fraction of the bonds presented for refunding. The warning thus administered proved sufficient to serve as a caution against continuance with the inflation tactics and propaganda during the period of the December financing:—at which time \$950,000,000 in Treasury notes was issued partly to be used in meeting maturing obligations, partly for current interest. This was followed by an issue of \$100,000,000 Treasury bills, also placed with the banks, and thus subjected them to added strain. The December financing thus provided for was the largest for a long time at that season. Perhaps the Treasury would not have been able to force upon the banks any such large quantity of its own obligations, had not the condition of the banks been such as to lead the government to resort to the plan of practically compelling the various institutions to issue preferred stock on a large scale. During the autumn, the Reconstruction Finance Corporation became the owner of more than \$500,000,000 of such stock, in over 300 banks, and as it had advanced to this same group some \$600,000,000 as direct loans, it was at the close of the year in various ways interested in the several institutions to the extent (in all) of over a billion and a quarter dollars. The banks obviously were not in position to refuse to take the offerings of their largest stockholder and thus the Treasury was practically in the position of the old well-known banking syndicates so much criticized of recent years which were in the habit of forcing new issues upon their members by the simple process of assignment of "quotas."

THE DEBT. In the table on page 698 is afforded a tabular view of the national debt at the close of the year. The striking element in the showing, as will have been inferred, from what has already been said, will be seen in the great increase of the floating debt captions—the Treasury notes, Treasury bills, and others of similar maturity.

LEGISLATIVE PROSPECTS. Shortage of income and constant advance of debt led to serious proposals for an immense increase in taxation which were presented to the preliminary sessions of the Ways and Means committee, held during December in preparation for the reopening of Congress which (according to the new system, now for the first time inaugurated, of deferring the opening until after the holidays), was to begin its deliberations after the beginning of January. The measures submitted by the Treasury department called for a severe advance in individual income taxation, and for drastic elimination of exemptions and abatements. The proposals met with considerable sharp criticism and various substitutes were offered, but the Ways and Means committee adjourned for the holidays without coming to a decision regarding the

programme for the coming year. About the only definite action taken by it with reference to taxation was to vote a tax of \$2 per gallon upon the sale of alcoholic liquors whose manufacture and sale had not been provided for by the final action taken on the fifth of December, whereby the Eighteenth (prohibition) Amendment to the Constitution was repealed. This repeal had, incidentally, brought into effect a conditional measure adopted by Congress whereunder the tax on dividends and that on capital stock of corporations were to be withdrawn upon the first of January immediately succeeding the cancellation of the Eighteenth Amendment.

PUBLIC WORKS ADMINISTRATION. See RAILWAYS; TUNNELS; BUILDING; RAPID TRANSIT; RAILWAYS.

PUERTO RICO, pwër'tō rē'kō. An American possession in the West Indies, acquired from Spain, Dec. 10, 1898. The name was changed from Porto Rico to Puerto Rico by joint resolution of the United States Congress, approved May 17, 1932. Capital, San Juan.

AREA AND POPULATION. With an area of 3435 square miles—about the size of Connecticut—Puerto Rico had a population of 1,597,500 on July 1, 1932 (1,190,191 white and 407,309 colored), compared with 1,543,913 at the census of 1930. The estimated population July 1, 1933, was 1,623,814, or a density of 472.7 per square mile. Births in 1932 numbered 66,433 (41.5 per 1000 inhabitants) and deaths 35,610 (22.3 per 1000). The population of the chief cities in 1930 was: San Juan, 114,715; Ponce, 53,530; Mayaguez, 37,060.

EDUCATION. Approximately 40 per cent of the population over 10 years of age were illiterate in 1933. During the school year 1932-33 there were 233,457 pupils (194,387 white and 39,070 colored) enrolled in public schools, including 117,833 in elementary rural schools, 101,833 in elementary urban schools, 6496 in second unit rural schools, 163 in continuation schools, and 7132 in high schools. Public school teachers numbered 4638. The per capita expenditure on enrolled students of public schools was \$22.53. The University of Puerto Rico had 2308 students in 1931-32.

PRODUCTION. Agriculture is the main occupation. There were 52,113 farms in 1930. The main crops are sugar, coffee, tobacco, and citrous fruits. Cotton, cacao, coconuts, beans, plantains, and vegetables are secondary crops. Sugar production in the year ended June 30, 1933, was 816,337 short tons (992,432 tons in 1931-32); tobacco, 17,000,000 pounds in 1933 (5,500,000 pounds in 1932); coffee (estimated), 11,200,000 pounds in 1933-34; pineapples, 400,000 crates in 1932-33; cultivated oranges, 25,000 boxes; wild oranges, 400,000 boxes; grapefruit, 900,000 boxes; coconuts, 4,600,000 nuts. The 1932-33 crops were badly damaged by the hurricane of Sept. 26-27, 1932, which caused losses estimated at \$20,441,586, including \$11,553,332 damage to the sugar crop, \$3,742,837 to coffee and bananas in groves, \$1,905,500 to citrous fruits and pineapples, and \$1,666,627 to minor fruits.

Manganese and salt are the chief mineral products, although gold, silver, iron, copper, bismuth, tin, mercury, platinum, and nickel exist. The chief manufactured products are refined sugar, cigars and cigarettes, garments, fine needlework, and canned, and preserved fruits.

COMMERCE. In the fiscal year ended June 30, 1933, merchandise exports from Puerto Rico were valued at \$75,406,455 (\$86,416,938 in 1931-32), while merchandise imports totaled \$51,745,711 (\$61,281,101 in 1931-32). Exports to the United States were valued at \$73,388,298 (\$83,645,803 in 1931-32); to foreign countries, \$2,018,157 (\$2,771,075 in 1931-32). Imports from the United States were \$48,886,644 (\$52,826,794 in 1931-32); from foreign countries, \$5,859,067 (\$8,454,307). Puerto Rico in 1932-33 ranked eighth among the leading markets of continental United States. In the calendar year 1932 it was the chief Latin American market for exports from the United States. Sugar accounted for two-thirds of the value of all exports (822,423 short tons valued at \$50,780,422 in 1932-33 and 912,169 short tons valued at \$55,116,975 in 1931-32). Exports of cotton manufactures to the United States were valued at \$10,434,522; tobacco and its manufactures, \$5,703,628; and fresh fruits, \$2,089,809. The leading imports were rice (\$5,016,796) and other grains, cotton manufactures (cotton cloth, \$5,287,776), cigarettes (\$2,163,316) and other tobacco products, iron and steel products, meats, lard, fertilizers, wearing apparel, etc.

FINANCE. The fiscal year 1932-33 closed with a budget deficit of \$1,721,502, which was decreased to \$1,083,263 by appropriating the surplus of \$638,239 left over from the previous fiscal year. Actual revenue receipts during the year were \$9,374,358, non-revenue receipts were \$1,382,486 (including loan of \$1,250,000), and the cash balance on July 1, 1932, was \$874,422, making total resources available for liquidation of appropriation liabilities of \$11,631,266. Total appropriations in force during 1932-33 were \$12,887,967, including the 1932-33 budget appropriations of \$10,287,836. The excess of appropriation liabilities over resources left a deficit on June 30, 1933, of \$1,256,701, of which \$173,437 represented an advance to be repaid, leaving a final deficit of \$1,083,263. The estimates for the operating budget for 1933-34 were reduced to \$9,007,018 in order to absorb the 1932-33 deficit. The bonded indebtedness of the Insular government on July 1, 1933, was \$28,542,000 (\$28,761,000 on July 1, 1932), while notes payable on June 30, 1933, totaled \$1,173,494 (\$379,494 on June 30, 1932).

COMMUNICATIONS. In 1931 there were 306 miles of railway line operating as public carriers and 157 miles of private lines. The total length of hard-surfaced highways in the island on June 30, 1933, was 1141 miles, not including municipal or secondary roads. Vessels entering and clearing the ports during 1931-32 from the United States and foreign countries numbered 3364.

GOVERNMENT. Puerto Rico is governed in accordance with the Jones Act passed by the United States Congress Mar. 2, 1917 and subsequently amended. The Act conferred American citizenship collectively upon the inhabitants. Executive power is vested in a governor appointed by the President of the United States and legislative power in a legislature of two elective houses—a senate of 19 members and a house of representatives of 39 members, all elected for four years by universal male and female suffrage. A resident commissioner, elected for four years, represents the island in the United States Congress. The seven departmental heads form an executive council, presided over by the Governor. Governor James R. Beverley, who assumed office Jan. 30, 1932, was succeeded on July 1, 1933, by Robert H. Gore.

Resident Commissioner in Washington, Santiago Iglesias, elected Nov. 8, 1932. The composition of the House of Representatives following the election of Nov. 8, 1932, was: Coalition group (Union Republicana and Socialist parties), 30; Liberals, 9. In the Senate, the Coalitionists held 14 seats and the Liberals 5.

HISTORY

ISLAND POLITICS. Robert H. Gore, President Roosevelt's appointee as Governor of Puerto Rico, became involved in a bitter political conflict soon after he assumed his post on July 1, 1933. He adopted a policy of governing in cooperation with the Union Republicana-Socialist coalition, which had captured control of the Legislature in the Nov. 8, 1932, election and ended the Liberal party's 30-year domination of the government. From the outset the Governor was bitterly attacked by the Liberal press and politicians, while the governing parties vigorously defended him and his policies. Two of the Governor's acts in particular aroused storms of criticism. One was his statement that he expected a resignation in advance from each of his appointees, a statement which he withdrew when he found that he had the authority to remove appointees at will. The Liberals declared that the incident indicated Mr. Gore's "complete ineptness" and demanded his removal by the President.

The other act which drew criticism from many nonpartisan Puerto Ricans as well as from the Liberals was the Governor's appointment of Rafael Alonzo Torres as a trustee of the University of Puerto Rico. Señor Alonzo Torres, a prominent labor leader and Socialist, was a self-made man without academic education. His appointment was made at the request of the governing coalition and was regarded as a move to give the coalition control of the University, in which the Liberals had become firmly entrenched. The students, believing that Señor Alonzo Torres was opposed to the university's best interests, charged that he was "culturally unfitted" to hold the position as trustee and went on strike in protest against his appointment. The strike continued from October 19 to November 6, when Señor Alonzo Torres resigned. Meanwhile the Governor had steadfastly refused to withdraw his appointment. He accepted the resignation, commended Alonzo Torres for his public spirit in resigning, and expressed regret that the Socialist executive committee would not permit him to name another Socialist to the vacant trusteeship. The Socialists decided, instead, to make the liberalization of the educational system for the benefit of the masses an issue before the next Legislature.

The period of the student strike was marked by several attempts to terrorize the Governor. A bomb was found near his official residence in San Juan and another exploded on the roof of his country residence. An anonymous letter warned the Governor of a plot to poison himself and his family. Additional guards were placed about the Governor's residence. Toward the end of October the Coalition groups sent a commission to Washington to defend Governor Gore against his critics. They declared that the Liberals represented a small minority of the population, who were incensed because they could not "boss" the Governor. Early in November, Governor Gore left San Juan with his family to undergo medical treatment at Johns Hopkins Hospital in Baltimore. He remained in the United States until the end of the

year and it was intimated that he did not plan to return. Acting Governor Benjamin J. Horton was in charge during his absence.

ECONOMIC CONDITIONS. The people of Puerto Rico hailed the inauguration of President Roosevelt and the early development of his recovery programme with much enthusiasm. On October 15 a great demonstration of loyalty to the President and his New Deal was held in San Juan under the auspices of the Coalition parties. Later it became apparent that the recovery programme in the United States was adding to the island's economic difficulties and considerable political unrest developed.

Governor Gore obtained a tangible share of public works and emergency relief appropriations for Puerto Rico during a visit to Washington in October. He announced that the Roosevelt Administration had appropriated \$1,500,000 for highways, \$1,300,000 for the San Juan aqueduct, \$900,000 for emergency relief, \$700,000 for improvement of the harbors at Mayaguez and Arecibo, \$1,000,000 for reclamation of swamp land, and \$500,000 for malaria control.

In contrast with these benefits, the San Juan correspondent of the *New York Times* estimated that the New Deal would cost Puerto Rico \$21,000,000 during the first year of operation. Of this, \$18,000,000 was attributed to the increased cost of commodities imported from the United States and \$3,000,000 to the cost of various processing taxes. Much confusion and uncertainty attended the application of the recovery legislation to the island. Codes for the sugar and needle-work industries submitted in the fall were not acted upon by the end of the year. There was no agreement for increased wages, despite an increase of about 25 per cent in the cost of articles imported from the United States. The islanders were almost unanimous in demanding that all of the recovery measures should be applied at once. An NRA coordinator finally arrived in San Juan the last week in December in an effort to bring order out of confusion.

Meanwhile the decline of the dollar on the exchange markets had caused a sharp reduction in imports from foreign countries, reducing customs collections to a record low level. Internal revenue receipts also declined far below the estimates, and at the end of 1933 another budget deficit was in prospect. The Treasury met a \$1,900,000 payment to United States holders of insular government bonds on Jan. 1, 1934, but was hard put to meet the December payrolls.

LEGISLATION. The first regular session of the Thirteenth Legislature, in session from Feb. 13 to Apr. 15, 1933, passed 142 bills and 186 joint resolutions. Governor Beverley vetoed 6 bills and 5 joint resolutions and pocket-vetoed 77 bills and 128 joint resolutions. The measures enacted into law provided for internal revenue taxes on beer, wine, and similar liquors, an appropriation for investigating the mineral resources of the island, tax relief for owners of property damaged or destroyed by the September, 1932, hurricane, and various other measures. Measures vetoed included bills designed to reduce the executive power, amending the Civil Service Law so as to withdraw about 69 per cent of the government employees from the Civil Service, etc. The Legislature repassed over the Governor's veto a bill to amend the election law, which the Governor stated would have the effect of restoring the standing of the parties to what it was before the election of

1932. The President sustained the Governor's veto when the bill was referred to him under the provisions of the Jones Act.

OTHER DEVELOPMENTS. A survey of the island's mineral resources was commenced Nov. 21, 1933, by four representatives of the United States Bureau of Mines, designated for the survey on request of Governor Gore. A survey of the educational system was made toward the end of the year by President Hopkins of Dartmouth College, at the request of Secretary of War Dern, and was completed on December 19. Senator Millard E. Tydings of Maryland, chairman of the United States Senate Insular Possessions Committee, studied conditions on the island during December.

PUGILISM. See BOXING.

PULITZER PRIZES. A series of awards established in 1915 by the will of Joseph Pulitzer, publisher of the *New York World*, to be presented annually by Columbia University on recommendation of the advisory board of the Pulitzer School of Journalism, for outstanding achievements in letters and journalism. The value of the prizes in the group devoted to letters is \$1000, with the exception of that for the best work on the history of the United States which is \$2000. The value of the prizes in the journalistic group is \$500, with the exception of that for the best example of a reporter's work during the year which is \$1000.

Early in May it was announced that the \$1000 award for the best novel published during the preceding year by an American author was awarded to Thomas Sigismund Stribling. His book, *The Store*, is the second volume of a trilogy depicting the decline of Southern civilization following the Civil War, and deals with the life of a Southern community some twenty years after the close of that war. The late Frederick Jackson Turner, who died in March, 1932, and was professor emeritus of history at Harvard, was awarded posthumously the \$2000 prize for a work dealing with the history of the United States. The volume, *The Significance of Sections in American History*, is a collection of twelve of his essays and lectures. The biography of Grover Cleveland, by Allan Nevins, professor of American history at Columbia University, was considered by the jury as the most outstanding work of the year in "teaching patriotic and unselfish service to the people, illustrated by an eminent example." Maxwell Anderson's play, *Both Your Houses*, was adjudged to represent best "the educational value and power of the stage." The play, concerning the active operation of government officials, has for its theme the padding of a deficiency measure from an initial \$40,000,000 to ten times that amount, and characterizes the unscrupulous methods of "pork-barrel" politicians. Archibald MacLeish, now on the staff of *Fortune*, received the \$1000 award in poetry for his volume *Conquistador*, historical in background, and dealing with the conquest of Mexico by Cortez.

In journalism, the \$500 gold medal for "the most disinterested and meritorious public service rendered by an American newspaper during the year," was awarded to the *New York World-Telegram* for "its wisely planned and judiciously conducted series of articles on veterans' relief, on the real estate bond evil, the campaign urging voters in the last New York municipal election to 'write in' the name of Joseph V. McKee, and the articles exposing the lottery schemes of various fraternal organizations." The "best example

of correspondence during the year," was adjudged to be that of Edgar Ansel Mower, Berlin correspondent of the Chicago *Daily News*, with especial mention of "his interpretation of the series of German political crises in 1932, beginning with the Presidential election and the struggle of Hitler for public office." For the best editorial during the year, "the test of excellence being clearness of style, moral purpose, sound reasoning, and power to influence public opinion," the \$500 prize was awarded to the Kansas City *Star* for a series of editorials on national and international subjects. Francis A. Jamieson, staff correspondent of The Associated Press, received the \$1000 prize for the best example of a reporter's work during the year, the award being based on his "prompt, full, skilful, and prolonged coverage of news of the kidnaping of the infant son of Charles A. Lindbergh." Harold M. Talburt, of the Washington *Daily News*, received a \$500 award for the best cartoon published in any American newspaper during the year; the selection was his cartoon "The Light of Asia," published on Jan. 27, 1932, which depicted a clenched fist, labeled "Japan," holding a blazing torch of crumpled papers labeled "Nine Power Treaty," "Kellogg Pact," "League of Nations."

PULLORUM DISEASE. See VETERINARY MEDICINE.

PULP. See PAPER.

PURDUE UNIVERSITY. A State technological institution in Lafayette, Ind., founded in 1869. The main purpose of the institution has been to train men for service in the fields of engineering, agriculture, and applied science and women in the fields of home economics and general science. The enrollment for the autumn of 1933 was 3695, of whom 3053 were men and 642 women; registration in the 1933 summer session was 620. There were 298 members on the faculty and in addition 70 assistants. The endowment amounted to \$340,000, and the income for the year was \$3,759,041. The library contained 113,786 volumes. President, Edward C. Elliott, Ph.D., LL.D.

PUTNAM, EBEN. An American genealogist, died in Boston, Mass., Jan. 22, 1933. Born at Salem, Mass., Oct. 10, 1868, he received his schooling in Cambridge, Mass. After acting as a clerk in the Boston brokerage house of Soley, Stearns, and Gay from 1885 to 1890, he became manager and treasurer of the Salem Press (originally the Essex Institute Press) and four years later publisher. He acted also from 1899 to 1902 as managing editor of the *International Monthly*. Until two years before his death he was associated with the Boston investment firm of F. L. Putnam and Co., Inc., and with the F. L. Putnam Securities Co. as treasurer and director.

Mr. Putnam's interest in genealogy dated from 1890 when he founded the *Salem Press Historical Genealogical Magazine*, later known during its 27 years' existence as *Putnam's Historical Magazine*, the *Genealogical Quarterly*, and the *Genealogical Magazine*. From 1900 to 1903 he edited also the *Genealogical Bulletin* and the *Vermont Antiquarian*. He was the author of *A History of the Putnam Family in England and America* (2 vols.); *The Putnam Lineage*; *Military and Naval Annals of Danvers*; *New England Ancestry of Grover Cleveland*; *Holden Genealogy*; *Lt. Joshua Heves*, a *New England Pioneer*; and genealogies of other leading New England families, such as

the Higginson, Endicott, Edgecombe, and Purington.

During the World War Mr. Putnam served at Nantes, France, as captain with the Quartermaster Corps, being later advanced to the rank of major in the Quartermaster Reserve Corps in 1923 and to that of lieutenant-colonel in 1927. As official historian for the Massachusetts troops of the A. E. F. after 1923, he wrote *Gold Star Record of Massachusetts and History of Massachusetts in the World War*. He was also historian of the Massachusetts department of the American Legion during 1919-20 and national historian of that organization after 1920. Partly owing to his efforts, the National Archive Building in Washington was erected.

QUAKERS. See FRIENDS, RELIGIOUS SOCIETY OF.

QUEBEC, kwě-běk'. The largest of the provinces of Canada, bounded on the south by the State of New York, and New Brunswick; and west by Ontario and the Hudson Bay. Total area, 594,534 square miles; total population (1931 census), 2,369,665. Chief cities: Montreal, 818,577 inhabitants in 1931; Quebec, the capital, 130,594; Verdun, 60,745; Three Rivers, 35,450; Hull, 29,433; Sherbrooke, 28,933. In 1930, there were in the Province 8279 schools of all kinds, with 634,757 students enrolled. The 4 universities had a total of 21,239 students enrolled for 1930-31.

The basic industry of Quebec is agriculture of which the estimated gross production for 1932 amounted to \$129,656,000 including field crops from 5,832,100 acres valued at \$70,382,000. Live stock (1931 census): 304,537 horses, 1,720,400 cattle, 732,000 sheep, 725,398 swine, and 7,932,000 head of poultry. The value of pelts of fur bearing animals taken during 1931-32 was \$2,334,202. Quebec has a total forest area of some 243,714 square miles and in 1931 produced 1,513,658 tons of wood-pulp valued at \$41,884,387; paper (including newsprint) was valued at \$71,385,954; lumber and sawmill products, \$15,333,194. The marketed value of the fisheries for 1932 amounted to \$1,815,544.

Mineral production for 1932 had a total value of \$24,557,066 of which 401,105 oz. of gold represented \$8,291,576; 628,902 oz. of silver, \$199,184; 67,336,692 lb. of copper, \$4,296,216; 122,977 tons of asbestos, \$3,039,721; magnesite and dolomite valued at \$262,860; 36,249 tons of pyrite, \$133,838; cement, \$3,155,702; limestone, \$1,327,484. The preliminary figures for 1933 showed the production of gold valued at \$8,013,684; silver, \$154,889.

In 1931 the 7505 manufacturing establishments had a capital investment of \$1,662,811,076, 180,808 employees, and a value of output of \$849,154,353 gross and \$480,110,221 net. For the fiscal year ending June 30, 1932, ordinary revenue amounted to \$36,941,020; ordinary expenditure, \$37,525,729; the total public debt was \$91,987,691 and the net funded debt was \$66,860,821.

Quebec is governed by a lieutenant-governor and a responsible ministry, assisted by a legislative council of 24 members appointed for life by the Lieutenant-Governor, and a legislative assembly of 90 members elected for 5 years. The 18th Legislative Assembly, elected Aug. 24, 1931, was constituted of 79 Liberals and 11 Conservatives. The Province is represented in the Dominion Parliament at Ottawa by 24 members in the Senate and 65 members in the House of Commons.

Lieutenant-Governor in 1933, H. G. Carroll; Prime Minister, L. A. Taschereau (Liberal).

QUEEN'S-CHICORA COLLEGE. A college for women in Charlotte, N. C., founded in 1857; nonsectarian in purpose but under the direction of the Presbyterian Church. The enrollment for the autumn term of 1933 was 360. There were 32 members on the faculty. The endowment amounted to \$336,000. The library contained 14,000 volumes. President, William H. Frazer, D.D., Litt.D.

QUEENSLAND. A state of the Commonwealth of Australia of which it forms the northeastern part. Total area, 670,500 square miles; population (June 30, 1933 census), 947,789 (exclusive of full-blood aborigines). Brisbane, the capital, had 334,000 inhabitants on Jan. 1, 1933. During 1932, births numbered 17,367; deaths, 7813; marriages, 6415. In 1931, there were 1934 schools of all kinds with a total enrollment of 193,247 pupils (exclusive of 3556 full-time and 8131 part-time students in the technical colleges). The University of Queensland had 799 students in the same year.

Agriculture, stock raising, and manufacturing are the leading industries. The total area under cultivation in 1932 amounted to 1,426,648 acres of which 1,245,638 acres produced crops valued at £11,305,731, including 2,493,902 bushels of wheat valued at £447,169; 1,653,853 bushels of maize, £389,345; 3,546,370 tons of sugar cane, £6,582,717; green forage, £981,905; 2,303,861 lb. of tobacco, £230,386; 1,869,883 bunches of bananas, £427,208; hay and straw, £415,821; 14,017 tons of potatoes, £108,630; pineapples, £196,914; cotton, £125,106; oranges and mandarins, £122,818. Livestock (Jan. 1, 1933): 21,161,142 sheep, 5,410,049 cattle, 436,176 horses, 222,686 pigs. The total wool production (greasy) for 1931-32 amounted to 184,716,462 lb. valued at £6,626,703.

Mineral production for 1932 was valued at £1,858,828 of which gold represented £173,144. The principal minerals were coal, lead, copper, gold, silver, and tin. In 7397 manufacturing establishments with a total of 35,799 employees, during 1931-32, the net value of production was £12,133,356. For the year ended June 30, 1932 there were 931 ships aggregating 3,265,988 tons cleared the ports in the overseas trade. Revenue for 1932-33 was reported at £13,396,644; expenditure, £14,951,088. The net public debt on June 30, 1932 amounted to £111,423,409. Executive power is vested in a governor, who acts through a responsible ministry, and legislative power in a legislative assembly of 62 members elected for 3 years. Governor in 1933, Sir L. O. Wilson; Premier, W. F. Smith (Labor).

RACING. See HORSE RACING.

RACKETS. See CRIME.

RACQUETS. See COURT GAMES.

RADCLIFFE COLLEGE. A nonsectarian college for women in Cambridge, Mass., founded in 1879. The enrollment for the autumn of 1933 was 1046, distributed as follows: Regular students, 795, graduate students, 221, special students, 30. Instruction was given to the students of the college by 300 teachers from Harvard University. The productive funds amounted to \$4,595,612 and the income, including tuition, for college purposes, was \$513,806. The library contained more than 71,000 volumes, exclusive of pamphlets. President, Ada Louise Comstock, A.M., Litt.D., L.H.D., LL.D.

RADIO. Radio broadcasting receivers were improved by the use of multifunction tubes with

several, instead of three, electrodes which made it possible for one tube to perform several duties.

Other improvements were higher efficiency coils and small high-capacity dry electrolytic condensers. Almost all of the sets used the superheterodyne principle. This made it possible to reduce the size of all the sets and to produce the "midget" set with four tubes which will operate on a power supply of either alternating or direct current. A "vest pocket" set was also brought out with two multifunction tubes. Some of the more expensive sets would receive in three ranges of frequencies, the usual broadcast band, 500 to 1500 kilocycles, the police call band from 1500 to 2800 kilocycles, and the foreign short wave broadcast band, 4000 to 12,000 kilocycles or 75 to 25 meters.

The automatic volume control on these new sets makes it difficult to determine when a set is properly tuned because this condition does not necessarily mean maximum volume. A new instrument has been devised to determine correct tuning by means of the plate current in one of the tubes, for instance, the detector. The new instrument is connected into the circuit of the receiver and has a magnetic vane which turns so that when the set is not tuned the vane casts a broad shadow, and when the set is tuned the vane casts a very narrow shadow, hence its name "Shadow Instrument."

In some hotels wiring was provided so that in each bedroom there was a choice of five broadcast programmes. This was accomplished by means of five high class sets receiving the different radio signals and feeding the audio signals into different audio amplifiers which in turn supplied five networks reaching every room.

One of the events of the year was the opening of Radio City at 50th Street and Fifth Avenue, New York City, to which the whole paraphernalia of Stations WEA and WJZ was moved and added to new equipment already installed so now this building holds all the studios and technical equipment of these two well-known stations. The actual transfer of each station in one night with no interruption of the regular programme was a remarkable feat.

A new high-power station (500 kw.), the most powerful in U.S.A. is being completed in Cincinnati and will be known as WLW. Some of the new features are: tubes with 12,000 volts and 100 amps on the plate; filaments heated by alternating currents instead of direct current, which, although common in receivers for years, has not been done with transmitters before because it was impossible to suppress the hum. The audio power given by the modulator will be 7, x 10¹⁶ times as great as that received by the microphone and is said to give true reproduction of sound in the range from 30 to 10,000 cycles.

In transoceanic radio communication there is the new link between Madrid and Buenos Aires which carries both telephonic and telegraphic messages at the same time.

Most commercial aircraft in the U.S.A. are now equipped with two-way radio telephones for receiving beacons and weather reports and blind flying is possible by means of directional radio giving up and down as well as right and left indications for landing in a fog.

Radio communication with both the Byrd and Ellsworth Antarctic expeditions has been maintained with great regularity, usually via Honolulu.

While the new station at Cincinnati is the only one in the U.S.A. having a power of 500 kw. there are many such in Europe and the reason seems to be the desire to use them for political propaganda from one country to another. This war of words is becoming a serious international affair. For instance, Austria complains of a high-power German station near the common border preaching the Nazi doctrine to the Austrians. In more than one country laws forbid tuning in a loud speaker in restaurants, etc., to a foreign station.

The Auto-Radio has become very popular and now many taxis as well as private cars are so equipped. Power is taken from the 6-volt storage battery converted to alternating current by a vibrator, stepped up to high voltage by a transformer, converted to direct current by a tube and impressed upon the plates of the tubes. It was found that some directional beacon stations with cross-loop radiators were giving erratic indications so they were changed to vertical type radiators and a special circuit known as an "artificial line" was developed to maintain proper phase relation between the different parts of the system of antennas so that a specific directional effect is maintained.

The Federal Radio Commission is considering extending the band allocated to broadcasting to include from 1500 to 1600 kilocycles and three experimental stations have been authorized to operate in this band with a separation of 20 kilocycles and a power of one kilowatt.

A new output tube was produced which will give one watt of power at 700,000,000 cycles or a wave length of 43 centimeters. This is in the range known as "Microrays" being exploited by Marconi.

The Federal Radio Commission obtained a court injunction against a radio broadcast station which was sending out programmes by wired radio over power lines in Bridgeport, Conn. The court held that since the programmes could be received by an ordinary radio set the station would have to comply with the Commission and apply for a broadcasting license.

RADIO CITY. See RADIO.

RAILROAD TRANSPORTATION ACT, EMERGENCY. See RAILWAYS.

RAILWAY ACCIDENTS. For the eleven months ending with November, 1933, there were reported a total of 5078 train accidents in the United States, according to a summary of the Interstate Commerce Commission. This total was 137 less than in the corresponding period of the previous year, although the casualties were heavier in 1933, with 184 persons killed and 1205 injured as against 164 killed and 922 injured in 1932. Derailments constituted nearly 60 per cent of the train accidents, and accounted for 103 deaths. Train-service accidents, involving 4221 deaths and 13,780 injured persons, caused 237 more deaths than in the corresponding period of 1932. As in the previous year the largest item in the fatality record comprised persons struck or run over not at public crossings, with a total of 1662 deaths as against 1464 in 1932. Accidents at highway grade crossings continued to take a great toll of victims with 1284 deaths and 3162 injured as compared with 1291 deaths and 3459 injured in 1932. Of the grand total of 37 passengers killed in 1933, fourteen deaths resulted

from train collisions, and ten from getting on or off cars.

Some of the major accidents of the year throughout the world were:

March 17. In Manchoukuo in a rear-end collision when a freight train crashed into a passenger train, 50 passengers, mostly Chinese, were killed and 70 injured.

April 10. In Colombia a derailment caused the death of 18 with injuries to about 100.

June 4. At Nantes, France, a derailment caused 14 deaths with the injured reported at 100.

June 6. At Lucknow, India, a motor-bus was wrecked by a train at a grade-crossing, causing 16 deaths.

July 9. Four were killed and 16 hurt by the derailment of a train at Apolda, Germany.

August 20. In Kiangsi Province, China, from 30 to 50 passengers, mostly soldiers, were killed when a train left the tracks.

August 29. An eastbound express from Los Angeles was wrecked by the collapse of a flood-weakened bridge at Tucumcari, New Mex.; 11 were killed, 40 injured, and several missing.

September 5. Near Binghamton, N. Y., a milk train crashed into the rear of a passenger train; 14 were killed and 30 injured.

October 26. Derailment of a passenger train between Evreux and Conches, France, caused the death of 30, with 32 injured.

December 10. Near Trujillo, Peru, 8 were killed by derailment of a train.

December 14. At a grade-crossing near Crescent City, Fla., a school bus was hit by a freight train; 10 were killed and 30 injured.

December 23. Near Lagny, France, the Paris-Strasbourg express crashed into the rear end of a local train, crowded with holiday passengers, and halted by fog, 180 were reported killed in the greatest railway tragedy of the year.

RAILWAYS. The report of the National Transportation Committee was made public Feb. 15, 1933. It was signed by Bernard Baruch, Vice Chairman, Clark Howell and Alexander Legge. The Chairman of the committee, Calvin Coolidge, had died and Alfred E. Smith, the fifth member of the committee, wrote a concurring opinion.

A new principle of rate making was recommended. "Whenever there is fair competition it will decide the rate question and it should be permitted to do so freely." . . . When fair competition does not exist "costs of service under efficient operation are a better general guide than some arbitrary determination of assets values." Rates "should look to the retirement of new debt for the purchase of productive facilities during their life and out of returns from their use."

The committee advised the railways to reduce competitive service and abandon unnecessary service and to consolidate terminal facilities.

Alfred E. Smith said that while he agreed with the other members of the committee he would lay stress on giving debtor relief to the railways so that they might scale down their debts without bankruptcy. The relief to terminate on Jan. 1, 1935.

The Emergency Railroad Transportation Act was passed on June 9, 1933 and authorized the appointment of a Federal coordinator. It provided for railway company reorganizations without bankruptcy.

It provided for the study of railway problems. It repealed the clause of the earlier Transportation Act directing the Interstate Commerce Commission to fix rates yielding a fair return on valuation and providing for recapture of earnings of more than 6 per cent on valuation.

Flexible rates were indicated as desirable.

The jurisdiction of the Interstate Commerce Commission was extended over all forms of acquisition or control of railways.

It provided for the regulation of holding company accounts.

It provided for keeping valuation up to date. Regional railway systems were provided for, "looking eventually to a single National system."

Joseph B. Eastman, a member of the Interstate Commerce Commission, was appointed by the President, Federal Coordinator.

On July 10 he announced his initial organization, dividing the central administration between freight service, car pooling, and purchases. He designated three regions, Eastern, Western, and Southern.

At the beginning of his work he let it be known that past theories and antagonisms were to be put aside. He instructed his staff that this was the spirit in which their work must be carried on.

The first report submitted under the Emergency Transportation Act of 1933 was not made public until Jan. 20, 1934 but the report was compiled in 1933 and reflects the attitude of the man who was selected by the President in that year. The objective of the government's treatment of the railways is the gradual welding together of the transportation facilities of the entire United States with dependence on the government for financing the whole thing, the implication being that government ownership would be the final result.

The Interstate Commerce Commission without Mr. Eastman's vote, refused an application for a 10 per cent reduction of railway freight rates. The reduction had been asked by farmers, lumber shippers, and coal shippers.

The railway officers gave evidence of their willingness to cooperate with each other, something entirely new, by joining in an appeal to people traveling to Chicago, for the Century of Progress Exposition, to travel by rail regardless of what railway they used.

LOANS TO RAILWAYS. By the end of 1933 the Reconstruction Finance Corporation had authorized loans to railways amounting to \$411,845,678 of which \$394,094,258 had been actually disbursed to 67 companies, and of this \$57,014,636 had been repaid. During 1933, Congress passed a law restricting R.F.C. loans to railway companies where the maximum salary paid to any officer was \$17,500 a year. According to *Railway Age*, the balance due from the railways to the R.F.C. at the end of 1932 was \$272,471,708 and at the end of 1933 the balance due the R.F.C. from the railways was \$337,079,622. Only five companies that had not borrowed from the R.F.C. in 1932 did so in 1933. Five railway companies repaid the R.F.C. in full. The interest rate on R.F.C. loans to railways in 1932 was 6 per cent; this was reduced on Jan. 1, 1933 to 5½ per cent, again on July 1, 1933 to 5 per cent, and to 4 per cent for one year on November 1.

On Nov. 2, 1933, the Federal Public Works Administration announced that it had "allotted" \$51,000,000 for the purchase of rails and fastenings and \$84,000,000 for a loan to the Pennsylvania Railroad for the completion of its electrification work and for the construction of cars and locomotives, "for the direct encouragement of heavy industries and in consummation of the Administration's plan for thus quickly aiding the movement of men from relief rolls to pay rolls in industries that have curtailed employment."

On November 20 the P.W.A. announced a policy of making loans for repairing cars and locomotives. On December 7 it was announced that \$5,500,000 had been allotted to the New York, New Haven & Hartford and to the Lehigh Valley for this purpose and on December 9 it was announced that

allotments amounting to \$36,307,500 had been made to four other railways for the purchase of cars and locomotives. *Railway Age* says that other allotments were made, and on December 28 announcement was made from Mr. Eastman's office of definite allotment of rail for which certain railway companies had contracted with Mr. Eastman's approval.

To obtain loans from the P.W.A., the railways are to give their promissory notes for ten years with interest at 4 per cent except for the first year. The notes will be payable in eight installments, the first payment to be made at the beginning of the third year. For loans for maintenance the P.W.A. has required collateral but for loans, the proceeds of which are to be used for the purchase of equipment, the P.W.A. has announced that it will accept railway equipment trust notes to run for fifteen years for freight cars and for twenty years for locomotives and passenger cars, interest to be at 4 per cent except for the first year. The loan to the Pennsylvania Railroad is to run for thirty years.

ELECTRIFICATION OF RAILWAYS. The operation of the Pennsylvania Railroad with electric motive power from New York City to Philadelphia, 90 miles, was begun in January (16th) 1933. Alternating current is used, 11,000 volts. The system allows for an axle load of 75,000 lbs. There is 1250 h.p. applied to each axle. The electrification of the Philadelphia suburban lines has been completed as far west as Paloi.

The justification for this Pennsylvania Railroad electrification is thought to be that it was the only feasible way to increase track capacity and improve the smoothness and frequency of train service.

AIR CONDITIONING. By 1933 air conditioning had been applied to equipment on; *Dining Cars*: Atchison, Topeka & Santa Fe; Chicago, Burlington & Quincy; Chicago, Milwaukee, St. Paul & Pacific; Chicago, Rock Island & Pacific; New York Central; Southern Pacific; Union Pacific. *Lounge Cars and Dining Cars*: Missouri-Kansas-Texas; Missouri Pacific; St. Louis-San Francisco; Texas & Pacific. *Through Trains*: Chesapeake and Ohio. *Full Trains*: Baltimore & Ohio; Alton; Chicago & Eastern Illinois; Illinois Central; Wabash; Pennsylvania Railroad (New York to Washington).

IMPROVEMENT IN BUSINESS. Purchases by railways began to show an increase in April, 1933. The trend of earnings had been upward and by April was thought to be clearly enough marked to justify some increased railway spending. Just how large the drop in railway earnings was is well shown by a comparison of the first six months of 1933 with the first six months of 1922, the worst year heretofore in American railway history.

In the first six months of 1922 gross earnings for the railways of the United States was \$2,613,600,000; for the corresponding period of 1933 gross earnings were \$1,415,200,000, a decrease of 46 per cent. Expenses of operation in the first half of 1922 were \$2,080,000,000 and in the first half of 1933 were \$1,068,900,000 a decrease of 49 per cent. Figures for car loadings had begun to show an improvement in business in August, 1932, and by April, 1933, railway officers acted on this advance notice of increased revenues and began making purchases that had been deferred.

Railway officers are able to forecast car loadings to some extent so the figures for car loadings

through June give the picture as they saw it when they began to make increased purchases.

Average weekly car loadings:

July, 1932 484,427

Percent of increase or decrease of average weekly car loadings:

August, 1932	+ 6.6
September, 1932	+ 15.8
October, 1932	+ 30.4
November, 1932	+ 13.3
December, 1932	- 2.7
January, 1933	- 1.4
February, 1933	+ 1.0
March, 1933	- 5.0
April, 1933	+ 3.4
May, 1933	+ 9.8
June, 1933	+ 16.9

Average weekly car loadings in the period 1925-29 compare with average weekly car loadings in the first months of 1933 as follows:

	1925-29	1933
March	957,889	460,301
April	958,402	500,949
June	1,001,905	566,345
July	1,009,839	621,763

Car loadings for the last few years were as follows:

1933	28,961,000	1931	37,151,000
1932	28,180,000	1930	45,717,000
1925-29 average	52,075,000		

MAINTENANCE. The surplus or deficit of a railway is in the roadbed and equipment rather than in cash in a bank. Thus five miles of railroad with new, heavy rails, new treated ties, and well repaired and painted stations and bridges represents about \$15,000 surplus which may be dipped into by discontinuing maintenance expenses for a certain period. Five miles of railroad with badly worn rails, rotted ties, dilapidated stations, and bolstered up bridges represents a deficit, not shown in the balance sheet. In 1933 the railways of the United States had a huge deficit, in part incurred in the three previous years and still further drawn upon in the first half of 1933. The *Railway Age* estimates undermaintenance since 1929 at three billion dollars. The exact extent would be a matter of opinion but the extent may be indicated. In the first seven months of 1933 the railways operating 241,147 miles (all the larger ones) spent \$738 a mile for maintenance of way and structures compared with \$1753 a mile spent in the first seven months of 1922 on the 235,758 miles then in operation. The year 1922 is selected for comparison because it was a year in which severe economies were necessitated by low railway revenues.

In July, 1933, the railways spent \$126 a mile for maintenance of way and structures. In July, 1922, they spent \$278 a mile. These figures both indicate the extent to which a draft on railway property had been made and also confirm the report of those who sell to railways, namely, that an increase in railway buying took place in the first half of 1933 (railway supply men said April).

In July the 1933 expenses of maintenance of way were 46 per cent of those of July, 1922. The seven months' expenses of maintenance of way in 1933 were but 42 per cent of the expenses for

maintenance of way in the seven months of 1922.

In July, 1932, the expenses of maintenance of way a mile were \$122 and for the seven months of 1932 were \$901. Thus the July, 1932, maintenance of expenses were 43 per cent of the July, 1922, maintenance of way expenses while the seven months 1932 maintenance of way expenses were 51 per cent of the seven months' maintenance of way expenses of 1922.

PASSENGER SITUATION. The fare for passengers on railways was 3.60 cents per mile in January, 1933, but during the year a majority of railway officers were in favor of reducing this to 2.50 cents in the hopes of getting back the passenger business that was being carried by busses.

By the end of the year passenger rates on all Western railways, many southeastern and some eastern railways had been reduced to 2 cents a mile for coach passengers and to 3 cents a mile for passengers riding in Pullman cars.

The basis for railway men's anxiety is shown in the following table:

PASSENGERS CARRIED

1919	1,211,022,000
1920	1,269,918,000
1932	478,738,000

Many favored the abolition of the surcharge for passengers riding in Pullman cars and greater stress in railway advertising and service on the comfort of a night trip by railway with its Pullman berth as compared with a trip by bus. Betterment of railway passenger service included air conditioning and electrification mentioned elsewhere in this article. The passenger bus pick up and delivery of passengers at train side of the Baltimore & Ohio railroad in New York City was described in previous *INTERNATIONAL YEAR BOOK* articles and was in service in 1933. It was generally considered satisfactory by passengers and an effective means of competing with a centrally located passenger station.

STORE DOOR DELIVERY OF FREIGHT. The Boston & Maine railroad made an extensive experiment with a store door pick up and delivery of freight the results of which were published in 1933. The Boston & Maine management said that the experiment proved that the service was a success both from the point of view of satisfactory service and effectiveness in competition with trucks. Agents in small towns voted 21 out of 34 that it was a success. Agents in large towns voted it a success, 10 out of 12. A canvass of shippers showed them enthusiastically in favor of the service.

In October, 1933, the Pennsylvania Railroad withdrew the tariffs providing for store door delivery of freight notwithstanding the fact that Joseph B. Eastman, Federal Coördinator, had approved of the Pennsylvania's plan over the protest of the New York Central. The tariffs had provided for store door delivery throughout the Pennsylvania system.

LABOR CONDITIONS. On June 21, 1933 an agreement was reached by railway labor leaders and railway managements extending the 10 per cent reduction in basic wage rates, without the right of appeal to arbitration to June 30, 1934, notice of intention to appeal not to be given before Feb. 15, 1934.

FINANCIAL SITUATION. On July, 1, 1933 the Great Northern Railroad had \$41,963,000 consolidated St. Paul, Minneapolis & Manitoba bonds

falling due. Had railway bonds been readily salable the company would have sold General Mortgage bonds and with the cash received from their sale have paid off the St. Paul, Minneapolis & Manitoba bondholders. But railway bonds were not readily salable. Therefore, holders of the maturing bonds were asked to extend their loan for 10 years, and holders of outstanding General Mortgage bonds were asked to approve the extension of the St. Paul, Minneapolis & Manitoba mortgage which underlay their own. Holders of 98 per cent of the General Mortgage bonds agreed to do so and a bank loan having been arranged to permit paying off maturing bonds, the holders of which would not extend their bonds, the whole plan was put through in the spirit that was indicated by the Emergency Transportation Act and by Joseph B. Eastman in his informal talks with his staff when he was appointed Federal Coordinator.

Another manifestation of this spirit was the reorganization of the Chicago, Rock Island & Pacific Railway Company without receivership or foreclosure.

Still another was the dismissal by the Interstate Commerce Commission of all actions at law for the recovery of excess (in excess of 6 per cent on their valuation) earnings. Most of these recapture cases were against small railroads—roads that were little more than plant facilities. One, however, of the companies against which recapture proceedings had been brought was the Richmond, Fredericksburg & Potomac, an important line connecting the southeastern railroads with the northeastern railroads. It is owned jointly by the Pennsylvania Railroad, the Baltimore & Ohio, the Chesapeake & Ohio, the Seaboard Air Line, the Atlantic Coast Line and the Southern Railway. Regardless of the amount of money involved, the new attitude of the Interstate Commerce Commission as shown by discontinuing the recapture cases is an important event in United States railway history.

Of great importance also is the fact that Joseph Eastman, Federal Coordinator of railways, has a seat on the Recovery Committee which includes the members of President Roosevelt's cabinet, General Johnson, and the head of the Reconstruction Finance Corporation.

This recognition of the railways as a major element in the economic life of the country to be cooperated with by the government marks 1933 as a period of distinct change from policy begun in 1870 with the creation of the Interstate Commerce Commission for curbing railway power. Taken together with the new principle of rate making laid down by the National Transportation Committee, quoted at the beginning of this article, it bids fair to make 1933 an important year in American railway history.

In line with this recognition of railways as a major factor in American economic life the Public Works Administration made an allotment of \$135,000,000 "to buy qualified securities of railroads desiring to purchase equipment now."

The announcement of the willingness of the Public Works Administration to advance money to the railways through the purchase of their securities was made by Secretary Ickes after a conference with President Roosevelt. One allotment of \$51,000,000 is for the purchase of steel rails and fastenings by all roads wishing to take advantage of the temporary price agreed on by President Roosevelt and heads of four large steel

companies just prior to the announcement by Secretary Ickes.

The remainder, \$84,000,000, is to go to the Pennsylvania Railroad Company for electrification and to pay for 7000 freight cars. In principle the railways, including the Pennsylvania, were glad to sell their securities to the Public Works Administration and the PWA was ready to buy them and the restrictions that had been placed on railroad officers' salaries by acceptance of Reconstruction Finance Corporation loans was not a bar to sale of securities to the Public Works Administration. In practice there were differences of opinion as to what constituted qualified securities.

In the spirit of the National Transportation Committee report, J. B. Eastman, coordinator, began a study of cost accounting for railways and, of great significance, he ruled that the study, which may be the basis for a modified system of accounting and statistics for railways, should be undertaken by means of research work rather than by means of public hearings. Mr. Eastman was a member of the Interstate Commerce Commission during many of the bitter dialectic sparring matches on valuation. Valuation had heretofore been used as a basic factor in fixing railway rates.

Mr. Eastman also undertook to gather some facts about water and bus competition in the field of transportation. He sent a questionnaire to 1100 companies engaged in inter-coastal, coast-wise, inland, and Great Lakes transportation by water. He also sent personal letters to 48 State commissions.

Thus later railway history may be affected by the new policies that had their inauguration in 1933.

A minor instance of this was the establishment of three bus routes by the Missouri Pacific Railway in Kansas. They were from Concordia on the east and west line, Athlison to Stockton, to Salina on the east and west line; Kansas City to Pueblo, Colo.; and the third from Osawatimie to Yates Center. The effect of these routes is to permit the railway owned busses to short haul the railway itself. It is a step in the direction of trying to forestall competition by an adoption of new methods of transportation in the interests of shippers.

NEW RAILWAY BUILT. There was only 24 miles of new railway built during 1933. According to the *Railway Age* this was the least number of miles built in any year since the Civil War. The record printed in the *Railway Age* goes back to 1893. The smallest figure for any year previous to 1933 was 163, the mileage built in 1932. The largest figure was 6026, the mileage built in 1902. Of the 24 miles built in 1933 the longest piece was 11 miles built by the Virginian Railway as the last section of the Guyandot River line between Elmore, W. Va., and Gilbert. There was one uncompleted line under construction during 1933. This was the Dotsero cutoff which will connect the so-called Moffat Line (Denver Northwestern & Pacific) and the Denver & Rio Grande Western thus giving a line of railway almost due west from Denver to Salt Lake City. The project dates back more than thirty years but the cost of financing the Moffat tunnel through the backbone of the Rocky Mountains—there is no pass directly west of Denver—was prohibitive until undertaken by the State of Colorado through a special taxing district that included the city of Denver. The tun-

nel was completed prior to 1933 but the connection with the Denver & Rio Grande Western was still under construction at the end of the year.

RAILWAY ABANDONED. There was 1876 miles of railway abandoned during 1933. This is the greatest mileage abandoned of which there is any record. The longest piece of line abandoned was 72 miles of the Southern Pacific running from Cochise, Ariz. to Commonwealth.

FREIGHT CARS ORDERED. The number of freight cars ordered by the railroads in 1933 was 1892 of which 1685 were for use in the United States, 132 were for export and 75 were for Canada. The corresponding figures for 1932 were: total 2546, United States 1968, export 77, Canada 501.

FREIGHT CARS BUILT. The *Railway Age* which compiled the figures given above also gives a figure for the freight cars built; for 1933 the figure was 2311 for the United States and 550 for Canada. According to the *Railway Age* record this compares with 3326 built in the United States in 1932 and with none built in Canada in 1932.

LOCOMOTIVES ORDERED. The same records show 49 locomotives ordered in 1933 of which 7 were for export to countries other than Canada. Of the total 42 ordered for use in the United States, 17 were steam, 20 were oil electric, 2 gasoline electric, and 3 were gasoline.

LOCOMOTIVES BUILT. The total for the United States was 63, there were none built in Canada. Of the 63 built in 1933, 57 were for domestic service and 6 were for foreign service. This compares with a total built in the United States in 1932 of 120—102 for domestic service and 18 for foreign service. The Canadian output in 1932 was 3, of which 1 was for foreign service and 2 were for domestic service.

PASSENGER CARS ORDERED. There were but 6 passenger cars ordered in 1933 and all 6 were for service in the United States. No orders were placed by Canadian railways either with builders in the United States or with builders in Canada. There were 39 ordered in 1932, all in the United States.

PASSENGER CARS BUILT. There were 6 passenger cars built in 1933, all in the United States and all for domestic service. In 1932 there were 39 passenger cars built, all in the United States and all for domestic service.

SIGNALING CONSTRUCTION. Automatic block signaling was placed in operation on 118 miles of railway in 1933 comparing with 190 miles in 1932. This statement should be taken in connection with the further statement made in the *Railway Age* that counting each automatic signal lever and each lever of interlocking, highway crossing signal, spring switch, etc. (all properly coming under the heading of *Signaling Construction*) as a unit, the total number of units placed in service in 1933 was 3711 as compared with 2837 units placed in service in 1932, a gain of 31 per cent for 1933 over 1932.

REVENUES AND EXPENSES. Reports of the larger (those earning one million dollars or over, called Class I) railways to the Interstate Commerce

Commission show the accompanying combined income accounts.

BREAKUP OF REVENUE [In millions]

	1933	1932
Freight	\$2,493	\$2,451
Passenger	331	377
Mail	92	97
Express	46	54
All other	139	148
Total	\$3,101	\$3,127

BREAKUP OF EXPENSES [In millions]

	1933	1932
Maintenance of way	\$ 321	\$ 351
Maintenance of equipment	602	619
Traffic	86	96
Transportation	1,079	1,158
General and other	165	179

RECEIVERSHIPS. There were eighteen railway companies placed in the hands of receivers or trustees (under the new Federal Bankruptcy Act a trustee can be appointed without the technical default occurring but the trustee's powers and responsibilities are much the same as those of a receiver). The mileage of these roads was 21,222 and their funded debt outstanding was \$842,805,971 and their stock outstanding was \$386,872,212. The two largest and most important were the Chicago, Rock Island & Pacific (known as the Rock Island) with 8333 miles, \$310,532,885 funded debt and \$128,909,212 stock and the Missouri Pacific with 7412 miles and \$350,932,500 funded debt and \$154,639,600 stock. Both of these lines serve the southwestern part of the United States where competition between railways has been especially keen for years and the credit of each had been used in such a way as to leave the company dependent on continued prosperity for its solvency. The Chicago, Rock Island & Pacific was used by D. G. Reid and E. S. Moore as the basis of a huge holding company structure. The Missouri Pacific was used by the late George Gould to form the basis of his projected Atlantic to Pacific system of railways. In neither case was the long past financial juggling responsible for the receivership of 1933 but the use of the companies' credit for purposes other than that of the development of the physical property may be considered a remote factor in the 1933 receivership.

At the end of 1933 there were 44,334 miles of railway being operated by receivers.

FORECLOSURE SALES. Only two small railways were sold under foreclosure during 1933, the total mileage being 298 and one of the two railways sold was not reorganized but operation of the 33 miles was abandoned. The name of this railway was the Savannah & Statesboro.

NEW FINANCING. The only public offering of new railway securities during 1933 was an offering by J. P. Morgan & Co. of \$12,000,000 5 per cent mortgage bonds of the Cincinnati Union Terminal at par, the bonds being guaranteed by the railways that use the terminal. It is estimated by Dr. Julius H. Parmelee, Director of the Bureau of Railway Economics, that the total capital expenditures of the Class I railways was \$100,000,000 for 1933.

DIVIDEND CHANGES. The *Railway Age* gives the dividend changes during the year as follows:

INCOME ACCOUNT [In millions]

	1933	1932
Total operating revenues	\$3,101	\$3,127
Total operating expenses	2,253	2,403
Taxes	255	275
Net railway operating income	470	328

The directors of the Alabama Great Southern in December declared a dividend of \$2 on its common stock, the first such disbursement made since 1932.

The Atchison, Topeka & Santa Fe paid \$1.50 instead of the customary \$2.50 per share on its 5 per cent preferred stock in the first half of 1933. In the second half \$3.30 was paid, bringing the total for the year to \$4.80, as compared with \$5 heretofore paid.

The directors of the Canadian Pacific during the year voted no dividends on either its preference or its ordinary shares. The former carried regular dividends in 1932 and 31½ cents was paid on each ordinary share in that year.

The directors of the Chesapeake & Ohio in August declared a quarterly dividend of 70 cents on its common stock—an increase of 7½ cents over the customary quarterly rate of 62½ cents.

Dividend action on its common stock was deferred by the directors of the Delaware & Hudson. The quarterly rate was formerly \$2.25 but this was reduced to \$1.50 in the latter half of 1932.

The directors of the Kansas City Southern in June omitted the dividend on its preferred stock upon which 50 cents per share was paid in the first quarter.

The St Joseph & Grand Island paid a dividend of \$5 a share on its senior preferred stock and \$4 a share on its second preferred—the former being the first payment made on that issue since 1902 and the latter being the first declaration ever made in favor of the second preferred.

MOTOR CARS. The following is quoted from an article in the annual statistical number of the *Railway Age*. The article is headed, "Character of Rail Motor Cars Changed in 1933" and is signed by C. B. Peck, Mechanical Department Editor.

"The steam railways of the United States placed orders for 18 rail motor trains, motor cars, and trailers in motor trains during 1933.

"Since the introduction of cars of great strength and light weight construction for use in light branch line service in 1932, the possibilities of combining great strength with light weight offered by aluminum alloys and stainless steel construction have rapidly passed beyond the branch line phase of their development. The possibilities which these materials offer in connection with suitable streamlining for the reduction of air resistance to meet the new ideas of high speed service were quickly seized upon and orders were placed for three light weight streamlined high speed articulated trains. Two for the Union Pacific and one for the Chicago, Burlington & Quincy."

RAINFALL. See METEOROLOGY.

RANDOLPH-MACON WOMAN'S COLLEGE. An institution for the higher education of women in Lynchburg, Va., under the auspices of the Methodist Episcopal Church, South, founded in 1893. The enrollment for the autumn of 1933 was 558. The faculty numbered 69. The endowment amounted to \$1,203,565, while the income for the year was \$558,671. The library contained over 40,000 volumes. President, Theodore H. Jack, Ph.D., LL.D.

RAPID TRANSIT. With a number of our great cities in financial difficulties the construction of subway facilities for rapid transit are more or less at a standstill. It is only in the great centres of population that this very costly type of construction is undertaken, and it would appear that there will be little work of this type underway for several years to come.

NEW YORK. Although the city has spent over half a billion dollars on its municipally-owned "Independent Subway System," this system is in operation only in part—a considerable amount of work is still to be done in equipping certain passenger stations, track laying, etc. The Public Works Administration has made an allotment of \$23,160,000 to complete and put the lines in operation. This sum, in part a grant, the remainder being a loan to be repaid by 1963, will not be made available, however, unless the city

budget is balanced—a task which the new mayor has undertaken to accomplish but which is, as yet, not a reality.

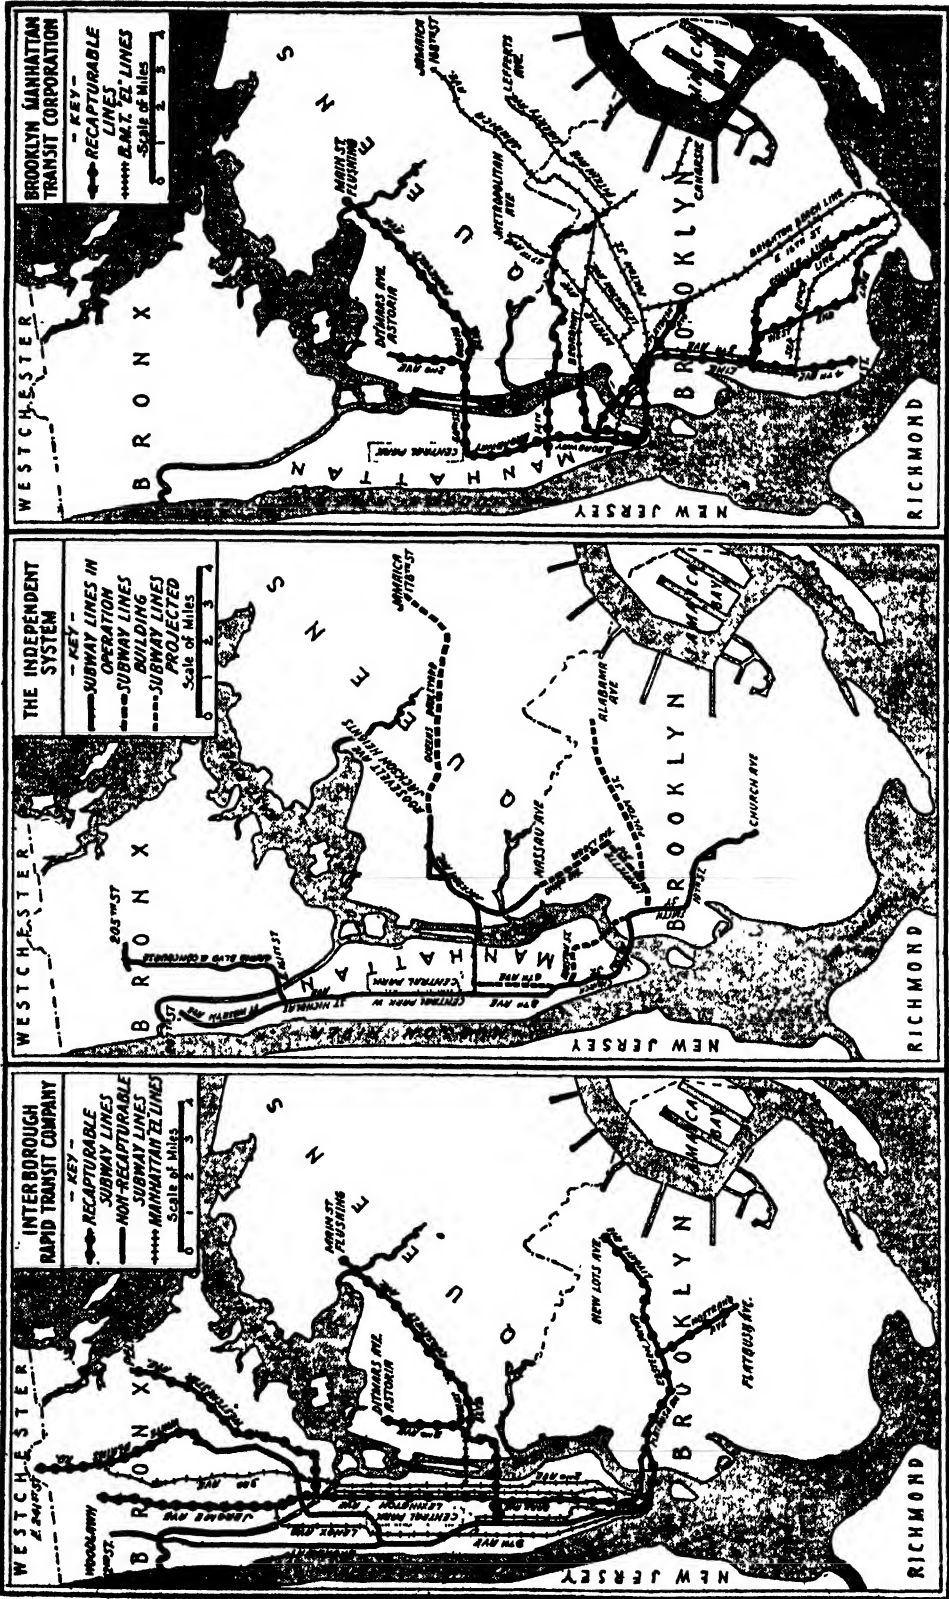

Mayor La Guardia's administration also faces the problem of unification. The three great subway systems of the city—the Interborough, the Brooklyn Manhattan (B.M.T.) and the Independent—could be combined into one operating whole and this problem of unification will undoubtedly continue to be agitated until some form of unified operating agreement is achieved. Practically all the lines of the B.M.T., and all except the "original subway" of the Interborough, are "recapturable" by the city. City finances, however, do not make such a move possible in the near future. Indeed, the problem of the five-cent fare is more likely to be settled first, for it has been found that the new city lines cannot meet expenses on a five-cent basis. See map on page 710.

BOSTON. Plans for a subway under Huntington Avenue to cost eight and one-half million dollars, have been under discussion during the year. This would permit the removal of all surface cars from Boylston St. and Copley Square.

RASMUSSEN, räs'mus'sen, KNUD (JOHAN VICTOR). A Danish Arctic explorer and author, died in Copenhagen, Dec. 21, 1933. He was born at Jakobshavn, Greenland, June 7, 1879, son of a Danish missionary and Eskimo woman, and was reared on that island. At the age of 17 he entered the University of Copenhagen and, after obtaining his Ph.D. degree in 1901, made his first ethnological excursion to Lapland in order to study the natives. The following year he joined the Danish Literary Greenland Expedition, led by Ludwig Mylius-Erichsen, which discovered near Evigheds Fiord, West Greenland, two ice-free mountain ranges, spent 10 months in a study of the heathen Eskimo of Cape York, and made the return journey to Upernivik across the ice of Melville Bay, the first sledge crossing on record. Rasmussen made ethnological expeditions to Greenland during 1906-08, in 1909, and during 1910-11, establishing on the latter the Cape York station at Thule, North Greenland, for the purpose of studying Eskimo folklore. His researches on these expeditions were published as *Nye Mennesker* (New People, 1905), *Under Nordenvindens Svøbe* (Under the Lash of the North Wind, 1906), *Lapland* (1907), and *The People of the Polar North* (1908).

In 1912 Rasmussen made a remarkable crossing of Greenland for the recovery of the records of the Mylius-Erichsen expedition of 1905-07, which explored and charted the entire coast line of northeastern Greenland but, owing to the prolongation of its journey, failed to reach its ship, perishing of starvation and cold. His outward journey, 764 miles across the inland ice, was made from Inglefield Gulf to the Denmark Fiord, thence to Independence Bay; the return journey of 621 miles was to Wolstenholme Sound. As confirmed later by the Mylius-Erichsen and Mikkelsen records, he found the Peary Channel to be nonexistent, thereby establishing the continuity of Greenland from Cape Farewell, 60° N., to the most northern land ever reached 83° 39' N. He discovered also a large area of ice-free land, with ample game in the region. The Mylius-Erichsen records, however, were discovered at Denmark Fiord by Eynar Mikkelsen who, after his rescue from Shannon Island by a Norwegian whaler, brought them back to Copenhagen in 1912.

Outstanding among Rasmussen's later expedi-

Copyright, 1934, by the New York Times Company.

RAPID TRANSIT—NEW YORK CITY'S THREE SUBWAY SYSTEMS

tions were the second Thule Expeditions around North Greenland (1916-18), the fourth Thule Expedition which studied folklore among the Angmagssalik Eskimos of East Greenland (1919), and the fifth Thule Expedition from Greenland to the Pacific Ocean (1921-24). The purpose of the latter was to make an ethnological survey of the Eskimo tribes between Baffin Bay and Bering Strait. Accompanied by an Eskimo man and woman, Rasmussen traversed 20,000 miles, largely by native methods, gathering Eskimo legends and observing their tribal life, influenced especially in Alaska by the innovations introduced by American whalers. His travels ended when the Soviet government refused to permit him to complete his investigations among the tribes of arctic Siberia, but the expedition had confirmed his theory that anatomically as well as culturally the Eskimos were sprung from the same stock as the North American Indians.

The last expedition which Rasmussen led was the sixth Thule Expedition. In 1931 it investigated the coast of East Greenland for 2500 miles between the fiords of Juhanehaab and Angmagssalik, and in 1932 mapped by aeroplane the southeastern coastline from Pikiutdlek (south of Angmagssalik) to Cape Farewell. This expedition, together with those conducted by Lauge Koch and Eynar Mikkelsen, was stimulated by the rivalry between Norway and Denmark for possession of unsettled parts of Greenland. Previous to his death he was engaged in supervising the filming in East Greenland of ethnographic pictures of Eskimo life.

In addition to receiving medals from the leading geographical societies of the world Rasmussen was made Knight of the Royal Order of Dannebrog (Denmark), Knight of the Royal Order of the North Star (Sweden), Commander of the Order of St. Olav (Norway), and Commander of the White Rose (Finland). He wrote: *Min Rejsedagbog* (Diary of My Journey, 1915); *Foran Dagens Øje* (Before the Day's Eye, 1915); *Grønland langs Polhavet* (Greenland by the Polar Sea, 1919); *Myter Og Sagn fra Grønland* (Myths and Legends from Greenland, 3 vols., 1921-25); *In the Home of the Polar Eskimos* (1923); *Across Arctic America* (1927); and *The Eagle's Gift* (1932).

RAYON. Rayon production in the United States established a new high record in 1933 of 207,579,000 pounds, a figure 54 per cent above the 1932 output of 134,814,000 pounds, and 45 per cent greater than the previous high of 1931, according to the statistics of the industry compiled by the *Textile Organon* of the Tubize Chatillon Corporation. Consumption in 1933 was also far in excess of previous years reaching a total of 206,773,000 pounds as against 152,178,000 pounds in 1932. Although imports rose from 197,000 pounds in 1932 to an estimated 950,000 pounds for the year, the increase is inconsiderable by comparison with the importation of more than fifteen million pounds in 1929. In other words, domestic industry is equipped to handle domestic consumption.

By trades the production of rayon was distributed as follows, with 1932 percentages in parentheses: hosiery 9 per cent (14 per cent); other knit goods 20 per cent (25 per cent); broad woven goods 67 per cent (57 per cent); narrow woven goods 2 per cent (2 per cent); miscellaneous 2 per cent (2 per cent).

It is estimated by *Textile World* that rayon production in the United States was not far short of

one-third of world production, estimated at 660,155,000 pounds. Leaders among other producing countries in 1933 were: Japan, 89,165,000 pounds; Great Britain, 84,300,000 pounds; Italy, 80,990,000 pounds; Germany, 76,000,000 pounds; France, 53,000,000 pounds; Holland 22,000,000 pounds; Switzerland, 12,000,000 pounds. No other producing country attained an output of 9,000,000 pounds. See CHEMISTRY, INDUSTRIAL OR APPLIED.

REBER, COL. SAMUEL, U.S.A., RET. An American soldier and aviation and radio pioneer, died in Washington, D. C., Apr. 16, 1933. He was born in St. Louis, Mo., Oct. 16, 1864. On his graduation from the United States Military Academy in 1886, he was commissioned a 2d lieutenant in the 4th Cavalry, being promoted to 1st lieutenant in the 9th Cavalry in 1892. Both these regiments were principally engaged in service against hostile Indians in Arizona. Assigned to the Signal Corps as 1st lieutenant in 1894, he was made major of the United States Volunteers on the outbreak of the Spanish-American War and participated as chief signal officer, with the rank of lieutenant-colonel, in the expedition under General Miles which landed in Puerto Rico, July 25, 1898. In 1900 he returned to the regular Army as a captain and after his promotion to major in 1903 served on several occasions as chief signal officer of the Second Corps Area, gaining considerable experience as an expert in the field of military telegraphy and telephony.

In 1914 Reber was made chief of the aviation section of the United States Army, which was then under the direction of the Signal Corps, and supervised the various international air meets held in the United States. His special interest was in the development of the dirigible. After the entry of the United States into the World War he directed, as a colonel of the Signal Corps, the set-up of the air service of the American Expeditionary Force in France, serving with the 28th and 88th Divisions and at the headquarters of the Second Army. This service consisted of observation, pursuit, day bombardment, night bombardment, and instruction squadrons. In addition there were balloon companies which operated the observation balloons and dirigibles.

On his retirement from the Army in 1919 Reber decided to enter the newly-developed radio field, being associated for a time with the Columbia Syndicate. In 1923 he joined the Radio Corporation of America as general foreign representative. Sent to Japan on his first assignment, he assisted after the earthquake of September, 1923, in re-establishing communication with the outside world by wireless and cable and in recognition of this service was decorated by the Emperor with the Order of the Rising Sun, fourth class. He attended the International Telegraph Conference in Paris (1925); the International Radiotelegraph Conference in Washington (1927); the World Engineering Congress in Tokyo (1929); the Fourth International Juridical Congress on Radio in Liège (1930); and the Second Conference of the International Technical Consulting Commission on Radio in Copenhagen (1931). At the time of his death he was vice-president of the Radio Corporation of America Communications, Inc.

RECEIVERSHIPS. See RAILWAYS.

RECLAMATION. In the United States the work of the Bureau of Reclamation had reached an impasse due to the exhaustion of available funds and the failure of the majority of the projects constructed to bring in any substantial pay-

ments on capital costs. With the advent of the Reconstruction Finance Corporation, however, a number of projects are again under discussion. In Wyoming, the Casper-Alcova project, involving an expenditure of \$22,700,000, has been approved but is being opposed by Colorado on the ground that a reasonable division of the waters of the North Platte must first be effected. Irrigation and work on the Rio Grande, as in the case of flood control with which many irrigation projects are linked (see FLOOD CONTROL), has been stimulated by the new agreements between the United States and Mexico. This development will be watched with interest. In the northwest, the Columbia River Basin developments, irrigation linked with power and navigation, promise to be of unusual interest. A number of other smaller projects will receive R. F. C. grants, which, however worthy from the viewpoint of relieving unemployment, will apparently add new acres to our overproduction of agricultural products.

Plans for the All-American Canal, which will carry water from the Boulder Dam to the Imperial Valley, have progressed slowly. As has been pointed out in previous YEAR BOOKS, this project is not only a great canal undertaking but involves unique problems due to drifting sands. It appears that differences in connection with the use of this water may at last be settled and construction should begin early in 1934.

SOIL EROSION. Technical publications have devoted much space during the past year to the problem of soil erosion and the rapid loss by erosion of many acres of previously fertile land. The removal of forests, overgrazing, and the consequent killing of grass protection, are blamed for much of this trouble. Indeed the Tennessee Valley Authority, recently set up by President Roosevelt, states that one of its major problems in the economic rehabilitation of the area under its control is that of arresting the rapid erosion by rain and streams, of the arable lands. This is a comparatively new but apparently vitally important phase of the reclamation problem.

ZUIDER ZEE. The completion of the great dike, by means of which Dutch engineers have reclaimed a large portion of the Zuider Zee area, was noted in the 1932 YEAR BOOK. It was found during 1933 that the phenomenally large flows of the rivers draining through this area caused severe scour of the sea bottom at the outlet sluices where this flow passes through the dike and into the North Sea. Accordingly, great mattresses, similar to those used to protect the dike itself, were placed on the sea bottom at the outlets.

PONTINE MARSHES. Since the time of Cæsar the marshy and malarial area south of Rome, through which the Appian Way passes on the first great tangent of its course to southern Italy, has been the scene of various attempts at reclamation and drainage. Mussolini, with his characteristic vigor, has now turned to this problem. Some 187,000 acres are involved and the cost is to reach \$35,000,000. Two objects are in view. First, the work affords employment for a number of Italy's war veterans. Secondly, a colonization scheme is proposed. Half the cost is borne by the Italian government, the remainder is to be paid by settlers under a system of long term bonds.

Canals for intercepting water courses entering the area from the hills, drainage canals which will operate by gravity, and others which will be fed by pumps, are required to make effective the net work of ditch construction now under way.

SALONIKA, GREECE. Faced with the problem of providing land for a million Greek and Armenian refugees expelled from Asia Minor by the Turks in 1923, the Greek government has undertaken to reclaim part of a fertile but swampy area of 600 square miles lying to the west of the City of Salonika. The total work is estimated to cost some \$18,000,000 and a contract was let to an American firm in 1925. About two-thirds of the project has been completed.

The Plain of Salonika is subject to inundation by the Axios and Aliakmon rivers. Plans provided for a main channel on the Axios and for various intercepting canals of which the so-called Circulatory Canal, which intercepts much of the Aliakmon drainage, are the principal features.

EGYPT. Civil Engineering (London) of January, 1934, carried an article under the title "Harnessing the Nile" in which earlier constructions on the Nile were reviewed and the function of the new Gebel Aulia project (see DAMS) was described. Briefly stated this dam on the Blue Nile, together with the increased storage provided by raising the Aswan Dam (now under way) will increase the reservoir supply of Egypt at low river stages by about one-third. The possibilities of drought and famine in the fertile valley of the Nile will thus be markedly decreased.

RED CROSS, THE AMERICAN NATIONAL. A semi-governmental organization, chartered by Congress in 1905 not only to furnish volunteer aid to the sick and wounded of armies in time of war but to continue and carry on a system of national and international relief in time of peace and to apply the same in mitigating the sufferings caused by pestilence, famine, fire, floods, and other great national calamities.

The nation's year of greatest need since the World War was also the year of most intense and varied activity of the Red Cross. In addition to extensive participation in unemployment relief through its chapters, the Red Cross completed in 1933 the distribution of 844,000 bales of cotton and 85,000,000 bushels of wheat, voted by Congress from Farm Board surpluses, and gave assistance to sufferers in 120 disasters. It is estimated that 25,000,000 persons in the United States received some form of Red Cross relief. This service extended into all but six of the 3098 counties of the country.

Under arrangement with the flour milling industry, a no-profit conversion fee was paid for the milling of flour, allowance being made for by-products. Shipping instructions to the various chapters were given the millers, who paid the transportation and were reimbursed in wheat or the proceeds from the wheat by the national organization. Under this arrangement the flour was received for local distribution without any cost to the community.

One barrel of flour as a 90-day supply for the average family was continued as a recognized adequate standard of relief. Distribution was by one of two plans: issuance of flour from a central warehouse or relief distribution depot to which the approved family came, or inclusion on regular grocery orders issued to local grocers, flour having been delivered to the grocer for this free distribution. At the end of the operation, 5,803,

000 families had received flour from the Red Cross.

As with flour, the Red Cross received the complete coöperation of the textile industry in its distribution of cotton. The terms of contract under which manufacturers sold goods to the Red Cross provided for payment in terms of cotton. Manufacturers assumed responsibility for delivery of goods to the local relief organization. Upon receipt of the manufacturer's invoice covering the cost and transportation, payment was made in raw cotton and later in money from the proceeds of the cotton under the second Act of Congress relating to this project. The terms of contract provided for claims adjustments because of differences of grade, weight, and staple.

At the end of the fiscal year, 5,465,410 families had been listed for clothing, and it was estimated that as much as 50 per cent of their yearly clothing requirements had been met. Thousands of sewing groups in Red Cross chapters had shared with factories 91,077,633 yards of cloth for the making of garments, while 4,085,390 dozen finished garments, 405,338 dozen sweaters, 1,995,511 blankets and comforters, and 1,110,867 yards of sheeting for the sick and aged had been purchased for distribution.

During the year 2834 chapters participated in unemployment relief activities. These activities included acting as family welfare agencies, enlargement of service to veterans, clothing production, food conservation and canning campaigns, hot school lunches, service to transients.

In the 12 months ending June 30, 1933, the Red Cross directed aid in 96 domestic disasters, and gave needed assistance in 21 disasters in insular territory and 3 disasters on foreign soil. The year's catastrophes included 44 tornadoes, 26 floods, 24 fires, and a long category of hailstorms, hurricanes, and explosions. The Red Cross was constantly busy, from the great fires at Ellsworth and Auburn, Maine, to the destructive earthquake in California, giving emergency relief and rehabilitation to victims.

The so-called "regular" services continued to meet growing needs. Nursing Service maintained 35,750 nurses in active status, ready for instant call. More than 700 Red Cross public health nurses were employed by the chapters. Home hygiene instruction by Red Cross authority reached 53,000 persons. In the year, 78,795 certificates were issued in life-saving and 66,354 in first aid. School children enrolled in the Junior Red Cross numbered 6,629,866. Senior membership totaled 3,701,866. There were 3701 chapters and approximately 10,000 branches.

The President of the United States is president of the Red Cross, which is governed by a board of 18, of whom six are appointed by the President. John Barton Payne is chairman of the board; and James L. Fieser, Ernest P. Bicknell, and James K. McClintock, vice-chairmen. National headquarters are in Washington, D. C., with branch offices in St. Louis and San Francisco.

REED COLLEGE. A nonsectarian, liberal college of arts and sciences for men and women in Portland, Ore., founded in 1911. The enrollment for the autumn term of 1933 totaled 432 students. The faculty numbered 35 with 13 graduate assistants. The productive funds for 1932-33 amounted to \$1,797,408, while the net income as of Aug. 31, 1933 was \$50,170. The library contained approximately 46,203 volumes. President, Norman Frank Coleman, LL.D.

REFERENDUM. UNITED STATES OF AMERICA. The year 1933 witnessed extensive use of the referendum, especially by the Federal government. For the first time in its history, Congress utilized the alternative method authorized by the Constitution in ratifying proposed amendments, viz. "by conventions" instead of, as theretofore, "by the legislatures." As the delegates composing these conventions were chosen mostly by popular vote, for the sole purpose of passing on the proposed 21st amendment, the elections virtually amounted to a referendum on the question. Indeed they were as much of a referendum as could ever be provided for such a proposal under the present Constitution; for in *Hawke v. State*, 253 U. S. 221, the Supreme Court held invalid an attempted submission of such an amendment to a popular vote. Some of the States, in legislating for a convention, provided expressly that its action should be determined by the result of the vote for delegates, the ballot containing the label, "for" or "against." This was criticized in some quarters as removing the convention from the category of "deliberative assemblages," to which, according to the decision just cited, it belongs. Most of the States, however, put the pressure on the candidates by requiring them to file written acceptances under one of the labels above mentioned. Some States also required a pledge and others an oath, from the candidate, to abide the result of the poll. One State penalized the failure to vote in accordance with instructions. Altogether it was much more of a popular referendum than the process by which the original Constitution was adopted; for the conventions which passed on the latter were chosen from a very limited electorate.

For the first time a proposal was offered of an amendment to repeal another amendment. Neither the Constitution nor any Federal legislation provided the details concerning the required conventions—how they should be called, who should compose them, or what procedure they should follow. All this was left to the States; although there was a considerable sentiment in Congress that it was a Federal rather than a State prerogative. As one result of the absence of any provision in the submitting resolution, the number of delegates and the mode of their election differed considerably. In New York there were 150 delegates; in New Mexico but three. Some States provided for local representation by districts or counties; many more elected delegates at large; while in a few the two methods were combined.

The States acted with unusual speed in setting up the necessary machinery. The proposal was finally submitted on February 20, when the House passed it, the Senate having done so on February 16. Barely six weeks later, on April 3, delegates were elected in Michigan. From that date until November 7, when the electors of six States voted, 39 in all chose conventions on the dates and by the vote indicated in the table on page 714.

While this was a referendum, it was by no means so nearly a popular one as the national election of the previous year. But the national referendum was not the only one which took place in the United States during 1933. The referendum is now in vogue in some 20 States and a number of them employed it for other purposes than to test public sentiment regarding the 18th amendment.

Alabama. On October 10 the electors of Birmingham voted against proposals that the city build

* Delegates to conventions in Wyoming and Nevada were chosen at precinct mass-meetings or county conventions; no popular vote.

^b Majority against repeal.

or acquire and operate municipal electric, heating, transportation, and water systems. The vote aggregated 16,619 as against 21,758 at the municipal election of the preceding year—a much better showing than on the repeal of the 18th amendment.

Arizona. At a special election on October 3, the voters adopted a constitutional amendment substituting execution by lethal gas in capital cases, for death by hanging, and two measures referred by the legislature—one requiring applicants for licenses to practice medicine to pass an examination in the basic sciences and the other, prohibiting, except under certain prearranged conditions, deficiency judgments in mortgage foreclosures. Proposals to extend the terms of State and county officers to four years were defeated.

Connecticut. On October 3, the voters in "small town" elections approved two amendments to the State constitution. One authorizes the governor to nominate judges of the court of common pleas (previously chosen by the legislature) avoiding an unseemly partisan scramble as at the last session. The other abolishes the "pocket veto" but allows more time for executive consideration of measures.

Kentucky. A proposal to authorize the general assembly to remove the State tax bill on real property was voted upon.

Louisiana. On February 27, the State supreme court, in *Wadkins v. State*, held invalid a referendum of the preceding year, at which the electors voted to repeal the "Hood act" for prohibition enforcement. The basis of the decision was that the legislature had no implied power to refer the measure and the constitution conferred none

expressly. But for over a century the courts of other States had held to the contrary (see Lobingier, *The People's Law*, 350).

Missouri. A bill to carry into effect the constitutional amendment adopted by the voters at the 1932 election, authorizing an old age pension law, was before the legislature at a special session.

Nebraska. Steps were taken to initiate a proposal to reduce the legislature, now consisting of 133 members, to 21. This accords with a plan long advocated by Senator Norris and will be voted on at the next general election.

New Mexico. In September the electors voted on six acts of the legislature whose operation had been suspended by referendum petitions.

New York. At the general election on November 7, no less than six proposals were submitted to the voters of the city and State. Four were proposed constitutional amendments, viz.:

(1) Authorizing the detail of two or more supreme court justices to dispose of proceedings to condemn land for public use, and thus to promote expedition and uniformity of result therein; (2) giving civil service preference to veterans not citizens of the State at the time of their enlistment. (This was intended to overcome the effect of Justice Cardozo's decision in *Matter of Bartholmess*, 231 N. Y., 435); (3) authorizing the construction of a State highway in the Adirondacks; (4) ceding the 53d St. barge canal terminal (found unsuitable) to the city. All of these except No. 2, which was vigorously opposed by the Citizens' Union and by the press, were adopted. "Emergency unemployment relief bonds" in the amount of \$60,000,000 were also voted by a heavy majority; but the proposed local law for New York City, providing for a charter commission, of 17, who would have been appointed by the retiring mayor, was rejected because, in the editorial language of the *New York Times*, "there will be no charter revision under Tammany auspices."

The municipal referendum in Utica, which resulted in the adoption of the city manager form of government, was frustrated by an order of supreme court Justice Dowling, restraining the mayor from carrying it into effect, on the ground that the city and county clerks' notices of the election were insufficient in form.

North Carolina. Voting on November 7, this State and its neighbor, South Carolina, were the only ones which rejected the 21st amendment to the Federal Constitution. Earlier in the year the general assembly authorized pari-mutuel betting on horse races, provided the votes of the locality should approve it in a referendum. McDowell county voted affirmatively on June 27, after an unsuccessful attempt to obtain an injunction to prevent the election being held. Its expenses, however, were defrayed by a private citizen, no appropriation having been made therefor.

North Dakota. On September 22 the electors voted upon two proposed constitutional amendments and three referred measures. The former were adopted, the first (rearranging the section relative to the county officers' elections) by a vote of 84,207 to 62,945; the second (relating to the reading of legislative bills) by a vote of 77,077 to 61,987. A proposed law for the "administration of insolvent banks" was rejected by a vote of 94,130 to 58,746; a proposed sales tax law by a vote of 113,807 to 41,241; and a proposal to permit the governor to remove any workmen's com-

pensation commissioner "without cause," by a vote of 94,429 to 50,819. Here again "intelligence and discrimination" appear; though the variance in the vote discloses that the electors are much more interested in some (e.g. fiscal) measures than in others.

Ohio. Besides the referendum on the 21st amendment, municipal elections were held in this State on November 7. That of Cincinnati was virtually a referendum on the proportional representation feature of city charter. The charterites polled about 51 per cent of the vote and retained a majority of one in the municipal council. At the same time a proposal to take over the local, privately owned gas and electric light plants was heavily defeated.

Rhode Island. On May 1, the electors, besides voting to repeal the 18th amendment (Federal), also approved a \$3,000,000 bond issue for unemployment relief.

Tennessee. By a vote of 4482 to 2362, the electors of Knoxville, on November 25, approved a bond issue of \$3,225,000 for a municipal power distributing system, to utilize Muscle Shoals power, supplied by the Tennessee Valley Authority, whose transmitting line is to pass within 25 miles of Knoxville. The vote is reported as much smaller than was expected.

Washington. A referendum on a State commission form of government was proposed in a resolution presented in the legislature on February 10.

GERMANY. This is one of the countries where popular legislation had its most extensive development during the post war period. Clauses providing therefor appeared in the provisional constitutions of no less than six German states as well as in that of the Reich as early as 1919 and all of the 17 states "adopted some form of the referendum in their permanent constitutions." That of Baden was submitted to the electors and required (sec. 23) popular approval of all proposed amendments. Again all permanent constitutions, except that of Lübeck, provide for the initiative, not only as to constitutional amendments but also as to ordinary legislation; and (save in Lübeck, Hamburg, and Mecklenburg-Schwerin) on the question of dissolving the legislature. Here, indeed, it has been most extensively used. Beginning with 1922, there have been few years when the electors were not called upon to vote as regards dissolution of a legislative body. In a number of these instances the desired result was accomplished through the initiative and, in that way, legislative deadlocks have been avoided. The question of consolidating states has been submitted to the voters of several. In Mecklenburg-Schwerin, the electors may initiate an appeal to the state *gericht* (court); but the attempt by this method to summon the ministry before the court in 1928, for alleged misappropriation of public funds, was unsuccessful.

Events of the present year show that, whatever may become of other democratic institutions, the referendum is to remain—at least in form. Hardly had the Hitlerites become seated in power when they began to prepare for an appeal to the electorate, for a show of popular support. The methods employed strangely resembled those of the Napoleonic plebiscites. But a single question was submitted, viz.:

Dost thou, German man or woman, approve the policy of thy Reich government and art thou ready to acknowledge this policy as the expression of thine own viewpoint and will and solemnly pledge thyself thereto?

Here the voter was given no opportunity to express his view on alternative proposals, such as the restoration of representative institutions. Again the campaign was conducted mainly on the government's behalf; open opposition was unsafe. Appeals to prejudice, fear, self interest, and perverted nationalism characterized the government's crusade, which closed with an appeal, evidently extorted, from the venerable President Von Hindenburg. Yet the result was not nearly so pronounced as in France under the Napoleons. In a very full turnout (also obviously stimulated) on Sunday, November 12, when the vote was taken, about 40,000,000 registered for the Hitler régime and about 3,500,000 against it. Said the New York Times, editorially:

The Hitler ticket received 92.8% of the total vote. But in January, 1919, in the elections for the Weimar National Assembly, the parties which Hitler has destroyed—Socialists, Centrists, Democrats, and People's—received 91.4% of the total vote. Thirteen years ago the Weimarites were just as strong in a free election as Hitler is now in a dragooned one.

A unique feature of this referendum was the polling of German citizens in other lands and even on shipboard. In Austria, the Baltic states, Danzig, Estonia, Italy, the Netherlands (where the former Kaiser's servants are said to have voted), Peru and Switzerland, not to mention others, Germans turned out *en masse* and in some of them "Nazi" emissaries had long been active.

ICELAND. America was not the only country to hold a referendum on repeal of the prohibition laws. In that far northern isle, where democratic institutions have flourished for 1000 years, the people voted in October on the same question, much as they used to in the althing, though in scattered localities instead of in one place. The result also was much the same—an overwhelming majority for repeal. It is reported that in one group of five villages, with a total of 1700, the vote for repeal was unanimous.

PORTUGAL. On March 19 a national plebiscite was taken on the proposed new constitution, under which the President and all members of the legislative body are to be chosen by popular vote, with the premier responsible to the former. Registered electors who refrained from voting, were, under a presidential decree, counted as approving the instrument.

REFORMED CHURCHES, THROUGHOUT THE WORLD HOLDING THE PRESBYTERIAN SYSTEM, ALLIANCE OF. An organization formed in London, Eng., in 1875 with the one great purpose, to encourage comity, cooperation, and efficiency in the accomplishment of Christian work. In 1933 there were 106 churches connected with the alliance. The members and adherents of the Presbyterian and Reformed churches throughout the world numbered about 60,000,000 including members of the Evangelical Church in Germany. The general secretary is the Rev. W. H. Hamilton of Edinburgh, Scotland, and the American secretary is the Rev. Henry B. Master, D.D., whose offices are at 1012 Witherspoon Building, Philadelphia. The Fourteenth Council of the Alliance was held in Belfast, North Ireland, in 1933. The Fifteenth Council will be held in Montreal, Canada, in 1937.

REFORMED CHURCH IN AMERICA. Composed originally of settlers from the Netherlands, and known until 1867 as the Reformed Protestant Dutch Church in North America, the denomination has since become largely intermixed with

elements from many other nationalities. Its doctrinal standards are the Belgic Confession, the Heidelberg Catechism, the Canons of the Synod of Dort, and the Westminster Catechism. The form of government is of the Presbyterian type.

In 1933 the denomination reported 728 churches, 851 ministers, 86,720 families, and 158,981 communicants. In the foreign mission field, which included China, India, Japan, Arabia, and Iraq, there were employed 166 missionaries. The 220 domestic missionaries were engaged principally among the Indians of Nebraska, Oklahoma, and New Mexico, and the mountaineers of Kentucky. Contributions reported in 1933 included \$3,050,541 for congregational expenses, \$596,035 for denominational benevolence, and \$128,695 for other benevolent objects.

The church colleges are Hope, at Holland, Mich.; Central, at Pella, Iowa; and Northwestern Junior, at Orange City, Iowa, while theological seminaries are maintained at New Brunswick, N. J., and Holland, Mich. The official paper is the *Christian Intelligencer*. The Rev. Edward Dawson, D.D., of Passaic, N. J., who was elected president at the 1932 session of the general synod, continued in that office, the 1933 session being omitted for economic reasons. Headquarters of the denomination are at 25 East Twenty-second Street, New York City.

REFORMED CHURCH IN THE UNITED STATES. This church, earlier known as the German Reformed Church in the United States, traces its origin chiefly to the German, Swiss, and French Protestants who settled in America early in the eighteenth century. Samuel Guldin, generally acknowledged to be the first German Reformed minister in the United States, preached at Germantown, Pa., in 1718, and John Philip Boehm held the first recorded communion service at Falckner Swamp, Oct. 15, 1725. Both in doctrine and polity the denomination is in hearty accord with the other Reformed and Presbyterian churches. The Heidelberg Catechism is the basis of religious doctrine and Christian nurture.

The denomination reported as of Jan. 1, 1933, 7 synods, 59 classes, 1705 congregations, 1335 ministers, 345,704 communicant members, and 353,844 Sunday school pupils. In the three foreign mission fields, Japan, China, and Iraq, there were employed 86 missionaries and 430 native workers. There were also 210 home missions with a communicant membership of 24,240, the work being conducted principally among the Hungarians, Bohemians, Japanese of California, and Indians of Wisconsin.

The church has theological seminaries at Lancaster, Pa., Dayton, Ohio, and Plymouth, Wis. The principal colleges are Franklin and Marshall, at Lancaster, Pa.; Ursinus, at Collegeville, Pa.; Cedar Crest, at Allentown, Pa.; Hood, at Frederick, Md.; Catawba, at Salisbury, N. C.; and Heidelberg University, at Tiffin, Ohio. The official periodicals are *The Messenger*, *The Christian World*, *The Kirchenzeitung*, and *The Outlook of Missions*.

At the twenty-fourth triennial session of the general synod, held in Akron, Ohio, in June, 1932, the Rev. Henry J. Christman, D.D., of Dayton, Ohio, was elected president. The Rev. J. Rauch Stein, D.D., has served as stated clerk since 1908. Headquarters are in the Schaff Building, Philadelphia, Pa.

REFORMED EPISCOPAL CHURCH. A denomination formed in December, 1873, by Bishop

George David Cummins and associated clergymen and laymen who had withdrawn from the Protestant Episcopal Church. It is liturgical and evangelical and possesses the historic episcopate. The two synods are New York and Philadelphia, and Chicago, the former comprising churches from New York to Virginia, the latter Illinois and Ohio. (The Synod of Canada was transferred to the Free Church of England in 1930.) Statistics are published triennially, following the meeting of the general council, which will convene for the twenty-eighth session in St. Paul's Church, Philadelphia, Pa., May 27, 1936. The church paper, the *Episcopal Recorder*, has been published continuously in Philadelphia for over 110 years. Its theological seminary, also in Philadelphia, was founded in 1886. The foreign mission field is the Lalitpur district in India, with over 200,000 inhabitants. The home mission field is among the Negroes in South Carolina, with 36 parishes and missions. The president is Bishop Robert Westly Peach, D.D., of Philadelphia, and the general secretary, the Rev. Howard D. Higgins, Th.M., of New York City.

RENSSELAER POLYTECHNIC INSTITUTE. A nonsectarian institution for the technical training of men in Troy, N. Y., founded in 1824. In 1933 there were 1367 students enrolled, as follows: Civil engineering, 303; mechanical engineering, 209; electrical engineering, 312; chemical engineering, 192; aeronautical engineering, 31; industrial engineering, 10; architecture, 60; biology, 45; business administration, 60; physics, 22; chemistry, 46; graduate students, 65; special students, 12. The teaching staff numbered 123. The productive funds amounted to \$8,700,000 and the income for the year to \$697,200. The gifts for endowment during the year amounted to \$206,000. The library contained 24,896 volumes and 24,527 pamphlets. President, Palmer C. Ricketts, E.D., LL.D.

REPARATIONS AND WAR DEBTS. The year 1933 was marked by the further disintegration of the reparation and war-debt structure erected by the peace treaties and by the war-debt settlements between the United States government and its debtors in Europe. The Lausanne Conference of 1932 had agreed upon terms for the final settlement of the Allied reparation claims upon Germany. But by the Gentlemen's Agreement signed at Lausanne July 2, 1932, the Allied powers pledged themselves not to ratify the reparation accord until they had reached a "satisfactory settlement" of their war debts to the United States (see 1932 YEAR BOOK). In the meantime the Hoover Moratorium was to be continued on German and non-German reparation and on the war debts which the various European governments owed one another.

No "satisfactory settlement" of the war debts owed to the United States government was reached during 1933. The five nations (France, Poland, Belgium, Estonia, and Hungary) which had defaulted on their war debt installments due Dec. 15, 1932 continued to default on the installments due June 15 and Dec. 15, 1933. On June 15, 1933, the list of defaulters was lengthened to include

Yugoslavia. Moreover, of the six governments paying war-debt installments in full on Dec. 15, 1932 (Great Britain, Czechoslovakia, Italy, Finland, Latvia, and Lithuania), five made greatly reduced "token" payments on their 1933 installments. Rumania, which had no installment due Dec. 15, 1932, followed the example of Great Britain and others in making a "token" payment on her June 15, 1933, installment. Finland was the only country owing war debts to the United States which paid in full during 1933. The United States received \$98,685,910 on total war-debt payments of \$123,682,421 due Dec. 15, 1932. On June 15, 1933, only \$11,369,592 was paid on a total of \$143,605,294. On Dec. 15, 1933, \$8,898,123 was paid on a total amount due of \$152,952,637. The accompanying tables show the amounts due and the amounts paid by the various debtor governments on June 15 and Dec. 15, 1933.

WAR-DEBT INSTALLMENTS: JUNE 15, 1933

Country	Amount due	Amount paid
Great Britain	\$ 75,950,000	\$10,000,000
France	40,738,568
Italy	13,545,438	1,000,000
Belgium	6,825,000
Poland	3,559,062
Czechoslovakia	1,500,000	180,000
Rumania	1,000,000	25,000
Estonia	284,322
Yugoslavia	275,000
Finland	148,592	148,592
Lithuania	132,091	10,000*
Latvia	118,961	6,000
Hungary	28,260
Total	\$143,605,294	\$11,369,592

* Payment deferred until June 23.

WAR-DEBT INSTALLMENTS: DEC. 15, 1933

Country	Amount due	Amount paid
Great Britain	\$117,670,765	\$7,500,000
France	22,200,926
Italy	2,133,906	1,000,000
Belgium	2,859,454
Poland	5,408,292
Czechoslovakia	1,682,813	150,000
Estonia	435,408
Finland	229,623	229,623
Lithuania	105,474	10,000
Latvia	180,705	8,500
Hungary	45,271
Total	\$152,952,637	\$8,898,123

The tabulation in column 2, prepared by Secretary of the Treasury Morgenthau at the request of the U. S. Senate, shows the status of the war debts as of Jan. 4, 1934. It gives the total indebtedness of the several debtor countries and the amount of principal and interest thereon unpaid between July 1, 1932, when the Hoover Moratorium terminated as far as the United States was concerned, and Jan. 4, 1934.

DEBT NEGOTIATIONS. The governments of Great Britain and the other countries which paid their war-debt installments on Dec. 15, 1932, notified the Washington government that they desired a readjustment of their obligations before another installment became due. President Hoover took up the question with President-elect Roosevelt. After a meeting between the two at the White House on Jan. 20, 1933, it was announced that the British government had asked for a discussion of the war debts and that the new Administration would be glad to take up the matter early in March. Some diplomatic manœuvring for advantageous positions marked the interim before Mr. Roosevelt's inauguration. Mr. Roosevelt discussed the debts

STATUS OF WAR DEBTS OWED UNITED STATES: JAN. 4, 1934

FUNDED INDEBTEDNESS, JULY 1, 1932—JAN. 4, 1934

Countries which have made payments in full:

Country	Total indebtedness	Amounts unpaid according to contract
Finland	\$8,726,645.63

Countries which have made payments on account of amounts due July 1, 1932—Jan. 4, 1934:

Country	Total indebtedness	Amounts unpaid according to contract
Czechoslovakia	\$ 165,283,195	\$ 2,852,898
Great Britain	4,636,157,358	176,120,246
Greece	32,583,338	1,379,690
Italy	2,008,103,288	13,687,010
Latvia	7,312,658	286,462
Lithuania	6,554,544	221,169
Rumania	63,871,783	1,048,750
Total	\$ 6,919,866,167	\$195,596,228

Countries which made no payments on account of amounts due same period:

Country	Total indebtedness	Amounts unpaid according to contract
Austria	\$ 23,757,934	\$ 84,767
Belgium	411,186,529	11,809,453
Estonia	17,784,695	989,985
France	3,960,772,238	82,308,312
Germany*	724,186,140	959,377
Hungary	2,051,938	114,628
Poland	222,560,466	12,317,829
Yugoslavia	61,625,000	525,000
Total	\$5,423,905,542	\$108,559,354

Total under funding agreements	\$12,352,498,355	\$304,155,582
--------------------------------	------------------	---------------

UNFUNDED INDEBTEDNESS

Country	Total indebtedness	Amounts unpaid according to contract
Armenia	\$ 20,813,416	\$ 20,813,416
Nicaragua	416,550	416,550
Russia	337,223,288	337,223,288
Total	\$ 357,953,254	\$357,953,254
Grand total	\$12,710,451,610	\$662,108,837

* Reichsmarks, converted at \$0.2382.

with Sir Ronald Lindsay, the British Ambassador, on January 29 at Warm Springs, Ga., and again on February 20 following the Ambassador's return from a hurried trip to London. The debt negotiations which had been formally opened between Secretary of State Hull and Ambassador Lindsay March 24, were continued by President Roosevelt and Prime Minister MacDonald during the latter's visit to Washington in the spring. At the same time the President discussed the position of the other European debtors with their special representatives sent to Washington for conferences on measures of world economic rehabilitation. No agreement was forthcoming, the negotiators apparently taking the view that it was impossible to isolate war debts from such other pressing questions as currency stabilization, tariffs, and other trade barriers.

Although the debt question had been excluded from the agenda of the World Economic Conference (q.v.) at American insistence, Prime Minister MacDonald in his opening address declared that war debts "must be dealt with before every obstacle to general recovery has been removed, and . . . must be taken up without delay by the na-

tions concerned." The spokesmen of Italy, Czechoslovakia, South Africa, and other nations joined in urging the United States to "fall in line" with the Lausanne reparation agreements and to postpone the June 15 payment until a settlement had been reached. These declarations had no direct effect upon the American debt policy, other than to provoke hostile replies in Congress. Accordingly the British government on June 13 notified Washington that it would make a partial payment of \$10,000,000 on June 15 "as acknowledgment of the debt pending a final settlement." The British government saved some \$2,800,000 on the \$10,000,000 debt payment by taking advantage of the U. S. Agricultural Adjustment Act under which the Treasury was authorized to accept silver at 50 cents an ounce in payment of war debts. The British accordingly transferred to the United States 20,000,000 ounces of silver purchased in India at a cost of about \$7,200,000.

The French note, reiterating that government's intention to default on the June 15 payment, stated that the reduction of French reparation claims upon Germany, made in the interests of world economic recovery, compelled the postponement of the installment due. It was made plain that France was ready to discuss a downward readjustment of the debt, as France did not intend "to break, unilaterally, engagements freely entered into. . . ." The other debtor countries followed the example of either Great Britain or France, as their interests dictated.

The Roosevelt Administration accepted the partial payments made as payments on account. The President set forth his attitude in a statement issued June 14 following receipt of the British note. He said that "inasmuch as the payment made is accompanied by a clear acknowledgment of the debt itself" he had "no personal hesitation" in saying that he did not characterize the resultant situation as a default. Regarding request for debt revisions, the government promised an early hearing but stated that Congress alone had power to revise existing agreements. To those governments which paid nothing and also to Italy, whose payment was considered "unsubstantial," the State Department sent sharp notes reproving their action.

With the June 15 installments disposed of, the war debt issue was not revived until September. Then a British delegation sailed for Washington in another effort to secure a revision. The delegation consisted of Sir Frederick Leith-Ross, economic adviser to the British government, Ambassador Lindsay, and T. K. Bewley, British Treasury expert. Negotiations continued in Washington from October 10 to November 7 when it was announced that no agreement had been reached. President Roosevelt issued a statement to the effect that the discussions had been discontinued due to the "unprecedented state of world economic and financial conditions" which made a permanent settlement of the British debt at that time difficult, if not impossible. Pending a clarification of the world situation such as to permit resumption of the negotiations, he announced his willingness to accept a payment of \$7,500,000 on account of the \$117,670,765 due by Great Britain on December 15. None of the other debtor nations entered into negotiations for revision in advance of the December 15 installment, on which date the United States received less than 6 per cent of the total amount due. Notes exchanged between the State Department and the debtor governments

were the same in tenor as those exchanged in connection with the June 15 installment.

REPEAL OF THE 18TH AMENDMENT.

For vote, see the different States under *Legislation*; PROHIBITION; UNITED STATES under *Administration*; REFERENDUM.

RÉUNION, RA'U'nyonn'. A French island colony in the Indian Ocean some 420 miles east of Madagascar. Area, 970 square miles; population (1931 census), 197,933. St. Denis, the capital, had 26,807 inhabitants in 1931; St. Paul, 22,679; St. Pierre, 22,048; St. Louis, 17,237. The chief port is Pointe-des-Galets. Sugar, rum, manioc, tapioca, vanilla, and essences are the principal productions. The island is administered by a governor assisted by a privy council and an elective council-general, and is represented in the French Parliament by a Senator and two Deputies.

RHODE ISLAND. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 687,497, as against 604,397 in 1920. Providence, the capital, had (1930) 252,981 inhabitants.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu	Value
Hay (tame) . . .	1933	35,000	44,000*	\$757,000
	1932	34,000	41,000*	726,000
Potatoes	1933	2,000	370,000	388,000
	1932	2,000	320,000	176,000
Corn	1933	10,000	410,000	308,000
	1932	9,000	351,000	176,000

* Tons.

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$7,953,881 (of which \$483,699 was for local education); for interest on debt, \$845,158; for permanent improvements, \$4,376,369; total, \$13,188,515 (of which \$3,990,095 was for highways, \$1,199,770 being for maintenance and \$2,790,325 for construction). Revenues were \$13,141,394. Of these, property and special taxes furnished 36.8 per cent; departmental earnings and compensation to the State for officers' services, 4.8; sale of licenses, 41.8 (in which was included a gasoline sale tax that produced \$1,906,243). Funded debt outstanding on June 30, 1932, totaled \$21,930,000, of which \$6,224,000 was for highways. Net of sinking-fund assets, the debt was \$16,806,957. On an assessed valuation of \$1,382,189,158 the State levied in the year ad-valorem taxes of \$1,208,656.

EDUCATION. All public schools were reported to have been kept open, despite the fiscal difficulties of 1933, for their full normal daytime terms of instruction. According to the *Journal* of the National Education Association, no teachers had been discharged for reason of retrenchment, up to December, although fewer new teachers had been employed. The reopening of evening schools was in prospect, and a programme of education for adults was in preparation at the end of the year.

The number of persons of school age in the State, as reckoned for January, 1933, was 210,871; their ages ran from 4 to 21 years. For the academic year ended June 30, 1933, the number of students in public schools was stated as 124,095; of those in private and parochial schools, as 33,844. Of the public-school pupils, those in pre-

elementary classes numbered 5781; in elementary grades, 50,430; in junior high schools, 20,496; in senior high schools, 13,112; in primary schools, 13,511; in grammar schools, 11,921; in mixed schools, 1861; in four-year high schools, 4607; in special schools, 1508; in vocational schools, 758. The year's current expenditures for public-school education totaled \$9,433,186. Salaries of teachers, principals, and supervisors averaged \$1628.41 for the year.

CHARITIES AND CORRECTIONS. The chief of the central functions of the State, with regard to the care and custody of persons, under the system in operation in 1933, rested in the Public Welfare Commission. See *NEW INTERNATIONAL YEAR BOOK*, 1932. The institutions under the commission, with their populations of Nov. 1, 1933, were: State Hospital for Mental Diseases, 2259; State Prison and Jail, 665; Reformatory for Men, 97; Reformatory for Women, 34; State Infirmary, 966; Sockanosset School for Boys, 181 (delinquents); Oaklawn School for Girls, 35 (delinquents); Exeter School, 603 (mental defectives); State Home and School, 320 (neglected and dependent).

LEGISLATION. The regular annual session of the General Assembly convened on January 3 and adjourned on April 21. It created a State convention of 31 delegates to be elected by popular vote on May 1, who should declare the will of the State as to the proposed repeal of the Eighteenth Amendment of the Federal Constitution. Traffic in beer of the alcoholic strength of 3.2 per cent was made lawful. In the course of the nation-wide banking panic emergency measures were passed that empowered the State bank commissioner, with the Governor's approval, to halt banking business by declaring bank holidays and also to permit State banks to operate under a system of limited withdrawals; authorization was given for the issue of a form of bank scrip, with a view to furnishing a substitute for currency, which had become scarce in the emergency.

To provide for the needs of the destitute unemployed an issue of \$3,000,000 of State bonds was authorized, subject to approval at a special election on May 1. The Legislature provided that the State, in addition to canceling previous loans of money for poor-relief to localities, and to remitting certain State tax claims, should grant localities funds from the proceeds of its loan, up to \$2,500,000 in total, on condition that the localities thus benefiting should match the grants with appropriations of their own. The marginal \$500,000 of the total of the loan was to constitute a special reserve for other grants to municipalities in extreme cases of need. Racetrack betting under the pari-mutuel system was declared lawful, but Governor Green vetoed the measure to that effect. Reductions to a total of about \$1,000,000 were reported to have been made in the budget, as compared with that of the year before.

POLITICAL AND OTHER EVENTS. At an election on May 1 there were chosen by popular vote 31 delegates, all in favor of the repeal of the Federal Eighteenth Amendment; the delegates met in State convention on May 8 and voted the State's adoption of repeal as provided by the superseding amendment submitted by Congress. The popular vote for repeal was more than 7 to 1. The banks of the State suffered relatively little in the nation-wide banking panic. Their operations were suspended without bankruptcy on March 4 by the State's declaration of a legal holiday and,

subsequently, by the Federal closure of all banks. All commercial banks had reopened by March 15 and some days later the coöperative banks opened without restriction.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Theodore Francis Green; Lieutenant-Governor, Robert E. Quinn; Secretary of State, Louis W. Cappelli; Attorney General, John P. Hartigan; Treasurer, Antonio Prince; Comptroller, Albert E. Godfrey.

Judiciary. Supreme Court: Chief Justice, Charles F. Stearns; Associate Justices, Elmer J. Rathbun, John W. Sweeney, John S. Murdock, J. Jerome Hahn.

RHODESIA, rô-dê-zhî-â or -zî-â. A British territory in south central Africa, reaching from the Belgian Congo and Tanganyika in the north to the Transvaal in the south. It is divided by the Zambezi River into Northern and Southern Rhodesia.

NORTHERN RHODESIA. The administration of this territory was taken over by the British Crown from the British South Africa Company on Apr. 1, 1924 according to the Order in Council of Feb. 20, 1924. With an area of some 288,400 square miles, mainly high plateau country, it had a population (1931) of 1,372,235 Africans and 13,846 Europeans. In 1932 there were 1,382,705 Africans and 10,553 Europeans. Livingstone is the capital.

Mining is the primary occupation, the total value of mineral production for 1932 was £2,562,489 of which copper represented £2,095,215; vanadium, £439,924; gold, £26,970. Tobacco, wheat, fruits, and maize are the principal agricultural crops. In 1932, imports were valued at £1,864,902 excluding specie and government stores; exports (excluding specie) totaled £2,675,248. In the same year, revenue amounted to £649,538; expenditure, £790,506; the public debt was £1,250,000.

The territory is administered by a governor assisted by a nominated executive council, and a legislative council. Governor in 1933, Sir R. Storrs.

SOUTHERN RHODESIA. Formerly under the administration of the British South Africa Company, this territory which consisted of Matabeleland and Mashonaland, voted in favor of responsible government in October, 1922 and on Sept. 12, 1923 was annexed to the British Crown. Total area, 150,344 square miles; total population (1931 census), 1,109,012 of whom 49,910 were Europeans. Salisbury, the capital, had 28,800 inhabitants; Bulawayo, 31,000.

The principal agricultural products were maize, tobacco, groundnuts, legumes, fodders, and fruits. In 1932 the export of citrus fruits amounted to 151,607 boxes. Livestock (1931): 2,582,500 cattle, 375,500 sheep, 67,900 swine. Mineral output in 1932 was: Gold, 574,000 fine ounces; silver, 115,000 fine ounces; coal, 483,000 short tons; asbestos, 16,000 short tons; chrome ore, 17,000 short tons.

In 1932, imports were valued at £4,272,127; exports, £5,387,251. There were 1348 miles of railway in operation, and a motor service system covering 1552 miles.

For the fiscal year ending Mar. 31, 1933, revenue amounted to £2,268,910; expenditure, £2,176,565; public debt, £6,547,690. Executive power is vested in a governor aided by an executive council, and an elected legislative council. Governor in 1933, Sir C. H. Rodwell. As a result

of the general election held in September, 1933 the Rhodesian party which had been in office 10 years was defeated by the Reform party headed by G. M. Huggins who became Prime Minister and Minister of Native Affairs. During 1933 the government purchased for £2,000,000 the mineral rights in Southern Rhodesia from the British South Africa Company.

RICE. The principal rice producing countries not including the United States, India, and China reported their yields for the crop year 1933-34 to the International Institute of Agriculture as follows: Japan 584,396,000 bu., Korea 161,727,000 bu., Formosa 74,779,000 bu., Italy 29,776,000 bu., and Egypt 6,014,000 bu. These estimates related to rough rice of 45 pounds per bushel. India reported the largest acreage, 74,994,000 acres, followed by Japan with 7,867,000 acres, and Korea with 4,160,000 acres. India produces annually about two and one-half billion bushels. Estimates on the large Chinese production are seldom available.

As reported by the Department of Agriculture the rice crop of the United States in 1933 was estimated at 35,619,000 bu. of 45 pounds rough. The rice area, 769,000 acres, was the smallest in 15 years. The average yield per acre was 46.3 bu., about the same as in 1932 and 1931. The average farm price, Dec. 1, 1933, was 77.9 cents a bushel giving the crop a total farm value of \$27,765,000 as compared with \$15,792,000 the preceding year when the corresponding average price per bushel was only 39.1 cents and the year's production 40,408,000 bu. The different rice producing States estimated their yields as follows: Louisiana 14,760,000 bu., Texas 7,473,000 bu., Arkansas 7,344,000 bu., and California 6,042,000 bu. The acreage harvested in these States was 369,000; 141,000; 153,000, and 106,000 acres respectively.

The rice and rice product exports of the United States for the fiscal year ended June 30, 1933, were recorded as 56,949,000 pounds of milled and brown rice, 41,809,000 pounds of rice flour, meal, screenings, and broken rice, and rough rice or paddy in quantity to make 7,295,000 pounds of cleaned rice. The imports for the same period consisted of 17,583,000 pounds of cleaned rice not including patna, 1,600,000 pounds of uncleaned or brown rice, 846,000 pounds of patna rice for use in canned goods and 1,639,000 pounds of rice flour, meal, and like products. Effective July 1, 1933, the entry into the United States of rice straw and rice hulls used for packing goods for shipment was prohibited to prevent the introduction of the Asiatic rice borer and other rice insects as well as foreign rice diseases.

RICE INSTITUTE. A coeducational institution for higher education in Houston, Texas, opened in 1912. The enrollment in the autumn of 1933 was 1317, and the faculty numbered 90. The plant equipment and productive funds of the institution were estimated at \$15,000,000, and the income from endowment for the fiscal year 1932-33 was in excess of \$600,000. The library contained approximately 110,000 volumes. President, Edgar Odell Lovett. Ph.D., Sc.D., LL.D.

ROADS AND STREETS. Outstanding among the events of the year affecting country roads and city streets was an allotment of \$400,000,000

of Federal money for the permanent improvement of through highways, minor rural roads and city streets. This amount, which was nearly an eighth of the \$3,300,000 appropriation under the National Recovery Act (see UNITED STATES under *Administration*), was the only portion of that fund allotted to a specified purpose. In addition, \$50,000,000 was allotted for road construction in national forests and parks, Indian Reservations, and in the Public Domain. The money must be expended in two years. It is divided between the 48 States, Hawaii, and the District of Columbia as follows: seven-eighths in accordance with the Federal Highway Act, which gives equal weight to population, area, and rural highway mileage, and one-eighth on the basis of population only, except that a minimum of $\frac{1}{2}$ of 1 per cent must be given New Hampshire, Vermont, Rhode Island, Delaware, the District of Columbia, and Hawaii. Unlike the previous Federal-aid for highway construction, the several States do not have to match dollar for dollar of Federal funds. Another difference is that instead of being confined to the Federal Highway System (see earlier INTERNATIONAL YEAR BOOKS), which consists of through highways entirely outside of incorporated places, not more than half the \$400,000,000 shall be so used, while not less than a fourth must go for extensions of the system into and through municipalities and not more than a fourth for secondary or feeder roads until provision has been made for the satisfactory completion of at least 90 per cent of the initial limiting mileage of the Federal-aid System, which is 7 per cent of the States' certified rural mileage. The Act reserves to the Federal authorities in control the "right to require the construction of roads desired by the U. S. Railroad Coordinator (see RAILWAYS), to provide adequate year-round highway service in place of branch-line railroad service proposed to be abandoned." The act also requires "that the maximum of human labor be used in lieu of machinery wherever practicable and consistent with sound economy and public advantage"—which means much or little according to the interpretation of the qualifying words. On the basis already stated, Texas leads with an allotment of \$24,244,000; New York has \$22,330,000; Pennsylvania, \$18,891,000; Illinois, \$17,571,000; California, \$15,607,000. Notwithstanding this huge amount for road and street construction the total sum available for the purpose was less in 1933 than in immediately preceding years, taking into account the shrinkage in State and local appropriations and bond issues (see detailed analysis, Annual Report of the Association of State Highway Officials). One cause for this is large diversions to other purposes than highway construction of funds previously devoted to highways, particularly motor vehicle licenses and gasoline taxes. California, however, by a State-wide referendum vote on June 27, voted 3 to 1 against diverting from highway purposes \$17,000,000 of gas tax funds expected in the next two years. About the same time the Circuit Court of Sangamon County, Ill., enjoined the diversion of highway funds to other purposes, as an impairment of contract. Aside from the \$400,000,000 already mentioned, Federal-aid appropriations for State highway construction for the fiscal years 1917 to 1933 inclusive totaled \$1,274,000,000, besides which \$125,000,000 was appropriated for roads in the National Forests and other public lands. Of a total highway mileage of over 3,000,000 on Jan. 1,

1933, about 740,000 had been surfaced more or less permanently. The remainder was classed as "graded or unimproved." This does not include roads and streets within incorporated places. See annual and monthly reports of the U. S. Bureau of Public Roads for details of Federal-aid to highway construction. New books include Brown and Connor, *Low Cost Roads* (Chicago); Watson, *Street Traffic Control* (London).

ROBERTSON, FIELD-MARSHAL SIR WILLIAM (ROBERT), FIRST BARONET. A British soldier, died in London, Feb. 12, 1933. Born at Welbourne, Lincolnshire, Jan. 29, 1860, he enlisted in 1877 in the 16th Lancers, receiving his first commission as a lieutenant of the 3d Dragoon Guards, then stationed in India, in 1888. After serving as railway transport officer in the Miranzai and Black Mountain expeditions of 1891 he was assigned to the Intelligence Branch at Simla as staff captain and for his bravery with the Chitral Relief Force in 1895 was decorated with the Distinguished Service Order. On his return to England in 1897 Sir William attended the Staff College at Camberley (the first officer who had risen from the ranks to be admitted) and after his graduation the following year joined the Intelligence Department of the War Office. When Lord Roberts was made commander-in-chief of the British Forces in South Africa on the outbreak of the Boer War he was attached to his headquarters staff as deputy assistant adjutant-general. He not only participated in various battles but accompanied Roberts on his occupation of Bloemfontein and Pretoria.

Recalled to the Intelligence Department of the War Office in 1901, Robertson served during the next six years as assistant director of military operations, being promoted in 1903 to the rank of colonel. On his transfer to Aldershot in 1907 he was made assistant quartermaster-general and brigadier-general of the general staff. Three years later, when appointed commandant of the Staff College at Camberley, he was advanced to major-general. The imminence of the World War, however, obliged him in October, 1913, to return to the War Office as director of military training, but his services at the Staff College were recognized by his being dubbed Knight Commander of the Royal Victorian Order.

On the outbreak of the World War Robertson went to France as quartermaster-general of the British Expeditionary Force and in January, 1915, was named Chief of the General Staff, with the rank of lieutenant-general. Promoted to general in December of that year, he returned to London as Chief of the Imperial General Staff, directing in that capacity the British military operations on all fronts. In opposition to Lloyd George, Kitchener's successor as Secretary of State for War in the Asquith coalition cabinet and later Prime Minister, Robertson insisted on the concentration of the Allied forces against Germany on the Western Front, which he considered the most strategic point for winning the war, rather than their dispersion to outlying theatres like Mesopotamia, Palestine, and the Balkans so as to defeat the lesser of the Central Powers, Turkey and Austria. On account of his resentment of Lloyd George's interference in this respect he was relieved of his command after the establishment of the Supreme War Council in November, 1917, Sir Henry Wilson being named Great Britain's representative on the inter-Allied general staff. The early success of the German

offensive in the spring of 1918 substantiated his belief in the concentration of forces at a decisive point.

Transferred to the eastern command in February, 1918, Robertson succeeded Sir John French in June of that year as commander-in-chief of the troops in Great Britain. His last command was that of the British Army on the Rhine from April, 1919, to March, 1920. Created a baronet in 1919 and a field-marshal in 1920, he published after his retirement his autobiography, *From Private to Field-Marshal* (1921), and *Soldiers and Statesmen, 1914-1918* (1926). The latter was a bitter indictment of Lloyd George and members of his war cabinet. In his last years Sir William was an ardent peace advocate, declaring on his last lecture tour of the United States in 1931 that Europe was ready for peace and that it was the duty of statesmen to show the way. He was the first and only soldier who rose from trooper to the highest rank in the British army.

ROBINSON, JOSEPH ARMITAGE, A British theologian, died at Upton Noble, Somersetshire, May 7, 1933. Born about 1859, he was educated at Christ's College, Cambridge, of which he was fellow from 1881 to 1889, honorary fellow after 1905, and high almoner after 1906. Ordained a deacon in the Church of England in 1881 and a priest the following year, he served as vicar of All Saints Church, Cambridge, during 1888-92, prebendary of Wells Cathedral during 1894-99, and rector of St. Margaret's, Westminster's "lady-in-waiting," during 1899-1900. Appointed canon of Westminster Abbey in 1899, he succeeded to the deanery in 1902 and in this capacity arranged the coronation ceremonies of Edward VII, held on August 9 of that year. In 1911, previous to the coronation of George V, he was transferred at his own request to Wells Cathedral as dean. He resigned this incumbency in March, 1933.

Dr. Robinson's most scholarly research was done during 1893-99 when he was Norrisian professor of divinity at Cambridge. An authority on the Church of the second and third centuries, he wrote *The Philocalia of Origen* (1893); *Euthaliana* (1895); *Unity in Christ* (1901); *The Study of the Gospels* (1902); *Commentary on the Epistle to the Ephesians* (1903); *Commentary on the Athanasian Creed* (1905); and *Barnabas, Hermas, and the Didache* (1920). Among his devotional works were: *Some Thoughts on the Incarnation* (1903); *The Vision of Unity* (1908); *The Advent Hope in St. Paul's Epistles* (1911); *Holy Ground* (sermons, 1914); and *Giving and Receiving* (1928). Dr. Robinson's later works were of an antiquarian nature: *The Saxon Bishops of Wells* (1919); *St. Oswald at Worcester* (1919); *Apostolic Teaching of St. Irenaeus* (1920); *The Times of St. Dunstan* (1923); and *Two Glastonbury Legends* (1926). In 1932 he was created a Knight Commander of the Royal Victorian Order.

ROCHESTER, UNIVERSITY OF. A nonsectarian institution of higher education for men and women in Rochester, N. Y., founded in 1850. It consists of three schools—the college of arts and sciences, composed of a college for men and a college for women; the Eastman School of Music; and the school of medicine and dentistry. A school of nursing is maintained also in conjunction with the Strong Memorial Hospital, the property of the university. The enrollment for the autumn sessions of 1933, exclusive of extension division and special music students, totaled 1812, distributed as follows: Arts and science,

1091, of whom 663 were men and 428 women; music, 423; medicine and dentistry, 181; graduate students, 217. For the summer session, 400 were enrolled in the arts college and 262 in the music school. There were 1001 in the extension division. The faculty had 340 full-time members. The productive funds as of June 30, 1933 amounted to \$53,383,606, and the total resources, including land, buildings, equipment, and endowment, were approximately \$82,816,000. The construction of Cutler Union was completed during the year on the campus of the college for women at a cost of \$600,000. President, Rush Rhees, D.D., LL.D.

ROCKEFELLER, CENTER. See PAINTING.

ROCKEFELLER FOUNDATION, THE. An institution chartered in 1913 "to promote the well-being of mankind throughout the world." Its plan of work provides for cooperation toward the advancement of knowledge in the fields of public health, the medical sciences, the natural sciences, the social sciences, and the humanities. For work in these fields the Foundation during the year 1933 expended approximately \$15,000,000.

Public Health. Appropriations for the advancement of public health were given for research on yellow fever, malaria, hookworm disease, tuberculosis, undulant fever, yaws, and diphtheria; for the organization or maintenance of essential services of State and National health departments; toward the advancement of the work of the Health Organization of the League of Nations; and for the development of schools and institutes of hygiene and public health. The following institutions were included among those receiving the larger grants: the Institute of Hygiene and Public Health, Rome; the Institute of Hygiene and the Health Center, Bucharest; the London School of Hygiene and Tropical Medicine; the State Institute and School of Hygiene, Warsaw; the Institute of Public Health, Tokyo; and the School of Public Health, Zagreb, Yugoslavia.

The Medical Sciences. In the field of medical science the following institutions or organizations received grants for maintenance, for the development of specific departments, for endowment, or for special research projects: the China Medical Board, Inc., for maintenance of the Peiping Union Medical College; the University of Utrecht, for a building for the Institute of Comparative Physiology; the Johns Hopkins University Medical School, for research in the department of psychiatry over a four-year period; the Harvard Medical School and the Massachusetts General Hospital for development of teaching and research in psychiatry; the Washington University School of Medicine, for investigative work in neurophysiology over a five-year period; Dalhousie University, for development of teaching in public health and preventive medicine over a five-year period; and the University of Rochester, for special research in dental pathology. Among the other institutions aided were the University of Montreal, for development of the laboratories of its faculty of medicine; Yale University, for research in dental pathology; Albany Medical College, toward the organization of extension in medical education; Shantung Christian University Medical School, Tsinan, China, toward maintenance; University College, London, for building and equipment of laboratories of the department of physiology; and the University of Lyons, toward the maintenance of the teaching facilities of its faculty of medicine. The National Research Coun-

cil received a grant for the work of its Committee for Research in Problems of Sex; the Chinese Medical Association, toward its expenses over a period of three and a half years; Harvard University, for field studies of its Infantile Paralysis Commission; Columbia University, for studies of the common cold; and the Central Institute for the Deaf, St. Louis, for research work in neurology. The medical profession in the Soviet Union was aided through the subsidizing of medical journals, distributed under the direction of the Narkomsdrav.

The Natural Sciences. In the natural sciences, new appropriations were made toward research programmes, maintenance, apparatus and equipment, or general development, to the following universities, scientific organizations, and institutions: the California Institute of Technology, for research in chemistry and in biology; the University of Chicago, for research in biology; the National Research Council, for expenses in connection with editing *Biological Abstracts*, for a survey by the Committee on Effects of Radiation upon Living Organisms, and for a fund in aid of research to be used for individual grants; the Roscoe B. Jackson Memorial Laboratory, Bar Harbor, Maine, for research in mammalian genetics; the American Mathematical Society, for publication of results of scientific research, over a period of two years; the Marine Biological Institute, Amoy, China, toward its general budget over a three-year period; Lingnan University, Canton, China, for emergency aid in its departments of science; the Department of Scientific and Industrial Research, Dominion of New Zealand, for the work of the Apia Observatory, Western Samoa; the Massachusetts Institute of Technology, to continue aerological research; and the Jungfrauoch Scientific Station, for construction and equipment.

The Social Sciences. A large proportion of the Foundation's grants in 1933 in the field of the social sciences had direct or indirect bearing on the current economic situation and the various factors involving in improving conditions in the United States and abroad. Appropriations were made to the Social Science Research Council for support of the Commission of Inquiry on Nationalism and Internationalism, a study of unemployment reserves and relief, a study of the Tennessee River Valley under supervision of the Southern Regional Committee, and expenses of the Advisory Committee on Federal Statistical and Informational Services. The Brookings Institution, received a grant for studies of the government's financial policy and of the administration of the National Industrial Recovery Act and the Agricultural Relief Act of 1933. In Europe the Institute of Economic and Social Research of Paris was aided in its establishment and maintenance for a period not exceeding seven years, while the Secretariat of the League of Nations was requested to promote, over a five-year period, analytical research work of its Financial Section and Economic Intelligence Service. Appropriations were also made for statistical studies of relief cases under supervision of the Federal Emergency Relief Administration; to the American Municipal Association, for advisory service to municipalities; to Columbia University, for a study of the effects of sales taxes in the United States; to the University of California, for a field study of California barter groups; and to the League of Nations, toward a study of in-

ternational taxation problems, by its Fiscal Committee. In New York City the Committee on Use of Leisure Time, under the National Recovery Administration, received aid for public hearings; and the Industrial Relations Counselors, Inc., for a study of the administrative procedure of unemployment insurance.

For the advancement of knowledge in the social sciences, contributions were made toward the maintenance or research programmes of the following schools or departments of universities: to Columbia University, for research and field training in anthropology; to Western Reserve University, toward support of its School of Applied Social Science; to the University of California, toward the research programme of its Institute of the Social Sciences; to the University of Hawaii, for support of its programme in racial research, over a three-year period; to the University of Stockholm, toward its general social science research programme and for the development of the social science library; to the University of Louvain, Belgium, for development, over a seven-year period, of its organization for business cycle research; and to the London School of Economics and Political Sciences, for a general research fund.

Grants for research or maintenance were also made to the following institutions or organizations: to the Canadian National Committee for Mental Hygiene, for a programme of research in the social sciences and mental hygiene, over a period of four and a half years; to the Institute of Pacific Relations, for the work of its American Council; to the Institute of Economics and History, Copenhagen, for its general budget over a three-year period; to the Economic Foundation, for completion and publication of an international study of the history of prices; and to the American Geographical Society, toward the preparation and publication of a map of Hispanic America on the scale of 1:1,000,000.

The Humanities. In the field of the humanities, the Foundation made appropriations during 1933 to the following organizations or institutions: to the Oriental Institute, University of Chicago, for research and field work; to the American Council of Learned Societies, toward the development of a training centre for Far Eastern studies at the Library of Congress, and for administration and support of research projects; to the University of North Carolina, for creative work in the drama; to the Orthological Institute, London, for research in the Chinese and Japanese languages; to the International Committee of Historical Sciences, toward general expenses and the issuing of an International Bibliography of Historical Sciences; and to the Library of Congress, for the accumulation of source materials in connection with American history.

The executive officers of the Foundation in 1933 were: John D. Rockefeller, Jr., chairman of the board of trustees; Max Mason, president; Thomas B. Appleget and Selskar M. Gunn, vice-presidents; Alan Gregg, M.D., director for the medical sciences; Warren Weaver, director for the natural sciences; Edmund E. Day, director for the social sciences; David H. Stevens, director for the humanities; Frederick F. Russell, M.D., director of the International Health Division; Norma S. Thompson, secretary; Lefferts M. Dashiell, treasurer; George J. Beal, comptroller; and Thomas M. Debevoise, counsel. Offices are maintained at 49 West 49th Street, New York City.

ROCKWELL, ALPHONSO DAVID. An American physician, died at Flushing, N. Y., Apr. 12, 1933. Born at New Canaan, Conn., May 18, 1840, he received his M.D. degree from the University and Bellevue Hospital Medical College in 1864 and served during the latter part of the Civil War as assistant surgeon with the 6th Ohio Cavalry, attaining the rank of major. On establishing his practice in New York City about 1868, he was one of the first to use electricity in medical treatment, especially in cases of paralysis and epilepsy, publishing his views in *Electricity as a Means of Diagnosis* (1869), *Electrolysis and Its Application to the Treatment of Disease* (1871), and *Relation of Electricity to Medicine and Surgery* (1879). He held also from 1888 to 1892 the chair of electro-therapeutics at the New York Post-Graduate Medical School and Hospital and from 1904 until his retirement in 1912 was neurologist and electro-therapeutist at the Flushing Hospital.

Dr. Rockwell was a member of the commission of three appointed by Prison Commissioner Gerry to investigate and report to the New York State Legislature "the most humane and approved method of carrying into effect the sentence of death in capital cases." After experimentation on several dogs, four calves, and a horse in Edison's laboratory at West Orange, N. J., there was devised the electric chair which was used for the first time at Auburn State Prison on Aug. 6, 1890, when William Kemmler of Buffalo was electrocuted for murdering his sweetheart. The method of electrocution was later adopted by such States as New Jersey, Pennsylvania, Massachusetts, Ohio, Indiana, Nebraska, Kentucky, and North and South Carolina. Dr. Rockwell was president of the American Electro-Therapeutic Association in 1904. In 1920 he published his autobiography, *Rambling Recollections*.

ROMAN CATHOLIC CHURCH. The solemnities attending the celebration of the Holy Year Jubilee—the third Jubilee during the reign of Pius XI—the promulgation of a number of Bulls, Encyclicals, and letters, with several beatifications and canonizations were marked events of the year at Rome. The first of the manifestations on the part of the Pontiff was the Bull *Quod Nuper* published on January 6, in which the Holy Year Extraordinary was officially promulgated and the conditions prescribed for gaining the indulgences. On March 26, the Bull of announcement of the Holy Jubilee was again read in the entrances of the Patriarchal Basilicas, and on April 1, at noon, the Holy Door of the Vatican Basilica was opened by the Pope with all the solemnities of that most imposing rite. On April 6, he descended into the Vatican Basilica to assist at the Holy Hour of reparation, thus associating himself with the faithful who had been asked to do likewise through a letter to the Cardinal Vicar. The next day he again descended into the Vatican Basilica to make his first Jubilee visit. During Holy Week the Pope renewed the ceremonies which, since 1870, had been celebrated in the Sistine Chapel. Speaking to the Universal Church the Encyclical *Dilectissima Nobis*, published under the date of June 3, was a protest against the anti-Catholic laws voted in Spain. It denounced the evil work Spanish legislators have done not only against religion but also against the traditions of their country and the welfare of their people. At the Consistory on March 13, the Pope rejoiced at the development of the Hierarchy both in the countries

where it is regularly constituted, and in those of the Missions; he expressed his joy at the development of Catholic Action. He reviewed the principal world events of the last two and one-half years with more than customary outspokenness and vigor. He referred to "the critical international situation," deploring "the roar of fratricidal arms" both in the Old and in the New World and expressed his distress over the economic crisis which has thrown millions out of work, affording enemies of political, social and religious order an opportunity to speculate on their suffering. He was especially emphatic in his condemnation of "unjust nationalism" and distrust among nations. The events in Russia, Mexico, Spain, and some states of Central Europe, the Pope declared, showed how insidious was the iniquitous propaganda of the "enemies of God," actuated by violent hate against religion and the Catholic Church because they see in it the pillar of everything against which they are fighting. Six new Cardinals were created and two others "reserved in petto." The other Consistories during the year were those of October 16 and 19, and of November 10, for the consultation of the Sacred College and of the Episcopate for the canonization of the Blessed Bernadette Soubirous and of the Blessed Joan Antida Thouret.

On January 6, he wrote to the Polish Episcopate rejoicing at the celebration of a Study Week for the Reunion of the Dissidents from the Catholic Church. On January 13 he wrote to Henry de Verges, President General of the Conferences of St. Vincent de Paul, felicitations on the celebration of the first centenary of the foundation of this excellent work of charity. On March 12, he sent the General of the Jesuits the Brief *Paterna Caritas* with which he confirmed once more the Society of Jesus, after the adaptation it had made of its rules to the new prescriptions of the Codex of Canon Law.

The Pope's annual Christmas address on December 23 was made before the College of Cardinals and the Roman prelates. "Prayers" are needed in world affairs, he said, and: "Money is needed to wage war." Severely criticizing the sterilization programme of Germany, the Pope said the inconsistency of such practices in the light of religious teachings was clearly set forth in the papal decree of 1931 and in the encyclical "*Casti Connubii*." Declaring that the international situation is bound up "with uncertainties and distrust by the clashing interests of fruitless negotiation," the Pope said the best comment he could offer is, "nobody knows" what the outcome will be.

Five beatification ceremonies were held in the Vatican Basilica: April 30, that of the Blessed Mary of St. Euphrasia Pelletier, Foundress of the Sisters of the Good Shepherd; May 7, that of the Blessed Vincenza Gerosa, co-foundress of the Sisters of Charity of Brescia; May 14, that of the Blessed Gemma Galgani; May 21, that of the Blessed Joseph Pignatelli, of the Society of Jesus; May 28, that of Sister Catherine Laboure, who received the revelation of the "Miraculous Medal"; June 4, the Canonization of St. Andrew Hubert Fournet, Founder of the Daughters of the Cross, and on December 8 of Bernadette Soubirous, to whom the Virgin appeared at Lourdes.

On July 10 the Pope left Rome, and paid a visit—the first paid by a Pope since 1870—to Castel

Gandolfo, the beautiful summer estate by Lake Albano, 18 miles from the Eternal City, and on September 7 he again left the confines of Vatican City to visit Castel Gandolfo, where he gave some personal directions as to the work there and inspected the new site of the Vatican Observatory. The signing of the Lateran Treaty should produce a "luminous future," Pope Pius said on February 11 in ceremonies inaugurating the world's first ultra short wave telephone station as a part of the celebration marking the fourth anniversary of the treaty and the eleventh year of the Pope's reign. After speaking, the Pope posed for the first time for the talking movies. He conversed for six minutes before the cameras.

On December 17 the Pontifical Academy of Science awarded Prof. George Birkhoff of Harvard University the first prize, \$800, in a mathematical competition for a paper dealing with a system for the solution of differential equations. The award was made during exercises inaugurating the new Pontifical Hall of Science, at which Pope Pius declared that the Church "not only never has feared scientific truth but has always been its herald." He drew an allegorical picture of the Three Wise Men of the East paying homage to Christ in support of his contention that the Church and science have always been harmonious.

Diplomatic activity increased during the year. On March 11 the ratifications of the Concordat were concluded between the Holy See and the State of Baden. On June 5, the Concordat between the Holy See and the Austrian Republic was signed. On September 10, the ratifications of the Concordat between the German Reich and the Holy See were exchanged. The pontificate of Pius XI in 12 years has this record: 1922, Concordat with Latvia; 1924, Concordat with Bavaria; 1925, Concordat with Poland; 1927, Concordat with Lithuania; 1928, *Modus Vivendi* with Czechoslovakia and Conventions with Portugal for the Dioceses of India; 1929, the Lateran Pacts (Treaty, Concordat and Financial Convention); Concordat with Rumania, Concordat with Prussia; 1933, Concordat with Baden; Concordat with the German Reich; Concordat with Austria; institution of diplomatic relations between the Republic of Estonia and the Holy See. After an interval of three years a British Minister, Sir Robert H. Clive, was appointed to the Holy See in March.

Rome was crowded all during the year with Holy Year pilgrims from all over the world. There were many American pilgrims among them. On April 12, in an audience to fifty, headed by Michael Williams, the Pope said he was glad to give them a special welcome inasmuch as they were the first pilgrimage from the United States. Mr. Williams presented a letter signed by Cardinal Hayes of New York, Archbishop Curley of Baltimore, and several hundred prominent Americans, including Protestants, asking the papal blessing for the Maryland tercentenary. The Pope said he would be glad to aid the commemoration, and particularly thanked the Protestant signers for their coöperation. Taking occasion July 19 again to bless America, he described it as a most important part of the world, where the Church has such high interests and sees so much promise for the future. He gave this blessing while receiving in audience a group of 65 pilgrims from the Archdiocese of New York and the Diocese of Albany. He praised the eloquent demonstration of filial devotion given by the

Americans in making the pilgrimage notwithstanding the particularly difficult times. Forty pupils of New York Jesuits were received July 22. A blessing on the United States Navy was imparted on August 17 by the Pope after he had received in audience 80 cadets from the schoolship *Annapolis*. On December 4 he commissioned Postmaster General James A. Farley to take back to the United States "blessings and best wishes for President Roosevelt and for the entire American people, Catholic and non-Catholic." The Postmaster General received a gold Holy Year medalion as Pope Pius's gift. The Pope gave Mrs. Farley a rosary and three medallions for the Farley children.

THE CARDINALS. Cardinal Andrew Francis Fruhwirth, Chancellor of the Roman Church and former head of the Dominican Order, died February 9. He was the first non-Italian to be appointed to a diplomatic post, viz., Nuncio at Munich (December, 1927). Cardinal Bonaventura Cerretti, former auditor of the Apostolic Delegation at Washington, died May 8; and Cardinal Raphael Scapinelli, also Chancellor, died September 17. At the Consistory of March 13 the Pope created six cardinals, the first creations in more than two years: Pietro Fumasoni-Biondi, Apostolic Delegate at Washington; Jean Marie Rodrigue Villeneuve, Archbishop of Quebec; Angelo Maria Dolci, Apostolic Nuncio to Rumania; Theodore Innitzer, Archbishop of Vienna; Elia Della Costa, Archbishop of Florence, and Maruillo Fossati, Archbishop of Turin. The year closed with a membership of 55 in the Sacred College: 28 Italians and 27 non-Italians.

THE HIERARCHY. Monsignor Amleto G. Cicognani was appointed Apostolic Delegate to the United States March 20, and consecrated Titular Archbishop of Laodiosa, in Rome, April 23; The Most Rev. Rudolph A. Gerken, Bishop of Amarillo, Tex., was made Archbishop of Santa Fe, New Mexico, June 5. These new bishops were appointed: Dr. Elmer Ritter, Titular Bishop of Hippo and Auxiliary of Indianapolis, February 8; Mgr. John A. Duffy, Bishop of Syracuse, N. Y., April 26; Mgr. Philip Scher, Bishop of Monterey, Fresno, May 1; Dr. Ralph L. Hayes, Bishop of Helena, June 27; Dr. Gerald Shaughnessy, Bishop of Seattle, July 2; Rev. Charles H. Le Blond, Bishop of St. Joseph, Mo., July 24; Archbishop Edward Mooney, then Apostolic Delegate to Japan, was appointed Bishop of Rochester, N. Y., August 27; Mgr. James A. Walsh, Founder of the Maryknoll Missionaries, N. Y., was named a titular bishop, April 25; Mgr. James Ryan, Rector of the Catholic University, was named titular of Moora, August 22; Mgr. Bernard J. Kevenhoerster, O.S.B., was made first Prefect Apostolic of the Bahama Islands, November 20; Rev. James T. G. Hayes, a New York Jesuit, was made Bishop of Cagayan, Philippine Islands, March 12, and Joseph W. Trudel of Chicago, a White Father, Vicar Apostolic of Tabora, Central Africa, April 29. On December 21 the Pope created two new Canadian dioceses—Saskatoon and St. Johns, in Quebec. Monsignor Gerard Murray of Victoria, B. C., was appointed bishop of the Saskatoon diocese. Monsignor Philippo Bernardini of the Catholic University was appointed Apostolic Delegate to Australasia February 21. The annual general meeting of the Bishops of the United States was held at the Catholic University of America on November 15 and 16. At this meeting, the Cardinals, Archbishops, and Bishops from

all sections of the country received the reports of the Administrative Committee, N.C.W.C., and discussed matters of interest to the Church in the United States to-day. The Administrative Committee issued a "Statement on the Present Crisis" which reviews economic and social conditions and was signed by Archbishop Edward J. Hanna of San Francisco, chairman of the committee, Archbishop John T. McNicholas, O.P., of Cincinnati, Archbishop John G. Murray of St. Paul, Bishop Thomas F. Lillis of Kansas City, Bishop Joseph Schrembs of Cleveland, Bishop Hugh C. Boyle of Pittsburgh and Bishop John F. Noll of Fort Wayne. A renewed protest against "the sustained persecution of the Church in Mexico" was made in a statement by the chairman of the Administrative Committee on behalf of the Catholic Bishops of the United States. The protest asked "all our fellow citizens actively to interest themselves in the restoration in Mexico of religious freedom for its citizens," and referred to Pope Pius's encyclical on Mexico. On November 14 the Board of Trustees of the Catholic University of America composed of the four American Cardinals, the other Archbishops, a half-score Bishops and a number of Monsignori and laymen met and former Governor Alfred E. Smith of New York took his place as a member of the Board. These deaths occurred: Bishops Francis Gilfillan of St. Joseph, Mo., January 13; John F. O'Hern, Rochester, N. Y., May 22; William A. Hickey, Providence, R. I., October 4; Thomas W. Drumm, Des Moines, Iowa, November 24; Joseph Chartrand, Indianapolis, December 8; John J. Dunn, Auxiliary of New York, August 31; Edward Sheehan, titular of Calydon and a Lazarist missionary from Illinois, in China, September 8.

STATISTICS. Figures compiled in the Official Catholic Directory for 1933, put the Catholic population of the United States proper at 20,268,403, an increase of 32,012. The number of converts was 41,226, or 957 more than the previous year. The Hierarchy now numbers 16 Archbishops, 4 of whom are Cardinals, and 102 Bishops. The secular priests number 21,016, an increase of 1367, and the priests of Religious Orders 8766, an increase of 118. The churches increased 108, now totaling 18,260 and including 12,537 churches with resident priests and 5723 missions with churches. The number of seminaries increased by 9, the total being 181, and the seminarians 20,993, a gain of 1550. There are 195 colleges for boys, an increase of 27. Academies for girls total 656, a gain of 16. There are 966 high schools, 29 more than the previous year, with a total attendance of 158,352, a gain of 13,960. The number of parochial schools is 7462, a decrease of 52 from the previous years, and the attendance 2,170,102, a decrease of 107,089. The number of orphanages is 327, one less, and the number of orphans cared for 50,154, or 564 less than in 1932. There are 146 homes for the aged poor and the hospitals show a gain of five, the total being 650. According to the English Catholic Directory there are 2,244,580 Catholics in England and Wales, an increase of 34,250 in the year. The clergy number 3179 diocesan, an increase of 110, and 1639 regulars. The schools total 518 secondary and 1385 elementary with an increase of pupils of 6700. The churches and chapels total 2294.

Catholics in Scotland are estimated at 370,000. There are 23,357 Catholics in the British army,

or one eighth of the total force. The Catholic population of Canada is 4,283,388. Catholics in the Province of Quebec total 2,463,160; in Ontario, 744,740; in Manitoba, 187,693; in Saskatchewan, 233,979; in Alberta, 168,408; in British Columbia, 70,852; in Yukon, 687; in the Northwest Territories, 3932; in New Brunswick, 188,098; in Nova Scotia, 162,754, and in Prince Edward Island, 39,105. There are 1022 Canadians working in the mission fields of the world, 431 priests, 218 Brothers and 973 nuns. Of the priests and Brothers, 292 are working in North America, 173 in Asia, 158 in Africa and 26 in the Pacific Islands; of the Sisters, 557 in North America, 287 in Asia, 86 in Africa and 43 in the Pacific Islands. A new estimate of the Catholic population of the world gives the total of 363,764,793. There are 1092 Sees of the Latin rite, 278 in Italy, 87 in France, 56 in Spain, 28 in Ireland, 27 in Great Britain, 24 in Germany and 20 in Poland. The United States (not including the Philippines or other possessions) leads in the new world, 118; Brazil is next with 68, then Canada 36, Mexico 33, and Argentina 11. There are 43 Sees in the East Indies, 21 in Australia, 13 in Africa, 5 in Japan and 1 in China. The present state in the world of the Catholic Hierarchy follows: 7 suburbicarian Sees (that is, within the See of Rome); 10 residential patriarchates; 4 titular patriarchates; 207 residential metropolitan Sees; 37 residential archiepiscopal Sees; 900 residential episcopal Sees; 665 titular archbishoprics and bishoprics, 45 prelates and abbeys nullius; 263 vicariates apostolic; 105 prefectures, and 32 mission and districts sui juris. In the first ten years of the pontificate of Pope Pius XI there had been created 82 new archiepiscopal and episcopal Sees; 34 new vicariates apostolic had been constituted; 12 prefectures had been created and then raised to the rank of vicariates apostolic; 70 new prefectures had been created, 24 missions and districts sui juris. Germany has 24,235 priests, of whom 3507 are members of Religious Orders; 2800 are engaged in teaching and managerial capacities for Catholic associations and about 150 in charitable organizations. There are 9804 Catholic parishes and 3507 pastorates. In Sweden out of a population of 6,000,000 only 4000 are Catholics and there are only 18 priests to care for their spiritual needs. The country has few Catholic schools.

In 1933 the members of the Society of Jesus throughout the world increased from 22,337 to 22,936. There are 10,166 priests, 7889 scholastics and 4881 Brothers. The Italian Assistancy (including Central Brazil as well as Italy itself) has 832 priests, 610 scholastics, and 509 Brothers. The German Assistancy (including Southern Brazil, Austria, Holland, and Hungary) has 1425 priests, 904 scholastics, and 838 Brothers. The French Assistancy has 1670 priests, 793 scholastics, and 513 Brothers. The English Assistancy (including Australia, Belgium, Canada, and Ireland) has 1826 priests, 1375 scholastics, and 530 Brothers, the numbers in England being 472, 269, and 127. The American Assistancy has 1931 priests, 2067 scholastics, and 505 Brothers. The Slav Assistancy (Czechoslovakia, Yugoslavia, and Poland) has 412 priests, 537 scholastics, and 395 Brothers.

Of 52 cases before the Tribunal of the Sacred Rota in the juridical year 1931-32 involving causes relating to marriage only 17 received a

sentence which recognized the nullity of these marriages. In 33 cases the validity of the marriage was recognized.

The Catholic Church conducts 15,700 hospitals, with a personnel of 135,000 Religious throughout the world. There are besides 134,000 other charitable institutions of a similar nature, demanding the service of 70,000 employees. The number of other organized charities is reported as 236,000 served by 350,000 Sisters and 32,000 Brothers, besides 120,000 professional employees. The number of voluntary charity workers is said to reach a total of 6,665,000. There are 638 Catholic hospitals in the United States proper and 23 in the insular possessions of the United States, and 157 in Canada; 418 of the Catholic hospitals in the United States have received unconditional approval of the American College of Surgeons to date; 51 of the hospitals in Canada have received this recognition. An estimate places the total number of Sisters serving hospitals in this country at 11,365. A similar estimate places the number in Canada at 2983. Fifty-three per cent of the Sisters serving in Catholic hospitals are registered nurses, while about 15 per cent are pursuing studies leading toward a higher degree.

THE MISSIONS. The Society for the Propagation of the Faith received during 1932, \$707,633.18 from collections in the various American dioceses for distribution among the missions. The United States contributed \$391,336.50 to mission activity in 1933, according to a report of the American Board of Catholic Missions. The report covers 94 dioceses. The Catholic population of China is 2,563,425, an increase of 32,582 over the previous year's figure. The number of conversions was 57,027, the largest number recorded since 1925. The ecclesiastical divisions increased from 107 to 114. Three of the new missions were placed in charge of native Chinese clergy, and there are now 17 vicariates or prefectures with Chinese superiors. There are 2195 foreign as compared with 1553 native priests, the latter figure showing an increase of 49. The new regional seminaries were opened and there are now 6420 Chinese studying for the priesthood.

There are 98,143 Catholics in Japan proper, exclusive of Formosa and Korea. Foreign priests there number 240; native Japanese priests 59. Foreign Missionary Brothers 88; native Brothers 120; foreign missionary Sisters 551, and native Sisters 245; Japanese seminarians 290. The number of boys attending the mission schools are 2527; girls 7596. The enrollment at the Catholic university of Tokyo was 650. On June 11 the Pope consecrated five natives of the Far East, at St. Peter's, one Annamite, one East Indian, and three Chinese. The new bishops are G. B. Tong, Annamite coadjutor to the Apostolic Vicar of Phat-Diem, in Indo-China; Father Attipetty, Indian, coadjutor to the Archbishop of Verapoly, in India; Joseph Fan, Apostolic Vicar of Tsing, Shansi, China; Matthew Ly, Apostolic Vicar of Yachow, China, and Joseph Tsaoei, Apostolic Vicar of Yungnien, Hupei, China.

The celebration of the centenary of the founding of the Society of St. Vincent de Paul, May 20-22, brought to Paris 7000 members representing 27 nations. At the beginning of the year 1933 the number of conferences had increased to 18,186. The number of visitors surpassed 186,000. The total annual expenditure for charitable work is more than 220,000,000 francs. The number of conferences organized in 1932 was 636 or more than

in any year since the organization of the society. There are conferences all over the world. In the United States, where the work was established in 1846, 2350 active groups affiliated with the Superior Council of New York have 30,000 active members. The society in the United States has sent upwards of \$18,000,000 to bring relief to approximately 1,000,000 needy persons during the last 10 years. The society gave assistance to 225,000 families consisting of approximately 1,000,000, made 4,310,000 visits to such families, and 339,000 visits to hospitals, prisons, etc., and assisted 61,863 persons to find employment. The amount contributed personally by members of the St. Vincent de Paul Society during the decade was \$1,217,609. The amount entrusted to the Society for the relief of the poor was \$18,836,751, and the amount distributed was \$18,496,657.

EDUCATION. A total of 2,582,000 students began the 1933-34 scholastic year in 10,594 Catholic institutions of learning in this country, according to an estimate made by the Department of Education of the National Catholic Welfare Conference. This estimate is based on the following enrollments reported in the 1932 survey of Catholic colleges and schools: Elementary, 7942 schools, 58,684 teachers, 2,193,000; Secondary, 2250 schools, 14,307 teachers, 250,000; Normal, 46 schools, 564 teachers, 9000 pupils; College, 174 schools, 7768 teachers, 110,000 pupils; Seminary, 182 schools, 1907 teachers, 20,000 pupils; Totals, 10,594 schools, 83,230 teachers, 2,582,000 pupils. There are nearly 25,000 students enrolled in Catholic schools of nursing in the United States and Canada. Of the total number, 20,996 are in the United States, while 3909 are in Catholic schools in Canada. The number of Sisters enrolled in the Catholic schools of nursing is 580 in the United States and 140 in Canada, giving an average of about two Sisters per school in each of the two countries. Of the 385 Catholic schools of nursing in the United States, 370, or 97 per cent, have merited the recognition of the American College of Surgeons, while in Canada 58 or 76 per cent of the Catholic schools of nursing have received either the unconditional or conditional approval of this same body. One hundred and nine of the Catholic schools of nursing in the United States, or 28.3 per cent, have effected educational affiliations with universities and colleges, while 28 schools in Canada, or 36.9 per cent have similar cooperative relations.

An American Jesuit, the Rev. Vincent A. McCormick of New York, on December 29, was made Rector of the Gregorian University in Rome, one of the oldest and most important educational institutions of the Order. It was founded in 1545 and has 1500 students from all over the world. He is the first American to hold the office.

ASSEMBLAGES. For the first time in the history of Calcutta the Blessed Sacrament was carried through the streets of that city in a procession held January 26. Thousands of Catholics took part in the demonstrations. Preparations began in January for the 32nd International Eucharistic Congress to be held in Argentina, October 10-14 at Buenos Aires. Georgetown University initiated a season of special programmes commemorative of the Tercentenary of the founding of Maryland on November 23. The fifty-first annual national convention of the Knights of Columbus was held at Chicago, August 15. The fifty-eighth national convention of the Ancient Order of Hibernians and of the Ladies' auxiliary was held during the

week of July 18 in Chicago. Sixty thousand persons attended the Pontifical High Mass celebrated at 6 o'clock Sunday afternoon, July 16, at Lourdes to commemorate the seventy-fifth anniversary of the last apparition of the Blessed Virgin. The Mass was celebrated in the open air on the place in front of the Basilica of the Rosary by Bishop Mennechet at Soissons. Cardinal Verdier presided, surrounded by twenty-two Archbishops and Bishops, among whom were six Chinese Bishops recently consecrated at Rome.

The nineteenth National Conference of Catholic Charities, one of the greatest gathering of welfare workers ever held in the United States, met in New York, September 29-October 4. Every State was represented and the delegates included civic and clerical leaders and 400 Sisters from 35 religious bodies engaged in philanthropic work. At the banquet concluding the meeting, President Roosevelt, two members of his cabinet, and the Governor of New York attended. The President made an address as did also Archbishop Cicognani, the Apostolic Delegate to the United States, and Cardinal Hayes.

ROSICRUCIAN ORDER. An international fraternity, known as the Ancient, Mystic Order Rosæ Crucis, whose name is derived from the emblem, a cross with a single rose in its centre, adopted by Johann Valentin Andreae, erroneously regarded as the restorer of the order in Germany in the seventeenth century. (For details as to

traditional origin and reestablishment of the order in North America, see the NEW INTERNATIONAL YEAR BOOK, 1932, page 733.) In 1933 the Rosicrucian Order in North America had throughout its jurisdiction of the United States and its dependencies, Canada, the West Indies, and the Central American states nine grand lodges, 136 local lodges, and three colleges. At the congress held in San Jose, Calif., in July, 1933, the delegates voted to found a Rose Croix University, similar to the European institutions. The purpose of this university will be for research and special personal instruction in those arts and sciences usually classified as arcane but lying distinctly within the fields of physics and chemistry. The organization conducts also much public welfare work and contributes to the advancement of the fine arts and sciences, especially through archaeological excavations in Egypt whereby there is brought back to various Rosicrucian museums some of the art of that land.

On the death of Charles Dana Dean in July, 1933, Clement Le Brun of Nice, France, was chosen grand master of the Rosicrucian Order in North America. Dr. Le Brun, a member of the International Council and one of the highest officers of the French organization, was selected for this honor in order that a closer relationship might exist between the brotherhoods of North America and of France. H. Spencer Lewis has been imperator or chief executive of the North American order since its reestablishment in 1909. Headquarters of the Supreme Council of the Grand College of Rites are in San Jose, Calif.

ROTARY CLUBS. Organizations established for the purpose of developing the highest ideal of unselfish service and of making practical application of that ideal to the business and professional life of the individual members, to organizations of which they may be members, and to the communities and countries in which they live. Membership in the clubs is limited to one representative of each business, profession, or institution in the community.

The twenty-fourth annual convention of Rotary International was held June 28-30, 1933, in Boston, Mass. There were 8456 Rotarians and members of their families present, representing Rotary clubs in 57 geographical regions. On Nov. 1, 1933, Rotary International consisted of 3619 clubs, with an approximate membership of 147,000. There were 2443 clubs in the United States, 112 in Canada, 382 in Great Britain and Ireland, and 682 in other parts of the world.

Officers elected for 1933-34 were: President, John Nelson, Montreal, Quebec, Canada; first vice-president, Ed. R. Johnson, Roanoke, Va., U. S. A.; second vice-president, Maurice Duperey, Paris, France; third vice-president, Herbert Schofield, Loughborough, England; secretary, Chesley R. Perry, Chicago, Ill., U. S. A.; treasurer, Rufus F. Chapin, Chicago, Ill., U. S. A. Headquarters of Rotary International are at 211 West Wacker Drive, Chicago, Ill., U. S. A., with a branch office at 74 Bahnhofstrasse, Zurich, Switzerland.

ROUND-TABLE CONFERENCES. See INDIA.

ROUX, r60, PIERRE PAUL EMILE. A French bacteriologist, died in Paris, Nov. 3, 1933. Born at Confolens, Department of Charente, Dec. 17, 1853, he studied medicine at Clermont-Ferrand and at the University of Paris, where from 1874 to 1878 he acted as clinical aide in the Faculty

of Medicine. In 1878 he entered the laboratory of Pasteur, becoming assistant director in 1883. Transferred to the Pasteur Institute as head of service in 1888, he was made assistant director in 1893 and director in 1904. He assisted Pasteur in various experiments, including those concerning the etiology of various infectious diseases, such as anthrax, tetanus, and syphilis, and the preventive treatment of hydrophobia. The researches which he conducted with Nocard regarding pneumonia resulted in the discovery about 1880 of the pneumonia microbe or pneumococcus.

Dr. Roux was best known, however, for his studies with Yersin of the diphtheria bacillus, known from its first discoverers as the Klebs-Löffler bacillus, and isolation of the diphtheric toxin. In 1896 he was elected to the Academy of Medicine and in 1899 to the Academy of Sciences of the Institute of France, receiving from the latter the prix Osiris of \$20,000 in 1903. He received also the Grand Cross of the Legion of Honor in recognition of his work as president of the Higher Council of Public Hygiene in Paris and as chief scientific adviser to the French government. At the time of his death Dr. Roux was editor of the *Annales de l'Institut Pasteur* and professor at the School of Higher Studies in Paris. He wrote *La Microbe médical, La Vaccination, Découverte du sérum antidiphtérique, Méthode d'injection du sérum antitétanique, and L'atténuation des virus.*

ROWING. Despite the cancellation for one year of the famed intercollegiate regatta at Poughkeepsie on the Hudson, the 1933 rowing season was an active one with many regattas being held. Rowing as a sport is unproductive of gate receipts and as such is a drain on the exchequers of the colleges fostering the spring sport. Because of this and because the gate receipts of the previous fall for football had fallen to a new low, the Poughkeepsie regatta was cancelled, mainly on the suggestion of Cornell.

For all this, the University of Washington's eight-oared crew earned what honors there were. The huskies outrowed California's band of Olympic winners in the first race of the season, on the Estuary in April, and then in July won the new intercollegiate regatta at Long Beach, Calif. This new regatta, sponsored by the Los Angeles Chamber of Commerce, presented crews from Washington, California, Yale, Cornell, University of California, Southern Branch and the second Harvard crew.

The lone four-mile race of the season was the annual Harvard-Yale regatta on the Thames at New London, won by a powerful Harvard crew for the third year in a row in a thrilling race. Cornell and Syracuse both announced abandonment of rowing at the time the Poughkeepsie regatta was called off, but both mustered eights in the spring. Two colleges joined the small band of rowing institutions—Manhattan College and Rutgers University.

In the East Yale had the finest sprint crew, winning the Blackwell and Carnegie Cups. Navy and Princeton both had fast eights with Pennsylvania close behind them.

In England the university race went to Cambridge for the tenth consecutive year, a longer stretch than either Cambridge or Oxford ever accomplished before in the century-old records of that famous race.

One of the sensations of the season was the Kent School eight from Kent, Conn. After an un-

beaten season in the east, in which the boat led all scholastic rivals and several freshman eights, the schoolboys journeyed to England and won the Thames Challenge Cup in the Henleys on the Thames in July. Kent finished a strikingly successful campaign with a decisive triumph in the British race and became the second American crew to win this ancient cup, Brown and Nichols School, Boston, having done so in 1929.

In club rowing, the fine Penn Athletic Club crew added to its three years of victories by taking the national eight-oared title again. It firmly proved itself the most remarkable of modern day club crews. Bill Miller retained his national single sculls title, although Bobby Pearce of Australia was again recognized as the world's greatest sculler of the time. Pearce rounded off his remarkable amateur career by turning professional and winning that championship late in the summer.

ROYCE, SIR (FREDERICK) HENRY. A British automotive engineer, died at West Wittering, Sussex, Apr. 22, 1933. Born in 1863, he early became interested in electricity while acting as a telegraph messenger in London and after serving his engineering apprenticeship with the Great Northern Railway assisted in the installation of the first electric-lighting system of the streets of London. In 1882 he was appointed chief electrical engineer in the installation of electric lighting in the streets of Liverpool, and in 1884 founded in Manchester the mechanical and electrical engineering firm of Royce, Ltd., which subsequently produced the Royce two-cylinder automobile. In 1906 Sir Henry founded with the Hon. C. S. Rolls, one of the early patrons of motoring in England and president of C. S. Rolls and Co. of London, Rolls-Royce, Ltd. Their most famous product, the Rolls-Royce automobile, became synonymous with perfection in manufacturing detail. The "Silver Ghost," a side-valve engined chassis of 40-50 h.p. which Sir Henry designed in 1907, maintained this reputation of quality for the Rolls-Royce automobile for almost two decades. In 1925 it was superseded by the "Phantom," also of 40-50 h.p. with an overhead valve engined chassis.

Sir Henry designed some of the engines which made aviation history. Among these was the 360 h.p. twin-engine "Eagle VII" used in the Vickers-Vimy Bomber biplane which carried Sir John Alcock and Sir Arthur Whitten Brown on June 14, 1919, from St. Johns, Newfoundland, to Clifton, Galway, Ireland, in 16 hours and 12 minutes, winning thereby the *Daily Mail* prize of \$50,000 for the first non-stop transatlantic flight. On Sept. 7, 1929, Flight Lieutenant H. R. D. Waghorn established at Spithead in a Supermarine monoplane Royce S-6 the speed record for seaplanes of 531.2 kilometers (330.7 miles) per hour over a 100-kilometer course. The Rolls-Royce engines enabled Sir Malcolm Campbell to set a new world's record for automobile racing of 253.968 miles per hour over a mile course at Daytona Beach, Fla., in February, 1932, and Kaye Don to set a new world's motorboat speed record of 119.75 miles per hour over a mile course on Loch Lomond in July, 1932. Sir Henry was made an officer of the Order of the British Empire in recognition of the efficient aid rendered by the Rolls-Royce aero engines in helping to win the World War. In 1930 he was created a baronet.

RUANDA-URUNDI. See under CONGO, BELGIAN.

RUBBER. World production of rubber in 1933, as determined by the Rubber Division of the U. S. Department of Commerce, amounted to 848,029 long tons, or 20.3 per cent greater than the production in 1932, and about 56,000 long tons in excess of the production in 1931. The 1933 production of the leading rubber countries of the world is shown in the accompanying table.

WORLD PRODUCTION, 1932 AND 1933
[Long tons]

	1932	1933
British Malaya	385,713	406,035
Ceylon	48,973	62,978
India and Burma	3,721	4,527
Sarawak	6,960	10,874
British North Borneo	4,664	7,556
Siam	3,451	7,765
Java and Madura	61,312	73,851
Sumatra East Coast	79,837	91,602
Other Netherland East Indies	85,871	151,827
French Indo-China	13,883	18,394
Amazon Valley	6,126	9,883
All other	1,816	2,737
Total	702,327	848,029

The rubber absorption by the leading import countries of the world for the years 1931, 1932, and 1933 is indicated in the table below, though comparative figures for Australia, Belgium, and Italy are not available for each year. Increased requirements in the United States made up for the greater part of the year's increase in production and was in excess of 90,000 tons more than the 1932 demand and more than half of the importations to all countries. British absorption declined slightly, though it would appear that Australian consumption had offset that shrinkage. The rapid advance in the rubber absorption of Japan brings that country into third place among the consumers of rubber; and increased shipments to Germany bring it to a position rivaling that of France.

CRUDE RUBBER ABSORPTION OF PRINCIPAL
MANUFACTURING COUNTRIES
[Long tons]

	1931	1932	1933
United States	352,047	184,255	405,687
United Kingdom	76,583	84,639	79,504

France	46,466	60,000	61,953
Germany	39,683	41,000	54,120
Italy	19,341
Japan	43,483	53,000	66,831
U. S. S. R.	30,671	25,000	29,830

The consumption of rubber in the manufacture of tires and tire sundries in the United States in 1933, compiled by the statistical department of the Rubber Manufacturers Association and comprising about 90 per cent of the industry, indicated a large increase in output over the past two years and slightly greater than that of 1930. The table on page 730 covers consumption by long tons over the past three years.

The production of tires and tire sundries, however, while slightly greater in rubber consumption than that of 1930, did not show corresponding returns to the manufacturers. Values were still low. In 1930 the consumption of 280,989 long tons was valued in finished product at \$518,786,000; the 1933 production was valued at \$301,271,000, little better than the 1932 valuation of \$292,201,000.

Total	80,315	55,974	58,433

The value of these products also reflected the general depression. Though consumption in 1930 was but 60,441 long tons, the value of the finished products of that year was \$284,342,000. Values dropped in 1931 to \$209,650,000; in 1932 to \$146,270,000, and despite greatly increased production for 1933, values rose only to \$179,207,000.

Stocks of rubber on hand at the close of the year totaled 652,928 long tons, of which the United States inventory included 373,030 tons and that afloat for United States and European ports amounted to 106,208 long tons. Stocks in England totaled 86,505 long tons and on hand in the East Indies 87,185 long tons.

Sales of rubber products manufactured in Canada of \$41,000,000 in 1933 were slightly higher than in 1932, according to the annual report of the Rubber Association of Canada whose membership comprises 90 per cent of the entire industry. The four years' decline of \$49,800,000 or 59 per cent in sales was halted in 1933 when operations resulted in an increase of \$18,600 over 1932. Domestic tire sales was the only item in 1933 showing a decline as compared with 1932, the decline being \$854,000. On the other hand, export tire sales in 1933 were \$255,000 higher than in 1932. Throughout most of Canada the winter weather was so severe and prolonged that it was of much benefit to sales of rubber footwear. Some of the important 1933 sales increases over 1932 were \$288,000 for rubber soles and heels; \$184,000 for rubber belting, hose, packing, and

other mechanical goods; and \$154,000 for drug rubber sundries and specialties. See CHEMISTRY, INDUSTRIAL OR APPLIED.

RUMANIA. A constitutional monarchy of southeastern Europe. Capital, Bucharest. Reigning sovereign in 1933, Carol II.

AREA AND POPULATION. Rumania has an area of 113,887 square miles. The population in 1932 was estimated at 18,426,000 (18,025,237 at the 1930 census). Living births in 1932 numbered 662,049 (35.9 per 1000 inhabitants); deaths, 399,346 (21.7 per 1000); marriages, 175,137 (19.0 per 1000). Populations of the chief cities (1930) were: Bucharest (București), 631,288; Chișinău (Kishinev), 117,016; Cernați (Czernowitz), 111,122; Iași (Jassy), 102,595; Galați, 101,148; Cluj (Klausenburg), 98,650; Timișoara, 91,866.

EDUCATION. Enrollment in the Rumanian schools was: Primary (1930-31), 1,973,949; secondary (1929-30), 161,502; university (1929-30), 37,604. The four universities are at Bucharest, Iași, Cluj, and Cernați.

PRODUCTION. Three-fourths of the population is engaged in agriculture. In 1932 arable land totaled 31,283,000 acres; pasture, 9,836,000 acres; trees, shrubs, etc., 1,367,000 acres; forest, 17,851,000 acres. Livestock in 1931 included 4,079,000 cattle, 12,356,000 sheep, 3,221,000 swine, 425,000 goats, 2,001,000 horses, mules, and asses, and 189,000 buffaloes. The chief crops in 1932 (thousands of units, bushels except as indicated), with 1931 figures in parentheses, were: Wheat, 55,536 (135,290); rye, 10,512 (13,962); barley, 67,382 (64,964); oats, 44,276 (46,175); corn, 235,934 (238,704); potatoes, 61,287 (67,981); sugar beets (metric tons), 309 (310); beet sugar (metric tons, in 1932-33 and 1931-32), 66 (52); wine (gallons), 158,502 (231,109); tobacco (pounds), 15,432 (24,926); alfalfa and clover (metric tons, 1931), 909. The value of agricultural production in 1932 was 47,609,000,000 lei, of which 25,361,000,000 lei, or 53.2 per cent, represented cereal crops.

Manufacturing statistics for 1931 showed 152,000 wage earners, 498,000 horse power employed, and a production value of \$198,928,000. Mine and factory production in 1931 was: Petroleum, 49,127,000 barrels (54,160,000 in 1932); coal, 287,000 metric tons (202,000 in 1932); lignite, 1,632,000 metric tons (1,469,000 in 1932); natural gas, 48,807,000 cubic feet; salt, 562,178,000 pounds; iron ore, 61,907 metric tons; gold, 88,125 troy ounces; silver, 114,268 troy ounces; pig iron, 25,894 metric tons; copper, 383,600 pounds; alcohol, 794,000 gallons; beer, 11,690,000 gallons. Lumbering is an important industry.

COMMERCE. Rumanian imports in 1932 were valued at 11,953,135,000 lei (\$71,719,000), compared with 15,754,600,000 lei (\$93,740,000) in 1931. Exports were valued at 16,654,563,000 lei (\$99,927,000), against 22,196,945,000 lei (\$132,072,000) in 1931. Conversions to dollars were made at the average annual exchange rate of \$0.00595 in 1931 and \$0.00597 in 1932. In 1932, Germany furnished 23.7 per cent of the total imports by value; France, 14.1; Czechoslovakia, 12.2; Italy, 11.0; and the United Kingdom, 10.8 per cent. Of the total exports, the United Kingdom took 14.0 per cent; France, 13.0; Germany, 12.3; and Italy, 10.6 per cent. The chief imports in 1931 were cotton yarns, iron manufactures, machinery, cotton piece goods. The leading exports were petroleum products, wheat, barley, corn, and building timber.

Total imports for 1933 amounted to 11,592,000,000 lei and exports to 14,101,000,000 lei, leaving a favorable balance of 2,509,000,000 lei. United States statistics for 1933 showed exports to Rumania valued at \$1,695,866 (\$1,260,327 in 1932) and imports from Rumania of \$402,787 (\$921,091 in 1932).

FINANCE. The budget for the calendar year 1931 closed with a deficit of 9,722,000,000 lei (expenditures, 33,962,000,000 and receipts, 24,240,000,000 lei). The 1932 fiscal year covered the period from Jan. 1, 1932, to Mar. 31, 1933, and subsequent fiscal years ran from April 1 to March 31. The 1932 period ended with a deficit of 922,000,000 lei (revenue, 25,157,000,000 lei; expenditure, 26,079,000,000 lei). The budget for the fiscal year 1933-34 called for expenditures of 36,280,000,000 lei and revenues of 33,934,000,000 lei, the anticipated deficit being 2,356,000,000 lei. The public debt on Dec. 31, 1931, amounted to 179,326,600,000 lei (foreign debt, 162,182,400,000; domestic, 17,144,200,000). On Apr. 1, 1933, the total was reported at 156,192,000,000 lei. The paper leu (\$0.0060 at par) exchanged at \$0.0078 in 1933.

COMMUNICATIONS. The state railway network in 1932 comprised 6968 miles of line. In the same year it carried 24,416,000 passengers and 20,628,000 metric tons of freight (commercial and military), gross receipts being equivalent to \$48,786,000 (at par). Highways extended 66,212 miles in 1931 (36,458 miles of macadam). From May to September, inclusive, the government operated air services on the lines Bucharest-Galati-Chişinau-Iasi-Czernowitz and Bucharest-Constanta-Balcic. In the 1932 season the lines carried 1231 passengers and 33,244 pounds of freight; mileage flown was 123,000 miles. Steam vessels of 100 tons or more in the merchant marine on June 30, 1933, had an aggregate gross tonnage of 74,000. The tonnage cleared from the Danube ports in 1931 was 1,553,211 tons (1,999,875 tons in 1930); at Constanta, 1626 vessels of 4,382,431 tons (1565 vessels of 3,841,555 tons in 1930).

GOVERNMENT. The Constitution of Mar. 28, 1923, vested executive power in the King and a council of ministers, the King having a suspensive veto over laws passed by parliament. Legislative power rested in a parliament of two chambers—a chamber of deputies, with 387 elected members, and a senate of 200 elected and about 50 *ex officio* and appointed members. The term of elected deputies and senators was four years. Premier at the beginning of 1933, Dr. Alexander Vaida-Voevod (National Peasant). For changes in 1933, see *History*.

HISTORY

INTERNAL POLITICS. The National Peasant party, which had regained power in Rumania in 1932 due to the inability of Premier Jorga to meet the country's economic problems, was in turn overthrown in 1933. Julius Maniu, leader of the party, had accepted the premiership Oct. 20, 1932, after three years of retirement from political life caused by his break with King Carol in 1930. It again proved difficult for him to work with the King, to whose military and other associates Maniu objected. Early in January, 1933, the Minister of Interior sought to oust the Bucharest prefect of police and the commandant of the national gendarmerie, who owed their positions to the King. Carol opposed the Minister's action and the latter's resignation was followed on January 12 by that of the entire Maniu Cabinet.

Contrary to expectations, the National Peasant party remained in control. A new ministry was formed January 14 by Alexander Vaida-Voevod, a National Peasant leader who had preceded Julius Maniu in the premiership. With the exception of M. Maniu and Minister of Interior Mihilache, all the former cabinet members were retained. The new ministry was confronted with numerous difficulties, the chief of which were the continuance of the economic depression and the widespread unrest resulting from poverty and hardship. Communism was reported to be gaining ground among the workers and the secret police on January 28 announced the discovery of a widespread Communist espionage organization. At the same time the government was harassed by the activities of a strong Fascist party, called the Iron Guard. This group was actively anti-Semitic and engineered numerous attacks upon the Jews (see Jews under Rumania). Labor troubles and Iron Guard activities led the government to impose martial law in sections of the country for a period of about six months beginning in February.

The Vaida-Voevod Ministry was charged with undue tolerance toward the Iron Guard and this, together with its failure to improve the economic situation, led to the resignation of the government on November 12. The King now turned from the National Peasants to his former enemies, the National Liberals, and commissioned their leader, Ion Duca, to form a cabinet. The new ministry, as announced November 15, was composed mainly of Liberals, the sole holdover from the previous cabinet being Dr. Nicholas Titulescu, the Foreign Minister. The new government immediately called an election for December 22. Under the peculiar Rumanian electoral system, giving two-thirds of the seats in the Chamber to the party polling the largest popular vote, the Liberals secured complete control of Parliament. They captured 293 out of 387 seats in the Lower Chamber and 176 out of 200 elective seats in the Senate.

Meanwhile a series of raids and riots by the Iron Guard led the ministry on December 9 to issue a decree declaring the organization illegal, removing its candidates from the electoral lists, and prohibiting all its activities. More than 3500 members of the Iron Guard were arrested. Premier Duca paid with his life for this attack upon reaction. He was assassinated at the railway station in Sinaia December 29 by a young member of the Iron Guard, who boasted that he had shot the Premier because of the latter's friendship for the Jews. The police, in rounding up 1400 other members or sympathizers of the Iron Guard, uncovered alleged evidence of a plot to assassinate all officials considered responsible for the dissolution of the organization. Immediately after Premier Duca's death, martial law was proclaimed in the chief cities and a rigid press censorship instituted. The King entrusted Constantine Angelescu, Minister of Public Instruction and deputy leader of the Liberal party, with the task of carrying on the government.

ECONOMIC MEASURES. The increasing difficulty of meeting external debt payments culminated on Feb. 18, 1933, in an agreement with French and British bondholders for the suspension of sinking-fund payments from Jan. 1, 1933, to Mar. 31, 1935, on a number of long-term loans. This measure proved insufficient to relieve the strain on Rumania's financial structure. Accordingly on Aug. 14, 1933, a complete moratorium was declared on all payments due abroad by the state, the

autonomous funds, and the various monopolies. The total amount involved was about \$24,900,000 annually. This action, taken without consulting the foreign creditors, aroused much resentment among foreigners holding Rumanian securities. The government mollified these creditors in part by reopening negotiations and concluding an agreement on Oct. 26, 1933, for the payment of about 25 per cent of the coupons due.

On Jan. 28, 1933, the Rumanian government reached an agreement with the Council of the League of Nations for League assistance in the financial rehabilitation of the country. It provided for the appointment of a financial adviser and other experts by Rumania on nomination of the League Council to supervise the fiscal reforms and other measures to which the Rumanian government agreed. Up to the end of 1933, neither the experts nor the financial adviser had been appointed.

The Rumanian supreme court having declared unconstitutional the Agrarian Debt Conversion Law of April, 1932, the government on Apr. 14, 1933, passed new legislation for the relief of farmers. Provision was made for a five-year moratorium with 1 per cent interest on the debts of small landowners and for a two-year moratorium with 3 per cent interest for larger landowners. The government also appropriated 900,000,000 lei to provide an export bounty on high quality wheat. To redress the adverse balance of payments the government by the decree of July 1, 1933, established a board to control imports and payments in foreign currencies, and to arrange reciprocal tariff benefits with other countries. In November the board imposed import quotas on goods from countries, including the United States, with trade balances unfavorable to Rumania. The quotas limited imports from these countries to 30 per cent of the value of the 1931 imports from the same countries. Imports in excess of this percentage were to be permitted only on the basis of compensating exports.

FOREIGN RELATIONS. Rumanian diplomacy, under the able guidance of Foreign Minister Nicholas Titulescu, was unusually active during 1933. The definite accomplishments of the year were: (1) the conclusion at Geneva on February 16 of a new Little Entente pact providing for closer political and economic collaboration between Rumania, Czechoslovakia, and Yugoslavia; (2) the conclusion on July 4 at London of a non-aggression pact with the Soviet Union, which contained a definition of aggression; (3) the conclusion on October 17 at Ankara, Turkey, of a Turko-Rumanian treaty of friendship. These moves were designed to strengthen Rumania and its allies against the threat of forcible territorial revisions by Germany and Hungary, to free the Little Entente from dependence upon the great powers, and to eliminate causes of dissension in the Balkans and central Europe. In line with this latter policy, Rumania and Yugoslavia made determined efforts to establish friendly relations with Bulgaria and even to add Bulgaria to the Little Entente. Up to the end of the year this effort met with only moderate success. See *LITTLE ENTENTE*; *UNITED STATES OF EUROPE*; *BULGARIA*, *HUNGARY*, *YUGOSLAVIA*, *ITALY*, *AUSTRIA*, and *GERMANY* under *History*; *BESSARABIA*.

RURAL SCHOOLS. See *EDUCATION IN THE UNITED STATES*.

RUSSELL SAGE FOUNDATION. An institution created by Mrs. Russell Sage as a me-

morial to her husband. The initial endowment was \$10,000,000, to which \$5,000,000 was added by her will. Its purpose is "for the improvement of social and living conditions in the United States of America."

The foundation's regular departmental work may be classified chiefly under the heads of delinquency and penology, family welfare, and charity organization, industrial relations, handicrafts, library on social work and social conditions and problems, recreation and community centres, remedial loans and consumers credit, social statistics, social service and relief, social surveys, social work publicity, southern highland conferences and improvement, publications including the *Social Work Year Book*, and general administration.

Nearly 50 per cent of the foundation's income, however, is expended in grants to other agencies with kindred purposes. Among the fields of activity in which these agencies are particularly interested are child welfare; city and regional planning and the improvement of housing; the survey, study, coordination, and planning of community social work programmes; improvement of country life; penology and the prevention of delinquency; family welfare; public health; education and training for social work; social welfare publications; race relations; the social sciences in general; and unemployment relief. The foundation makes available to such agencies, and to other social welfare organizations, free use of its conference rooms and halls for organization or public meetings. During 1933 these halls were used by 66 different organizations and special groups, for a total of 367 separate meetings.

The foundation has undertaken, as a special service during the present emergency period, to make available to all workers and interested citizens the best thought and experience obtainable in treating relief problems, emphasis being placed upon the prevention and improvement of unwholesome conditions. It has also followed the policy of assisting in the support of certain types of civic and social work whose continuation might otherwise be jeopardized, or their effectiveness diminished by forced budget reductions or by overshadowing campaigns for emergency relief.

The departments of the foundation have cooperated actively in other types of work dealing with aspects of the present unemployment situation, in which their experience seemed to be of special value. These have included improvement of public statistics relating to employment; the systematic collection of statistics of relief work in the United States; experimental sampling studies in cities of the amount and distribution of unemployment, in an effort to develop detailed methods for use in similar local unemployment surveys; and the collection, study, and spread to communities throughout the United States of information as to outstanding pieces of work in organizing and administering relief. In addition there have been the study and evaluation of various self-help movements and programmes for subsistence gardening; assistance, personally and by publication, in planning educational campaigns to inform and interest the public regarding the needs of the unemployed and methods of coöperation in helping them; and investigating and making available information concerning various recreational projects designed to teach the constructive use of leisure time to sustain the morale of those out of work, and to prevent possible delinquency in which the unprecedented compulsory

free time of the unemployed might prove a factor.

The foundation's trustees are: Lawson Purdy, vice-president and treasurer; John M. Glenn, secretary; Lindsey Bradford, Johnston de Forest, Frederic A. Delano, John H. Finley, Mrs. Frederic S. Lee, Mrs. Finley J. Shepard, and Harold T. White. Shelby M. Harrison is general director. Headquarters are at 130 East Twenty-second Street, New York City.

RUSSIAN SOCIALIST FEDERATED SOVIET REPUBLIC. See UNION OF SOVIET SOCIALIST REPUBLICS.

RUTGERS UNIVERSITY. A nonsectarian institution of higher learning in New Brunswick, N. J., founded under the name of Queen's College in 1766. The university consists of the following schools and colleges: Arts and sciences, engineering, agriculture, pharmacy, chemistry, education, and New Jersey College for Women. The registration for the autumn of 1933 was 2444, of whom 956 were registered at the college for women. Of the 298 members of the faculty 174 were professors and 123 instructors. The endowment funds amounted to \$4,204,600, and the income for the year, exclusive of the State agricultural experiment station, amounted to \$2,750,146. Lands, buildings, and endowments had a total valuation of more than \$19,579,506. The library contained 175,000 volumes. President, Robert C. Clothier, LL.D.

RUTHENIA. A Province of Czechoslovakia. See CZECHOSLOVAKIA under *Area and Population*.

RYAN, JOHN D(ENIS). An American capitalist, died in New York City, Feb. 11, 1933. Born at Hancock, Mich., Oct. 10, 1864, he received a public school education and for several years after 1889 was employed as a traveling salesman in the West for the Crew-Levick Oil Co. of Philadelphia. In this capacity he met Marcus Daly, the developer of the Anaconda Mining Co. In 1901, at Daly's request, he went to Butte, Mont., where he organized the Daly Bank and Trust Co., serving as its vice-president and subsequent president. Three years later he was made managing director of the Montana subsidiaries of the Amalgamated Copper Co. and in 1906 was elected to the presidency of the Amalgamated's largest subsidiary, the Anaconda Copper Mining Co. (formerly the Anaconda Mining Co.). On the death of Henry H. Rogers in 1909 Mr. Ryan became president of the Amalgamated and the following year merged into the Anaconda the company's Montana subsidiaries. In 1915 the Amalgamated was dissolved, and he returned to the presidency of the Anaconda, holding after 1919 the office of chairman of the board of directors.

Under Mr. Ryan's direction the Anaconda Copper Mining Co. was developed into the largest producer of copper in the world, controlling directly, or indirectly through its subsidiaries such as the International Smelting Co., the production before the financial crash of 1929 of more than 1,000,000,000 lbs. of copper annually. Its chief subsidiary, the American Brass Co., was the largest fabricator of copper products in the world. The company exploited also the deposits of gold, silver, lead, and zinc found in the vicinity of Anaconda, and after the establishment of other plants at Great Falls, Mont., Tooele, Utah, East Chicago, Ind., and Miami, Ariz., proceeded to mine or manufacture such products as lumber, coal, oil,

sulphuric acid, zinc oxide, and arsenic. In the foreign field it held copper, zinc, and coal holdings in Poland, Mexico, and Chile. Mr. Ryan served as chairman of the board of the Andes Copper Mining Co. and of the Chile Copper Co., both of which had numerous subsidiaries in South America. After 1912 he was president of the Montana Power Co., which controlled nearly all the electric light and power resources of the State and through which another of the Anaconda's subsidiaries, the Butte, Anaconda, and Pacific Railway, was electrified. The success of the latter venture in 1913 led to the expansion of railway electrification in the Northwest.

On the entry of the United States into the World War Mr. Ryan was appointed director of the department of military relief of the American National Red Cross and later served on its war council and central committee. In April, 1918, President Wilson appointed him director of the bureau of aircraft production and chairman of the aircraft board. After the merger of that bureau and the bureau of military aeronautics in August, 1918, he was made Second Assistant Secretary of War and director of the Air Service of the United States Army, there being spent under his direction more than \$1,000,000,000 for the production of training and combat aeroplanes and Liberty motors. He resigned these posts after the signing of the Armistice and the following year resumed his duties with the Anaconda Copper Mining Co. In recognition of his interest in Roman Catholic philanthropies, Mr. Ryan was made in 1923 a Knight of the Papal Order of St. Gregory the Great.

RYE. The 1933 production of 27 countries reporting to the International Institute of Agriculture not including the Soviet Republics and the countries of the southern hemisphere was estimated at 1,005,289,000 bu., or 2 per cent above the crop of 1932 and 8.5 per cent above the average annual yield for the five years 1927-31. The acreage of these countries, 44,750,000 acres, was only slightly below that of the preceding year and 2.5 per cent below that of the five-year average. The production of the leading countries other than the United States was reported as follows: Germany 343,581,000 bu., Poland 251,565,000 bu., Czechoslovakia 82,104,000 bu., and France 36,718,000 bu. The total European crop not including the Soviet Republics was reported as 969,492,000 bu., which was 4.9 per cent above the preceding year's crop and 12.6 per cent above the average annual yield for the five years 1927-31. For the Soviet Republics an acreage of 63,003,000 acres or 2 per cent below the five-year average was reported. The Canadian crop was placed at 4,725,000 bu., which was 66.6 per cent below the five-year average and 47.1 per cent below the yield in 1932. Argentina reported a yield of 10,078,000 bu., as compared with 12,992,000 bu. in the crop year 1932-33.

The 1933 production of rye of the United States, according to estimates published by the Department of Agriculture, was 21,184,000 bu., compared with 40,639,000 bu. in 1932. The acreage harvested was only 2,352,000 acres while in 1932 it was 3,344,000 acres. The small crop of the year was due to drought in North Dakota and South Dakota, a smaller acreage sown in the principal rye producing States, and a large acreage abandoned on account of winter injury. The yield of rye averaged 9 bu. per acre compared with 12.2 bu. in 1932. The average farm price on

Dec. 1, 1933, was 55.4 cents, making the value of the crop \$11,737,000 or \$2,664,000 more than the much larger crop of the preceding year when the corresponding price was only 22.3 cents per bushel. The crops of the leading States among 33 reporting rye production were recorded as follows: North Dakota 3,712,000 bu., Minnesota 3,638,000 bu., Wisconsin 2,260,000 bu., Nebraska 1,712,000 bu., and Pennsylvania 1,606,000 bu. These States produced over 60 per cent of the country's crop.

For the fiscal year ended June 30, 1933, the exports of rye by the United States amounted to 311,000 bu., as compared with 852,000 bu. for the preceding year.

SAAR BASIN. A part of the German Rhineland, the coal mines of which were awarded to France for 15 years by the Treaty of Versailles as compensation for destruction of coal mines in the north of France by Germany. In 1935 the inhabitants of the Saar Basin will decide their future nationality by a plebiscite. Area, 573 square miles; population (1931 estimate), 805,274. The principal city is Saarbrücken with 125,020 inhabitants in 1927. Production for 1932 in metric tons was coal, 10,438,049 tons; coke, 1,685,000; pig iron, 1,349,493; steel, 1,463,429; rolled steel, 994,447. The Saar is governed by a commission of five members nominated by the League of Nations. See GERMANY under *History*.

SABIN, CHARLES HAMILTON. An American banker, died near Southampton, L. I., N. Y., Oct. 10, 1933. He was born at Williamstown, Mass., Aug. 24, 1868. On his graduation from the Greylock Institute at South Williamstown in 1885, he entered the flour commission business in Albany, N. Y. His future career, however, was determined by his employment four years later as a clerk by the National Commercial Bank of Albany so as to help the bank's baseball team win a game over a rival institution. He was associated from 1891 to 1898 with the Park Bank of Albany and from 1898 to 1902 with the Albany City National Bank, rising with the latter to the position of cashier and becoming on its consolidation with the National Commercial Bank vice-president and general manager.

Elected president in 1907 of the National Copper Bank of New York, sponsored by John D. Ryan (q.v.), president of the Anaconda Copper Mining Co., Mr. Sabin held that office until its merger three years later with the Mechanics and Metals National Bank. He served for a short time in 1910 as vice-president of the reorganized Mechanics and Metals National Bank and then was elected vice-president and director of the Guaranty Trust Co. of New York. Under his presidency from 1915 to 1921 the deposits of the latter institution increased four-fold, making it during the high-water mark of war prosperity the largest trust company in the world. After 1921, with the exception of the year 1929 when he was vice-chairman, he held the office of chairman of the board of directors of the Guaranty Trust Co.

Mr. Sabin's power in the banking field was illustrated in October, 1916, when a report he gave to the press that the German government was urging President Wilson to use his good offices to effect peace caused a wave of selling on the New York Stock Exchange and an ensuing decline of 1.33 points in the shares of 50 railroads and industrial concerns. His principal philanthropy was the Boys' Club of New York, of which he was president and through which he hoped to see pro-

vided worth-while outlets for the adolescent's energy. Like his wife, he was an ardent advocate of prohibition repeal and served as treasurer of the Association against the Prohibition Amendment.

SAFETY AT SEA. The number of persons saved or rescued from peril at sea by the U. S. Coast Guard during the fiscal year 1933 was 6492, according to the annual report of the U. S. Secretary of the Treasury. This number was 1278 in excess of the year 1932 and the largest in the history of the Coast Guard. The total number of persons on board vessels that were assisted by the Coast Guard was 33,716 or 2869 more than in the previous year. Instances of assistance rendered number 14,652, compared with 13,739 in 1932. Fifteen hundred and forty-nine vessels were seized or reported for violation of law (2359 in 1932), and fines and penalties amounting to \$244,558 were imposed for violations of law (\$300,756 in 1932).

Among the accidents during the year the most notable were:

January 4. The French liner *L'Atlantique*, 42,512 tons, caught fire in the English Channel. Sixteen lives were reported lost.

January 16. The steamship *Hain Ningtan* foundered in Hangchow Bay with a loss of 300 lives.

January 20. The British freighter *Exeter City* foundered at sea; 4 lost; 22 rescued by S.S. *American Merchant*.

March 12. The motorship *Unimak Native* wrecked in a gale in the Aleutian Islands, 13 lives lost.

May 6. Three of a crew of 33 rescued after 5 days in open boat from the Soviet salvage steamer *Rouslan* reported sunk off Spitzbergen.

May 27. The S.S. *George M. Coz* grounded in Lake Superior and sunk, 125 on board were rescued.

July 7. The French steamship *Nicolas Paquet* was wrecked near Tangiers, crew of 117 and 26 passengers saved in life-boats.

July 14. An overcrowded launch on the Volga River capsized; 70 drowned, captain sentenced to death.

October 1. A Japanese excursion boat capsized off Misumi, 70 rescued, 80 missing.

October 7. The Greek freighter *Annoula* sank off Cape Lookout, 20 lost.

October 20. The Japanese steamship *Yashima Maru* sank in a typhoon, 54 lost, 53 rescued.

October 24. The S.S. *Tronoh* sank in a storm off Singapore; 28 lost, 9 rescued.

November 15. The S.S. *Saxilby* sank off Valentia, Ireland; crew of 29 took to lifeboats but were not found.

November 17. Japanese steamer *Seiten Maru* sank with crew of 300 off Loochow Island.

December 2. The Dutch tanker *Gelinik* sank in the Black Sea; 13 lost, 7 rescued.

December 25. The schooner *Monica Hartery* overturned on the high seas; all on board were lost.

SAGHALIEN. See SAKHALIN.

ST. CHRISTOPHER-NEVIS. See LEEWARD ISLANDS.

SAINT GAUDENS. See SCULPTURE.

ST. HELENA. A British colony in the South Atlantic some 1200 miles west of the west coast of Africa, consisting of the island of St. Helena (47 square miles) and its dependency the island of Ascension (34 sq. miles). Population (1931 census), 4183 of whom 188 were on the island of Ascension. The principal exports are fibre, tow, twine, and rope. Jamestown is the capital and chief port. Governor in 1933, Sir S. P. Davis.

ST. JOHN'S COLLEGE. A college of liberal arts and sciences for men in Annapolis, Md., founded as King William's School in 1696. The enrollment for the first half-year of 1933-34 was 238. There are 26 faculty members. The endowment fund as of July 1, 1933, amounted to \$232,724, and the income for the year ending June 30 was \$303,910. The library contained 27,000 volumes. President, Douglas H. Gordon.

ST. LAWRENCE UNIVERSITY. An institution for the higher education of men and women at Canton, N. Y., founded in 1856. The registration for the autumn term of 1933 was 723. The faculty numbered 54 members. The endowment funds amounted to \$4,921,001, and the income for the year was \$252,466. The law school of the University, with separate funds, is located in Brooklyn, N. Y. Its enrollment for the autumn term of 1933 was 1367. The library contained approximately 55,000 volumes. President, Richard Eddy Sykes, D.D.

ST. LAWRENCE WATERWAY. See UNITED STATES under *Administration*; NEW YORK under *Political and Other Events*; CANALS; WATER POWER.

ST. LUCIA, lū'shī-ā or lōo-sē-ā. A British insular colony in the Windward Islands (q.v.) group of the West Indies. Area, 233 square miles; the population was 61,135 on Jan. 1, 1933. Castries, the capital, had 5899 inhabitants. Port Castries has one of the best harbors in the West Indies and is a coaling station. The principal products are sugar, cacao, copra, and lime. For 1932, imports were valued at £165,269; exports, £135,496; revenue, £130,207; expenditure, £96,278; public debt, £162,595 for which the sinking fund amounted to £44,028.

ST. PIERRE AND MIQUELON, mīk'ē lōn'. Two small groups of islands belonging to France, situated near the southern coast of Newfoundland, and named from their two largest islands. Area of St. Pierre group, 10 square miles; Miquelon group, 83 square miles. Total population (1931), 4321. St. Pierre is the capital and chief town.

SAINTSBURY, GEORGE EDWARD BATEMAN. A British critic and literary historian, died at Bath, Jan. 28, 1933. Born at Southampton, Oct. 23, 1845, he was educated at King's College School, London, and at Merton College, Oxford. After acting as senior classical master at Elizabeth College, Guernsey, during 1868-74 and as head master at Elgin Educational Institute during 1874-76, he settled in London as a journalist and miscellaneous writer, contributing principally to the *Academy* and *Saturday Review*. Called to the University of Edinburgh as professor of rhetoric and English literature in 1895, he held that chair with distinction until his retirement in 1915.

The range of Professor Saintsbury's reading in classical, mediæval, and modern literature was immense, while the sheer bulk of his work, original and editorial, was a monument to a literary enthusiasm which imparted remarkable zest, vitality, and readableness to his surveys of these fields and criticism of their outstanding representatives. Among these were *Primer of French Literature* (1880); *A Short History of French Literature* (1882); *Elizabethan Literature* (1887); *Essays in English Literature, 1780-1860* (1st series, 1890; 2d series, 1895); *Essays on French Novelists* (1891); *Nineteenth Century Literature* (1896); *The Flourishing of Romance and the Rise of Allegory* (1897); *Sir Walter Scott* (1897); *A Short History of English Literature* (1898); and *Matthew Arnold* (1899). His monumental *History of Criticism* (3 vols., 1900-1904); *Minor Caroline Poets* (3 vols., 1905-21); and *History of English Prosody* (3 vols., 1906-10) were followed by *The Later Nineteenth Century* (1908); *A Historical Manual of English Prosody* (1910); *History of English Criticism* (1911); *History of English Prose Rhythm* (1912); *The English Novel* (1913); *A First Book of English Literature*

(1914); *A History of the French Novel* (2 vols., 1917-19); and *A Consideration of Thackeray* (1931).

One of the most delightful connoisseurs of wines, Professor Saintsbury wrote *Notes on a Cellar Book* (1920), while in such miscellaneous works as *A Scrap Book* (1922), *A Second Scrap Book* (1923), *Collected Essays and Papers* (4 vols., 1924), and *A Last Scrap Book* (1924) he expressed his impatience with Modernism and nostalgia for the Victorian Age. He was president of the English Association in 1909, and in 1911 was elected a Fellow of the British Academy.

ST. THOMAS. See SÃO THOMÉ AND PRÍNCIPE; VIRGIN ISLANDS.

ST. VINCENT. A British island colony in the Windward Islands (q.v.) group of the West Indies. Area, 150.3 square miles; population (1931 census), 47,961 of whom 2173 were white; the estimated population for 1932 was 49,065. Kingstown, the capital, had 4269 inhabitants in 1931. The chief products are arrowroot, cotton, copra, rum, and syrup. In 1932, imports were valued at £149,289; exports, £97,299; revenue, £72,073; expenditure, £67,903; public debt, £93,543 for which the sinking fund amounted to £5816. St. Vincent is under the governor of the Windward Islands but has its own executive council and legislative council.

SAKHALIN, sā'kà-lēn'. An island off the eastern coast of Siberia and north of Japan. The portion north of 50° N. latitude belongs to the Soviet Union and has an area of some 13,934 square miles and an estimated population (1930) of 22,500. For the Japanese portion of the island see KARAFUTO.

SALES TAX. See TAXATION.

SALMOND, AIR CHIEF MARSHAL SIR (WILLIAM) GEOFFREY (HANSON). A British soldier, died in London, Apr. 27, 1933. Born near Dover, Kent, Aug. 19, 1878, he attended Wellington College and the Royal Military Academy at Woolwich. In 1898 he joined the Royal Artillery, and for his services in the relief of Ladysmith and the operations at the Tugela River during the Boer War received the Queen's medal with seven clasps. Aside from service at the British legation in Peking during the Boxer Rebellion and further training at the Staff College at Camberley during 1911-12 his career was uneventful until the outbreak of the World War. Having joined the Royal Flying Corps in 1913, he accompanied Maj.-Gen. Sir David Henderson to France as staff officer. In 1915, however, after commanding Squadron No. 1, he was recalled by the Air Ministry to command in Egypt the Fifth Wing of the Royal Flying Corps. In 1916 he was named commander of the Royal Flying Corps in the Middle East (Saloniki, Egypt, and Mesopotamia) with the rank of brigadier-general. In that capacity he directed the bombing from the air of the Turkish Army in Palestine as it retreated northward from the advancing Allied forces under Allenby; the campaign culminated in the capture of Jerusalem on Dec. 9, 1917. In recognition of this exploit he received the Distinguished Service Order in 1917 and was made a Companion of the Bath in 1918 and a Knight Commander of St. Michael and St. George in 1919.

Appointed Air Vice-Marshal in 1919, Salmond was a passenger on the first aeroplane to fly from England to India, the object of his trip being the inspection of units of the Royal Flying Corps in India. In 1922 he became Director-General of Sup-

ply and Research in the Air Ministry and as a member of its Air Council during the next five years was responsible for the development of the light aeroplane. His next command was that of Air Officer commanding the Royal Air Force in India where he carried out through air patrol of the Northwest frontier the Government of India's policy of "control without occupation." Having been made Air Marshal in 1929, he assumed on his return to England in 1931 the post of Air Officer commanding-in-chief of the Air Defense of Great Britain. On the retirement of his brother, Sir John Salmond he was named in April, 1933, Chief of the Air Staff.

SALONIKA, GREECE. See RECLAMATION.

SALVADOR, sál'vá-dör' (EL SALVADOR). A Central American republic. Capital, San Salvador. AREA AND POPULATION. Salvador has an area of 13,176 square miles and a population estimated on Dec. 31, 1933, at 1,688,000 (1,437,365 at 1930 census). Persons of mixed Spanish and Indian blood numbered 1,000,000 or more. The population in 1933 was 38.8 per cent urban and 61.2 per cent rural. In 1932 the birth rate was 40.9 per 1000 inhabitants; the death rate, 21.9. The population of the chief cities (1930) was: San Salvador, 89,281; Santa Ana, 41,210; San Miguel, 17,569; Santa Tecla, 20,958; Sonsonate, 15,737.

EDUCATION. In 1932, there were 1046 public primary schools, with 54,437 pupils; 97 private primary schools, with 6234 pupils; 49 secondary schools (4 public and 45 private), with 1558 pupils; and one National University, with 350 students.

PRODUCTION. Coffee is the chief crop, furnishing 95 per cent of the value of all exports in 1931. Other products are sugar, henequen, balsam, indigo, cotton, rubber, corn, rice, and beans. Dye and cabinet woods are the chief forest products. The livestock census of 1930 showed 328,000 cattle, 355,00 swine, and 66,000 horses, mules, and asses. Coffee production in the 1932-33 season was 117,040,000 pounds (84,816,000 in 1931-32). For the year ended Oct. 31, 1933, exports were 822,848 bags, or 276,921 bags more than in the previous season. The value of coffee exports in the calendar year 1932 was \$6,433,000 (\$10,579,000 in 1931). Gold and silver are mined in small quantities. Sugar grinding, coffee cleaning, and the manufacture of shoes and textiles are the main industries.

COMMERCE. Provisional returns for 1932 showed general imports (including bullion and specie) of \$5,009,000 (\$7,271,000 in 1931) and exports of \$5,531,000 (\$11,081,000 in 1931). In colones (1 colon equals \$0.50 at par) the figures were: Imports, 12,484,000 in 1932 (14,007,000 in 1931); exports, 13,962,000 in 1932 (22,726,000 in 1931). Conversions to dollars were made at average exchange rates. Besides coffee, the chief exports were sugar, cotton, henequen, balsam, indigo. Cotton fabrics, wheat flour, lumber, and machinery were leading imports. In 1931 the United States supplied 50.4 per cent of the total imports; United Kingdom, 12.1; Germany, 8.7. Of the 1931 exports, Germany took 28.5 per cent; United States, 15.1 per cent. Imports from the United States (1933) were valued at \$2,320,377 (\$2,289,155 in 1932); exports to the United States, \$2,107,850 (\$1,143,495 in 1932).

FINANCE. Provisional budget returns for the calendar year 1931 showed revenues of 17,638,050 colones and expenditures of 18,766,857 colones; for 1932, revenues of 16,889,264 and expenditures

of 17,294,470 colones. For the fiscal year ended June 30, 1933, closed accounts placed receipts at 18,471,064 colones and expenditures at 17,682,096 colones. The budget for the fiscal year 1933-34 estimated receipts at 17,932,531 colones (\$6,133,000) and expenditures at 17,909,751 colones (\$6,125,000). The public debt on Dec. 31, 1932, totaled 46,830,068 colones (internal, 12,204,168; external, 34,625,900). In May, 1933, the government agreed with a Bondholders' Protective Committee to pay interest in its foreign debt from July 1, 1932 to Jan. 1, 1935, but to suspend sinking fund payments. The colon exchanged at an average of \$0.395 in 1932.

COMMUNICATIONS. Salvador has 375 miles of railway lines, of which 285 miles are operated by the International Railways of Central America. In 1932 all lines carried 786,936 passengers and 219,627 tons of freight. Highways extended 1476 miles, of which 353 miles were motor roads. The Pan American Airways, link San Salvador with most of the other American capitals.

GOVERNMENT. The Constitution vests executive power in a President elected for four years and legislative power in a single chamber of 42 Deputies, elected for one year by popular suffrage. President in 1933, Gen. Maximiliano H. Martínez, who was appointed Provisional President on Dec. 4, 1931, by a military directorate following the successful *coup d'état* of December 2 against the constitutional régime of President Arturo Araujo. On Feb. 5, 1932, Congress declared him constitutional head of the state and confirmed him in office for a four-year term.

HISTORY. The government of Salvador during 1933 secured the adoption of a series of financial and economic measures designed to meet the agricultural crisis and particularly to aid the coffee industry which is the country's chief source of wealth. A decree of June 17, 1933, established a new temporary subsidiary coin, the silver colon, with a par value of 50 cents U. S. currency, and provided for the coining of 5,000,000 colones of such coins. The new coins were to be legal tender at par (2 colones for 1 gold peso) for all customs duties, taxes, and payments to the government, while for private obligations they were to be accepted at par up to 30 per cent.

This new currency was to be paid for with part of the proceeds of the coffee export tax and was to form part of the funds of a credit institution established for the promotion and protection of agriculture. Two other complementary measures were the Coffee Defense Law of July 28, 1933, and the decree for the establishment of the Bank of El Salvador, authorized by the Legislative Assembly on the same date. The Coffee Defense Law placed the cultivation, production, cleaning and sale of coffee under the protection and supervision of the state, acting through a commission. The bank act authorized the Bank of El Salvador, among other things, to provide credits for the purchase and sale of agricultural products on a reciprocity or barter basis, to grant loans on crops, to discount, rediscount and sell agricultural paper maturing within one year, etc. It was empowered to issue bank notes and later was to become the sole bank of issue.

Another measure passed by the legislature provided for the establishment of an Exchange Control Board to fix rates and regulate all exchange operations. By a decree of June 3, 1933, provision was made for the distribution of public lands to the poor under a homestead system. These mea-

ures were all passed previous to the adjournment of the National Legislature shortly after the middle of October. None had been placed in effective operation before the end of the year.

The Martínez government in Salvador was unsuccessful in its efforts to secure recognition from the United States government during 1933. The governments of the United States and of Guatemala, Honduras, and Nicaragua held that President Martínez was ineligible to hold executive office in Salvador under the Central American treaty of 1923, which forbade recognition of any Central American government gaining power by force. Costa Rica, however, had denounced the 1923 treaty, effective in January, 1934, when recognition of the Martínez government by Costa Rica was practically assured. Meanwhile, in spite of the action of the State Department in Washington, numerous Latin American and European governments had extended recognition to the Martínez régime.

SALVATION ARMY. THE. A world-wide organization with international headquarters in London, England, whose sole purpose is the "salvation of mankind from all forms of spiritual, moral, and temporal distress." The movement was first organized as a mission in the East End of London in 1865 by William Booth, a minister of the New Connexion Methodists. It spread rapidly throughout England and in 1880, as the Salvation Army, was extended to the United States. Incorporation took place in New York City in 1899. The government is military in character and in 1933 was under the command of Gen. Edward J. Higgins. The higher command is divided into territories, each territory usually being a separate country, or colony, led by a commissioner and subdivided into divisions consisting of corps, posts, and institutions under the direction of officers of varying ranks.

In 1933 the Salvation Army was active in 84 countries and colonies, where it preached the Gospel in 75 languages. There were in its service, 26,355 officers and cadets, 9527 persons without rank, wholly employed, 163,571 local officers and bandsmen, 65,298 songsters, 34,087 corps cadets, and 15,467 corps and outposts in operation. Its social institutions and agencies numbered 1599 and its day schools, 973. It published 131 periodicals, with an average circulation of 1,717,157 copies per issue.

The message of the Salvation Army in the United States for the year 1933 was very appropriate—"All else may have failed! Try religion." Under that arresting slogan it conducted a nationwide campaign, bringing home to countless numbers of people the fact that the one panacea for the world's ills is found in spiritual peace. As to its emergency relief work, the army found little diminution in the demands made upon it by the sufferers from unemployment and kindred social ills, but thanks to generous public support it was able to continue this work throughout the year. It was called by President Roosevelt and his advisers into consultation on many aspects of the new national programme and modified its own relief programme to suit the changes caused by Federal and State legislative action.

There were in the United States, in 1933, 1716 corps and outposts, 4701 officers and cadets, 15,878 local senior officers and bandsmen, and 14,342 local junior officers and bandsmen. Converts during the year numbered 122,301. Among the social institutions were 90 men's hotels and 16

residential hotels for young women, accommodating a total of 9589. Men's industrial homes numbered 116 with accommodation for 4152 persons; children's homes 10, with accommodation for 822 persons; women's homes and hospitals 36, with accommodation for 2711 persons; and dispensaries 10, with a total of 25,700 patients. During the year 11,128 families were visited, while Thanksgiving and Christmas dinners were distributed to 709,904 persons. In addition 39,360 prisoners were assisted by the Salvation Army on discharge and situations were found; 16,718,922 persons were afforded temporary relief outside social service centres and hotels; 54,299 children and 7791 mothers received summer outings; and 331,043 men and women found employment through the army's 82 free employment bureaux.

The national headquarters of the Salvation Army in the United States are at 120 West Fourteenth Street, New York City. Evangeline Booth, daughter of William Booth, the founder, is the commander-in-chief. The territorial commissioners in 1933 were: John McMillan (eastern); William McIntyre (central); Benjamin Oramas (western); and Alexander Damon (southern).

SAMOA. A group of 14 islands in the Southern Pacific, about 4000 miles southwest of San Francisco. The islands east of 171 W. longitude belong to the United States; those west of that line are administered by New Zealand under a mandate of the League of Nations.

AMERICAN SAMOA. American Samoa comprises the islands of Tutuila, Tau, Olosega, Ofu, Aunuu, and Rose Island. The Naval Station at Pago Pago, Tutuila, is the seat of government. The harbor at Pago Pago is considered the best in the South Seas. With a total area of about 60 square miles, the islands had a population on May 31, 1933, of 10,773, an increase of 501 over the previous year. The death rate was 16.92 per 1000 inhabitants in 1932-33 (20.02 in 1931-32). There were 21 public schools, with 2229 pupils in 1933, an increase of 111 pupils over the previous year. English is the language of instruction in public schools. Production of copra, the main export product, has declined due to competition of the Manchurian soy bean. In 1932-33, 602 tons of copra were exported at a price of about \$32 per ton, a price 36 per cent less than in the previous year. Governmental revenue in 1932-33 was estimated at \$108,800 and expenditure at \$88,686. Of the revenue, \$23,294 was raised by the tax on freehold property and leases, the taxpayers numbering 2214.

The islands are under the jurisdiction of the U. S. Navy Department and are administered by the Governor of the U. S. Naval Station at Pago Pago. Governor in 1933, Capt. G. B. Landenberger, U. S. Navy. There is a native advisory council to the Governor, called the Fono, which meets annually. The 1933 Fono recommended a change in existing regulations to give residents of three-quarters Samoan blood the landowning rights and other privileges previously reserved to full-blooded Samoans. Tuitale, District Governor of the Western District of Samoa, died in May, 1933.

WESTERN SAMOA. The Territory of Western Samoa, as the islands under New Zealand's control are officially named, include the two large islands of Savaii and Upolu, with areas of 700 and 430 square miles, respectively. The population of all islands on Dec. 31, 1931, was 46,023 (42,296 natives, 2883 Europeans and half-castes,

714 Chinese contract laborers, and 130 other islanders). Apia, the chief port and administrative centre, is on Upolu. In 1931 there were some 14,000 pupils in 41 schools. Copra, cacao, and bananas are the chief products. Revenue for the year ended Mar. 31, 1932, was £109,040; expenditure, £128,936. Imports in 1931, £164,950; exports, £194,447. Vessels entering and clearing Apia in 1931 numbered 138 of 113,006 tons. Western Samoa is administered by the New Zealand Ministry of External Affairs, the Administrator in 1933 being Brig.-Gen. H. E. Hart, appointed April, 1931. There was a renewal during 1933 of the long-standing conflict between the mandatory authorities and the Mau, a native Samoan league organized to secure greater autonomous powers. In November seven chiefs of the Mau were imprisoned on charges of sedition. The trial on a similar charge of O. F. Nelson, a white trader sympathetic toward the Mau, took place in Apia shortly afterward. Nelson had recently returned to Western Samoa after having been banished for five years for previous anti-administration activities.

SÁNCHEZ CERRO, LUIS M. A Peruvian soldier and president, died by assassination in Lima, Apr. 30, 1933. Born at Piura, Aug. 12, 1889, of Indian parentage, he attended the Military School of Chorrillos and on his graduation in 1910 served with various infantry and engineering regiments. In 1914 he took part in the uprising whereby President Guillermo Billinghurst was ousted, and the following year was sent as military attaché to the Peruvian embassy in Washington. On his return in 1916 he spent several months exploring the Amazon basin and then resumed his military life with the 11th Regiment at Arequipa. For his participation in the revolt against the Leguía government in 1922 he was imprisoned on the island of Taquila in Lake Titicaca. On his release he joined the 4th Regiment in the military district of Madre de Dios but was deported in 1924 on account of his revolutionary agitation. His service during the next five years with the Italian and French armies in Morocco gave him a valuable knowledge of military tactics.

Permitted to return to Peru in 1929, Sánchez Cerro assumed command of the 3d Regiment of Engineers at Arequipa with the rank of lieutenant-colonel and the following year staged the coup which terminated President Leguía's 11-year régime. The provisional government of which he was president was unable, however, to remedy Peru's serious economic and financial difficulties, and he was obliged to resign in March, 1931. After spending a few months in France he returned in July to begin his campaign for the presidency and in October was elected to that office. His régime as regularly elected president was no less trying than his term as provisional president. Only for a few months in 1932 when there was tension between Peru and Colombia over the possession of the port of Leticia on the upper Amazon was there a whole-hearted support of his government. His principal opponents were the Aprista or Apra (Alianza Popular Revolucionaria Americana) party which charged that the election of October, 1931, was unfairly conducted and demanded the appointment of a junta to take over the government and call new elections. A systematic boycott of the party ensued, with the imprisonment or deportation of thousands of its members. An attempt to assassinate him was made in March, 1932, when he was attending a church

in Lima. A year later another political terrorist, Abelardo Hurtado de Mendoza, succeeded and in turn was slain by the Civil Guard which had been assigned to protect the President while he reviewed 20,000 troops recently recruited on account of the growing hostile feeling between Peru and Colombia.

SAN FRANCISCO. See AQUEDUCTS; BRIDGES.

SANITARY ENGINEERING. See GARBAGE AND REFUSE DISPOSAL; SEWERAGE AND SEWAGE TREATMENT; WATERWORKS AND WATER PURIFICATION.

SAN MARINO, sän mī-rē'nō. A tiny independent republic situated near the southwest coast of the Adriatic and encircled by Italian territory. Area, 38 square miles; population (1932), 13,948. San Marino, the capital, had 2000 inhabitants. The republic is governed by a council of 60 members, elected by popular vote, two of whom are appointed every six months to act as regents.

SANTO DOMINGO. See DOMINICAN REPUBLIC.

SAORSTAT ÉIREANN. See IRISH FREE STATE.

SÃO THOMÉ, sou'n tō-mē, AND **PRINCIPE**, prēn'sē-pē. Two islands in the Gulf of Guinea, some 125 miles from the coast of Africa, constituting a province of Portugal. Total area, 364 square miles; total population (1921), 59,055.

SARAWAK, sà-rā'wāk. An independent state forming the northwestern part of the island of Borneo, under British protection. Area, 50,000 square miles; population, 475,000. The chief towns are Kuching, the capital, with 25,000 inhabitants; Sibü (Fort Brooke); and Miri. In 1932, imports totaled S\$9,698,808; exports, S\$13,573,872; revenue, S\$4,210,558; expenditure, S\$4,277,278 (Straits dollar averaged \$0.4040 in 1932). Rajah in 1933, Sir C. V. Brooke.

SASKATCHEWAN, säs-käch'ē-wōn. A province of Western Canada between Alberta and Manitoba. Area, 251,700 square miles; population (1931 census), 921,785. Regina, the capital, had 53,209 inhabitants in 1931; Saskatoon, 43,291; Moose Jaw, 21,299. Living births during 1931 totaled 21,331; deaths, 6066; marriages, 5700. There were 221,331 students in the 4777 elementary schools in 1931; the University of Saskatchewan had 1459 undergraduates for 1930-31.

Agriculture is the leading occupation; the estimated gross annual agricultural output for 1932 was valued at \$109,649,000, of which field crops from a total of 22,333,900 acres represented \$80,046,900 including 202,000,000 bushels of wheat valued at \$60,600,000 and 107,400,000 bushels of oats valued at \$11,814,00. Livestock (1931 census): 997,426 horses; 1,188,884 cattle; 281,013 sheep; 949,055 swine; 11,518,707 head of poultry. The total value of all livestock in 1931 was \$98,008,978 (\$196,485,201 in 1921). Pelts of fur-bearing animals taken in 1931-32 were valued at \$1,043,739.

Mineral production for 1932 was valued at \$1,025,167 of which coal (875,432 tons) represented \$1,211,539. According to preliminary figures for 1933, gold production was valued at \$667,907 (\$20.67 per fine ounce); silver, \$309,819 (\$0.3758 per ounce). In 1931 the 768 manufacturing establishments had 6061 employees, a capital investment of \$68,547,866, and a value of output of \$44,265,151 gross and \$21,724,533 net. For the fiscal year ended Apr. 30, 1931, revenue amounted to \$14,346,010; expenditure, \$18,202,677. The bonded indebtedness on Apr. 30, 1932 was \$112,060,761.

Executive power is vested in a lieutenant-governor, and a legislative assembly of 63 members elected for five years. Saskatchewan is represented in the Dominion Parliament at Ottawa by six Senators, and 21 members in the House of Commons. Lieutenant-Governor in 1933, H. E. Munroe; Premier, J. T. M. Anderson (Conservative).

SAULT STE. MARIE, CANALS AT. Traffic through the canals at Sault Ste. Marie in Michigan and Ontario indicated a remarkable stride toward recovery. Although neither in number of transits nor in tonnage did it reach the traffic of 1930 when 16,818 vessels carrying almost 55,000,000 net tons were reported, the year's total far exceeded the 1932 totals and almost reached the totals for 1931. In 1933 the report of the combined traffic through the canals, as compiled under the direction of Maj. R. C. Crawford, Corps of Engineers, U. S. Army, showed 12,100 vessel passages with a registered net tonnage of 34,370,300 tons. In 1932 the vessels numbered 8679 carrying 17,250,905 tons; in 1931, 13,056 vessels with 35,917,044 tons.

The total freight carried during 1933 amounted to 40,307,893 short tons, showing an increase of 97 per cent over that for 1932. Passenger traffic increased slightly, with 20,943 in 1933 and 20,241 in 1932. Of the freight the greatest increase was in iron ore, with 22,226,025 short tons, an increase of 516 per cent over the 3,607,119 short tons in 1932. Cargoes of wheat declined 4 per cent during the year, with 198,698,290 bu. as against 207,224,044 bu. in 1932; oil dropped by 2098 short tons to 487,486 short tons. All other cargoes showed gains, rising from less than 1 per cent in flour to 394 per cent in structural steel and pig iron. The major items with 1933 totals and the percentage of gain over 1932 are as follows: Flour, 7,118,520 bbls, a gain of 0.3 per cent; grain, 39,821,163 bu., a gain of 1 per cent; stone, 219,956 short tons, a gain of 4 per cent; soft coal, 7,958,524 short tons, a gain of 11 per cent; salt, 32,106 short tons, a gain of 37 per cent; hard coal, 307,573 short tons, a gain of 64 per cent; lumber, 142,322 M. ft. board measure, a gain of 83 per cent; copper, 47,310 short tons, a gain of 163 per cent; structural steel and pig iron, 240,870 short tons, a gain of 394 per cent.

The United States Canal was opened April 19 and closed December 14, a season of 240 days. The Canadian Canal was opened April 20 and closed December 1, a season of 226 days. The greater amount of the freight, 30,543,685 short tons, was east-bound, and of this amount 28,794,768 short tons passed through the United States Canal and 1,748,917 short tons through the Canadian Canal. Of the 9,764,208 short tons west-bound, 9,238,673 tons passed through the United States Canal and 525,535 tons through the Canadian Canal. Of the total vessels, 253 were sailing vessels as against 335 in 1932.

SAXONY. The name applied to three divisions of the former German Empire: The Republic of Saxony (formerly Kingdom of Saxony); the former Grand Duchy of Saxony (now part of Thuringia); and the Prussian Province of Saxony. See **GERMANY** under *Area and Population*.

SCABIES ERADICATION. See **VETERINARY MEDICINE**.

SCANDINAVIAN LITERATURE. This review includes a few books of 1932 as well as those of 1933 and is divided into Danish, Norwegian, and Swedish literature.

DANISH. *Poetry.* Valdemar Rørdam's *Huset ved Volden* (The House by the Dam) shows a strong love for the old cultural ideals and traditions of Denmark. The poems in Johannes Wulff's *Sange fra Jorden* (Songs from Earth) vary from light numbers written in a humorous vein to hymns expressive of exalted religious feeling. In Hulda Lütken's *Lænken* (The Chain) we see the conflict between the urge of womanhood and that of the artistic and poetic temperament.

Fiction. In Henri Nathansen's *Mendel Philipssen & Søn* (Mendel Philipssen and Son), the story of a business house and at the same time of a family, the patriarchal traditions of the Jewish race and the solidarity of the Jewish family are pointed to as models for the rest of the world. *Lokomotivet* (The Locomotive) is Emil Lycke's strongest work to date. His thesis seems to be that literature is untrue and unreal and that therefore a practical career is more useful than that of the writer. Gudmundur Kamban's *Quod felix*, which completed the Skalholt series, is an historical novel of unusual power. In *Vikivaki* which, although in many respects an excellent work, is somewhat below the author's usual standard, Gunnar Gunnarsson entered a new field, that of the psychic.

Miscellany. In *Revolutionære Profiler* (Profiles of Revolutionists), Ad. Stender-Petersen endeavors to explain the Russian revolution through the character and personality of its leaders. Frederik Weilbach's *Frederik II's Italienrejser* (Frederick IV's Journeys to Italy) gives an account of the Danish king's several trips to Italy and their influence on Danish architecture, art collections, etc. In his work on *William Blake*, Vilhelm Grønbech interprets the English writer as a poet, an artist, and a mystic.

NORWEGIAN. *Poetry.* Norwegian literature suffered a great loss in the death of Olaf Bull.—In his latest collection, *Det levende livet* (The Full Life), Stein Backe expresses a resignation and happiness which have been acquired through struggle. Vilhelm Krag's *Digte* (Poems), written in a lyric vein, impresses one as a series of personal confessions.

Fiction. *Masken* (The Mask), written in the sombre realistic style peculiar to Oskar Braaten, seems to express the author's conviction that one cannot entirely escape the influence of heredity. In *Franziska kommer hjem* (Franciska Comes Home), Katharina Gjesdahl depicts the varying and adventurous life of her heroine from the early days when she leaves home to the time when she is drawn back to the place of her childhood. *Fugl Fønix* (Bird Phoenix) by Kristian Elster stresses the tragic fact that each generation is misunderstood and condemned by the succeeding one and that any attempt at an understanding between the two is futile.

Science, Criticism, etc. Hans Hansen's book on *P. Chr. Asbjørnsen* discusses not only the artistic, but also the practical side of the great writer. In *Kulturkrisen og kapitalismen* (for which one might venture the English title "The Great Crisis and Capitalism") Ingjald Nissen subjects the present world crisis to a psycho-sociological investigation. Arnold Ræstad's *Danmark, Norge og folkeretten* (Denmark, Norway, and the Law

of Nations) treats the relations of these two countries during the last six centuries in the light of international law.

SWEDISH. Poetry. In *Under öppnad himmel* (Under an Opened Heaven), a collection of poems of high artistic quality, Nils Bolander shows on the one hand a strong sense of pathos, and on the other, a strong religious faith. Pär Lagerkvist's *Vid lägereld* (By the Camp Fire) is expressive of a meditative mood and a love of nature. It shows occasional traces of the author's earlier fondness for experimenting with words and desire for a "film" style. Bertil Malmberg's *Illusionernas träd* (The Tree of Illusions) expresses a sense of isolation and a dissatisfaction with the modern lack of idealism. Eva Wessel, who made her début with *Kvall* (Evening), in addition to giving evidence of deep feeling, shows herself a thorough master of poetic form, especially in her use of the folk-song forms and motifs.

Fiction. In *Godnatt, jord* (Good Night, Earth) Ivar Lo-Johansson, one of to-day's master realists, takes care to show all phases, even the revolting ones, of peasant life. The hero of Thore Ericson's *John Steen i Himmelsvik* (John Steen in Himmelsvik) is a foundingling who attains wealth and social position beyond those of his fellow townsmen, and yet finds that he has failed to acquire the one thing that could make him happy, companionship. In addition to telling a touching and interesting story, the author gives a clear economic and cultural picture of Sweden during the last third of the nineteenth and the beginning of the twentieth century. Ella Boström, on the other hand, goes back to pre-Mosaic times in *Horisonstaden* (The City on the Horizon), which treats the double theme of Achnaton's romantic love for Nephertiti and his endeavor to give his people a new religion based on enlightenment and brotherly love. Some of the shorter stories of the year show the influence of American novelistic technique. Of these may be mentioned, Walter Ljungquist's *Ombyte av tåg* (Change of Train), a touching story of two childhood friends who, after years of separation, meet at a railroad station; and Signe Engström's *Midsommarafton* (Midsummer Eve), an excellent picture of an old Swedish estate which proves unable to keep out the economic worry incident to our modern industrial system.

Miscellany. In *Mörkt och ljus* (Dark and Light) Gustaf Strindberg tells some interesting episodes from his work as a physician in America. In *Egyptiska profiler* (Egyptian Profiles) Dagmar Berg gives some interesting pictures of Egyptian life as she has observed it during her sojourn in Cairo. (See also PHILOLOGY, MODERN.)

SCAPINELLI DI LÈGUIGNO, RAPHAEL, CARDINAL. A Roman Catholic prelate, died at Vatican City, Rome, Italy, Sept. 17, 1933. He was born at Modena, Apr. 25, 1858, and after his ordination to the priesthood in 1881 taught for a time in a seminary at Reggio. Becoming attached to the secretariat of the Vatican, he was later named secretary to Mgr. Vincenz Vannutelli, the Papa Nuncio in Lisbon, and in 1907 served as Apostolic Delegate in Madrid. At the Vatican he held successively the posts of consulting secretary to the Commission on Canon Law, secretary to the Commission for the Administration of the Vatican's Property (which entailed also the office of vice-prefect of the Holy Apostolic edifices), and secretary to the Holy Congregation for Ec-

clesiastical Affairs. While serving as special Apostolic Nuncio to Vienna during 1912-16, he was created cardinal-priest and pronuncio (in 1915) by Pope Benedict XV. On the death of Cardinal Vannutelli in 1930 he was named by Pope Pius XI Apostolic Datary, in which capacity he conferred the non-consistorial benefices.

SCHILLINGS, Max von. A German composer and orchestral conductor, died in Berlin, July 24, 1933. He was born at Düren, Apr. 19, 1868. While pursuing his studies at the Gymnasium of Bonn he studied music with Brambach and Von Köigs-löw. After three years of further study at the University of Munich he settled there as a teacher and in 1903 received the title of Royal Professor of Music. In connection with the Wagnerian opera performances at Bayreuth he distinguished himself as director of rehearsals in 1892 and as chorus master 10 years later. On removing to Stuttgart in 1908 he was appointed musical assistant to the intendant of the Stuttgart Court Theatre, later becoming conductor of the Court Orchestra and Opera and serving as general music director at the Stuttgart Court Theatre from 1911 to 1918. Von Schillings was called to Berlin as director of the Prussian State Opera in 1919 but was removed from this post six years later following a dispute with the Prussian Minister of Culture. After refusing an appointment as professor of music in the Prussian Academy of Fine Arts he served as conductor for the German Grand Opera Company on its tour of the principal cities of the United States in 1929-30. In March, 1933, after the ascendancy of the National Socialist party, he was named director of the Berlin Civic Opera to replace Karl Ebert.

As a composer Von Schillings showed decided talent, but unfortunately allowed himself to be strongly influenced by Wagner, thus sacrificing his individuality. His operas *Der Pfeifertag* (1899) and *Mona Lisa* (1915), however, were well received in Germany until 1930. In 1923 *Mona Lisa* was presented at the Metropolitan Opera House, New York City, with his wife, Barbara Kemp, in the title rôle. He wrote also the operas *Ingwelde* (1894) and *Moloch* (1906); the symphonic fantasias, *Meergruss* and *Seemorgen*; a hymn-rhapsody for mixed chorus and orchestra, based on Schiller's *Dem Verklärten*; and about 40 songs. Among his best works were Schiller's *Kassandra* and *Das Eleusische Fest*, Spitteler's *Glockenlieder*, and Wildenbruch's *Das Heldenlied* arranged as recitations, with illustrative accompaniment for piano or orchestra. He wrote also a symphonic prologue to Sophocles's *Edipus Rex* and incidental music to Aeschylus's *Orestes* and the first part of Goethe's *Faust*. Knighthood was conferred on him by the King of Württemberg in 1912, and in 1932 he was elected president of the Prussian Academy of Fine Arts.

SCIALOJA, VITTORIO. An Italian jurist, died in Rome, Nov. 19, 1933. Born in Turin, Apr. 24, 1856, he studied law at the University there and in Florence and Rome, and in 1879 became professor of law at the University of Camerino. He was called to the University of Siena as professor of Roman law the following year, and after 1884 held the same chair at the University of Rome. Scialoja's political career dated from 1904 when he was elected to the Senate. He served as Min-

ister of Justice during 1909-10, and in the wartime coalition cabinet of Paolo Boselli (1916-17) was Minister of Propaganda. As Foreign Minister under Premier Nitti during 1919-20 he was a member of the Italian delegation to the Paris Peace Conference where he assisted President Wilson in framing the covenant of the League of Nations. He was also chief of the Italian delegations to the Locarno Conference and the sixth Assembly of the League of Nations, and from 1925 to 1931 represented Italy on the Council of the League of Nations. At the time of his death Scialoja was president of the Reale Accademia dei Lincei and of the International Institute for the Unification of Private Law. He translated into Italian during 1893-98 Savigny's monumental *System des heutigen römischen Rechts*.

SCULPTURE. In June, seventy works of sculpture in bronze and stone by Malvina Hoffman representing types of the principal divisions of the human species, modeled from carefully selected living subjects, was opened in the Field Museum, Chicago, with beautiful placement in the Chauncey Keep Memorial Hall devoted to the races of mankind. To secure the subjects for these, the sculptor traveled practically around the world and visited many out of the way places. The commission provided for 100 works, of which only 30 have not been completed. This sculpture is said to be unique both as a scientific and an artistic achievement. No other museum in the world possesses a comparable series of studies in physical anthropology. Leading authorities have pronounced these works "the finest racial portraiture that the world has yet seen." Highly civilized peoples as well as the most primitive tribes are represented, and yet while scientifically correct the works are artistically superior. Thus science and art are brought into close relationship. Chauncey Keep, in whose honor the hall was named, was a member of the museum's board of trustees for fifteen years preceding his death in 1929. A bequest of \$50,000 left to the museum by Mr. Keep was applied to carrying out this project, and the balance of the cost, exceeding \$150,000 was received in contributions from Marshall Field of New York, Mrs. Stanley Field, and Mrs. Charles Schweppe of Chicago.

Eight caryatids by Augustus Saint-Gaudens were given appropriate placement in the Albright Gallery, Buffalo, during the latter part of the summer of 1933. When John J. Albright of Buffalo donated at the beginning of the century the funds for this art gallery, Augustus Saint-Gaudens was commissioned to design eight caryatids for the two porches which were to project from the north and south wings on the east front of the new building. After their completion in 1907 it is said that financial complexities arose which prevented their becoming the permanent possession of the Albright Gallery. At the time of Saint-Gaudens' death disagreements arose between Mr. Albright and the sculptor's executors which delayed indefinitely their installation. In 1932, a year after the death of Mr. Albright, it became necessary to offer them for sale. A campaign for their purchase was organized and gifts of \$25,000 saved these works for the building for which they were intended.

Under the auspices of the Fairmount Park Art Association the first International Exhibition of Sculpture to be held in this country was set forth in the Philadelphia Museum of Art from May 14th to September 15th. The exhibition comprised 300 pieces representing the work of 91 American and foreign sculptors and was set forth on the East Terraces and in the Great Stair Hall of the Museum.

The Roosevelt Inaugural Medal issued in March, 1933, was the work of Paulanship. A portrait head of Roosevelt in low relief was on the obverse and a full-rigged sailing vessel—the old Constitution conventionalized—on the reverse. Copies in gold were struck for the President and Vice-President; copies in silver for members of the new Cabinet and 2500 in bronze were offered to the public at the nominal price of \$2.50. Mr. ManSHIP also designed and modelled the official medal for the Century of Progress Exposition.

The Society of Medallists issued during 1933, for their members and others, medals by C. Paul Jennewein and Gaetano Cecere.

A commotion was caused in New York in the early part of 1933 by the banishment, under edict of "Roxy," from the Roxy Music Hall, Radio City, of three pieces of sculpture, "The Spirit of the Dance" by Zorach, "Eve" by Gwen Lux, and "Goose Girl" by Robert Laurent. These works were ejected because they did not meet with the approval of the Music Hall's director, who claimed that they were neither beautiful nor appropriate for Music Hall display.

An interesting and most successful experiment in the use of polychrome sculpture in terra cotta, a pediment of the Pennsylvania Museum, Philadelphia, was completed by the sculptor, C. Paul Jennewein, executed by the Perth Amboy Atlantic Terra Cotta Company, and installed.

NECROLOGY. Among the sculptors of note who died were: Moses Dykaar, James E. Kelly, Maxwell Miller and Nana Matthews Bryant.

For bibliography, see the article on PAINTING.
SEISMOLOGY. It is well known that the earth's axis of rotation is not absolutely fixed within the earth and as a result of this the poles wander over an area whose radius is about 40 feet. Nagaoka has considered the change in the elements of inertia during the period immediately before great earthquakes, when it has been observed that the course of the poleshift becomes straight. The change in these elements may take place just before a great earthquake by a simple displacement of a portion of the crust. The change in velocity of the poleshift may give a hint to prediction, though the locality cannot be stated, as there seems to be no connection between the place of disturbance and position of the pole. Observation of the poleshift is made on the assumption that there is no change in the direction of the force of gravity, but of this there is no certainty. Nagaoka has observed a similar relation between the poleshift and volcanic eruptions.

From a detailed study of the seismograms and records from 90 stations of the earthquake which occurred near Vladivostok on Feb. 20, 1931, Scrase calculated the focus to be 360 kilometers below the surface. This is an abnormally deep focus, one of the deepest that has ever been computed. Most of the records show the anticipated characteristics of well developed, singly-reflected echoes, and the time intervals between these and direct waves provide reliable data for the computation of the depth of the focus. The surface

waves are feebly developed and a much greater proportion of the energy is carried by the body waves than is the case in normal shocks. There is no trace at all of very long Love waves.

C. Davison, who has previously done considerable work on determining possible periodicities of earthquakes, has recently published several papers on this subject. He finds that there is a 42-minute period and divides earthquakes having aftershocks into three classes: (1) those in which the main aftershocks first occurred at some multiple of 42 minutes after the initial shock; (2) those in which aftershocks occurred at $(21 + 42n)$ -minute intervals; (3) those in which no regularity of the aftershocks was found. The time required for primary waves to travel the diameter of the earth is 21 minutes; this accounts for the intervals stated above. Davison has also discussed an eleven year period of earthquake frequency and shows that this period agrees closely with the corresponding sunspot cycle. In addition he has discussed a period of 18.6 years which coincides with the nutation period of the earth. See EARTHQUAKES.

SEWERAGE AND SEWAGE TREATMENT. Federal loans under the National Recovery Act (q.v.) helped check the decline in sewerage and sewage disposal construction but more aid of this kind was in sight for 1934 than was actually given in 1933. Large projected expenditures in this field, with the expectation of Federal aid, were authorized in November by the voters of *Columbus* (Ohio) and *San Francisco*. At *Columbus* nearly \$8,500,000 of bonds were voted for sewers and sewage treatment, the old sewage-works having been outgrown years ago. *San Francisco* voted \$2,625,000 for sewer construction and for two treatment works to protect municipal beaches. Work was continued on the large activated-sludge plant on Ward's Island, *New York City*. Projected extensions to the activated-sludge plant at *Milwaukee* included changes in design considered desirable after experience in operating the existing plant. (For description of these changes and for a summary of five years' operating results, see *Engineering News-Record*, July 27, and Nov. 16, 1933.) At *Essex, England*, four small sewage-works, serving as many parts of the city, were displaced by a single activated-sludge plant. One of the displaced works included a Cameron septic tank, the first of its kind. After its installation in 1896 this type of tank was built in great numbers throughout the world; then

changed by Travis to a two-story tank, which, in turn, was improved by Imhoff to the type of sedimentation and sludge-digestion tank bearing his name, which, in turn, swept over the world, outside Great Britain. Then came the activated-sludge process, about 1915, which, in the last few years has come rapidly into use. Most of the plants of the new type now in use in England are smaller than those in the United States but a large plant is now being built for a group of towns in the county of *Middlesex, England*, to displace many small works of various kinds scattered through the district. Ultimately this plant will serve 2,000,000 people but owing to the small per capita water consumption in English cities its final capacity will be only 80,000,000 gallons (Imperial) a day, or 96,000,000 gallons, United States standard. To gather the sewage from the various towns 67 miles of branch and main sewers, from 21 to 153 inches in diameter, are being built; besides which there will be two 11-ft. outlet sewers to carry the treated sewage to the tidal waters of the Thames. The cost of the complete works will be £3,250,000, or some \$16,000,000, a considerable part of which is being met by unemployment relief grants from the British government.

On February 7, a Federal district court in Wisconsin held that *Milwaukee* is infringing United States patents on the activated-sludge process granted in 1917, 1918, and 1921, to Walter Jones, of Stourbridge, England. A similar suit against the *Sanitary District of Chicago* is pending. Delay, because of lack of funds, in carrying out the orders of the United States Supreme Court (see INTERNATIONAL YEAR BOOKS for 1929 and 1930) to the effect that the sewage of the district just named might be treated to a degree that would permit a large decrease in the volume of water diverted from Lake Michigan through the Chicago Drainage Canal and the Des Plaines and Illinois rivers to the Mississippi, led the court to order the State of Illinois to see that necessary money is provided. On December 8, the Federal Public Works Administration (see UNITED STATES under Administration) allotted the district nearly \$33,000,000 in addition to a previous grant of \$8,000,000 toward the completion of the works ordered by the court. These allotments are conditioned upon certain action by the district, including the collection of charges to industrial plants for trade wastes delivered by them to the disposal system; for which legislation must be obtained.

Working-scale experiments with drying and burning sludge, begun in August, 1932, by the Sanitary District of *Chicago* were continued in 1933. After partial dewatering by sedimentation aided by ferric chloride, the sludge is put through a vacuum dryer and drying furnaces and is then used as a fuel to dry still other sludge. Ultimately the district must dispose of 650 tons of sludge every day. (See *Municipal Sanitation*, July, 1933.) An incinerator with a capacity of 50 tons a day to burn the material removed by the sewage screening plant of *Los Angeles*, the largest plant of its kind in the world (see INTERNATIONAL YEAR BOOK for 1931), was contracted for early in the year. The screenings will be partly freed from water before they are burned.

Only 19 cities of Russia had sewerage systems in 1917 and but 32 in 1928. Under the first five-year plan of the Union of Soviet Socialist Republics the number was 69. (See "Results of the Five-Year Plan on Sanitation in Russia," by

Isodor Mendelsohn, in *Municipal Sanitation* for October, 1933.

See "Chemical Sewage-Treatment Methods, Reviewed and Appraised," *Engineering News-Record*, Dec. 7, 1933, for an account of new processes under treatment.

SHAN STATES. See **BURMA**.

SHEEP. See **LIVESTOCK**.

SHERRERD, MORRIS REBESON. An American civil engineer, died in Newark, N. J., Oct. 20, 1933. Born in Scranton, Pa., Dec. 16, 1865, he was graduated from Rensselaer Polytechnic Institute in 1886 and began his career with the Beach Creek Railroad as an assistant engineer. After service with the Ontario, Carbondale and Scranton Railroad he became supervising engineer on construction for the Public Improvement Committee at Troy, N. Y. In 1892 he removed to Peoria, Ill., to serve as assistant city engineer but three years later returned to Troy in the same capacity. He was also engineer and superintendent of the water department of Newark, N. J., during 1895-1905. Appointed chief engineer for the Department of Public Works of Newark in 1905, Mr. Sherrerd held that office until 1926 when he became consulting engineer. He had served also as chief engineer for the New Jersey Water Supply Commission during 1907-16, and as chief engineer for the North Jersey District Water Supply Commission during 1916-26. The latter project involved the construction at a cost of approximately \$26,000,000 of a cooperative water system for eight New Jersey cities (Newark, Kearny, Montclair, Bloomfield, Glen Ridge, Passaic, Paterson, and Clifton), 100,000-000 gallons of water per day being supplied from the Wanaque and Pequannock watersheds.

In 1929 Mr. Sherrerd became connected with the New Jersey Water Policy Commission as chief engineer. He was also a member of the Technical Advisory Board of the Port of New York Authority and of the Committee on the Regional Plan of New York and Its Environs. Prominent in engineering societies, he served as president of the American Water Works Association, the American Society for Municipal Improvements, and the New Jersey Sanitary Association, as well as chairman of the engineering advisory committee of the New Jersey League of Municipalities. He was a former member of the board of directors of the American Society of Civil Engineers.

SHIPBUILDING. Exclusive of shipbuilding in Russia, from which complete information was not available, and exclusive of warships, the output of ships during 1933 represented a total of 489,016 tons, the lowest output ever recorded by *Lloyd's Register of Shipping*, from whose annual summary this article is taken. This is almost exactly one-third less than the total output, 726,591 tons, of 1932.

The total steam tonnage launched—116 vessels of 141,738 tons—includes five vessels of 19,090 tons to be fitted with steam turbines, and nine vessels of 11,358 tons, which will have a combination of steam reciprocating engines and turbines. Of the total steam tonnage, about 21,000 tons refer to steamers fitted for burning oil fuel under the boilers. The tonnage of vessels launched in which internal combustion engines are to be employed amounts to 337,821 tons, which compares with 268,690 tons launched in 1932, 920,495 tons launched in 1931, 1,582,994 tons in 1930, and 1,269,888 tons in 1929.

Of the 330 vessels launched in the world during

the year, 13 are of between 4000 and 6000 tons, 25 between 6000 and 10,000 tons, and four only above 10,000 tons each. The following are the four vessels:

	Tons	Built in
<i>Président Doumer</i>	12,700	France
<i>Marguerite Finaly</i>	12,426	Italy
<i>Robert F. Hand</i>	12,197	Germany
<i>Cordillera</i>	12,051	Germany

During 1933, excluding vessels of less than 1000 tons, 12 vessels of 82,675 ton were launched which have been built for the carriage of oil in bulk. Of these, 11 vessels of 81,595 tons are motorships. The total number and tonnage of vessels built on the Isherwood system of longitudinal framing launched during the year was six of about 42,000 tons, excluding those of less than 1000 tons. All are built for the carriage of oil in bulk.

In only one country was an output of 100,000 tons or more recorded during 1933, namely Great Britain and northern Ireland, 133,115 tons. Next in order come Japan (72,290 tons), Sweden (60,860 tons), Germany (42,195 tons), Holland (35,899 tons), France (34,073 tons) and Denmark (34,016 tons).

GREAT BRITAIN. The tonnage launched during 1933 was 54,679 tons, less even than that for 1932, and is the lowest recorded since the first issue, in 1888, of *Lloyd's Register Shipbuilding Returns*. The output represents 27.2 per cent of the world's output during 1933, as compared with 25.8 per cent in 1932, 31.1 per cent in 1931, 51.2 per cent for 1930, 54.5 per cent for 1929, 53.6 per cent for both 1928 and 1927, and 58 per cent in 1913. The tonnage launched in England and Wales amounts to 53,595 tons; in Scotland, 65,720 tons; and in Ireland, 13,800 tons.

The returns for 1933 show that only seven vessels exceeding 5000 tons each were launched. The largest vessel was the twin screw motorship *Port Chalmers*, of 8535 tons, built on the Tyne. Only two other vessels, each a motorship of 6900 tons and launched at Belfast, exceeded 6000 tons. Six vessels, of 2041 tons, were launched for the carriage of oil in bulk, all being for British registry. They comprise one steamer, three motorships, and two non-propelled barges, one of the last named being an all-electrically-welded vessel of 720 tons. No oil tankers of 1000 tons or upwards were launched. The tanker tonnage represents less than 2.0 per cent of the total output for the year 1933. Of the tankers, two, of 1478 tons, are built on the Isherwood system of longitudinal framing. In two other vessels, of 4750 tons, the longitudinal framing system is in part employed. The larger vessel of these, *Arcwear*, of 4200 tons, is the first vessel launched in which the new Isherwood "Arcform" design of hull has been adopted. The tonnage of steamers fitted for burning oil fuel, launched during the year, amounts to approximately 5000 tons. Three vessels with a total tonnage of 5190 tons were launched which will be fitted with steam turbines. In two of these vessels, of 4320 tons, reduction gearing is employed.

The tonnage of vessels fitted with internal combustion engines launched during 1933 amounts to 47,825 tons, which is 36.4 per cent of the total steam and motor tonnage launched during the year. Two Diesel-electric tugs, the first electrically propelled vessels built for towing purposes in Great Britain and Ireland, were also launched.

JAPAN. The output for the year, 74,290 tons,

showed an increase of 19,866 tons as compared with the total for 1932. The steamer tonnage launched—three vessels of 9107 tons—includes one, of 8100 tons, fitted with geared steam turbines. The 1933 figures comprise 27 motorships, of 65,273 tons, including four vessels of about 7500 tons each. The motorship tonnage accounts for 87.9 per cent of the output for the year, and includes a number of fishing vessels and other small craft.

SWEDEN. The figures for 1933—60,860 tons—are 17,860 tons greater than those for 1932, and consist entirely of motorships. Eleven vessels launched in Sweden were for owners in other countries.

GERMANY. During the year 43 vessels of 42,195 tons were launched. As compared with the output for 1932, the present figures show a diminution of 38,604 tons, and are the lowest annual figures recorded for this country. The figures include four steamers—an icebreaker of 836 tons, and three trawlers, two of which are fitted with combined reciprocating engines and low pressure turbine. The total comprises 39 vessels of 40,150 tons to be fitted with oil engines. The two largest, the *Robert F. Hand* and the *Cordillera*, referred to before, exceed 12,000 tons each. The first named is an oil tanker built on the longitudinal framing system. Almost the whole of the remainder of the ships launched in this country consists of fishing vessels, many being fitted with auxiliary oil engine power.

THE NETHERLANDS. The total tonnage launched during 1933—35,899 tons—was 9667 tons higher than the 1932 figures, but was still less than that recorded for any year since 1901 with the exception of last year. The figures do not include craft exclusively intended for river navigation, the total tonnage of which vessels often reaches a high figure. The tonnage launched includes four motorships of about 6500 tons each and one of 4700 tons. Otherwise, the output mostly consists of small craft.

FRANCE. The output for the year—34,073 tons—was 55,237 tons less than that for 1932. Included in the total is the largest ship launched in the world during 1933, the twin screw motorship *Président Doumer*, of about 12,700 tons, already alluded to, launched at La Ciotat. The steamers include one of 5800 tons, fitted with geared turbines, and this vessel, together with two others of 3947 tons, is fitted for burning oil fuel. The motor tonnage—mostly small craft apart from the *Président Doumer* and a fishery research vessel of 1240 tons—includes two tenders with Diesel-electric drive.

DENMARK. The tonnage launched during 1933—34,016 tons—was 11,603 tons more than last year's low total. The steamers launched included six, of about 1400 tons each, fitted with combined reciprocating and turbine engines. The motorship tonnage included an oil tanker of 8500 tons, which was the largest vessel launched in the country during the year, and a train ferry of 2560 tons.

SPAIN. The output for 1933—18,044 tons—exceeded by 6912 tons that for 1932. The motorship tonnage, of 16,052 tons, was composed of three oil tankers, two being of 6276 tons each. All three, and one steam tanker, of 1080 tons, are constructed on the bracketless longitudinal framing system.

ITALY. The total figures for this country—16,560 tons—show a decrease of 30,881 tons compared with those for 1932, and are the lowest recorded since 1897. The three vessels included in

the returns are all motorships, and include the twin screw vessel *Marguerite Finaly*, 12,426 tons, launched at Monfalcone. This vessel is an oil tanker, and is constructed on the bracketless longitudinal framing system. One other motorship, of 4013 tons, was also built on the Adriatic Coast.

UNITED STATES. The output for the year 1933, viz., 10,771 tons, showed the large diminution of 132,788 tons from the total launched in 1932, and was the lowest recorded for the United States by *Lloyd's Register*. All the tonnage launched was built on the Atlantic Coast, and includes nine non-propelled barges. Only two steamers, of 2006 tons, and three motorships, of 1607 tons, were launched. All the non-propelled barges and two of the motorcraft are to carry oil in bulk, four of these vessels, of 3117 tons, being built on the longitudinal framing system. Of the tanker tonnage, nine vessels, of 5885 tons, are electrically welded craft.

SHIPPING. At the end of the fiscal year, June 30, 1933 according to the annual report of the Bureau of Navigation and Steamboat Inspection, the merchant marine of the United States comprised 24,865 vessels aggregating 15,060,157 gross tons, the figures including 642 vessels of 190,803 gross tons built during the previous twelve months. The total indicates a reduction of 288 vessels of 797,498 gross tons from the previous year accounted for by the scrapping of a large tonnage by the U. S. Shipping Board.

Of the total number 747 vessels of 3,923,165 gross tons were engaged in foreign trade and 1250 vessels of 5,420,725 tons in coastwise trade. Foreign trade, which reached its greatest volume in 1921—10,699,596 gross tons—has thus fallen off 63 per cent. Though coasting trade, exclusive of that on the Great Lakes, has increased in the same period by 2,976,279 gross tons, the total seagoing tonnage has decreased 3,800,152 gross tons.

On June 30, 1933, the laid-up seagoing tonnage of the United States aggregated 607 vessels of 2,497,639 gross tons, as against 831 vessels of 3,603,426 gross tons on June 30, 1932. World tonnage laid up, as estimated by *Lloyd's Register of Shipping* for 1932, was 12,000,000 tons as against 15,000,000 tons of the previous year; but the shrinkage was accounted for by the increased scrapping of old ships rather than by absorption into operation. The report indicates that more than 3,333,000 tons of shipping had been broken up or otherwise disposed of, and it was estimated that the total of the world's shipping would shortly decline to the 1927 level of 65,000,000 tons, compared with 70,000,000 tons in 1931.

The actual number of vessels of 100 gross tons and upward throughout the world, as recorded in *Lloyd's Register*, 1933-34, is 31,700. The gross tonnage is 87,920,185. Of the total number 29,515, comprising 66,627,524 gross tons, are steam and motor vessels, leaving only 2185 sailing vessels of 1,292,661 gross tons. Great Britain still retains the lead in ownership with 10,233 vessels of 21,819,687 gross tons. The United States is in second place with 3485 vessels over 100 gross tons, aggregating 13,357,799 gross tons. Japan passed Norway for third place by raising its ownership from 1904 vessels to 2019 and increasing the gross tonnage from 4,225,014 to 4,258,159 in 1933. Norway, in fourth position, declined in ownership from 2008 to 1970, with a corresponding decline in tonnage from 4,166,839 gross tons to 4,079,540 gross tons.

SHOE INDUSTRY. The production of footwear, other than rubber, in the United States in 1933 showed an increase of 11.8 per cent over that of the previous year and of 9.7 per cent over that of 1931. According to statistics on production of boots, shoes, and slippers compiled by the U. S. Bureau of Census the total production for the year was 350,381,737 pairs as against 313,289,854 pairs in 1932. The production of men's dress and work shoes increased 19.2 per cent; boys' and youths' 10.2 per cent; women's 14.7 per cent; infants' 18.7 per cent; barefoot sandals and all other footwear 8.4 per cent. The production of misses' and children's shoes decreased 1.2 per cent. All-fabric shoes (satin, canvas, etc., excluding footwear with fabric uppers and rubber soles) decreased 24.4 per cent, and part leather and part fabric shoes decreased 20.7 per cent. The accompanying table shows total production by pairs as compared with 1932.

<i>Kind</i>	<i>1933</i>	<i>1932</i>
Boots, shoes, and slippers, total	350,381,737	313,289,854
High and low cut boots and shoes, (leather), total	291,265,362	255,790,035
Men's		
Dress	63,770,741	51,583,118
Work	25,049,886	22,909,658
Boys' and youths'	19,943,822	18,100,132
Women's	130,742,290	118,948,757
Misses' and children's	33,180,175	33,599,982
Infants'	18,578,448	15,653,393
Athletic*	1,315,880	1,111,212
Part-leather and part-fabric	1,485,327	1,874,052
All-fabric (satin, canvas, etc)*	4,637,255	6,132,362
Slippers and moccasins for house wear, total	40,648,351	38,211,968
All leather	10,910,778	8,502,674
Part leather, felt, etc.	29,737,573	29,709,294
Barefoot sandals and all other footwear	11,029,562	10,170,225

* Excludes footwear with fabric uppers and rubber soles

SHOOTING. Walter Beaver, Berwyn, Pa. electrician, succeeded Arthur Sheffield, postal clerk, as winner of the Grand American Handicap, richest trapshooting prize, in the Grand American tournament at Vandalia, O., in August, 1933. In the regulation 100 targets Beaver disposed of all his rivals with the exception of seventeen-year-old Ned Lilly of Stanton, Mich., who tied him with a score of 98, posted before Beaver went to the firing line. To tie the 98 Beaver hit twenty-four of the last twenty-five targets and then had a perfect count on the twenty-five targets in the shoot-off. Lilly, however, won the North American championship with 199 out of 200 and also the National Junior title with a perfect score of 100. The Grand American open went to E. C. Woodward of Houston, Tex.; the class AA crown to E. Torges of Wales Center, N. Y.; class A to H. C. Krout of Maryland Line, Ind.; the class B honors to R. Finnel, of Akron, O.; the class C laurels to F. W. Gustites of Balboa, C. Z.; the title in class D to W. F. Kern of Springfield, Ill.; and class E honors to J. M. Imes of Chicago. M. Canterino of New York took the Vandalia open, and the North American for women fell to Miss Alice Crothers of Chestnut Hill, Pa. John R. Taylor of Newark, O., captured the North American professional crown.

The world's amateur trapshooting championship fell to Joseph F. Hiestand of Hillsboro, O., who shattered 497 of 500 targets at Yorklyn, Del. in August to succeed S. M. Crothers to the title. The latter gunner proved he was still in the running by winning the national amateur doubles at

Travers Island, N. Y. with a score of 172 out of 200. J. H. Kretchman of Hamilton, Ont. won the national amateur at the same meeting.

Skeet shooting, eight-year-old offspring of trapshooting, increased in popularity, attracting many hunters who prefer it because it is more of an approximation of real game shooting conditions. The Great Eastern States crown for men was won by Glenn B. Watts, of Lynbrook, L. I. Mrs. Anna May Vance of Waban, Mass. took the honors for women. Harry C. Hathaway of Dighton, Mass. won individual honors in the Eastern States championships, team honors going to the Waltham, Mass. Gun Club, and women's honors to Mrs. Sidney R. Small of Detroit. Vern Marlow of Culver City, Calif., won the Western open crown, and Charles Pickle of Austin, Tex. took the Southwestern States championship.

United States rifle teams scored victories in all four international matches in which they competed. In the Dewar Trophy match the United States won, with Great Britain second, Australia third and South Africa fourth. The United States team won the International Railwavmen's Match with Great Britain second and Canada third. Great Britain was also second in the Fidac match and the Rhenische-Westphalian matches, with Belgium third in the former and Germany third in the latter. T. P. Samsoe of Perth Amboy, N. J. won both the Camp Perry small-bore rifle event and the national small-bore championship. The national individual short range small-bore test was taken by Thurman Randle of Dallas, Tex. with a perfect score of 400. Walter R. Walsh of Union City, N. J. captured the .22-calibre pistol championship of the United States.

SHORT RADIO WAVES. See PHYSICS.

SIAM. An independent monarchy in southeastern Asia. Capital, Bangkok; sovereign in 1933, King Prajadhipok.

AREA AND POPULATION. With an area of 200,234 square miles, Siam had a population on July 15, 1929, of 11,506,207 (9,207,355 in 1920). The 1929 total included 10,493,304 Siamese, 445,274 Chinese, 379,618 Indians and Malays, 60,668 Cambodians, 4880 Burmese, 1920 Europeans and Americans, 295 Japanese, and 120,248 others. The estimated population on Mar. 31, 1930, was 11,684,000. The registration area of Bangkok contained 550,000 inhabitants in 1932.

EDUCATION. Primary education is compulsory for children between the ages of 7 and 14, and includes two years of vocational training, mostly in agriculture, if the pupils do not proceed to a secondary school. Children in the governmental and local schools in 1932 numbered 676,717 (412,235 boys and 264,482 girls); in private schools, 51,788 (33,696 boys and 18,092 girls). Secondary education covers a period of eight years; there were 16,322 pupils enrolled in 1932. Over 86 per cent of the local schools and 50 per cent of the government schools are situated in the monasteries. Chulalankarana University at Bangkok has faculties of medicine, arts and science, and engineering and a civil service school.

PRODUCTION. In 1929, 83.05 per cent of the population was engaged in agriculture, 1.10 per cent in fishing, and 2.19 per cent in industrial pursuits. Rice is the chief crop and is both the main diet of the people and the chief item of export. The yield in 1932-33 was estimated at 4,830,000 tons (4,036,238 tons in 1931-32). The exportable surplus in 1932-33 was about 1,760,000 tons of rice and rice products, and the value was \$4,200,-

660 bahts (1 baht = \$0.4423 at par). Other products in 1931-32 were: Rubber, 132,793 piculs (picul = 133.3 pounds); tobacco, 118,937 piculs; pepper, 52,827 piculs; coconuts, 152,837,870 nuts. Exports of leading products in 1932-33 were: Rubber, 57,692 piculs valued at 396,692 bahts; teak, 37,719 cubic tons, valued at 3,312,029 bahts; copra, 92,566 piculs, valued at 491,445 bahts; tobacco, 6019 piculs; pepper, 10,537 piculs; stick-lac, 54,890 piculs. Tin is the chief mineral produced, although gold, coal, zinc, manganese, copper, lead, antimony, wolfram, etc., are found. Tin output in 1932 (provisional) was 9400 metric tons (12,700 in 1931); exports in 1932-33 were valued at 14,303,900 bahts. Effective Jan. 1, 1934, the International Tin Committee fixed the tonnage of metallic tin exportable from Siam annually for three years at 9800 tons. Rice milling is the chief manufacturing industry.

COMMERCE. For the year ended Mar. 31, 1933, Siam's exports were valued at 152,552,494 bahts (134,206,840 bahts in 1931-32) and her imports at 89,497,423 bahts (99,908,837 bahts in 1931-32). Foodstuffs, cotton textiles, gunny bags, tobacco and its products, kerosene, beer, wine and spirits, and bullion and coin were the chief import items. The chief sources of imports in 1932-33 were Hong Kong, 15,378,647 bahts; United Kingdom, 12,256,780 bahts; Netherland India, 11,541,713 bahts; Singapore, 11,364,718 bahts; and Japan, 9,798,372 bahts. Exports went principally to Hong Kong, 52,959,913 bahts; Singapore, 34,264,948 bahts; Penang, 23,669,944 bahts; and Japan, 9,015,061 bahts. The United States supplied imports valued at 2,158,099 bahts and took exports to the value of 153,325 bahts.

FINANCE. The budget estimates for the fiscal year commenced Apr. 1, 1933, placed revenues at 72,428,424 bahts and expenditures at 72,415,415 bahts. The preceding fiscal year ended with a surplus of about 2,000,000 bahts, with revenues of 74,500,000 bahts and expenditures of 72,500,000 bahts. Capital expenditures totaled 4,000,000 bahts. There was a substantial budget deficit in 1931-32.

On Mar. 31, 1933, the £1,916,000-balance due on the 7 per cent sterling loan of 1922 was paid off, 30 years in advance of maturity, after which there still remained about £2,700,000 in the Debt Redemption Fund. With the retirement of the 1922 loan, the national debt was reduced to £8,568,000, all held in London. The unit of currency is the baht (par value, \$0.4424), which exchanged at an average of \$0.435 in 1930-31 and at \$0.426 in 1931-32. On May 11, 1932, Siam's currency was linked with sterling at the rate of 11 bahts to the pound.

COMMUNICATIONS. On Mar. 31, 1932, there were 1860 miles of railway lines, all state owned, which during the year ended on that date carried 3,631,181 passengers and 1,091,451 tons of freight, with gross earnings of 10,755,874 bahts. The Aerial Transport Company of Siam in 1931 inaugurated a twice-weekly passenger, mail, and express service in northeastern Siam, with Korat as the base of operations. The Dutch Air Mail operated a weekly service between Amsterdam and Batavia, via Siam. There was direct wireless telephone communication between Bangkok and London and Berlin.

GOVERNMENT. Siam's absolute monarchy was overthrown by a *coup d'état* on June 24, 1932, and a new Constitution was adopted on Dec. 10, 1932. It provided for a limited monarchy, with

the King exercising executive power through the Executive Committee, legislative power by and with the advice and consent of the National Assembly, and judicial power through courts duly established by law. The Executive Committee, which took over most of the King's former powers, consisted of 15 members; heads of administrative departments were directly responsible to it. The National Assembly consisted of 70 members, one half elected by popular vote and one half nominated. The first popular election of members of the Assembly took place in November, 1933, and the Assembly convened in December, 1933. See *History*.

HISTORY. The new course upon which the Siamese ship of state was launched by the overthrow of the absolute monarchy in 1932 proved stormy during the ensuing year. In 1932, the King, the princes, and the conservatives generally had yielded without a struggle to the practically bloodless *coup d'état* executed by a group of young revolutionaries supported by powerful army officers. But in 1933 the conservatives made two separate attempts to regain control of the government, one of which resulted in sanguinary and costly civil strife.

The civilian leader of the 1932 revolt was a young patriot named Luang Pradit. Phya Bahol was the military leader. In establishing their new government, they remained in the background, bestowing the high ministerial posts upon persons who had taken no part in the revolution. Dominant figures among the new Ministers were Phya Manopakarana, Finance; Phya Srivisar Vacha, Foreign Affairs; Vice-Admiral Phya Rajawangsan, Defense. These men were regarded as liberals, but they raised strenuous objections to plans for the economic reorganization of the country submitted by Luang Pradit and his idealist adherents. The conflict came to head on Apr. 2, 1933, when the Ministers, acting through the King, banished Luang Pradit from the kingdom, suspended the new Constitution, and organized a new State Council headed by Phya Manopakarana and other conservative Ministers of the old Council. The King's manifesto, announcing the change, accused Luang Pradit and his group of attempting to establish a Communist society. The conservative coup was effected without the use of force.

The new conservative régime proved short-lived. On June 20 Phya Bahol led the army, navy, and the radical civilians in another bloodless *coup d'état*. The Council of State was deposed and the Constitution was restored. General Bahol, assuming the executive power, gave assurances that his administration had no communistic tendencies, that it would remain loyal to the King, and that there would be no change in the government's fiscal policy. However, General Bahol revoked the banishment of Luang Pradit and the young radical leader returned to Bangkok, where he was reported to have been appointed Minister of the Interior.

These developments produced the second conservative attempt to regain power. The new revolt was led by Prince Bovaredej, a member of the royal family and former Defense Minister. On October 12, he seized the airdrome at Don Muang, and rallied to his support a strong section of Siam's air force and the garrisons of Korat and other northern districts. Marching upon Bangkok, the rebels were met on the outskirts of the city by loyal troops and defeated

after heavy fighting in which air fighting played a spectacular and important part. By October 16, the rebels were in retreat from the capital, having lost some 500 killed and 1000 wounded. Don Muang airdrome was recaptured on October 19. About a week later Prince Bovaredej, who had aspired to replace King Prajadhipok, fled by airplane from the country. Guerrilla fighting in the northeastern part of the country continued for some time. Martial law was lifted on November 22.

While a special military court was trying persons arrested in connection with the uprising, elections to the National Assembly were held and the Assembly convened for the first time in December.

SIBERIA. A general term applied to the vast area of northern Asia extending from the Ural Mountains to the Pacific and from the Arctic Ocean to Manchuria, Mongolia, and Soviet Central Asia. Siberia is divided, as shown in the accompanying table, into administrative units of the Russian Socialist Federated Soviet Republic, the largest of the seven republics forming the Union of Soviet Socialist Republics (q.v.):

Division	Square miles	Pop. (1931)
Ural Area *	660,000	7,688,400
Western Siberian Area . . .	503,653	8,767,200
Eastern Siberian Area . . .	1,227,248	2,568,400
Yakutsk Republic	1,552,994	308,400
Buriat-Mongol Republic . . .	150,192	575,000
Far Eastern Area	900,731	1,593,400
Total	4,994,818	21,500,800

* Includes a small section of European U. S. S. R.

SIERRA LEONE, si-ēr'-ā lē-ō-né. A British West African colony and protectorate between French Guinea and Liberia. Total area, 27,925; total population (1931 census), 1,768,479 of whom 96,422 were in the colony. Some parts of the colony are for administrative purposes governed like the protectorate. The part of the colony consisting of the peninsula of Sierra Leone, the town of Bonthe, and the Tasso, Banana, Turtle, and York islands, with a total area of 260 square miles, is administered as colony. Births in the colony during 1932 totaled 2430; deaths, 2404; marriages 204. Freetown, the capital (55,359 inhabitants in 1931), is the chief seaport in West Africa and an Imperial coaling station.

The chief exports were palm kernels, gold, kola nuts, palm oil, pissava, and ginger. In 1932, total imports amounted to £1,248,346 of which cotton piece-goods represented £262,959; total exports, £932,773. The United Kingdom supplied 66 per cent of the imports and took 40 per cent of the exports. Shipping entered and cleared at the ports in 1932 totaled 3,286,299 tons. For 1932, revenue amounted to £872,469; expenditure, £831,921. The public debt on Jan. 1, 1933 was £2,141,273 against which the sinking fund amounted to £676,148. The government of the colony and protectorate is administered by a governor and commander-in-chief, who is also a vice-admiral, assisted by an executive council of five members, and a legislative council of 22 members including the governor. Governor in 1933, Sir A. W. Hodson.

SIGNALING CONSTRUCTION. See RAILWAYS.

SILESIA, si-lē'shi-ā or -shā. (1) A part of the Province of Moravia and Silesia in Czechoslovakia. (2) A county of Poland. (3) The two Prussian provinces—Lower Silesia and Upper Silesia.

SILK. No estimate can be made of the actual production of raw silk in Asia, and for world calculations it is therefore necessary to use the export figures from those countries, with full realization that there is no measure of the amount consumed internally. Using such export figures and the known production of Europe and the Levant, the estimated production in 1933 rose about 4 per cent above the 1932 production, according to the compilations of the Planning and Research Bureau of The National Federation of Textiles, Inc., successor to The Silk Association of America, whose estimate compared with that of 1932 is reproduced here. Production was about 12,000,000 lbs. below that of 1931. The slight increase in demand showed a corresponding slight improvement in prices after the first quarter of the year in Japanese raw silk, which rose from the unprecedentedly low figure of \$1.24 at New York in March to the year's high of \$2.31 in July, steadily diminishing thereafter and closing the year at \$1.46, the average for the year being exactly three dollars less than the price of \$4.66 per pound in January, 1930.

Total imports into the United States dropped from 547,195 bales in 1932 to 503,376 bales in 1933. Japanese deliveries to United States mills, constituting 90 per cent of the total deliveries, dropped from 518,794 bales in 1932 to 426,358 bales in 1933.

WORLD RAW SILK PRODUCTION, SEASONS
1931-32 AND 1932-33
[Tussah silk included]

	Pounds 1931-32 *	Pounds 1932-33 *
Europe	7,518,000	6,642,000
Italy	7,245,000	6,393,000
France	176,000	172,000
Spain	97,000	77,000
Levant	1,786,000	1,995,000
Asia, total exported ^b	80,646,000	85,428,000
China, Shanghai ^c	4,762,000	6,614,000
China, Canton	3,417,000	3,858,000
Japan	72,795,000	74,956,000
India	22,000
Grand total	90,300,000	94,065,000

* Estimated. ^b The total production of raw silk in Asia is an unknown quantity, therefore, export figures have been used. ^c Includes tussah silk.

SILVER. At the opening of the year the demand for silver was at the record low as established on Dec. 29, 1932, 24½ cents in New York and 16½d. in London. The demand showed a slight increase in the succeeding two months when it reached a price of 27¼ cents on March 3. Upon the announcement of the President's embargo on gold on April 19, the price of silver advanced sharply from 28¾ cents to an early height of 37¼ cents on April 24, slowly receding to 32½ cents at the middle of May and advancing again to 36 cents by early June. Upon the fluctuating decline of the dollar following the President's refusal to accept the proposal for stabilized currency at the London Economic Conference, the price of silver reflected similar fluctuations. This is illustrated in the Annual Review of Handy and Harmon of New York City by the following figures showing sterling exchange and New York quotations on silver on various dates: June 19, \$4.14½, .36; July 18, \$4.84, .40½; July 22, \$4.62, .35½; Sept. 23, \$4.78½, .40½; Oct. 16, \$4.50½, .36½; Nov. 16, \$5.49½, .45; Nov. 27, \$5.11, .42.

On December 21, President Roosevelt issued his silver proclamation, which meant essentially that

newly mined silver shall be bought by the U. S. Treasury at a price of 64½ cents an ounce to the producer, and this proclamation is to "remain in force until the 31st day of December, 1937, unless repealed or modified by Act of Congress or by subsequent proclamation."

The actual production of silver in the continental United States, in terms of recovered metal, was slightly above that of 1932, according to preliminary figures issued by the Bureau of Mines; but with an average price during the year of 34.5 cents against an average of 28.2 cents in 1932, the value was much higher. The comparison is shown in the accompanying table. Aside from production in the United States, the silver output of the world in 1933, as estimated by Handy and Harmon, was: Mexico, 69,100,000 ounces; Canada, 15,400,000; South America, 13,500,000 ounces; and all other countries, 43,600,000 ounces.

SILVER PRODUCTION IN THE WESTERN STATES AND ALASKA, IN TERMS OF RECOVERED METALS

SIMMONS COLLEGE. A nonsectarian college for women in Boston, Mass., founded in 1899. The enrollment on Nov. 1, 1933, was 1474. The faculty numbered 145. The productive funds of the institution amounted to \$3,385,530. and the income for the year was \$549,974. President, Bancroft Beatley, A.M., Ed.D.

SINGAPORE. See STRAITS SETTLEMENTS.

SKATING, FIGURE. For another year Miss Sonia Henie of Norway and Karl Shafer of Austria won the world's figure skating titles, winning the 1933 meet in Paris with ease. The 1932 world's and Olympic champions were in perfect form and also took the European titles. They did not invade the United States. Roger F. Turner of Boston and Miss Maribel Y. Vinson of Boston retained their national crowns for the sixth consecutive year. The pairs title went to Miss Vinson and George E. B. Hill. Miss Vinson had won the three previous years with Sherwin C. Badger

as partner. The national junior title went to William Smollender of Minneapolis and the junior women's to talented Miss Estelle Weigel of Buffalo. The championships were held at New Haven.

The Canadians ran off with the major North American titles, Mrs. Constance Samuel winning the women's laurels and her brother, Montgomery Wilson, the men's. They paired to capture the pairs championship. For the first time a championship for fours was held and this popular event was taken by the team of Miss Elmore Davis, Miss Prudence Holbrook, Guy Owens, and Melville Rogers.

Miss Emilia Rotter and Laszlo Szollas of Hungary succeeded the Olympic champions, M. and Mme. Pierre Brunet, as world's pairs champions.

SPEED SKATING. Melvin Johnson of Detroit won the national speed championship at Lake Oconomowoc, Wis., with 110 points, the result of two firsts, two seconds, and a third. Charles Delpier of Detroit was second, twenty points behind. Miss Kit Klein of Buffalo captured the women's crown with 70 points. Leo Frucsinger of Chicago won the intermediate class and Ken Kesselberg of the same city, the boys'. Miss Klein had a perfect day, winning three races, to take the Middle Atlantic crown at Newburgh, N. Y. in January, and Alex Hurd of Canada won the men's title. Joseph Bill of New York City took the intermediate crown and Bobby Anstett, also of New York, the boys'.

SKIING. Roy Mikkelsen, of the Auburn Ski Club of California, won the national ski jumping championship of 1933, winning handily in the meet at Salisbury, Conn., in late February, and succeeding Anton Lekang. Magnus Satre, of Salisbury, won the national 16-kilometer race; the national class B jumping went to Olav Aasen of the Norway Ski Club, class C to young John Oliver of Minneapolis. Harold Sorensen, of the Norsemen's Ski Club won the Eastern title, with class B honors going to Aasen.

SMITH, J (ONAS) WALDO. An American civil engineer, died in New York City, Oct. 14, 1933. He was born at Lincoln, Mass., Mar. 9, 1861, and attended Phillips Andover Academy and the Massachusetts Institute of Technology, receiving the C.E. degree from the latter in 1887. After serving as assistant engineer with the Holyoke (Mass.) Water Power Co., he was appointed in 1890 resident engineer for the East Jersey Water Co., supervising the construction of four reservoirs and dams on the Pequannock watershed and erecting at Little Falls what was said to be the first modern mechanical filtration plant in the United States. He acted also from 1892 to 1900 as the company's principal assistant engineer in charge of the water companies of Passaic and Paterson and as engineer for the Montclair Water Co. and the Asquackanonk Water Co. of Passaic. Following his promotion to chief engineer for the East Jersey Water Co., he directed in 1902 the construction of the Boonton dam and other parts of the Jersey City Water Supply System built at an aggregate cost of \$7,500,000.

In 1903 Mr. Smith was employed by the Aqueduct Commissioners of New York City as chief engineer to complete the Croton Dam, said to be at that time the largest masonry dam in the world. Two years later he was named chief engineer for the newly created Board of Additional Water Supply of New York City—his great task being the construction of the Catskill Water Supply System so as to supply New York City with a maximum of 500,000,000 gallons of water a day. The project on which \$185,000,000 was expended included the construction over a 12-year period of the Ashokan Dam with a capacity of upwards of 150,000,000,000 gallons, enlargement of the Kensico Storage Reservoir, and building of the 92-mile Catskill Aqueduct with a pressure syphon under the Hudson between Storm King and Breakneck Mountains. After 1917 there was constructed the Schoharie watershed of 314 square miles in which the aqueduct had its origin, the Gilboa Dam with a capacity of 20,000,000,000 gallons, and the 18-mile Shandaken Tunnel which carried the water to the Ashokan Reservoir. Within the city limits an average of 250,000,000 gallons were distributed daily by 56 miles of tunnel and pipe lines. For this achievement he was awarded in 1918 by the four national engineering societies the John Fritz Medal. On his retirement in 1922 Mr. Smith established a consulting engineering practice and in that capacity advised the Moffat Tunnel Commission of Colorado, the Metropolitan District Commission of Boston, and the Water Supply Boards of Providence, Philadelphia, St. Louis, Hartford, San Francisco, and Vancouver.

SMITH COLLEGE. A nonsectarian college for women in Northampton, Mass., founded in 1871. The enrollment for the autumn of 1933 was 2001, while that for the summer was 202. There were 242 faculty members. The productive funds amounted to \$6,171,705, and the income from funds was \$273,415. The volumes in the library numbered 208,624. President, William Allan Neilson, Ph.D., LL.D., L.H.D., Litt.D.

SMITHSONIAN INSTITUTION. An organization founded in 1846 according to the terms of the will of James Smithson of England, who in 1826 bequeathed his property to the United States of America "to found in Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men." The enterprises, supported wholly by Congressional appropriations but administered by the institution, include the United States National Museum, National Gallery of Art, Bureau of American Ethnology, International Exchange Service, National Zoological Park, and Astrophysical Observatory. It administers also the Freer Gallery of Art.

During 1933 an extensive programme of oceanographic investigations was initiated, under the name of the Johnson-Smithsonian Deep-Sea Expedition, by Eldridge R. Johnson of Philadelphia, who placed at the disposal of the institution his yacht and a considerable sum of money. The expedition's first cruise of two months, under the direction of Dr. Paul Bartsch, curator of the division of mollusks of the United States National Museum, was devoted to exploring the Puerto Rican deep, with important scientific results. There was transferred to Washington and placed on exhibition in the National Gallery of Art the Gellatly collection of paintings and art objects, comprising more than 1600 pieces and valued at more than \$4,000,000, which was presented to the

institution in 1930 by the collector, the late John Gellatly of New York City. A new astrophysical observing station was installed on Jebel Katherin in the Sinaitic Peninsula, while a radiation-measuring device, called the "kampometer," devised by Dr. C. G. Abbot, was successfully used in measuring the infra-red solar spectrum.

The expendable income of the institution for 1933 was \$250,852; its endowment funds totaled \$1,828,773. There were published by the institution and the government bureaus under its direction 100 volumes and pamphlets, of which 177,572 copies were distributed to libraries, educational institutions, and individuals. The most important of these were the eighth revised edition of the *Smithsonian Physical Tables*, in which some 270 tables of new data were included and the scientific scope of the others greatly broadened, and *The Story of Kalaka*, the first volume in the new series of Oriental studies issued by the Freer Gallery of Art. The secretary of the institution is Charles G. Abbot, D.Sc.; the assistant secretary, Alexander Wetmore, Ph.D.

SOAPLESS DETERGENTS. See CHEMISTRY, INDUSTRIAL OR APPLIED.

SOCCER. The national open soccer honors in 1933 went west, shattering an almost iron bound eastern monopoly on the title. The western champion eleven, the Stix, Baer, and Fuller team of St. Louis, scored a double triumph over the eastern representatives, downing the New York Americans, eastern champions, 1-0, at St. Louis and winning, 2-1, in New York.

The national amateur championship, also under the auspices of the United States Football Association, was taken by the German American Football Club of Philadelphia, which defeated the McKnights of Pittsburgh in the final, 5-1. The University of Pennsylvania captured college honors.

The lone bit of international soccer in the United States was when a South American eleven, the Club Andux de Italiane of Santiago, Chilean champion, downed the Brooklyn Celtics in an exhibition, 4-2, in Brooklyn.

The cup of the New York State Football Association was taken by the German Hungarians of Brooklyn with the Metropolitan League team of the Norwegian Turn Society of Bay Ridge as runner-up. The Staten Island Thistles won the New York State qualifying cup by defeating the Dublin Freebooters of the Bronx. The Melita Union Soccer won the championship of the Brooklyn Soccer League, outranking the Brooklyn Celtics. The latter were also second for the Brooklyn League Cup, captured by the Gerritsen Park team. Greenock West of Scotland, with the Shamrock Rovers second, won the annual cup competition of the New York Metropolitan Soccer League.

SOCIAL ECONOMICS AND INSURANCE. See CHILD LABOR; CHILD WELFARE; COÖPERATION; LABOR LEGISLATION; MINIMUM WAGE; OLD AGE PENSIONS; STRIKES AND LOCKOUTS; UNEMPLOYMENT; WOMEN IN INDUSTRY; WELFARE WORK; WORKMEN'S COMPENSATION; LITERATURE, ENGLISH AND AMERICAN.

SOCIALISM. In August, at Paris, there met some 150 delegates from 30 nations and 36 parties in a special "crisis" conference of the Labor and Socialist International to discuss the two outstanding problems which hung over the Socialist movement. More than 30 of the delegates were political exiles, while on the other hand, many of those attending the gathering were playing power-

ful rôles in the political activities of their nations. The Scandinavian bloc, in conjunction with the British delegates, for the most part ruled the proceedings. The assembled Socialists gave particular attention to the problem of Fascism which in one form and another had raised its head in most European countries. Attention was called to the fact that a Belgian Fascist group had granted the existing Conservative government special powers which even included the elimination of parliament; that Socialist workers had suffered in the bloody Geneva riots in November, 1932; and that the Socialists of Hungary, Danzig, Estonia, and Finland had also become the targets of Fascist attacks. Those Socialists from Austria, Germany, and France, who had suffered as a result of difficulties with both the Right and the Left, advocated an attempt at a united front with the Communists at least for common action against war and Fascism. Also, it was interesting to note that those Socialist groups which had had a sad experience with "bourgeois democracy" wanted to set forth more clearly the need for revolutionary movements to fight Fascism. On the other hand the British-Scandinavian bloc, which up to now had had perfectly satisfactory experiences with democracy, refused to permit the placing of too great an emphasis on employment of un-democratic means for gaining control of the state. Mr. Edward Levinson, writing in the *New York Herald-Tribune* from Paris on August 28, pointed out the difficulties the Socialists were having in reaching a common plane of understanding on the question of utilization of forces. He said: "The British shuddered at the very idea of suggesting the possibility of the dictatorship of the proletariat to the British voter. The Scandinavian and Czechoslovak delegates would not countenance any general order against Socialist participation in coalition governments. The programme for meeting the war danger did cut across national lines, but even did not go as far as Leon Blum and other French delegates wished in drawing up an air-tight prohibition against Socialists joining in support of 'capitalistic war.'" The final declarations of the conference restated Socialist theory on the basis of recent developments and also included a practical programme of procedure against war and Fascism. The question of a united front with the Communists was referred to the Second International executive committee to be taken up again when that body met before the end of 1933. The new statement of principles referred to the extended dominion of business by government as exemplified in the cases of United States, Italy, and Germany. The trend toward monopolized capitalism had shaken democracy severely in the countries where it was not firmly rooted before the war.

The Second International called upon the trade unionists of the world to launch a moral and economic boycott against Hitlerism. In the case of a threat of war the conference called upon trade unionists to participate in the general strike called with the aid of the International Federation of Trade Unions. Any nation rejecting arbitration by the League of Nations was to be declared by the Second International and the International Federation of Trade Unions to be an aggressor nation and the target of a general strike by its own workers and a boycott by workers in other lands.

BRITISH LABOR PARTY. In October, at its annual convention at Hastings, England, the Brit-

ish Labor party voted to adopt a general strike against war, in the first place, and to conduct a boycott against German Fascism, in the second. The resolution against war in general was moved by Sir Charles Trevelyan, a former Liberal and a descendant from a sister of Lord Macaulay. The resolution had the backing of Arthur Henderson, president of the Geneva Disarmament Conference, who assured his Labor conferees that when he and his associates were restored to power the Labor party would devote itself to the enactment of a law outlawing war. The resolution further demanded the total disarmament of all nations and the creation of an international police force. It also called upon the present British government "to abandon its retrograde attitude at Geneva on the question of air bombing and to submit proposals for a large immediate reduction in the armament expenditures of all nations, for general abolition of all weapons denied to Germany, for abolition of military aircraft, for international control of civil aviation and for supervision of the execution of the disarmament treaty."

On the next day the Laborites passed two resolutions against Fascism. The first dealt exclusively with Germany and included a pledge upon the part of the British workers to refuse to buy any articles manufactured in that country as well as the raising of relief funds for German refugees and the offer of hospitality in Great Britain to such refugees. It also called upon the League of Nations to prevent the violation of treaty rights by protecting Jews and other minorities in Germany. The second resolution was directed against Fascism in general and with particular reference to its possible appearance in Great Britain. On the other hand the conference turned down a motion calling for a reprimand of the Labor party's executive committee for refusing to cooperate with the Communists and other radicals in Great Britain in presenting a united front against Hitlerism.

The 1000 delegates attending the conference represented an affiliated trade union membership of 2,000,000 as against the high point of 4,300,000 members in 1920. On the other hand it was roughly estimated that the formal voting strength of the party was in the neighborhood of 8,000,000 persons. There was every indication, as the year progressed, that the British Labor party was increasing in strength and was succeeding in its effort to shake off the leadership of Ramsay MacDonald. In a series of municipal and parliamentary elections the Laborites, under the leadership of George Lansbury, had won a number of victories at the expense of the Tories. According to *Today*, the rising tide of Socialism in Great Britain, as indicated by the renewal of interest in the Labor party, was to be regarded as a protest against chronic poverty and a demand for a new social system. Said *Today*: "For the new pivot of the British Labor party is its recently announced programme calling for the nationalization of the Bank of England and the great joint-stock banks, as well as for the national control of credit." *Today* quotes George Lansbury as describing in the following words the present temper of the British people: "The nation is disillusioned. It has learned by bitter experience that the policy of trying to turn abundance into scarcity is mid-summer madness. It now demands the abandonment of the absurd policy which buries thousands of millions of pounds in the banks and keeps millions of workers unemployed, while all around us work is crying out to be done."

SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR. An international association, of which the Association for Labor Legislation is the American section, created in 1925 by amalgamating three former allied organizations, the International Association for Labor Legislation, the International Social Insurance Committee, and the International Association on Unemployment. The general assembly last met at Paris, Oct. 19-22, 1931. See LABOR LEGISLATION, AMERICAN ASSOCIATION FOR.

SOIL EROSION. See RECLAMATION.

SOILS. Land use planning, land classification, valuation, and adaptation, soil erosion prevention, moisture conservation, soil chemistry, soil fertility, soil physics, soil microbiology, and the dynamic properties of soils affecting tillage, traction, and erosion were among the more important topics receiving special attention by soil investigators.

Numerous land uses surveys were under way as emergency measures. Notable among these was the survey in South Carolina of the average pH of every five-acre tract in the State as a basis for a liming, fertilizer use and crop adaptation programme. Federal cooperation with the State and local authorities in land use planning became more important than ever before. Thousands of unemployed city people returned to the land. The guidance and direction of this wholesale movement were entrusted to the Department of the Interior and Section 208 of the National Recovery Act provided \$25,000,000 to redistribute the population through loans or other aids to the purchase of subsistence homesteads. Emphasis was to be placed on experiments in aiding working men to establish garden homes within commuting distance of factories and offices.

The Agricultural Adjustment Act provided for readjusting productive acreage to market requirements for farm products.

The total value of farm real estate in the United States fell from \$37,027,000,000 as of March, 1932, to \$30,515,000,000 as of March, 1933, according to the *Report of the Secretary of Agriculture for 1933*.

The acre value of farm real estate declined in nearly every region. The index of land values declined to 73 during the year. In only seven States, four of them in New England, was the index of land values higher in March, 1933, than in 1912-14. In some States it was less than 60 per cent of the prewar index. In the Middle Atlantic States land values averaged 82 per cent of prewar, in the East North-Central States 62 per cent, in the West North-Central States 64 per cent, in the South Atlantic States 80 per cent, in the East South-Central States 79 per cent, in the West South-Central States 82 per cent, in the Mountain States 69 per cent, and in the Pacific Coast States 96 per cent. Forced sales of farms increased as a result of delinquency on taxes and on debt service. For the year ended Mar. 15, 1933, approximately 15.3 farms per 1000 were sold for taxes and approximately 38.8 per 1000 were involved in transfers in settlement of debt. The Agricultural Adjustment Act provided for refinancing

farm indebtedness whereby excessive debts may be cut down, interest rates reduced, and payment on principal postponed. It provided means also for redeeming land which had been taken from farmers by foreclosure. Farmers whose mortgages were already held by any of the 12 Federal land banks also benefited by a reduction of their interest charges to 4½ per cent for a period of five years. A loan fund of \$25,000,000 was also made available to the Federal land banks to enable them to postpone foreclosures on delinquent loans. The act authorized and directed the Reconstruction Finance Corporation to make \$200,000,000 available to the Farm Loan Commission for direct loans on farm real estate. The Bureau of Agricultural Economics was engaged in a national study of farm land tax delinquency in cooperation with the State agricultural experiment stations. A programme for gradually removing poor farming areas from cultivation was under way. An agreement was reached between the Department of Agriculture and the Public Works Administration providing that, for every acre of new land brought into cultivation through reclamation by public works funds, money would be made available to take out of cultivation an area of poor farm lands of corresponding productivity. In general the acreage of poor farm land thus removable would amount to several times that of newly reclaimed land. Funds were to be made available for studies to determine the area that should be removed from cultivation.

The Bureau of Chemistry and Soils continued the nation-wide inventory of the soil fertility resources of the United States. The soil survey was world-wide and the United States retained the lead in such work. During the year the Department of Agriculture in cooperation with appropriate State agencies conducted detailed soil surveys in 78 separate areas distributed over 28 States and one insular territorial possession. Detailed surveys aggregating 27,771 sq. miles and reconnaissance surveys to the extent of 4065 sq. miles were covered during the year, bringing the total acreage for the detailed survey to nearly 568,000,000 and of the reconnaissance survey to nearly 405,000,000 according to the Bureau of Chemistry and Soils. Continued progress was made in the inventory of the character and quality of the peat and muck resources of the United States and efforts were continued to locate and develop the vast domestic deposits for use in agriculture and industry. Studies were made of profile characteristics of peat deposits in Ohio, Virginia, and North Carolina, and in sections of Oregon. The results of tests conducted by the Bureau of Chemistry and Soils, designed to determine the extent to which mineral soils may be improved by the addition of certain grades of peat and muck, were published in a form intended to serve the needs of peat producers in 17 States and to point out to consumers the uses and relative value of different kinds of domestic peat products. The results of a systematic study of the major groups of peat land, their subdivision, the distribution of each and their important relationships were prepared for publication in book form. Studies were completed and published by the Boyce Thompson Institute on the effect of various factors on the hydrogen-ion concentration of peat soils with particular reference to the influence of moisture content, drying and leaching. The *Michigan Agricultural Experiment Station* completed studies on the biological decom-

position of peat with particular reference to its use in composting processes. The buffer capacity of peat soils was found to be closely related to initial soil reaction and base content and to ash and calcium content, according to the *New York Cornell Experiment Station*. Apparently reaction is a reliable index of the buffer capacity of peat soils. The Indian Institute of Science completed and published the results of a survey of the origin and nature of the peaty soils of Travancore. Studies of the control of ground water in peat and muck soils were continued by the Bureau of Agricultural Engineering.

Soil impairment by erosion and run-off continued to be recognized as one of the most important problems confronting American agriculture. The Department of Agriculture continued its investigations and demonstrations in coöperation with the State agricultural experiment stations at 10 regional erosion experiment stations and developed methods of erosion control which were of practical importance to a majority of farmers in the United States and of immediate value to the present programme of farm relief. Information continued to accumulate on soil and water losses under various conditions of soil type, slope, crop cover, and character of precipitation. Erosion surveys by the Bureau of Chemistry and Soils indicated that land formerly in cultivation to the amount of 35,000,000 acres has been essentially destroyed for crop production and that 225,000,000 acres of land now in crops has lost all or most of its topsoil. The annual cost of impoverishment of farm lands and damages to roads, reservoirs, irrigation ditches, and valley lands from erosion was estimated at not less than \$400,000,000. Vegetation proved to be the most effective agency of erosion control and the adoption by farmers of the strip cropping method of reducing soil losses became widespread in eroded areas. However, it was demonstrated by the Bureau of Agricultural Engineering that terraces, properly laid out and constructed, are an effective and practical method of controlling soil erosion on cultivated land. The bureau demonstrated especially the utility of broad-base terraces, level on permeable soils in regions of light rainfall but more generally with a longitudinal grade not exceeding 4 in. per 100 ft. Such terraces proved to be the most permanent and effective means of soil-erosion control for cultivated lands. The rate of terracing of farm lands in the United States continued to be about 3,000,000 acres per year. A soil erosion service was established in the Department of Interior with an initial appropriation of \$5,000,000 secured by allotment from the Public Works Administration.

The demand for more accurate and specific information regarding the fertilizer requirements of crops on soils of known character persisted in spite of the national movement toward general curtailment of production. Soil fertility studies by both the Department of Agriculture and the State agricultural experiment stations continued to concentrate in that direction with particular reference to the needs of cotton, corn, wheat, potatoes, sugar beets, sugarcane, sweet potatoes, strawberries, general truck crops, citrus fruits and nut crops. According to the Bureau of Chemistry and Soils work on fertilizer usage in relation to soil fertility was becoming increasingly important owing to the complex problems presented by a number of prominent soil types and the use of new fertilizers of synthetic origin,

especially those resulting from the fixation of atmospheric nitrogen. Evidence continued to accumulate that some of the less common elements such as manganese, magnesium, copper, and zinc may be deficient in the soil or in the fertilizer applied. Only by the use of manganese compounds was commercial growing of tomatoes made profitable on certain Florida soils. The use of magnesium materials in potato fertilizers was found to overcome a typical chlorosis of potato vines due to a deficiency in certain soils, and the use of zinc compounds was developed as a means of overcoming pecan rosette.

Work on humus compounds in soils continued, that of the Bureau of Chemistry and Soils being confined largely to investigations of uronic acid complexes and sterols in soils. Sterol compounds, closely related to vitamin D, were found in all horizons of selected soils.

Information continued to accumulate at the State agricultural experiment stations and the Bureau of Chemistry and Soils relating to the functions and behavior of soil colloids with particular reference to base exchange phenomena, availability of soil nutrients to plants and soil preparation. Much additional information was gained on the dominating influence exerted by colloids upon the capacity of the soil for retention and distribution of moisture. Evidence accumulated that the organic colloid of soil may function at the same time as an acid and a base. Two new soil-water relationships developed are that the maximum volume of soil in equilibrium with water is variable in soils of divergent types, and distribution of water within the soil is varied by the character as well as by the quantity of colloid. The evidence pointing to the fact that the dynamic reactions of soils are controlled largely by the colloidal material continued to grow. The theory of basic relationships between the colloidal properties of arable soils and the principles of design of tillage machinery was strengthened and developed into a practical reality by the *Alabama Agricultural Experiment Station*. That station in cooperation with the Bureau of Agricultural Engineering started the installation of a new farm tillage laboratory in which to make studies to establish the types of machines best suited economically to the soils of the southeastern United States. This laboratory costing \$110,000 and financed with funds obtained from the Public Works Administration is the only one of its kind and size in the world. Additional light was thrown by the *New Jersey Agricultural Experiment Station* on the laws of colloidal behavior with particular reference to amphoteric reactions and isoelectric weathering. The Department of Agriculture completed and published the results of a study on the fractionation, composition, and hypothetical constitution of certain colloids derived from the great soil groups. The movement of gases through soil under certain conditions was developed for use as a criterion of soil structure according to a critical study at the *Arizona Agricultural Experiment Station*.

Soil microbiology was again an important subject for research with particular reference to its more practical aspects relating to soil fertility. The inspection of legume and soil inoculants was being broadened to include equipment, methods, and personnel of production in order to detect and eliminate faulty procedures before the product reaches the market. Evidence accumulated that nodule production alone is not a guaranty of the

most beneficial activity of an inoculant for legumes. Studies and observations of forest soil microbiological population were continued showing a predominance of fungous flora on the forest floor where the soil is very acid and of bacteria and earthworms where less acid conditions prevail. Arsenic injury to crops was definitely proved in some areas where large amounts of arsenic are used for insecticidal and fungicidal purposes. It was found that soils contain abundant molds which are capable of setting arsenic free from the various combinations used so that it appears in soluble and volatile forms. Evidence accumulated that the Winogradsky Azotobacter plaque method for determining phosphorous deficiencies of soils has no general or practical value when used on eastern soils. The feasibility was established of a method of determining soil deficiencies consisting of testing soil by inoculating samples, treated in routine manner, with *Aspergillus niger*. A type of organism was found in the genus *Chatomium* which proved to be an active destroyer of cellulose and related substances, is tolerant of varied temperatures, and is active within a wide range of moisture conditions. Evidence continued to accumulate that an active microbiological population exists in peat soils. An abundant population consisting of bacteria, and, in the case of certain lowland peats, of actinomycetes was found at all depths of peat profiles by the *New Jersey Agricultural Experiment Station*. Peat supported the growth of *Azotobacter* only when at a pH of about 5.9 or above according to the *Minnesota Agricultural Experiment Station*. The presence of native sulfofying flora, which prevented the accumulation of elemental sulphur, was established in both mineral and peat soils by the *New York Cornell Agricultural Experiment Station*.

BIBLIOGRAPHY. Advances in the knowledge of the sciences of soil technology, microbiology, and fertility appear currently in *Soil Science*, published in Baltimore, Md., and in *Journal of the American Society of Agronomy*, published at Geneva, N. Y. Recent books and bulletins on these subjects are: *Methoden für die Untersuchung des Bodens*, by O. Lemmerman, Berlin, 1932; *Soils: Their Origin, Constitution, and Classification*, by G. W. Robinson, New York, 1932; *A Critical Laboratory Review of Methods of Determining Organic Matter and Carbonates in Soil*, by L. T. Alexander and H. G. Byers, United States Department of Agriculture Technical Bulletin No. 317, Washington, D. C., 1932; *The Fractionation, Composition, and Hypothetical Constitution of Certain Colloids Derived from the Great Soil Groups*, by I. C. Brown and H. G. Byers, United States Department of Agriculture Technical Bulletin No. 319, Washington, D. C., 1932; *Physical and Chemical Characteristics of the Soils from the Erosion Experiment Stations*, by H. E. Midleton, et al., United States Department of Agriculture Technical Bulletin No. 316, Washington, D. C., 1932; *A Comparison of the Soil-Plaque Method with the Neubauer and Hoffer Cornstalk Methods for Determining Mineral Soil Deficiencies*, by L. C. Stewart et al., Colorado Agricultural Experiment Station Bulletin No. 390, Fort Collins, 1932; *Petrographic Methods for Soil Laboratories*, by W. H. Fry, United States Department of Agriculture Technical Bulletin No. 344, Washington, D. C., 1933; *The Winogradsky Spontaneous Culture Method for Determining Certain Soil Deficiencies*, by A. W. Young, Iowa

Agricultural Experiment Station Research Bulletin No. 157, Ames, Iowa, 1933.

SOLOMON ISLANDS. A group of islands in the South Pacific, lying east of the island of New Guinea. The southern islands (Guadalcanar, Malaita, Yaabel, New Georgia, San Cristoval, Chioseul, Shortland, and many smaller ones) are known as the British Solomon Islands Protectorate of which the land area is approximately 11,000 miles, with a total population (1931) of 94,060. The northern islands (Bougainville, Buka, and adjacent small islands) form part of the Territory of New Guinea, mandated to Australia. See NEW GUINEA under *Territory of New Guinea*.

SOMALILAND, ITALIAN. See ITALIAN SOMALILAND.

SOMALILAND, sô-mä'le-länd', PROTECTORATE. A British African protectorate extending along the south shore of the Gulf of Aden. Area, 68,000 square miles; population (estimated), 344,700. The capital and chief port is Berbera. In 1932, imports (by sea) were valued at 4,077,827 rupees (excluding specie, 10,645 rupees); exports (by sea), 2,142,030 rupees (excluding specie, £57,175); revenue, £102,894; expenditure, £156,240; public debt (Jan. 1, 1933), £217,250.

SORGHUM. See AGRICULTURE; FLAX.

SOTHERN, E(DWARD) H(UGH). An American actor, died in New York City, Oct. 28, 1933. Born in New Orleans, La., Dec. 6, 1859, the second son of E. A. Sothorn, he received his education at various English preparatory schools and in accordance with his father's wishes attempted to become a painter. His forte, however, was the drama, and his successful début in New York City in 1879 as the cabman in *Brother Sam*, in which his father was then appearing, caused the elder Sothorn to relent. In 1881 he joined John E. McCullough's company, which played in London in *False Colors* and *Out of the Hunt*, and on his return to the United States two years later toured in several farces such as *Three Wives to One Husband* and *The Fatal Letter*. In 1885 he joined, as leading man, the Lyceum Theatre's Stock Company, of which Daniel Frohman was manager, achieving his first real success in *One of Our Girls*. During the 13 years that he was associated with this company he perfected his art as a romanticist, progressing from such comedies as *A Scrap of Paper* (1886), *Met by Chance* (1887), *The Highest Bidder* (1887), and *Editha's Burglar* (1887) to the romantic plays *Sheridan, or the Maid of Bath* (1893), *The Prisoner of Zenda* (1895), *The Lady of Lyons* (1897), and *A Colonial Girl* (1898). His successful portrayals of the rôles of D'Artagnan in *The King's Musketeers* (1899), Heinrich in *The Sunken Bell* (1900), Francois Villon in *If I Were King* (1901), and Robert, King of Sicily, in *The Proud Prince* caused him to be acclaimed the leading "romantic actor" of the United States.

Mr. Sothorn's appearance in *Hamlet* in 1900 was followed by his engagement by Charles Frohman in 1904 to co-star with Julia Marlowe in Shakespearean plays. He quickly took first rank among contemporary Shakespearean actors, appearing with great success as Hamlet, Macbeth, Jacques, Petruchio, Malvolio, Shylock, and Romeo. The Marlowe-Sothorn partnership was temporarily dissolved in 1907, and Mr. Sothorn appeared during the next two seasons in *When Knighthood Was in Flower*, *The Fool Hath Said in His Heart*, *Our American Cousin*, and *Richelieu*. Reunited in

Antony and Cleopatra in 1909, Mr. Sothorn and Miss Marlowe were married in 1911 and continued presenting their Shakespearean repertoire until Mrs. Sothorn's retirement in 1915. They presented revivals, however, in 1919, 1921, 1923, and during the World War were active in providing entertainment at the canteens of the American Expeditionary Forces in France. In 1924 they presented the entire scenery, costumes, and properties of 10 Shakespearean plays to the Shakespeare Memorial Theatre at Stratford-on-Avon. Mr. Sothorn devoted his later years to lecture tours on which he deplored the realistic trend of the theatre. He wrote *My Remembrances* (1917).

SOUTH. UNIVERSITY OF THE. A Protestant Episcopal institution for the higher education of men in Sewanee, Tenn., founded in 1857. The enrollment for the autumn term of 1933 was 237, of whom 216 were registered in the college and 29 in the theological school. The faculty had 26 members, exclusive of student assistants. The income from productive funds was \$61,705, while the receipts from all sources totaled \$281,238. The library contained 45,755 volumes. President, Benjamin Ficklin Finney, LL.D.

SOUTH AFRICA, UNION OF. A self-governing dominion of the British Commonwealth. Capital, Pretoria; seat of the legislature, Capetown.

AREA AND POPULATION. With an area of 471,917 square miles, South Africa had an estimated population on June 30, 1933, of 8,369,200, divided as follows: Europeans, 1,889,500; Bantus (Negroes), 5,681,100; Asiatics, 196,400; mixed and other races, 602,200; total non-European, 6,479,700. The area and estimated mean populations of the four Provinces, by racial divisions, on June 30, 1933, are shown in the accompanying table.

AREA AND POPULATION BY PROVINCES
[Estimated, June 30, 1933]

Province	Area, sq. miles	Europeans	Bantus	Asiatics and mixed races
Cape of Good Hope	276,536*	766,500	1,881,300	548,900
Natal	35,284	185,000	1,383,300	178,500
Transvaal	110,450	731,500	1,867,100	54,500
Orange Free State	49,647	206,500	549,400	16,700
Total	471,917*	1,889,500	5,681,100	798,600

* Excluding Walvis Bay (area, 430 square miles), attached to Cape of Good Hope Province.

The 1931 census of Europeans showed a total of 1,828,175. Estimated populations of the chief cities in 1932 were: Johannesburg, 355,600; Capetown, 274,000; Durban, 121,000; Pretoria, 90,700; Port Elizabeth, 78,900; Bloemfontein, 52,800; Benoni, 51,300; Germiston, 46,900; East London, 44,800; Pietermaritzburg, 41,200; Boksburg, 41,900; Kimberley, 30,200; Bruckersdorp, 25,100. In 1932, European births numbered 45,175 (24.30 per 1000); deaths, 18,465 (9.93 per 1000); marriages, 15,688 (8.58 per 1000). Of the 1931 European population about 55 per cent were of Dutch origin and about 36 per cent British.

EDUCATION. At the beginning of 1932, there were 756,434 pupils in state and state-aided schools, exclusive of 7068 students in the universities. They were divided as follows: Europeans, 358,021; non-Europeans, 398,413. There were ten universities and colleges.

PRODUCTION. South Africa has some 10,000,000 acres of arable land, of which 6,000,000 were devoted to cereals (chiefly corn). Forests covered 2,600,000 acres. Production of the chief crops was: Wheat, 10,627,000 bushels in 1932-33 season (13,713,000 in 1931-32); oats, 5,920,000 bushels (European cultivation) in 1930-31; corn, 37,267,000 bushels in 1932-33 (61,625,000 in 1931-32); potatoes (European cultivation), 5,758,000 bushels in 1931-32; sugar cane, 3,500,000 short tons in 1931-32; tobacco (European cultivation), 10,000,000 pounds in 1932-33 (21,100,000 pounds in 1931-32); Kafir corn (European), 34,000 short tons in 1932-33 (42,000 in 1931-32); cotton, 960,000 pounds in 1932-33 (1,431,000 in 1931-32); wine, 27,715,000 gallons in 1931-32; peanuts (European cultivation), 12,880,000 pounds in 1932-33 (5,250,000 in 1931-32). Animals products for 1931-32 were: Butter, 21,339,000 pounds; cheese, 8,258,000 pounds; wool, 305,000,000 pounds; mohair, 9,500,000 pounds.

Mineral production in the calendar year 1932 was valued at 54,235,000 South African pounds (\$258,462,000), compared with £54,895,000 (\$267,146,000) in 1931. Conversions to dollars made at par for 1931 and at the average exchange rate in 1932. The value of output of the chief minerals in 1932, in South African pounds, was: Gold, £49,098,000; platinum, £42,000; diamonds, £1,680,000; coal, £2,727,000; copper, £277,000; asbestos, £116,000. Gold production in 1933 was 11,017,495 ounces, compared with 11,553,564 ounces in 1932, a decline of 536,069 ounces. The quantity of other minerals produced in 1932 was: Asbestos, 12,071 short tons; coal, 10,650,000 short tons; copper, 11,027 short tons; tin, 975 short tons; diamonds, 798 carats; osmium, 4998 troy ounces; platinum, 7086 troy ounces. The declared value of gold production in 1933 was £67,604,000. Part of the increase over 1932 was due to currency depreciation.

In the year ended June 30, 1930, factories employed 218,585 persons and 991,779 motive horse power, the value of production being £112,441,000 (\$547,194,000), of which £55,787,000 (\$271,487,000) was added in process of production.

COMMERCE. The trend of South African foreign trade during the period 1929-33 is shown in the accompanying table from the 1933 *Commerce Yearbook*.

SOUTH AFRICAN TRADE. 1929-33

Year	Thousands of pounds sterling		Thousands of dollars *	
	Imports	Exports	Imports	Exports
1929	83,467	80,943	406,193	393,910
1930	64,559	67,931	314,174	330,584
1931	52,945	60,330	257,658	293,596
1932	32,673	65,903	159,001	320,719
1933 *	46,281	73,149	225,388	356,236

* Converted at par. * Preliminary.

The leading exports in 1932 (1931 figures in parentheses) were (in 1000 U. S. dollars): Gold (bar), \$231,610 (\$189,609); wool, greasy, \$31,010 (\$26,648); fresh fruits, \$7769 (\$6594); sugar, \$6376 (\$7014); uncut diamonds, \$5724 (\$13,354); cut and polished diamonds, \$3793 (\$4036); corn, \$3361 (\$2543); bunker coal, \$3238 (\$5150). Leading imports were machinery and apparatus, chemicals and drugs, automobiles and parts, heavy iron and steel manufactures, gasoline, wearing apparel, etc. The United Kingdom took 42.1 per cent of the total 1932 exports (43.4 per cent in 1931); France, 12.6 (10.7); Germany,

8.0 (7.0); Belgium, 8.0 (6.9); Canada, 5.9 (3.9). Of the total 1932 imports, the United Kingdom supplied 45.4 per cent (44.1 per cent in 1931); United States, 13.4 (14.2); Germany, 7.6 (6.8); Japan, 3.8 (5.0).

FINANCE. Budget operations of the South African government were as follows (in thousands of South African pounds):

<i>Fiscal years, ended Mar. 31</i>	<i>Ordinary receipts</i>	<i>Ordinary expenditures</i>	<i>Surplus (+) or deficit (-)</i>
1929-30	30,486	29,998	+ 488
1930-31	28,563	29,949	-1,386
1931-32	27,041	28,188	-1,145
1932-33	25,845	20,456	+5,387
1933-34 *	28,292	34,016	-5,724

* Estimates.

The ordinary budgets do not include expenditures from loans, which amounted to £10,454,000 in 1929-30, £10,810,000 in 1930-31, and £10,092,716 in 1931-32. The public debt of the Union on Mar. 31, 1932, totaled £263,945,830 (external, £159,086,122; internal, £104,260,708), compared with £256,845,100 on Mar. 31, 1931 (external, £161,190,746; internal, £95,654,354). The par value of the South African pound was the same as that of the pound sterling. Gold payments were suspended by the Union government on Dec. 29, 1932.

COMMUNICATIONS. The Union in 1932 had 13,512 miles of railway line, all state owned except 411 miles. In 1932 the railways carried 72,962,000 passengers and 19,113,000 short tons of freight, the gross receipts totaled £22,040,000 (\$107,256,000). There were more than 85,600 miles of highways. A mail and passenger airline between Cape-town and Croyden, England, was opened in 1932. During 1932, 1285 vessels of 4,772,000 net registered tons entered the ports of the Union and 1263 vessels of 4,775,000 tons cleared.

GOVERNMENT. The executive power is vested in a governor-general, appointed by the Crown, who acts through an executive council of ministers responsible to Parliament. Legislative power rests in a Parliament consisting of the King, a Senate of 40 members (32 elected—8 from each province), and a House of Assembly of 148 members elected by universal white suffrage. The suffrage is exercised also by a limited number of colored citizens under property and wage qualifications. Governor-General and Commander-in-Chief in 1933, the Earl of Clarendon (appointed January, 1931). For the executive council formed in 1933, see under *History* below.

HISTORY

COALITION AND FUSION. Political developments of far-reaching significance marked the year 1933 in South Africa. The growing schism between the Afrikaners and the English-speaking element in the population was bridged in part by the formation of a coalition government. Moreover, great progress was made toward a permanent fusion of the Nationalist party, representing mainly the Afrikaners, and the South African party, representing mainly the English-speaking population but with an influential group of moderate Afrikaners including the leader of the party, Gen. Jan Christiaan Smuts.

The Nationalist party, led by Prime Minister J. B. M. Hertzog, had controlled the government since 1924. Its position was threatened toward the end of 1932 by widespread opposition to its policy of retaining the gold standard, despite the

abandonment of the gold standard by Great Britain in 1931. Its gold policy was in line with other measures tending to weaken the link with the British Commonwealth. As such it was bitterly opposed by the English-speaking South Africans; the predominantly English province of Natal threatened to secede from the Union. At the same time the government's gold policy was opposed by many Afrikaners, whose economic interests were adversely affected. On Dec. 20, 1932, Tielman J. de V. Roos, an influential Afrikaner, resigned his seat on the Supreme Court and entered politics in opposition to the National government. He demanded immediate devaluation of the currency and the termination of antagonistic racial policies through the formation of a coalition government.

This move forced the Nationalist government to abandon the gold standard on Dec. 29, 1932. During the first weeks of 1933, Judge Roos made a triumphal tour of South African provinces, being everywhere enthusiastically received except in the strongly Nationalist Orange Free State. He opened negotiations with General Smuts for an alliance with the South African party which would permit the overthrow of the Hertzog government and new elections. Meanwhile strong pressure was exerted upon Prime Minister Hertzog and General Smuts to sink their political differences and form a national government on the British model to deal with the economic crisis. These latter negotiations met with success late in February, when an agreement for a coalition government was concluded by Generals Hertzog and Smuts.

The coalition ministry, formed Mar. 30, 1933, was composed of six Nationalists and six members of the South African party, as follows: Prime Minister and External Affairs, General Hertzog; Deputy Prime Minister and Justice, General Smuts; Finance, N. C. Havenga (Nationalist); Mines, Patrick Duncan (South African); Native Affairs, Pieter G. W. Grobler (Nationalist); Railways and Defense, Oswald Pirow (Nationalist); Agriculture, Gen. Jan. C. G. Kemp (Nationalist); Labor, A. P. J. Fourie (Nationalist); Lands, Col. D. Reitz (South African); Interior and Education, Jan. H. Hofmeyr (South African); Posts and Telegraphs, Senator Clarkson (South African); Minister without Portfolio, Mr. Suttard (South African).

Elections to the House of Assembly held May 17, 1933, gave the coalition 138 out of the 150 seats. The new coalition group consisted of 75 Nationalists, 61 South African party members, and 2 Laborites (Creswell faction). The 12 Opposition members comprised 6 Independents, 2 followers of Judge Roos, 2 Laborites, and 2 Home Rule advocates. The remainder of the year witnessed a vigorous effort to transform the coalition into a permanent single political party. The fusion movement was approved by the South African party congresses in all four provinces and by the Nationalist congresses in Natal, Transvaal, and the Orange Free State. The movement met a distinct setback in Cape of Good Hope Province, in October, when the Nationalist party Congress at Port Elizabeth voted the fusion proposal down, 140 to 30, despite an earnest plea for fusion by Prime Minister Hertzog.

The leader of the Cape Nationalists in opposing coalition and fusion was Dr. D. F. Malan, formerly Minister of Interior. A new party was in process of formation under his leadership toward

the end of 1933, uniting all members of the National party opposed to General Hertzog's policy of coalition and fusion. This group was strongly Afrikaner in sentiment, favoring the ultimate establishment of a republic.

LEGISLATION. Freed from the restrictions previously imposed by their party obligations, the coalition majority in Parliament proceeded to a general reorganization of federal and provincial finances. More important was the imposition of a heavy tax on gold mining, the proceeds of which were used to strengthen the position of agriculture. This was envisaged as a permanent policy with the aim of placing agriculture in an impregnable position before the mineral resources of South Africa were exhausted. The future of agriculture was causing some concern as a result of the drying up of the country through deforestation, veld burning, and overstocking. The seriousness of the problem was emphasized by the most severe drought experienced in the memory of South Africans, which caused heavy losses of livestock and crops.

In October, the government announced plans for the reorganization of its national defense policy. The small navy built by the Nationalist government as a gesture of independence was for the most part scrapped and it was decided to restore the former contribution toward Imperial defense in return for the protection afforded by the British Navy. At the same time provision was made for the increase and improvement of land forces, especially in aviation units and coast defenses, and for the intensification of obligatory military training.

This development reflected in part the apprehension created among all the British dominions by Japan's naval expansion, as well as South African concern over Germany's renewed interest in South-West Africa. Effective Dec. 15, 1933, South Africa imposed "exchange dumping duties" on an additional list of goods imported from Japan. This was in line with efforts made throughout the British Commonwealth to check the invasion of their markets by cheap Japanese textiles and other goods. On Jan. 21, 1933, the Union had abolished the primage duty of 5 per cent ad valorem and the surtax of $7\frac{1}{2}$ per cent ad valorem chargeable, with certain exceptions, against imported goods. The trade treaty signed between South Africa and Canada at the Ottawa Conference Aug. 20, 1932, went into force June 30, 1933.

ECONOMIC DEVELOPMENTS. The abandonment of the gold standard was followed during 1933 by a strong boom in the shares of gold mines, a rise in domestic commodity prices, and a general and pronounced improvement in business conditions. As producer of about half of the world's gold, South Africa reaped full advantage of the increase in the value of gold with relation to other commodities. Agricultural prospects, hard hit by the drought, were revived toward the end of the year, when heavy rains replenished the water supplies. The gold boom was held under control by the heavy taxes levied upon both production and profits of the industry.

NAZIS IN SOUTH-WEST AFRICA. The future of South-West Africa (q.v.), administered by the Union of South Africa under mandate of the League of Nations, aroused some concern in the Union in 1933. The espousal of the Nazi cause and principles by the German delegates to the South-West House of Assembly caused the British and Dutch members to sink their differences and unite

in opposition to the Germans. The union gave them nine votes against the seven German votes. The 1933 session of the Assembly, over the protests of the Germans, passed motions suppressing Nazi organizations in South-West Africa and prohibiting Nazi propaganda. The British and Dutch representatives furthermore announced that in view of the principles adopted by the German delegates they were no longer prepared to carry out the Cape Town agreement of Apr. 9, 1932 (for terms of the agreement, see 1932 YEAR BOOK). The Union government withheld its approval to the South-West Africa Assembly bills making Naziism illegal. Meanwhile the large Jewish population in the Union itself had launched a boycott of German goods and was in turn the object of an anonymous anti-Jewish propaganda.

OTHER EVENTS. In Bechuanaland Protectorate, a native chief, Tshekedi, in violation of South African law ordered the flogging of a white man for immorality among native women. After a hearing before Vice Admiral E. R. G. Evans of the British Navy, as Acting High Commissioner of Bechuanaland, the white man was banished from the territory and Tshekedi was removed as chief and exiled on September 14. The case, the handling of which evoked much criticism, was reviewed by the British Colonial Office and the chief was reinstated.

SOUTH AMERICA. See under the various South American countries; **EXPLORATION**; **ARCHAEOLOGY**; **PAN AMERICAN CONFERENCE**.

SOUTHAMPTON DOCKS. See **PORTS AND HARBORS**.

SOUTH AUSTRALIA. A state of the Australian Commonwealth occupying the south central part of the continent. Area, 380,070 square miles; population (1933 census), 580,987. Adelaide, the capital and largest city, had 312,629 inhabitants at the same census. In 1932, births numbered 8521; marriages, 3036; deaths, 4957.

The value of production for 1931-32 totaled £20,973,307 of which crops represented, £13,907,488; manufactures, £6,570,939; pastoral, £2,725,702; minerals, £559,069; dairying, £1,570,144; poultry, fisheries and game, forestry, etc., £1,039,905. The estimated production of wheat for 1932-33 was 43,420,614 bushels from a total of 42,429,614 acres. Livestock (Jan. 1, 1933): 7,713,230 sheep; 312,932 cattle; 190,222 horses; 113,831 pigs. Wool production for 1931-32 amounted to 67,021,312 lb.

State revenue for 1932-33 totaled £10,160,712; expenditure, £11,169,610; public debt, £103,707,332. There were 3756 miles of railway and 46,000 miles of highway in the State. Executive authority is vested in a governor who is aided by a council of ministers and the lieutenant-governor. Parliament consists of a legislative council of 20 members and a house of assembly of 46 members. Governor in 1933, Sir A. Hore-Ruthven; Premier, R. S. Richards.

SOUTH CAROLINA. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 1,738,765, as against 1,083,724 in 1920. Columbia, the capital, had (1930) 51,581 inhabitants; Charleston, 62,265.

AGRICULTURE. The table on page 757 shows the acreage, production, and value of the principal crops for 1933 and 1932.

EDUCATION. The number of persons of school-going age in the State was estimated, for the academic year 1932-33, as 677,587. Whites formed 344,697 of this total; Negroes, 332,890. There

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1933	1,379,000	742,000*	\$35,987,000
	1932	1,661,000	716,000*	21,838,000
Corn	1933	1,578,000	22,808,000	15,058,000
	1932	1,656,000	17,885,000	7,691,000
Tobacco	1933	101,000	85,850,000*	10,817,000
	1932	68,000	39,236,000*	4,904,000
Oats	1933	870,000	7,215,000	5,050,000
	1932	389,000	7,974,000	2,871,000
Hay (tame)	1933	268,000	195,000*	2,438,000
	1932	287,000	210,000*	2,100,000

Potatoes	1933	16,000	1,744,000	1,360,000
	1932	17,000	1,445,000	1,084,000

* Bales. * Pounds. * Tons.

were enrolled in the public schools 473,130 pupils. Of these, 253,460 were whites and 219,670 were colored. The number enrolled in common schools or elementary grades in the school year 1931-32 (the latest year for which this information was furnished) was 202,894 whites and 214,299 Negroes; that in the high schools, 48,470 whites and 9411 Negroes. For the academic year 1932-33 expenditures for public-school education totaled \$11,513,935. Salaries of teachers averaged, for the year, \$648; those of white teachers alone averaged \$848; those of Negro teachers, \$269.

LEGISLATION. A regular session of the Legislature convened on January 10. It created a State convention to pronounce the will of the State as to the proposed repeal of the Eighteenth Amendment to the Federal Constitution; this convention was to be composed of 46 delegates; candidates for delegate were to be nominated by counties, but were to be elected by the State at large, on November 7. Beer and wine of alcoholic strength up to 3.2 per cent were rendered lawful and sellable generally without restriction, but were to be taxed at the rate of 2 cents on each 12-ounce bottle. An appropriation bill of but \$8,925,000 was passed, to cover a period of 18 months which was rendered necessary by a change in the State's fiscal year. The total was \$500,000 less than the previous appropriation for 12 months. The savings were made largely by means of statutory reductions of State pay. The State's four-mill direct tax on property was abolished. To make up the expected loss of \$1,600,000 yearly of revenue for school aid, the special property tax on public utilities was increased; likewise the tax on the stock of domestic corporations and one on the property of foreign corporations. Efforts to enact a tax on sales failed. Dealing with the March banking panic, the Legislature passed an act, later declared valid by the Federal Supreme Court, suspending the liquidation of insolvent banks for 18 months.

POLITICAL AND OTHER EVENTS. On November 7 the voters chose delegates to form a State convention on the repeal of the Eighteenth Amendment. The popular vote gave a slight majority in favor of retaining the amendment, and the elected delegates were opposed to repeal. Governor Blackwood followed the lead of North Carolina on September 1 by taking steps, with the support of the tobacco growers in great number, to prevent the sale of tobacco at the existing low prices.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Ibra C. Blackwood; Lieutenant-Governor, James O. Sheppard; Secretary of State, W. P. Blackwell; Treasurer, J. H.

Scarborough (resigned) and (later) E. P. Miller; Budget Secretary, J. M. Smith; Attorney General, John M. Daniel; Comptroller, A. J. Beattie.

Judiciary. Supreme Court: Chief Justice, Eugene S. Blease; Associate Justices, Thomas P. Cothern, John G. Stabler, Jesse F. Carter, and Milledge L. Bonham.

SOUTH CAROLINA, UNIVERSITY OF. A non-sectarian State institution of higher education located in Columbia. The enrollment for the autumn session of 1933 totaled 1342. The faculty numbered 76. The State appropriation was \$249,000 from Jan. 1, 1933 to July 1, 1934. The library contained 125,000 volumes. President, Leonard T. Baker, A.M., LL.D.

SOUTH DAKOTA. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 692,849, as against 636,547 in 1920. Sioux Falls, the chief city, had (1930) 33,362 inhabitants; Pierre, the capital, 3659.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Wheat	1933	1,248,000	5,120,000	\$ 3,076,000
	1932	3,958,000	58,468,000	14,162,000
Hay (tame)	1933	1,277,000	778,000*	4,668,000
	1932	1,015,000	1,045,000*	4,441,000
Corn	1933	3,370,000	40,440,000	14,154,000
	1932	5,030,000	73,941,000	9,612,000
Oats	1933	696,000	5,220,000	1,357,000
	1932	2,321,000	75,432,000	6,261,000
Barley	1933	403,000	3,451,000	1,208,000
	1932	2,053,000	47,680,000	6,668,000
Potatoes	1933	62,000	2,480,000	1,364,000
	1932	73,000	5,110,000	1,175,000
Rye	1933	190,000	760,000	827,000
	1932	475,000	7,125,000	1,069,000
Flaxseed	1933	46,000	115,000	167,000
	1932	165,000	776,000	629,000

* Tons.

MINERAL PRODUCTION. The outstanding mineral industry of the State was, as in previous years, the mining of gold, of which all but a very small part was done by the Homestake Mine, the largest active gold enterprise in the Union. The State's yearly output of gold increased to 480,330 fine ounces (1932), from 432,075 (1931); in value, to \$9,929,297 (1932) from \$8,931,791 (1931). Minor amounts of silver and of lead were recovered from the gold ore.

The production of gold for 1933, partly estimated, was 510,058 ounces; in value \$10,543,835 on the old basis of \$20.67 an ounce, which had been abandoned in the course of the year. The gold presumably fetched some \$2,097,000 more than the above total.

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$8,563,858 (of which \$1,586,232 was for local education); for conducting public-service enterprises, \$594,967; for interest on debt, \$2,671,746; for permanent improvements, \$6,581,803; total, \$18,412,374 (of which \$7,341,457 was for highways, \$1,088,050 being for maintenance and \$5,653,407 for construction). Revenues were \$17,329,915. Of these, property and special taxes furnished 26.3 per cent; departmental earnings and compensation to the State for officers' services, 8.4; sale of licenses, 28.5 (in which was included a gasoline sale tax that produced \$3,410,350). Funded debt outstanding on June 30, 1932, totaled \$50,421.

886, of which \$146,886 was for highways. Net of sinking-fund assets, the debt was \$14,499,938. On an assessed valuation of \$1,608,675,986 the State levied in the year ad-valorem taxes of \$4,914,890.

EDUCATION. A definite source of revenue providing partial State support for the public schools was provided by the operation of a State tax on gross incomes. Proposals for the future organization of State aid were agitated.

The number of persons of school age in the State was reckoned for 1932 as 216,658. There were enrolled in the public schools in that year 164,684 pupils. Of these, 130,697 were in common schools or elementary grades; in high schools, 33,987.

CHARITIES AND CORRECTIONS. The Board of Charities and Corrections, exerting in 1933 the central administrative authority over State institutions for the care and custody of persons, consisted of three members. The board had under its control the State Penitentiary at Sioux Falls, the State Hospital for Insane at Yankton (about 1550 inmates), the State Training School at Plankinton (about 140), the School for the Deaf at Sioux Falls (about 150), the School and Home for the Feeble-Minded at Redfield (about 500), the School for the Blind at Gary (about 50), and the State Tubercular Sanatorium at Sanator (about 175). There were in the Penitentiary, in December, 595 inmates, of whom 15 were women.

LEGISLATION. The Legislature met in regular session on January 3. To meet the financial needs of the State and reduce the burden on property, it enacted an income tax, not on net, but on gross income; the rates imposed were $\frac{1}{4}$ per cent on wholesalers and manufacturers, $\frac{1}{2}$ per cent on livestock producers, 1 per cent on other incomes generally, $1\frac{1}{2}$ per cent on salaries and wages of \$2000 and over, and 2 per cent on those of \$5000 and over. The organization of the State government was simplified by doing away with the hail-insurance department, the securities commission, the State sheriff's office, the industrial commission, and the bonding office and reducing the railroad commission to one man. Grace was extended to property owners on their payments of State taxes by permitting them to pay off delinquencies under a 10-year contract.

Provision was made for expressing the State's will as to the proposed repeal of the Eighteenth Amendment to the Federal Constitution; a State convention for this purpose was created, to be composed of 103 members, who were to be elected by legislative districts; but the election was to be at a relatively distant date—that of the general election in November, 1934. At that time also, it was provided that a popular vote might be taken on whether to repeal the State's own prohibition law. No action was taken to legalize beer as permitted by the Federal modification of the Volstead Act. Therefore a special session was called, which met on July 31 and made provision for the sale of beer of the alcoholic content of 3.2 per cent.

POLITICAL AND OTHER EVENTS. The State's general tax levy for 1934 was eliminated in September. At the same time the board of equalization reduced the assessed valuation of property in the State by \$144,227,732. These steps were taken in the anticipation that the State's tax on gross income, which went into effect on July 1, would yield about \$3,500,000 a year needed to meet State expenditure.

OFFICERS. The chief officers of the State, serv-

ing in 1933, were: Governor, Tom Berry; Lieutenant-Governor, H. A. Ustrud; Secretary of State, Myrtle Morrison; Auditor, George O'Neil; Treasurer, Frank G. Siewert; Attorney General, Walter Conway; Commissioner of Schools and Public Lands, Ben Strool; Superintendent of Public Instruction, I. D. Weeks.

Judiciary. Supreme Court: Judges, S. C. Polley, Frederick A. Warren, Everett D. Roberts, Herbert B. Rudolph, Dwight Campbell.

SOUTH DAKOTA, UNIVERSITY OF. A State institution of higher education at Vermillion, founded in 1882. The enrollment for the autumn term of 1933 was 815 and for the summer session 338. The faculty and staff numbered 140. The operating income for the year was \$433,380. President, Herman G. James, J.D., Ph.D.

SOUTH DAKOTA STATE COLLEGE. A State college of agriculture and mechanic arts at Brookings, founded in 1882. The enrollment for the autumn of 1933 was 675 collegiate and 95 secondary vocational students. The 1933 summer school had an attendance of 109. On the teaching staff were the equivalent of 62 full-time teachers in the collegiate department and six in the secondary vocational. The income for 1932-33 was \$879,404. The library contained approximately 45,000 bound volumes and 15,000 pamphlets. President, Charles W. Pugsley, D.Agr.

SOUTHERN CALIFORNIA, UNIVERSITY OF. An institution of higher education for men and women in Los Angeles, Calif., founded in 1879. The enrollment for 1932-33, including summer session and extension classes, was 13,845. In the autumn of 1933 there were 550 members on the faculty. The endowment was \$1,315,000, the income from tuition and fees, \$1,683,195, and other income \$169,205. President, Rufus B. von KleinSmid, Sc.D., J.D.

SOUTHERN RHODESIA. See under RHODESIA.

SOUTH GEORGIA; SOUTH ORKNEYS. See FALKLAND ISLANDS.

SOUTH-WEST AFRICA. A former German protectorate, administered since Dec. 17, 1920, by the Union of South Africa under a mandate from the League of Nations. Area, 322,394 square miles; population (1932), 275,000 of whom some 32,000 were Europeans. Capital, Windhoek. In 1931, imports were valued at £1,631,766; exports, £1,448,740. The budget for 1932-33 estimated revenue at £500,000 and expenditure (including £82,000 loan expenditure) at £700,372. Administrator in 1933, D. G. Conradie. See SOUTH AFRICA, UNION OF, under *History*.

SOVIET CENTRAL ASIA. A region in central Asia, including the territory formerly known as Russian Turkestan. Administratively it is divided into the soviet socialist republics and autonomous areas, affiliated with the U.S.S.R., shown in the accompanying table.

States	Sq. miles	Population
Turcoman S. S. R.	189,658	1,030,500
Uzbek S. S. R.	75,598	4,525,000
Tadzhik S. S. R.	54,826	745,200
Kara-Kalpak Aut. Area	46,820	570,000
Kirghiz A. S. S. R.	60,000	1,000,000

SOVIET UNION. See UNION OF SOVIET SOCIALIST REPUBLICS.

SPAIN. A state of southwestern Europe, proclaimed a republic Apr. 14, 1931. Capital, Madrid. AREA AND POPULATION. Including the Balearic and Canary Islands, Spain had an area of 196,807

square miles and a population estimated on Jan. 1, 1932, at 23,656,300 (23,500,975 at the census of 1930). Living births in 1932 numbered 870,525 (28.1 per 1000 inhabitants); deaths, 338,895 (16.3 per 1000); marriages, 158,693 (13.2 per 1000). Estimated populations of the chief cities on Jan. 1, 1932, were: Barcelona, 991,262; Madrid, 890,511; Valencia, 327,088; Sevilla, 231,049; Málaga, 191,611; Zaragoza, 177,250; Bilbao, 166,758; Murcia, 160,478; Granada, 118,905; Córdoba, 106,045. Emigration in 1931 totaled 66,989.

EDUCATION. At the 1930 census, 45.46 per cent of the population could neither read nor write (46.45 per cent in 1920). The Republican Constitution made secular primary education free and compulsory, but authorized the churches to conduct schools for religious training under state supervision. The number of school buildings was increased from 35,989 in 1930 to about 45,600 in 1933. Primary schools in 1930 numbered 41,589 (35,989 public and about 5600 private), with about 3,600,000 pupils; secondary schools (1930-31), 94, with 76,074 pupils; universities (1930), 11, with 47,108 students.

PRODUCTION. Agriculture is the main occupation. In 1931 Spain had 39,404,000 acres (32 per cent of the total area) of arable land, 46,040,000 acres of pastures, and 11,244,000 acres of trees and shrubs, etc. The value of field crops (1931) was 9,615,903,000 pesetas (\$773,123,000 at average exchange rates), compared with 9,096,313,000 pesetas (\$1,061,540,000) in 1930. The chief crops in 1932 (thousands of units, bushels except as indicated), with 1931 figures in parentheses, were: Wheat, 184,206 (134,426); rye, 25,905 (21,903); barley, 132,569 (90,727); oats, 57,215 (41,670); corn, 27,286 (26,389); rice, 15,591 (13,042); potatoes, 188,526 (171,846); sugar beets (metric tons), 1793 (2856); beet sugar (metric tons, 1932-33 and 1931-32 seasons), 218 (361); olive oil (gallons, 1932-33 and 1931-32 seasons), 99,886 (101,725); grape must (gallons), 528,153 (503,881). The 1933 wheat crop was 3,762,000 metric tons.

In 1931 the value of crude mineral products was 489,934,000 pesetas (\$39,391,000) and of refined mineral products 942,302,000 pesetas (\$75,761,000); comparative 1930 figures were 477,741,000 pesetas (\$55,752,000) and 1,095,572,000 pesetas (\$127,853,000). On Jan. 31, 1933, Spain had 2,070,000 raw cotton-spinning spindles. The mineral and metallurgical output in 1931 (in metric tons), with 1932 figures in parentheses where available, was: Coal and lignite, 7,538,000 (7,179,000); coke, 751,000; iron and copper pyrites, 2,572,000; pig iron, 473,000 (293,000); copper (blister), 25,812 (14,369); lead, 109,630 (114,291); zinc, 10,094 (9907); mercury, 682; superphosphates, 887,850 (1,200,000); cement, 1,630,000.

COMMERCE. Spanish imports in 1932 were valued at 975,442,000 pesetas (\$188,260,000 at par), compared with 1,175,474,000 pesetas (\$226,866,000) in 1931. Exports totaled 738,381,000 pesetas (\$142,508,000), as against 961,043,000 pesetas (\$185,480,000) in 1931. Leading import items in 1932 were: Chemicals and fertilizers, \$22,177,000; raw and waste cotton, \$20,688,000; oilseeds, \$19,279,000; machinery, \$15,775,000; and mineral oils, \$10,687,000. The chief exports were: Fresh fruits, \$39,400,000 (oranges, \$33,299,000); olive oil, \$12,373,000; fresh vegetables, \$10,493,000; wines, \$8,952,000; chemicals, \$7,363,000; and almonds, \$6,522,000. The United Kingdom purchased

25.8 per cent of all Spanish exports in 1932; France, 18.4; Germany, 8.9; and the United States, 7.0 per cent. The United States supplied 16.4 per cent of the total imports; United Kingdom, 10.6; Germany, 10.3; and France, 7.6 per cent.

In 1933 imports were valued at 837,000,000 gold pesetas and exports at 673,000,000 pesetas. By volume there was a 21 per cent decline in imports and a 6 per cent increase in exports. Imports from the United States (1933) were \$30,756,698 (\$26,688,366 in 1932) and exports to the United States were \$13,698,591 (\$11,400,375 in 1932).

FINANCE. For the fiscal calendar year 1931 actual revenue was 3,656,000,000 pesetas (\$349,000,000) and expenditure was 3,855,000,000 pesetas (\$368,000,000), the deficit being 199,000,000 (\$19,000,000). For 1932 actual revenue was 4,409,000,000 pesetas (\$354,000,000); expenditure, 4,297,000,000 pesetas (\$345,000,000); surplus, 112,000,000 pesetas (\$9,000,000). For 1933 the budget estimates called for revenues of 4,722,000,000 and expenditures of 4,727,000,000 pesetas. The public debt on Jan. 1, 1933, amounted to 19,972,674,000 paper pesetas (\$1,627,773,000) and 305,142,000 gold pesetas (\$58,892,000). The peseta (par value, \$0.1930) exchanged for United States gold dollars at an average of \$0.0954 in 1931, \$0.1804 in 1932, and \$0.0832 in 1933.

Actual receipts in 1933 totaled 4,561,490,000 pesetas, including loans of 619,280,000 pesetas, and expenditures were 4,426,440,000 pesetas. The actual deficit was thus 484,230,000 pesetas (preliminary).

COMMUNICATIONS. The Spanish railways, which are privately owned, had 9877 miles of line in 1930. In that year they carried 117,100,000 passengers and 48,136,000 metric tons of freight, the gross receipts being equivalent to \$110,503,000 at the average exchange rate. Highways had a total length of 52,224 miles in 1930. Regular air services were operated between Madrid and Barcelona (322 miles) and Madrid and Sevilla (248 miles) during 1932, 6374 passengers being carried on a total of 1321 scheduled flights. Telephone communication between Madrid and Manila, P. I., was inaugurated early in 1933.

The merchant marine on June 30, 1932, consisted of 861 vessels of 1,265,321 gross tons. Idle shipping Oct. 1, 1933, totaled 339,000 gross tons. During 1932, 18,068 vessels of 30,495,624 net registered tons entered Spanish ports, against 19,402 vessels of 31,431,473 tons in 1931.

GOVERNMENT. The Constitution of Dec. 9, 1931, declared Spain to be a democratic republic of workers of all classes, organized as an integral state but with autonomy for municipalities and certain regions. Freedom of conscience was guaranteed; all citizens were made equal before the law; Castilian (Spanish) was made the official language; and war was formally renounced as an instrument of national policy. Legislative power was vested in the people, who exercise it through the unicameral Cortes, or Congress of Deputies, elected for four years by universal male and female suffrage.

The President is elected for six years conjointly by the Cortes and by an equal number of electors chosen by universal, secret suffrage. He is ineligible for reelection for six years after the end of his term. The Premier is appointed and dismissed by the President, who also appoints the Ministers upon the Premier's nomination. President in 1933, Niceto Alcalá Zamora y Torres,

elected Dec. 10, 1931. Premier and Minister of War at the beginning of 1933, Manuel Azaña y Díaz, appointed Dec. 16, 1931. For changes in 1933, see *History*.

HISTORY

THE CONSERVATIVE REACTION. The year 1933 marked the end of the first phase of the Spanish Republic, established upon the ruins of the monarchy on Apr. 14, 1931. Premier Azaña's coalition ministry of Socialists and Republicans was forced to resign by internal dissensions and a rising tide of conservative opposition. The radical and semi-socialistic measures by which the Azaña government had sought to rebuild Spain were repudiated in three successive elections. The ministry gave way in the end to a coalition of conservative and moderate parties which threatened to undo much of the work accomplished by the Constituent Cortes and the government during the previous two years.

These accomplishments included the framing of a progressive constitution; reorganization of the army and its removal from politics; the separation of Church and State; dissolution of the Jesuits and expropriation of their property; nationalization of the property of the Church and exclusion of the religious orders from commerce, industry, and from all except religious education; and legalization of civil marriage and divorce. In the field of social legislation a code of laws had been passed giving the worker full protection, social insurance benefits, and the guaranteed right of collective bargaining. Redistribution of the large landed estates was provided in the Agrarian Reform Law. The educational system was secularized and extended by the establishment of more than 9000 new schools. The age-old Catalan question was peaceably settled by a division of administrative powers between the central government and Catalonia (q.v.). In addition, the Republic had inaugurated a large-scale programme of public works designed to modernize Spain's transportation, irrigation, and power facilities.

ANTI-CLERICAL MEASURES. Of these measures, two important ones were enacted by the Cortes during 1933. The bill for the seizure of all church property was finally approved March 24. It provided that "churches of all classes, episcopal palaces, rectories, seminaries and other buildings of the Catholic cult are declared to be national property; also all ornaments, pictures, and other such objects in them." The law restricting the religious orders was presented to the Cortes in December, 1932. Because of the bitter opposition it was not finally approved until June, 1933, when it resulted in a cabinet crisis. It provided that the orders were to cease all primary teaching by Dec. 31, 1933, and all other non-religious instruction by October, 1933. The bishops of Spain responded with a pastoral letter strictly forbidding attendance at state schools. Pope Pius addressed an encyclical to the bishops, clergy, and people of Spain condemning this legislation and urging them to defend the faith. The full strength of the Church was placed behind those political parties demanding repeal of the anti-clerical laws.

OTHER OPPOSITION GROUPS. Besides the opposition of the Church, the monarchists, and a newly formed Fascist movement headed by José Primo de Rivera (son of the former dictator), the Azaña ministry faced the hostility of the merchants, manufacturers, and landlords. The latter groups, antagonized by the government's pro-

labor policy, formed in July, 1933, a central committee which played an effective part in Azaña's overthrow. Their central committee, the Catholic Action, and various other conservative organizations united their anti-government efforts through the medium of the *Confederación Española de Derechas Autónomas*, formed in February, 1933.

Attacked by these groups for its radicalism, the Azaña government was assailed also from the Left because it was not radical enough. Both the Anarcho-Syndicalists and the Communists waged an unceasing war upon it. Their third serious effort to overthrow the republic and establish a strictly proletarian régime came in January, 1933. It was crushed with the loss of some 50 lives. Sporadic strikes, riots, and disorders continued, however, and the government was forced to resort to arbitrary arrests and imprisonments. The jails held about 9000 political prisoners in the summer of 1933. Moreover the government inaugurated a policy of strike-breaking which further alienated labor. The cabinet's ability to withstand these aggressively hostile elements was weakened by growing dissensions within its ranks. The government coalition during 1933 gradually split asunder on the issue of whether the republic was to be bourgeois or socialist in character.

THE ELECTIONS. The first definite indication of the government's waning prestige was the victory of the opposition forces in the elections held in about one-third of the Spanish municipalities on Apr. 23, 1933. Incomplete returns indicated that the government parties won 5048 seats in the municipal councils, as against 4206 seats won by the anti-government republicans under Alejandro Lerroux and 4954 won by the Right parties. Lerroux and other opposition leaders demanded that Premier Azaña resign in response to popular demand as expressed in the municipal elections. The Premier held on until the dispute over the Church laws widened the breach in the cabinet ranks. He finally offered his resignation on June 8, when President Alcalá Zamora refused to allow him to reorganize the Ministry of Agriculture without consulting other party leaders. Advised against calling a new election at that time, the President attempted without success to find a leader capable of forming a new ministry without the support of Azaña or the Socialists. On June 11 he was forced to turn again to Azaña. The latter's reorganized ministry proved no stronger than before and by the middle of August the break-up of the Republican-Socialist coalition made further progress in legislation virtually impossible.

The fall of the Azaña régime was hastened by the election on Sept. 3, 1933, of 15 judges of the Tribunal of Constitutional Guarantees. One judge was elected for each of the 15 regions by the municipal councilors. The government elected only five of the 15; the Radical party under Lerroux elected four and the extreme Right six. This second rebuff caused the resignation of Azaña, September 7, and the formation of a ministry under Lerroux on September 13. The Radical leader failed to survive his first vote of confidence in the Cortes, however, and gave way on October 3 to a coalition of Republicans (formed October 7) under his lieutenant, Diego Martínez Barrios. The Socialists were excluded in the new ministry, which contained seven members of the Lerroux cabinet.

With the authorization of President Alcalá Zamora, Premier Martínez Barrios immediately dissolved the Constituent Cortes and called new elections for November 19, with a supplementary

election to be held December 3 in districts where no candidate received the 40 per cent of the total vote required by law.

The general elections were of great significance for several reasons. The 12,500,000 votes cast included those of some 6,000,000 women, who exercised for the first time in a general election the suffrage extended to them by the republican régime. It was also the first opportunity which the nation had had to register its approval or disapproval of the Constitution and legislation enacted by the Constituent Cortes. In general the four chief alternatives facing the voters were: (1) the parties of the extreme Right, united in the C. E. D. A. by the Catholic leader José María Gil Robles; (2) the parties of the Right Centre (moderately conservative) under Lerroux and Miguel Maura; (3) the moderately radical republican groups headed by Azaña; and (4) the Socialist party, headed by Largo Caballero, Fernando de los Ríos, Indalecio Prieto, and others.

The result was a sweeping victory for the parties of the Right and the Right Centre. Of the 472 seats in the Cortes, the Right captured 212, the Centre 162, and the Left (radical) parties 98. Of the 20 parties represented in the new Cortes, the Agrarian Populists (conservative, Catholic, pro-monarchist) under Gil Robles, with 104 seats, and Lerroux's Radicals, with 101 seats, emerged as the most powerful. The Socialist representation was cut to 58 from 114 in the previous Cortes, while Azaña's Republican Movement returned only five deputies in place of 30. The lineup of the Right parties was: Agrarian Populists, 104; Agrarians, 39; Independents, 24; Traditionalists, 17; Renovación Española, 15; Basque Nationalists, 12; Nationalists, 1. The Centre parties comprised: Radicals (Lerroux), 101; Catalan League, 25; Conservative Republicans, 18; Liberal Democrats, 9; Independents, 6; Progressive Republicans, 3. The Left parties included: Socialists, 58; Catalan Left, 22; Galician Federation, 6; Republican Movement, 5; Independent Radical Socialists, 4; Radical Socialists, 1; Federals, 1; Communists, 1.

The elections were marked by considerable disorder and charges of unfair tactics and irregularities. Botella Asensi, Minister of Justice in the Martínez Barrios cabinet, resigned in protest against the conduct of the elections. He charged that Lerroux had reached an understanding with the extreme Right. The Socialists, alarmed at the prospect of a Monarchist reaction, gave warning that any attempt by the Right to wreck the Republic and its work would be met with armed revolution and a dictatorship along Communist lines. The Socialists, however, refused to join in a fourth Anarchist-Syndicalist insurrection which coincided with the meeting of the new Cortes on December 8. A reign of terror continued for five days, especially in Catalonia, Andalusia, and Estremadura, and more than 100 persons were killed before government forces restored order.

LERRoux FORMS CABINET. Shortly after the Cortes convened the Martínez Barrios ministry resigned and Alejandro Lerroux formed a new minority government (Dec. 16, 1933), dependent upon the support of the Right. The Lerroux cabinet contained eight members of the Premier's Radical party and five representatives of other Centre parties. The line-up was: Premier, Alejandro Lerroux; Foreign Affairs, Leandro Pita Romero; Justice, Ramon Alvarez Valdes; War, Diego Martínez Barrios; Marine, José Rocha; Finance, Antonio Lara; Interior, Manuel Rico

Avello; Education, Don Antanagildo Pareia y Ebenes; Labor, José Estadella; Communications, José María cid Ruiz Zorrilla; Agriculture, Cirilo del Rio Rodriguez; Public Works, Rafael Guerra del Rio; Industry, Ricardo Samper. While the new ministry was committed to revision of the anti-clerical laws, the land reforms, and the secularization of education, it accepted the republic. So also did nearly all of the Right parties, including Gil Robles's powerful Agrarian Populists.

CATALONIAN DEVELOPMENTS. Meanwhile the semi-autonomous government of Col. Francisco Macia, President of the Catalan Generalidad (state), was encountering great difficulty in its effort to launch the new state upon a successful course. By the Statute passed by the Cortes at Madrid, Sept. 9, 1932, and subsequently accepted by the Macia government, the administration of Catalonia was divided between the federal and the local government (see 1932 YEAR BOOK for provisions of the Statute). There remained the task of interpreting the Statute with regard to its actual application, and of establishing a constitutional government in accord with its provisions. The interpretation of the Statute was entrusted to a mixed commission representing both the Madrid and Barcelona governments.

The work of drafting a Catalonian Constitution was begun early in January, 1933, and a state government in accordance with the Statute was set up early in June. The transfer of various administrative powers from the central to the Barcelona government was scheduled for later in the year. The transfer of the administration of justice took place on November 1, but the transfer of control over the police and finances was for some reason deferred. A move on the part of the Lerroux ministry to destroy Catalonian regional autonomy was feared.

Although many Catalans were not satisfied with the autonomy granted under the Statute and demanded complete independence from Spain, the Nationalist movement suffered a severe setback during 1933 as a result of dissensions within Colonel Macia's Esquerra party, which had been instrumental in securing the Statute. Quite unexpectedly Colonel Macia's party was defeated by the Catalan League in the national elections of November 19 and December 3. It won only 22 seats in the national Cortes, as against 25 captured by the more conservative Catalonian League. The death of Colonel Macia on December 25 removed a powerful champion of Catalan autonomy (see MACIA Y LLUSA, FRANCISCO). Luis Companys, former Civil Governor of Catalonia, was elected President of the Catalan Generalidad, succeeding Colonel Macia, by the Catalan Parliament on December 31.

BASQUE STATUTE APPROVED. A statute providing for the establishment of an autonomous Basque state comprising the three provinces of Guipúzcoa, Alava, and Vizcaya was approved by more than 85 per cent of the voters at a plebiscite held in the three provinces Nov. 5, 1933. The provisions were reported to be similar in many respects to those of the Catalan Statute. To become effective it required the approval of the Spanish Cortes. See BASQUE PROVINCES.

FOREIGN RELATIONS. The arrest and imprisonment of five American citizens residing on the island of Majorca, following an altercation in June with the local Civil Guard, led to considerable diplomatic negotiation by the American ambassador in Madrid during 1933. All were charged

with attacking a Civil Guard, an offense covered by military law in Spain and carrying a penalty of up to six years' imprisonment. The defendants—Rutherford Fullerton, Mr. and Mrs. Clinton Lockwood, Roderick F. Mead, and Edmund W. Blodgett—were released on bail after seven weeks' imprisonment. A military court at Palma, Majorca, acquitted them on October 26, but the approval of the military auditor, required by Spanish military law, was not forthcoming. At the end of 1933 the defendants were awaiting a review of their case by the Spanish courts. By decrees issued Dec. 15, 1933, the Spanish government established stringent regulations covering the admission of foreigners to any of the Balearic islands. The decrees were attributed partly to a desire to eliminate undesirables from the islands and partly to prevent foreign spies from securing information on the new fortifications under construction there.

A supplementary commercial agreement between France and Spain, providing tariff and quota concessions, became effective June 23, 1933. See ANDORRA under History.

Consult Anita Brenner, "Spain's Venture in Democracy," *Current History*, December, 1933; Lawrence A. Fernsworth, "Whither Spain?" *Foreign Affairs*, October, 1933; Bailey W. Diffie, "Spain Under the Republic," *Foreign Policy Reports*, Dec. 20, 1933.

SPANISH-AMERICAN LITERATURES.

The facts here given are not to be considered exhaustive, nor must the omission of some countries be held as evidence that they produced nothing in 1933.

ARGENTINA. Again Argentina offers materials of interest in several fields.

Fiction. Hugo Wast published a splendid work in two volumes: *Don Bosco y su tiempo*, dealing with the period of the unification of Italy (somewhat as does Marion Crawford's Saracinesca series), vol. i bearing the sub-title *Los años de Carlos Alberto*, and vol. ii that of *Los años de Pio IX.* Carlos María Ocantos produced *En el más allá* . . .; Oscar Charpentier, *La mujer que soñó* (with a very unusual theme); J. Alvaro Sol, *La jaula sangrienta*; Alberto María Rossi, *La camisa de once varas*; Manuel Gálvez, *Nacha Regules*; Augusto Scarpitti, *Hombres sin valor*; and Isabel Figueras de Walls, *El ramo de orquídeas*.

Drama. José Borrás wrote *La codicia rompe el saco*: Juguete cómico en dos actos y en verso (Instituto de Literatura Argentina) Sección de documentos, Tomo 5, núm. 1; Francisco Javier de Acha, *Una víctima de Rosas*, Drama en tres actos, en verso y prosa; (Instituto de Literatura Argentina) Sección de documentos, Tomo III, núm. 8; and Horacio H. Dobranich, *Monólogos y cabos sueltos*.

Poetry. Fernández Moreno (whose *Décimas* won for him the Second National Prize for Literature in 1929) published a volume called *Cuadernillos de Verano* (sort of poetic triptych of a summer's vacationing): *Córdoba y sus sierras* (Córdoba in Argentina), *Mar del Plata*, and *Montevideo*. Eduardo Escobar wrote *Pais Azul*; Bartolomé R. Aprile, *El hijo de Martín Fierro*; (daring but successful, attempt to make a continuation, or sequel, to a well-known literary work); Blanca del Prado (poetess of deep and delicate sensibility) expresses easily her memories and impressions of a sojourn in Perú; González Carbalho has some exquisitely harmonious verse

in *Día de canciones*; and Enrique Banch's *La urna* is another beautiful work.

Erudition. Among scholarly works may be mentioned: Gabriel Paláu, *Diario íntimo de un cura español (1919-1930)*; Ernesto Nelson (the great educator), *La delincuencia juvenil*; Arturo Capdevila (whether as poet, novelist, or dramatist, the great artist of Argentina's Episodios Nacionales), *La santa furia del padre Castañeda*, *Vidas españolas e hispanoamericanas del siglo XIX*; Alfredo Colmo (author of the excellent *América Latina and Política Cultural en los Países Latino-americanos*), *La Revolución en la América Latina* (second ed. of fine study of revolutionary movements in the Americas, with sharp criticism of militarism); Ricardo Riaño Jauma, *José Ingenieros y su obra literaria* (devoted to the great littérateur who was Argentina's greatest philosopher and psychologist); Almafuerte (Pedro Bonifacio Palacios, who died in 1917), *Discursos completos* (recopilación, estudios y notas de Sergio J. Bagú); Enrique Larreta, *Las dos fundaciones de Buenos Aires* (excellent study); Juan Alfonso Carrizo, *Cancionero Popular de Salta*; Antonio Aita, *Expresiones*; Arturo Mejía Nieto, *El perfil americano*; Ricardo Rojas (Rector of the National University of Buenos Aires), *El santo de la espada: Vida de San Martín* (excellent); and G. Martínez Zuviria (National Librarian), *La Biblioteca Nacional en 1932*.

Prizes. The three National Prizes for literature (for 1930) were awarded, as follows: First Prize (\$30,000), to Carlos Ibarguren for his *Juan Manuel de Rosas* (a masterly study); Second Prize (\$20,000), to Eleuterio Tiscornia for his *Gramática del Martín Fierro* (an exhaustive and scholarly work); and the Third Prize (\$10,000) to Carlos B. Quiroga for his *Los Animalitos de Dios* (excellent collection of tales and apologues).

Necrology. Argentine letters suffered three notable losses through death: José de San Martín (author of *Mis profetas locos* and *Alberto (Ghiraldito)*); Ricardo Jaimes Freyre (master of symbolism, diplomat, and author of *Castalia Bárbara*, *Los sueños son vida*, and *Los Conquistadores*); and Luis Mario Jordán (poet, novelist, essayist).

CHILE. Several interesting works in various genres have come to hand. Miguel Luis Amunátegui Reyes, the learned Director of the Academia Chilena (Correspondiente de la Academia Española), continued his monumental work (see NEW INTERNATIONAL YEAR BOOK for 1932) *Don Antonio García Reyes* with vol. iv, and a fifth volume is announced. Joaquín Edwards Bello, *Oriollos en París* (third ed. corrected). Eugenio Orrego Vicuña published *Carrera* (prose drama); Roberto Meza Fuentes, *Palabras de amor* (cuadernos de poesía); R. Rodríguez San Martín, *Mapa de un corazón* (highly praised verses by a young writer); R. M. Velasco, *La Mujer superior al hombre*; Dr. Yolando Pino Saavedra, *La Poesía de Julio Herrera y Reissig: Sus temas, y su estilo*; (published by the Universidad de Chile); Raúl Silva Castro, *Estado actual de los métodos de la historia literaria and Fuentes bibliográficas para el estudio de la Literatura Chilena*; and Alonso Ercilla y Zúñiga, *La Araucana* (ed. hecha por la Universidad de Chile, con motivo de la celebración del cuarto Centenario de Alonso de Ercilla, 2 vols.). Aurelio Díaz Meza (writer of Chilean Tradiciones) offers a picture of colonial Chile in *La Quintrala y su época*.

In the Academia Chilena (Correspondiente de la Academia Española) three members-elect took

their chairs, reading the obligatory entrance discourses: Francisco J. Cavada (distinguished philologist); Ricardo Montaner Bello (writer, jurist, consultant, professor of International Law in the University of Santiago, Chile) who wrote *Don Antonio José Iriarri, filólogo*; and Agustín Edwards (littérateur and politician), who wrote *Elogio de Don Eliodoro Yáñez y bosquejo panorámico de la prensa chilena*.

Necrology. Chilean letters suffered a grievous loss through the death of Francisco Contreras (b. 1877), poet, critic, and novelist. As a poet he wrote *Esamaltines* (1897), *Raúl, Toison* (1906), *Romances de hoy* (1907), *Luna de Patria* (1913), and *La varillita de virtud* (1920). As critic he served (as the successor, since 1910, of Eugenio Díaz Romero) as editor of the section of Letras Hispano-Americanas of the *Mercure de France*, and as author of *Los Modernos* (1909), *Rubén Darío-su vida y su obra* (1930), etc. As a novelist he wrote, in French, *La ville merveilleuse* (in 1924; in Spanish in 1927), *La montagne ensorcelée* (1928), and *La vallée qui rêve* (appeared posthumously in the *Mercure de France*). These three novels are considered unmittable documents concerning the Chile of the recent past.

COLOMBIA. Miguel Abadía Méndez (illustrious humanist, Ex-Minister of Public Instruction, and Ex-President of Colombia) was elected Director of the Academia Colombiana. (Correspondiente of the Academia Española).—Luis Carlos López published *Por el Atajo* . . . with prologue by Emilio Bohadillo and epilogue by Eduardo Castillo—J. M. Yepes (distinguished Senator and historian) expounds the boundary dispute between Colombia and Perú: *Le conflit entre la Colombia et le Péru—Affaire de Leticia devant le droit international*. The Colombian government continues its practice of honoring its great citizens by officially publishing their complete works: *Miguel Antonio Caro, Obras completas, Tomo VI: Discursos y documentos públicos*. (Ed. oficial dirigida por don Víctor E. Caro.)

COSTA RICA. Alejandro Alvarado Quirós, Secretary of the Academia Costarricense, published *Prosa Romántica*.

CUBA. The crisis, through which our Cuban friends are passing, is hardly a propitious moment for the production of creative or scholarly books. The following items have come to our attention: J. D. M. Ford and Maxwell I. Raphael, *A Bibliography of Cuban Belles-Lettres*; René Lufriu y Alonso, *La Vida de la Academia de la Historia, de Cuba* (1931-1932); Juan M. Dihigo y Mestre, *Un orientalista cubano: Francisco Mateo de Acosta y Zenea*; Manuel Navarro Luna, *Pulso y onda* (fine verse); Nestor Carbonell, *José Martí: Apóstol, héroe, y mártir*; José Manuel Carbonell, *El dolor de los ciegos y la piedad cubana*; and José María Chacón y Calvo, Cuba's Secretary of Embassy at Madrid, and Member of the Academia Cubana (Correspondiente de la Academia española), gave us *El Consejo de Indias y la Historia de América*.—The Academia Cubana lost one of its most noted members, Rafael Montoro y Valdés, its Censor, who died July 13, 1933.

DOMINICAN REPUBLIC. Federico Henríquez Carvajal, Rector of the University of the Dominican Republic, President of the Academy of History of the Dominican Republic, President of the Dominican Supreme Court, Minister of the Interior, Doctor of Jurisprudence, poet, and journalist,

took possession of his chair in the Academia Dominicana.

ECUADOR. Attention should be called to two works of fiction: Jorge Icaza, *Barro de la sierra* (collection of tales); and Eduardo Samaniego y Alvarez, *La voz interior*. There are also two works of erudition, each of which has gone to a second improved edition: Remigio Crespo Toral, *El divorcio de Colombia: Segunda edición—Aspectos de última hora*; and Alejandro Mateus, *Riqueza de la lengua castellana y provincialismos ecuatorianos*. Other erudite works of interest are: Manuel María Pólit Laso, *Composiciones poéticas del Sr. D. Belisario Peña para completar la colección*, and *Los Hermanos de Santa Teresa en América* (Nuevo estudio histórico, 2a. ed.); and Aurelio Espinosa Pólit, *Virgilio, el poeta y su misión providencial* (Prólogo del Dr. Remigio Crespo Toral).—Ecuador has suffered two grievous losses through death within the past year. Although it occurred Oct. 29, 1932, we received too late for inclusion in last year's article the news of the death of Manuel María Pólit Laso, Archbishop of Quito, and Director of the Academia Ecuatoriana. (Correspondiente de la Academia Española). Born in Quito (1862), he made his general studies in Europe, and his law studies in Ecuador, receiving his degree in 1881. During his youth, he was a lawyer and politician, serving as Deputy to the Cortes and Secretary of the Congress for several years. Suddenly, in 1891, he took orders and shortly thereafter became Vicar-General of the Archdiocese of Quito, later Bishop of Cuenca (in Ecuador), and in 1918, Archbishop of Quito. In 1921 he was elected Correspondiente in Ecuador of the Real Academia Española. He thereupon successfully reorganized the Academia Ecuatoriana as a Correspondiente of the Royal Spanish Academy, becoming its Director, which post he held until his death.—On Jan. 26, 1933, Honorato Vázquez died. He was the Academy's senior member (see INTERNATIONAL YEAR BOOK for 1932). He was a Doctor of Jurisprudence, Professor of Literature in the Colegio Nacional de Cuenca (his native city, where he was born in 1855), and Minister of Ecuador to Spain for many years.

GUATEMALA. Rafael Arévalo Martínez produced a novel *La signatura de la Esfinge*. Dorothy H. Popenoe spent years of expert and intelligent investigation, *in situ*, in the preparation of her very attractive *Santiago de los Caballeros de Guatemala*, which is an unusually fine piece of archaeological reconstruction and historical writing. The illustrations were also drawn by the author, who died before the work was published.

HONDURAS. Rómulo E. Durón, former Minister of Public Instruction and Sub-Minister of Foreign Affairs, has continued his literary labors by producing *Biografía de don Juan Nepomuceno Fernández Lindo*.

MEXICO. Creative writers and scholars have both been active.

Versé. B. Ortiz de Montellano, *Sueños* (exquisite); Alfonso Reyes, *Romancero del Río de Enero*; Aristeo Martínez de Aguilar, *Haz*; Vicente Echeverría del Prado, *Vida Suspensa*; and Alvaro Gamboa Ricalde, *En la tierra del mayab*.

Fiction. José Mancisidor, *La asonada* (highly praised); Roque Estrada, *Liberación* (contemporary historical novel); Salvador Quevedo y Zubieta, *México marimacho* (revolutionary historical novel, 2d ed.).

Drama. Mauricio Magdaleno, *Teatro revolucion-*

ario Mexicano; Juan Bustillo Oro, *Tres dramas mexicanos* (three plays belonging to the new theatrical movement "Teatro de Ahora," and showing three separate problems of to-day).

Erudition. Luis Castillo Ledón, *La Conquista y Colonización Española en Méjico: Su verdadero carácter*; Luis Chávez Orozco, *Bibliografía de Zaoatecas*; José Castillo y Pifia, *Conferencias y Discursos*; J. M. Puig Casauranc, *Mirando la vida, Una Política social-económica de "preparación socialista,"* and *Los Juan López Sánchez López y López Sánchez de López*; Arturo Torres-Rioseco, *Bibliografía de la novela mejicana*; Plutarco Elías Calles, *El General Calles señalando rumbos*; Enrique A. Cervantes, *Herreros y forjadores poblanos: Dibujos y fotografías del autor*; Domingo Díez, *Bibliografía del Estado de Morelos*; Moisés Sáenz, *Sobre el indio ecuatoriano y su incorporación al medio nacional*; Rodolfo Usigli, *Méjico en el teatro*; Alfonso Taracena, *La Tragedia Zapatista and Autobiografía—Cuentos* (both highly praised); and Manuel Romero de Terreros (Marqués de San Francisco), *Encuadraciones artísticas mejicanas—Siglos XVI al XIX* (study of four centuries of book-binding in Mexico). The Academia Mejicana (Correspondiente de la Academia Española) received two of its members-elect: Artemio de Valle-Arizpe, who has since published *Virreyes y Virreinas de la Nueva España—Leyendas, tradiciones y sucesos del México virreinal*, in two large volumes; and Mariano Cuevas (worthy descendant of a family that for more than three hundred years has devoted itself to belles-lettres), whose entrance discourse dealt with the *Orígenes del humanismo en Méjico*.

NICARAGUA. The Academia Nicaraguense lost through death the Perpetual Secretary, Francisco Paniagua Prado, and elected to that post in his stead Antonio Lezcano y Orrega, who was treasurer.

PANAMÁ. Two works have come to our attention: Ernesto J. Castellero R., *El Doctor Manuel Amador Guerrero, Prócer de la Independencia, y primer Presidente de la República de Panamá: Primer Centenario 1933*; and Ismael Ortega B., *Manuel Amador Guerrero, 1833-1933*.

PERÚ. Perú has shown literary activity in various fields but chiefly in erudition. Works that have come to our attention are: Rosa María Rojas, *La alcancia de cristal*; Enrique López Albuja, *Mataraché* (novela retaguardista) and *Cuentos Andinos*; Sturgis E. Leavitt, *A Tentative Bibliography of Peruvian Literature*; Luis Humberto Delgado, *Vida de Rodó*; David Rubio, *La Universidad de San Marcos de Lima durante la colonización española (Datos para su historia)*; Ventura García Calderón, *Virages*; Víctor Andrés Belaúnde, *El debate constitucional and Meditaciones Peruanas*; Alberto Ureta, *Las Tiendas del desierto* (a volume of verse by a poet with real inspiration); Pedro M. Benvenuto Murrieta, *Quince plazuelas, una alameda y un callejón* (a reconstruction of the Lima of 1884-1887, with two valuable glossaries of Peruanismos); Ismael Portal, *Del pasado limeño* (chronicles by this veteran writer); María Wiese, *Nuevos Relatos*; Catalina Recavarren Ulloa, *Poesías*; Luis E. Galván, *La escritura del alfabeto de las lenguas aborígenes del Perú*; J. de la Riva-Agüero, *Añoranzas* (commentary on the book of Benvenuto Murrieta previously mentioned); *Goethe—Homenaje de Lima en el primer centenario de su muerte*; and *Crónica Intelectual: La semana de Palma*; Hector

Velarde (some of whose previous works are *Kikif* and *Tumbos de Lógica*), *Yo quiero ser filósofo* and *Fragmentos de espacio* (a group of essays on architecture); Angélica Palma (her book on *Fernán Caballero* appeared in 1931), *Ricardo Palma* (a beautiful, restrained account of a great man, written by his daughter).

The outstanding event of the literary year in Perú was the celebration of the centenary of Ricardo Palma. The centenary took the form of a programme called *La Semana de Palma*, organized by the "Sociedad Amigos de Palma." The programme lasted from 10 P.M. February 6 until the evening of February 14. On February 6 there was a radio address by Carlos Pareja y Paz Soldán. On February 7 there were various ceremonies including the inauguration of the bust of Palma by the sculptor Manuel Piqueras Cotolí and an address by José de la Riva-Agüero y Osma. February 8 the placing of the bust of Palma in the Alameda de Miraflores, which is renamed Ricardo Palma. February 9 Inauguration of the Exposition of Personal Mementos of Palma and reciting of verses by José Gálvez. February 10 lecture concerning Palma by Jorge Guillermo Leguía. February 11 address: "Palma político," by Víctor Andrés Belaúnde; and verses by Eduardo Martín Pastor. February 13 address: "Palma romántico," by Raúl Porras Barrenechea; and remarks by Angélica Palma. February 14 radio address by Pedro M. Benvenuto Murrieta.

URUGUAY. From Uruguay we have received literary pieces of several types. Guillermo Furlong, S.J., *Los Jesuitas y la cultura rio-platense*; Alberto Nin Frías, *Alexis o el temperamento homo-sensual* (con breves Prólogos de Havclock Ellis, Benavente, y Marañón); and L. F. Azarola Gil, *Los orígenes de Montevideo 1607-1749*.—Carlos Reyles, the great novelist and critic, published *El Gaucho Florido* (novela de la estancia cimarrona y del gaucho crudo), by long odds his best work.—Ester de Cáceres, Doctor of Medicine, author of two other volumes of verse (*Las Islas Extrañas and Canción*), published a new volume of verse, *Libro de la soledad*. Although the name of God scarcely appears in any of the books, the motive of the singing in all her verse is the author's desire for and need of God.

VENEZUELA. Dr. J. M. Núñez Ponte published the second edition of his discourse read on taking possession of his chair in the Venezuelan Academy, the title being *Importancia cultural del Castellano*. Dillwyn F. Ratcliff, published through the Instituto de las Españas en los Estados Unidos, *Venezuelan Prose Fiction*, a very valuable addition to our resources. The Academia Venezolana added those members who read their official discourses and took possession of their chairs: Jacinto Fombona, Doctor of Jurisprudence of Caracas and a poet of note; and Eloy G. González, and Crispín Avala Duarte.

SPANISH LITERATURE. For the first time in many years erudition seems to have outstripped any of the creative forms of literature, leaving the drama and fiction about on a par for second place.

DRAMA. A remarkable thing about this year's production is that there were three religious plays of no mean worth: Gonzalo Delgrás, *INRI*; J. M. Pemán, *El divino impaciente* (verse drama, life of San Francisco Javier); and Eduardo Marquina, *Teresa de Jesús and Salvadora*. Honorio Maura produced *El príncipe que lo aprendió todo en la vida, Hay que ser modernos*, and *El balcón de la*

felicidad. Among the older generation we find: Manuel Linares Rivas, *Eva Quintana—Romance de fieras*; Carlos Arniches, *Las pícaras faldas* and *Cuidado con el amor*; Pilar Millán Astray, *Ruth*; G. Martínez Sierra, *El amor y la muerte*; Jacinto Benavente, *El rival de su mujer*; Enrique Suárez de Deza, *Escuela de millonarios* and *La duquesa se divierte*; Serafín y Joaquín Álvarez Quintero, *El rincón de la pícara vida*, *El susto*, and *Un pregón sevillano*; Joaquín Dicenta, *Leonor de Aquitania* (verse play, prize of the Ayuntamiento de Madrid) performed by company of Enrique Borrás and Margarita Xirgu; Pedro Muñoz Seca, *El refugio*, and with Pedro Pérez Fernández, *Trastos viejos* and *La voz de su amo*; Francisco Serrano Anguita, *Siete puñales*, and with Manuel de Góngora, *La novia de Reverte*. Others that should be mentioned are: Marcelino Domingo, *Doña María de Castilla*; Frederico García Lorca, *Bodas de Sangre*; Antonio Estremera, *Los ateos*; Pedro L. Pico and Tomás Borrás, *Napoleoncito*; Pedro Sánchez de Neyra, *La viuda*; Enrique López Alarcón, *La maravilla de Ejesa*; Manuel de Góngora, *La razón del silencio*; Rodolfo Viñas, *Oro*; Pérez Domenech, *Un grito en la noche* (dramatization of Pedro Mata's novel of the same title); Seneca, *Medea* (Spanish translation by Miguel de Unamuno, and performed in the Roman Theatre at Mérida); Enrique Jardiel Poncela, "*Usted tiene ojos de mujer fatal*"; and Luis Manzano, *La mujer, mujer*.

FICION. There are two new books in Pío Baroja's series *La selva oscura*: *El Cabo de las Tormentas*, and *Los visionarios*. Several others of the older generation are still producing books that charm. Concha Espina, *Candelabra* and *Llama de cera*; W. Fernández Flórez, *Aventuras del Caballero Rogelio de Anaral*; José Más, *En la selva de Bithynia* (a scathing satire of modern life); Pedro Mata, *Subverguenzas*; M. R. Blanco-Belmonte, *El Capitán de las Esmeraldas* (Córdoba under Carlos V); and Rosa Arciniega, *Mosko-Strom* (a literary triumph). Others that should be mentioned are: Rafael Sánchez-Guerra, *De hombre a hombre*; María Costa Durán, *Alas rotas* (great success); Samuel Ros, *El hombre de los medios abrazos*; Francisco Aparicio Miranda, *La mujer de tu prójimo*; A. de Ascanio, *El invencible*; Doctots Oliver Cobeña and Torres Oliveiros, *La tierra número 2* (great success); Rafael Villaseca, *Las brujas de Montecarlo* (highly interesting); Mariano Tomás, *Vega Vd. a casa en primavera* (excellent).

POETRY. The quality of the verse produced seems to be excellent: Julio Bernácer, *Mediterráneo*; Agustín de Foxá, *La niña del caracol* (highly praised ballads); María Luisa de Iriarte, *Romances de amor antiguo y otras composiciones* (an original rhythm, new lyric forms, and modern adjectivation); José Gallo de Renovales, *Horas del Escorial*; Antero de Quental, *Sonetos cacogidos*; and José Moreno Villa, *Puentes que no acaban* (a beautiful poem). Concha Espina produced a solid volume of notable verse: *Entre la noche y el mar*.

ERUDITION. Despite the strenuous problems that face all loyal Spaniards of whatever persuasion during these months of adjustment, scholarship has flourished, as witness the following: Fernando Castán Palomar, *Escenario zaragozano: Horas y Figuras*; Pedro Rodríguez de Ardila, *Baco y sus bodas en España* (annotated by Francisco Rodríguez Marín; Emilio Gutiérrez-Gamero, *Galdós y su obra: los episodios nacionales*; Wenceslao Fer-

nández Flórez, *La conquista del horizonte*; Mariano Tomás, *Vida y desventuras de Miguel de Cervantes*; José R. Lomba y Pedraja, *Costumbristas españoles de la primera mitad del siglo XIX*; Joaquín de Entrambasaguas y Peña, *Una guerra literaria del siglo de oro: Lope de Vega y los preceptistas aristotélicos*; Eusebio Vasco, *Treinta mil cantares populares*, Tomo 3; Federico Carlos Sáinz de Robles, *Castillos en España: Su historia, su arte, sus leyendas*; Julio Puyol y Alonso, *La conspiración de Espoz y Mina (1824-1830), con noticias y documentos hasta ahora inéditos*; Charles E. Kany, *Life and Manners in Madrid 1750-1800*; José Bergamín, *Mangas y Capirotes*; Manuel Ciges Aparicio, *España bajo la dinastía de los Borbones (1701-1830)*; Juan Orta González, *El destino de los pueblos ibéricos* (analysis of historic faults and qualities of the Iberian race); José de la Torre y del Cerro (greatest authority on Mosque at Córdoba), *Beatriz Enríquez de Harana y Cristóbal Colón* (minute study, with documents newly discovered in the Archives of Córdoba); C. E. Chapman, *Colonial Hispanio America: A History*; Conde de Romanones, *Doña María Cristina de Habsburgo y Lorena la discreta regenta de España* (by one who served throughout the Regency and afterward); Mariano de Pano y Ruata (Director of the Academia de Bellas Artes de San Luis, de Zaragoza, whose fine study of *La Condesa de Bureta . . . y el Regente . . .*, appeared some years ago), *El Monasterio de Sijena, La Serie Prioral*; Eugenio d'Ors, *Estudios de Arte: Arte portugués*; Augusto Malaret, *Por mi Patria y por mi Idioma*; Vicente Castañeda and Amalio Huarte, *Nueva colección de pliegos sueltos*; Julián Paz, *Catálogo de manuscritos de América existentes en la Biblioteca Nacional*; *Revue Hispanique*, Tome 81 and last (articles by scholars from many lands: tribute to R. Foulché-Delbosc, founder and sole editor throughout the 80 volumes that precede this dedicatory volume; Narciso Alonso Cortés, *Montalvo, el del Amadís*; Antonio Rubió y Lluch, *Mitteilungen zur Geschichte der Griechischen Sklaven in Katalonien im IV. Jahrhundert, und Chanceliers et notaires dans la Grèce catalane*; R. Menéndez Pidal, *Un inédito de Pereda, Realismo de la epopeya española, La Historia Troyana polimétrica*, and *El lenguaje del siglo XVI*; *Diccionari Català-Valencià-Baleari*, Tomo II, fascicles 22-26; José Balari y Jovany and Manuel de Montoliu, *Diccionario Balari-Inventario lexicográfico de la lengua catalana*, Tomo II, fascicles 5-8; Ignacio Casanova, *La cultura catalana del segle XVIII*; Armando Cotarelo Valledor, *Historia crítica y documentada de la vida y acciones de Alfonso III, el Magno, último rey de Asturias*; José Couselo Bouzas, *Galicia artística en el siglo XVIII y primer tercio del XIX*; Luis and Agustín Millares Cubas, *Cómo hablan los canarios*; Gregorio Marañón, *Amel* (study of the Swiss philosopher Amiel) and *Raíz y decoro de España* (brilliant essays dedicated to the youth of the Hispanic countries); Pedro de Irizar y Avilés, *Sinónimos: Reportorio de palabras usuales castellanas de sentido análogo* (5a. ed. augmented by Homero Seris); José A. Balseiro, *Novelistas Españoles Modernos*.

ACADEMIES. THE SPANISH ACADEMY elected (vice the Marqués de Villa-Urrutia) Miguel Artigas, Director of the Biblioteca Nacional; (vice Carlos María Cortezo) Tomás Navarro Tomás, authority in experimental practical phonetics; and (vice the Marqués de Figueroa) Gregorio Marañón, internationally famous physician and sur-

geon.—The SPANISH ACADEMY awarded the following prizes: Luca de Tena Prize, for 1932, for journalism to Fermín Mugueta; Mariano de Cavia Prize, for 1932, to Pedro Massa, for *Sardana en la montaña y Sardana en la ciudad*; Juan Valera Prize, to Luis González López, for *Las Mujeres de Juan Valera*; Fastenrath Prize to Agustín Millares Carlo, for *Tratado de paleografía española*; the two Prizes of the Conde de Cartagena Foundation, to Angel González Palencia, for his *Estudio sobre la censura gubernativa en España desde 1800 hasta 1833*, and to Antonio Alcalá Venceslada, for his *Vocabulario Andaluz*.

The ACADEMY OF HISTORY elected (vice the Marqués de Villa-Urrutia) Francisco Álvarez Osorio, Director of the Museo Arqueológico.—The ACADEMY OF HISTORY discerned the Premio al Talento, for 1930, to Domínguez Bordona (in charge of the priceless library in the former Royal Palace), for his book *Códices miniados españoles*.

HONORS. The Spanish Republic signally honored two of Spain's outstanding scholars, by conferring upon them the Banda de la Orden de la República—the highest rank in this newly established Order. The scholars are: Santiago Ramón y Cajal, internationally known histologist, and Ramón Menéndez Pidal, the greatest Romance Philologist in Spain.

NECROLOGY. Spain suffered a number of serious losses in the fields that concern us. In journalism there were: the brilliant Felix Lorenzo; the illustrious Eugenio Rodríguez de la Escalera who signed "Monte-Cristo"; Francisco López Acebal, novelist and dramatist; and Luis López Ballesteros, novelist, Deputy at Cortes, Vice-President of Congress, Civil Governor of Madrid, Sevilla, etc.—The stage also suffered severely in the deaths of: Pedro Sepúlveda, a notable actor; Felipe Carsi, dean of Spanish actors; and that brilliant actress, Rosario Pino.—In Belles-Lettres, there were the finished novelist and critic Guillermo Díaz Caneja; the mellow octogenarian poet Salvador Rueda.—The several Academies were likewise not spared: Eugenio Carré y Aldao, Member of the Academia Gallega, historian of Modern Gallegan Literature; Manuel Serrano y Sanz, professor of history in the University of Zaragoza, Member of the Academia de Bellas Artes de San Luis de Zaragoza, and Member-elect of the Academy of History of Madrid; Tomás Montejo y Rica, Professor and Honorary Rector of the University of Madrid, Minister of Public Instruction, and Member of the Academy of Moral and Political Sciences; and Carlos M. Cortezo, celebrated physician, Minister of Public Instruction, Senator, President of the Academy of Medicine, Director of the "Siglo Médico," professor in University of Madrid, Member of the Spanish Academy, and Knight of the Illustrious Order of the Golden Fleece.—Juan Armada y Losada, Marqués de Figueroa (d. Dec. 22, 1932), Deputy, Member of the Academia de Ciencias Morales y Políticas, and of the Academia Española, lawyer, Minister of Public Works, Minister of Grace and Justice, Vice-President of the Congress (several times), Counselor of State, and President of the Congress.—Wenceslao Ramírez de Villa-Urrutia, Marqués de Villa-Urrutia (d. Apr. 1, 1933), Member of the Academia Española, and the Academia de la Historia; Life Senator, Minister of State, Ambassador in Austria-Hungary, England, France, and Italy; Knight of the Collar of the Royal and Distinguished Order of Carlos III, and

Knight Grand Cross of the Légion d'Honneur, of the Victorian Order, of Saint Stephen of Hungary, of Saint Maurice and St. Lazarus of Italy, and of the Netherlands Lion of Holland; and an outstanding historian.

SPEED SKATING. See SKATING.

SPITSBERGEN. See SVALBARD.

SPORTS. Articles covering the activities in the various sports during 1933 will be found under such titles as ATHLETICS, BASEBALL, FOOTBALL, GOLF, OLYMPICS, RACING, TENNIS, YACHTING; also UNIVERSITIES AND COLLEGES.

SQUASH RACQUETS, SQUASH TENNIS. See COURT GAMES.

STANFORD UNIVERSITY. A privately endowed institution of higher education, nonsectarian, and coeducational, founded in Palo Alto, Calif., in 1891 in memory of Leland Stanford, Jr. On the campus are the schools of business, education, engineering, and law. The school of medicine is in San Francisco, and the Hopkins marine station at Pacific Grove. The total enrollment in 1932-33 was 3856. The 1933 summer session had an attendance of 598, while the enrollment for the autumn session was 3310. The faculty numbered 666, including 152 teaching and research assistants. The endowment funds amounted to \$31,544,583; the income for the year was \$2,677,573. The principal gift received during 1933 was approximately \$400,000 from Ellwood P. Cubberley and his wife, establishing the Ellwood P. and Helen Cubberley Trust Fund. There were 586,098 volumes in the libraries. President, Ray Lyman Wilbur, M.D., LL.D., Sc.D.

STARR, FREDERICK. An American anthropologist, died in Tokyo, Japan, Aug. 14, 1933. He was born at Auburn, N. Y., Sept. 2, 1858. On his graduation from Lafayette College in 1882 he was variously engaged as professor of sciences at the State Normal School, Lock Haven, Pa. (1883-84) and Coe College (1884-85), registrar of Chautauqua Institution (1888-89), and curator of ethnology at the American Museum of Natural History, New York City (1899-91). He was then called to the University of Chicago as assistant professor of anthropology and in 1895 became associate professor and curator of the anthropological section of the Walker Museum. He retired as professor-emeritus in 1923.

Professor Starr carried on his research in many lands. During 1905-06 he made a careful study of the pygmy races of Central Africa, visiting 28 different tribes and traveling 22,000 miles with only a guide. He next visited the Philippine Islands in 1908 and during 1909-10 and again in 1917 was in Japan where he was particularly interested in the aboriginal Aino. He conducted investigations also in Liberia in 1912 and in Korea during 1911-13 and again during 1915-16. In recognition of these researches the Belgian government made him an Officer of the Order of Leopold II (1907); the Liberian, a Knight Commander of the Order of African Redemption (1915); and the Japanese, a member of the Order of the Sacred Treasure, third grade (1921). He was highly respected by the Japanese, among whom he was living at the time of his death, for his interest in their national customs and for his attempting to understand their viewpoint in the Sino-Japanese conflict.

Among Professor Starr's publications were:

Some First Steps in Human Progress (1895); *American Indians* (1899); *Indians of Southern Mexico* (1900); *The Aino Group at the St. Louis Exposition* (1904); *The Truth about the Congo* (1907); *In Indian Mexico* (1908); *Filipino Riddles* (1909); *Japanese Proverbs and Pictures* (1910); *Congo Natives* (1912); *Liberia* (1913); *Mexico and the United States* (1914); *An Early Account of the Choctaw Indian* (1918); *Korean Buddhism* (1918); *The First Man* (1919); *The Origin of Religion* (1919); and *Fujiyama, the Sacred Mountain of Japan* (1924).

STARS. See ASTRONOMY.

STATE BANKS. See BANKS AND BANKING.

STATISTICAL ASSOCIATION, AMERICAN. An organization founded in Boston in 1839 to foster an interest in statistics and to promote scientific methods of collecting and interpreting statistical data. The official publication is the *Journal of the American Statistical Association*.

The association's ninety-fifth annual meeting was held in Philadelphia, Pa., Dec. 27-29, 1933. Several joint meetings were held with the American Association for Labor Legislation, American Economic Association, American Farm Economic Association, American Political Science Association, American Sociological Society, and the Econometric Society, which was meeting in Philadelphia on these dates. Among the topics discussed were: "Construction and Urban Real Property Statistics"; "The Business Cycle"; "Employment and Unemployment Statistics"; "A Social Programme as Protection against Unemployment"; "State and Federal Cooperation in the Collection of Social Welfare and Criminal Statistics"; "Statistical Problems of Industries under the Codes"; and "The Rehabilitation of Agriculture."

The officers elected for 1934 were: President, Frederick C. Mills; vice-presidents, Isador Lubin, William L. Crum, Royal Meeker, Karl J. Holzinger, James Harvey Rogers, Bradford B. Smith, Emanuel A. Goldenweiser, Paul H. Nystrom; secretary-treasurer, Willford I. King. Headquarters are in the Commerce Building of New York University, 236 Wooster Street, New York City.

STATISTICS. WAGES PER HOUR. The Bureau of Labor Statistics presented in the table below (Table I) a general index of wages or earnings per hour for each year, 1840 to 1932, for the wage earners of the country as a whole, exclusive of agricultural wage earners, with the 1913 earnings per hour at the base or 100. The index is a composite of all satisfactory data available. Agriculture was excluded because of the seasonal character of that industry and the wide variety of the perquisites so often forming part of the compensation of farm hands. The figures of the table are for average wage rates or earnings per hour for wage earners actually at work. They cannot be taken as reflecting earnings per day or per week. The table shows that the general trend of wages per hour has been upward. There was a sevenfold increase in the 80 years from 1840 to 1920, the peak year, the index rising from 33 to 234 in that time. Unusual increases were made during each of the two great wars. From 1840 to 1861 the increase was but 21 per cent. Between 1861 and 1865 the increase was 45 per cent. After the Civil War there was an increase each year to 1872, when rates or earnings per hour were 72 per cent higher than in 1861. From 1914 to 1919, or during the World War, the increase was from an index of 102 to 184, or 80 per cent. In 1920 the

wage level was 129 per cent higher than in 1914 and 134 per cent higher than in 1913, the base year of the index. The year 1921 was one of depression, unemployment, and wage-rate decreases. The general level of wage rates or earnings per hour in that year was 7 per cent and in 1922 was 11 per cent less than in 1920. From 1922 there was an increase each year to 1929. The depression began late in that year and has continued through 1930, 1931, 1932, and into 1933. The level for 1929 was but a fraction of 1 per cent lower than in 1920. The level for 1930 was 1.7 per cent lower than in 1929; for 1931 it was 6.9 per cent lower; and for 1932 it was 20.2 per cent lower.

WHOLESALE PRICES. The following table (Table II) presents the index numbers of wholesale prices by groups of commodities, by years, from 1920 to 1933, inclusive, and by months from January to December, 1933.

AGE DISTRIBUTION OF GAINFUL WORKERS. The accompanying table (Table III) compiled from a report of the United States Census Bureau, gives for 1920 and 1930 the proportion of gainfully occupied persons in the total population of the United States, 10 years of age and over, by age groups, and also the percentage distribution of the gainfully employed by age groups. The term "gainful worker" according to the Census definition includes all persons 10 years of age and over who usually follow a gainful occupation although they may not have been actually employed at the date the census was taken.

INTERNATIONAL COMPARISON OF COST OF LIVING. The *International Labor Review* of the International Labor Office presented a comparison of the cost of certain important foodstuffs and articles of fuel and light in various countries. The tables on page 769 present the information. Table IV shows in terms of United States currency the rela-

tive cost in October, 1932, in each of 21 countries, of an "international basket of provisions" consisting of 14 commodities for which the International Labor Office had information as to actual prices in all of the countries listed. Money cost and the index numbers contained in the table have been computed by the International Labor Office at the par value of the national currencies and also at the exchange rate. However, attention is called to the fact that the fluctuating rates of exchange in 1932 render approximate all figures expressed in a common currency. The 14 items comprising

the basket, and the weight of each (representing approximately the average amount consumed by an adult man per week) are as follows: Bread, 3.75 kilograms (kilogram 2.2 pounds); flour (wheaten), 0.80 kilogram; butter, 0.17 kilogram; beef, 0.45 kilogram; mutton, 0.10 kilogram; pork, 0.20 kilogram; bacon, 0.15 kilogram; potatoes, 2.02 kilograms; sugar, 0.45 kilogram; coffee (or tea), 0.07 kilogram; cheese, 0.09 kilogram; rice, 0.20 kilogram; milk, 2.40 liters (liter 1.06 quarts); and eggs, $3\frac{1}{2}$ (number). In figuring the cost of the various articles, the price of the

...

cheaper kind of bread was used; coffee only was taken into account for those countries in which little tea is used by the working classes, but for Great Britain and the Irish Free State, where coffee is not used by workers' families, only tea was considered. It was stated that the quantities used in the basket are "to some extent arbitrary, and do not correspond to the actual quantities consumed in any of the countries considered. Also, the differences between these weights and the quantities actually consumed vary for different countries, and the system of uniform fixed weights applied throughout may make certain countries

appear relatively too cheap and others too expensive, according to the varying degrees to which the above weights reflect actual conditions." However, the "basket" is believed by the International Labor Office to represent the approximate average proportions in which the various articles are consumed by the working classes in different countries.

In order to show the extent to which the cost of food had decreased since 1929, the International Labor Office recomputed the basket index numbers on a July, 1929 base. The number of towns and the towns themselves are the same for each coun-

TABLE V—COMPARISON OF "FOOD BASKET" COST INDEXES FOR DIFFERENT COUNTRIES WITH THE OFFICIAL COST-OF-FOOD INDEXES, JULY, 1929 TO OCTOBER, 1932
[July, 1929 = 100]

^b June. ^c December, 1929, 1930, or 1931. ^d November. ^e July. ^f May. ^g August. ^h February. ⁱ 29 articles.
^j March. ^k January, 1932.

try for the whole period covered. Unweighted averages were used throughout except for Great Britain, for which prices were available only in the form of weighted averages for seven towns. The recomputed indexes are given in Table V, together with food index numbers compiled by national statistical authorities in the different countries concerned, also recomputed on a July, 1929 base.

STEAM BOILERS. See **BOILERS**.

STEAM TURBINES. Progress in steam turbines during the past year centred around improvements in design making for greater dependability and economy. New governing and control systems were evolved to provide freedom from oscillations and at the same time have the necessary sensitivity. New blade sections and improved arrangement of axial clearances increased efficiencies, and the use of materials better suited to present steam conditions reduced maintenance.

Because of the American practice of designing turbines to meet high peak loads while carrying high vacuum, a very large volume of steam must be passed through the low-pressure casing at such times. This means crowding of the steam and consequent loss in efficiency in the low-pressure section. To obviate this condition it would be necessary to increase the already large dimensions of large turbines which, in turn, would add considerably to the initial cost of the unit. The compromise, in many cases, has resulted in excessive leaving losses in the low-pressure steam. This problem is now being given extensive study with a view to effecting modifications in design that will minimize such losses.

As a result of several disastrous fires due to breakage of oil lines supplying the governing mechanism and the consequent impingement of oil on hot steam pipes, the arrangement of turbine oiling and governing systems has undergone radical changes. A new non-inflammable governing fluid has been brought out by one manufacturer, and in the case of the new Buzzard Point Station at Washington, D. C. the oil reservoir, pumps, purifiers, and coolers are isolated in a fire-proof room under the turbine. This room is protected by an automatic CO₂ fire-extinguishing system. Furthermore, all oil piping to the governor and bearings is run inside of and spot-welded to drain lines that return to the oil reservoir in the fire-proof room. This practice is likely to be followed by other new stations.

While a few large turbines were installed during the year, notably a 165,000-kilowatt unit, of the single-shaft type, at the Richmond Station in Philadelphia, the majority of the installations were replacements or supplements to existing equipment. In a number of cases higher pressure units, operating with steam at 400 to 600 pounds, were installed so as to exhaust into the existing lower pressure mains and thus increase the economy of the plant.

In the rayon industry several turbine-generators were put in to operate at frequencies above 100 cycles.

One turbine manufacturer announced the design for a 200,000-kilowatt unit to operate at 1200 pound steam pressure and 1000° F., although no installation has yet been made.

In the high-temperature range, a paper by W. A. Carter and F. O. Ellenwood at the Annual Meeting of the American Society of Mechanical Engineers in December, reported on "The Thermal Performance of the Detroit Turbine Using Steam

at 1000° Fahrenheit." This unit has actually operated successfully for long periods at 1100° with a thermal efficiency of 31.8 per cent and a heat rate of 10,730 B.t.u. per kilowatt-hour. The trend as shown by recent installations is toward higher initial steam temperatures in the neighborhood of 825 to 850°.

Last year also saw the completion and initial operation of two 20,000-kilowatt mercury turbines, one at the Schenectady Works of the General Electric Company and the other at the Kearny Station of the Public Service Electric & Gas Company at Newark, N. J.

STEEL. See **IRON AND STEEL**.

STEEPLECHASING. See **HORSE RACING**.

STEVENS INSTITUTE OF TECHNOLOGY. A college of engineering at Hoboken, N. J., founded in 1870. The enrollment for the autumn of 1933 was 459 undergraduate and 33 graduate students. There were 60 members on the teaching staff. The income for 1932-33 was \$340,000. President, Harvey Nathaniel Davis, Ph.D.

STRAITS SETTLEMENTS. A British crown colony in the Malay Archipelago. The various Settlements with their areas and populations (1931 census) are shown in the accompanying table.

Settlement	Sq. miles	Pop. (1931)	Chief town
Singapore ^a	288	560,023	Singapore
Penang ^b	575	859,757	Georgetown
Malacca	637	186,694	Malacca
Labuan	35	7,538	Victoria
Total for S. S.	1,535	1,114,012	Singapore

^a Includes Christmas and Cocos or Keeling Islands

^b Includes Province Wellesley and the Dindings.

Singapore, the capital, had 433,432 inhabitants in 1932; it is one of the greatest ports in the world. A total of 20,011 merchant vessels (exclusive of native craft) aggregating 43,353,043 tons entered and cleared the ports in 1932. The budget for 1933 estimated revenue at £4,087,172; expenditure, £3,203,773. On Jan. 1, 1933 the public debt amounted to £6,913,352 and 15,074,300 Straits dollars. Governor in 1933, Sir C. Clementi.

STRATOSPHERE. See **METEOROLOGY, AERONAUTICS**.

STREETS. See **ROADS AND STREETS**.

STRIKES AND LOCKOUTS. From 1917 and almost consistently (up to 1932), there had been a steady downward drop in the number of industrial disputes taking place in the United States. In 1933, however, with the recognition of trade union organization by the NRA, industrial disputes once again raised their heads; and while they did not approach the record year 1919, certainly as far as the number of disputes, persons involved and violence and turbulence occurring were concerned, they were as serious as anything that had taken place in this aspect of industrial relations in the whole post-war period. Table I

TABLE I—RELATIVE NUMBER OF DISPUTES AND OF EMPLOYEES INVOLVED, 1916 TO 1932

Year	Dis- putes	Employ- ees	Year	Dis- putes	Employ- ees
1916	100	100	1925	84	27
1917	117	77	1926	27	21

1924	957	28,588	30				

In 1933, however, with the inauguration of the New Deal, labor once again became restive and industrial disputes swept the country leaving no section and no industry untouched. The chief cause for labor disputes was undoubtedly the demand upon the part of labor to organize in and conduct collective bargaining through trade unions of its own choosing; however, disputes over wages and hours continued of course to take place. It was estimated by Mr. Mauritz A. Hallgren, writing in the *Nation* of November 8, that since the New Deal began nearly 1,000,000 workers had gone out on strike. The number of disputes brought to the attention of the Bureau of Labor Statistics had increased more than four-fold from January to August, 1933; and more than five-fold as compared with the average for 1932. In many communities industrial disputes had definitely taken a violent turn and were resulting in wholesale arrests of strikers and strike pickets and in the destruction of property. According to Mr. Hallgren, this unrest "also led to numerous riots, from which both workers and police have come away with bruised heads and broken limbs, when no more serious injuries have been inflicted. Indeed, press dispatches show that some hundreds of strikers have been wounded and perhaps a dozen killed in clashes with factory guards, deputy sheriffs, and city police." There was no question that increasing independence of labor was due to the fact that workers were feeling their strength, particularly with the formal recognition of their right to organize by the Federal government under the New Deal. It is significant to note, too, that

strikes were taking place not so much in the organized industries, that is to say, in the printing, railroading, and building trades, but in the heavy industries where heretofore an open shop policy had prevailed. Labor was organizing and engaging in strike activities in steel, automobiles, oil, and

rubber, and it was doing similarly in loosely integrated industries like bituminous coal and the clothing and needle trades.

One significant result of this renewal of activity has been the expression from many quarters that strikes were not only antiquated and barbaric but that they were frustrating the orderly development of the New Deal programme. The Paul Block newspapers published a signed editorial from their owner which declared that "hundreds of strikes throughout the country are largely responsible for the retardment of business progress. . . . Business is ready to start upward, and no one, either employer or employee, should be allowed to stand in the way."

The article on LABOR ARBITRATION AND CONCILIATION will point out how under the New Deal there has been set up elaborate machinery for the purpose of intervening in labor disputes, that is, the National Labor Board. Here it suffices to mention that labor unrest apparently may be accepted as a sign of recovery, for in periods of real stagnation the psychological attitude of labor has not been very much unlike that of industry.

In Table IV there are presented figures for industrial disputes in the United States as reported to the Bureau of Labor Statistics for the twenty-four months period January, 1932 to December, 1933. It will be observed how under the New Deal the number of disputes, the number of workers involved, and the number of man-days lost in disputes have increased by leaps and bounds.

Table V is presented to show how industrial disputes were leaving no industry untouched. It gives, by industrial groups, the number of strikes beginning in August, September, and October, 1933, and the number of workers directly involved.

TABLE IV—INDUSTRIAL DISPUTES BEGINNING IN AND IN EFFECT AT END OF EACH MONTH JANUARY, 1932 TO OCTOBER, 1933

Month and year	No. of disputes beginning in month	No. of disputes in effect at end of month	No. of workers beginning in month	No. of workers in effect at end of month	Number of man-days lost in disputes

disputes, which in some cases were continued for relatively long periods. Most of the time loss in such disputes in 1932 was due to two controversies in Nova Scotia and four in Alberta. In other industries the 1932 time loss was considerably less

TABLE V—INDUSTRIAL DISPUTES BEGINNING IN AUGUST, SEPTEMBER, AND OCTOBER, 1933

Industrial group	Number of disputes beginning in— August	September	October	Number of workers involved in disputes beginning in— August	September	October

CANADA. In 1932 there were 116 strikes and lockouts in Canada—28 more than in the preceding year. The number of workers involved in these industrial disputes of 1932 were 23,390, an increase of 12,652 over 1931. The time loss in man working days was 255,000 in 1932 as compared with 204,238 in the previous 12 month period. Such increases are accounted for mainly by the greater number and importance of the coal mine

than that of 1931, although the number of employees involved was almost double in the later year. As in 1931 the majority of the disputes did not continue long and involved relatively few workers. The chief industries affected were logging, sawmilling, salmon fishing, and fur and clothing manufacture. The table at the top of this column is a record of the strikes and lockouts in the Dominion of Canada from 1913 to 1932.

DENMARK. According to the American vice-consul at Copenhagen, Mr. E. Gjessing, as reported in the *Monthly Labor Review*, on Jan. 31, 1933, the Danish Parliament passed a law banning all strikes and lockouts for a period of one year. By this enactment a general labor war, which threatened to break out on February 1 in Denmark, was averted. Strikes have been rare in this country, the only time industrial disputes occurring being as a result of the inability on the part of capital to make quick adjustments in wages when Denmark went off the gold standard. As a result of this inability of the two groups to come to an understanding, from early 1932 on, every month seemed to force the contesting groups farther apart so that there was imminent danger of industrial warfare on a wholesale scale. Thus in January, 1932, the association of employers issued a notice of lockout which would have affected 100,000 workers; the trade unions replied immediately with strike notices. A board of arbitration attempted to formulate a proposal of compromise, but in vain. The prime minister thereupon called a conference of representatives of the employers and workers. The result of his mediation was that a basis for negotiations was reached, and the board of arbitration thereupon submitted the proposal which was the result of the ensuing negotiations. The proposal, which was accepted by both parties, provided for an extension of one year from date of expiration of all trade agreements.

In January, 1933, on the eve of the expiration of the wage agreements the employers renewed an earlier demand for a 20 per cent cut and the representatives of labor refused to negotiate, whereupon lockout warnings to take effect on February 1 followed. The employers claimed that the wage standard was too high and about 20 per cent above that of Sweden, and pointed to the ever increasing unemployment in Denmark as a proof of their contention. At the end of January, 1933, about 42 per cent of all organized workers were out of employment. The increasing unemployment, the fall in the prices of agricultural products, the resultant distress among the farmers and the looming industrial conflict combined to produce a situation which threatened to be serious in the extreme. It was to meet these conditions that the bill, previously mentioned, was passed Jan. 31, 1933. It aimed to remedy the agricultural situation by inflating the currency, reducing its value in kroner from 19 to 22.50 in the pound sterling, and to meet the industrial situation by forbidding strikes and lockouts for one year.

STUDENT SERVICE, INTERNATIONAL. See INTERNATIONALISM.

STURGIS, MAJ.-GEN. SAMUEL DAVIS, U.S.A., RET. An American soldier, died in Washington, D. C., Mar. 6, 1933. He was born in St. Louis, Mo., Aug. 1, 1861, attended Washington University there, and was graduated from the United States Military Academy in 1884. Commissioned a 2d lieutenant in the 1st Field Artillery, he rose through the grades until on the outbreak of the Spanish-American War he was acting as assistant adjutant-general of the Department of the Pacific and the 8th Army Corps. He participated in the campaign against Manila and during the first American occupation of Cuba in 1899 served as adjutant-general of the Department of Pinar del Rio. Later in that year he was transferred to the Philippines as assistant adjutant-general of the Philippine division during the insurrection there.

Assigned to the General Staff Corps from 1907 to 1911, General Sturgis returned to field duty with the 3d Artillery at Fort Sam Houston, Texas, and for three years (1913-16) was connected with the 1st Artillery in the Hawaiian Islands. He organized the 7th Field Artillery at San Antonio, Texas, in 1916 and until the entry of the United States into the World War served as commander of Camp Funston at Leon Springs, Kans.

On his promotion to the rank of major-general, General Sturgis organized and commanded at Camp Pike, Little Rock, Ark., the 87th Division of the National Army, accompanying it overseas. During the Meuse-Argonne operations of October, 1918, he saw detached service with the 1st and 42nd Divisions, both of which were in the line twice. After the Armistice he assumed command of the 80th Division and on his return to the United States in April, 1919, was assigned successively to Camp Gordon, Atlanta, Ga., Camp Pike, Little Rock, Ark., and Camp Sherman in Ohio. Named commander of the Panama Canal Department in 1921, he served during the year previous to his retirement in 1925 as commandant of the Third Corps Area at Baltimore.

SUEZ CANAL. Traffic in the canal showed a slight gain for the year ending June 30, 1933. The total number of transits was 5163 as against 5025 in the previous twelve-month period; the gross tonnage was raised to 40,572,276 from 39,533,187, and the net tonnage to 29,239,770 from 28,377,553. British bottoms continued to carry about 53 per cent of the gross tonnage, with German vessels occupying second place in number and tonnage, about 8½ per cent. The accompanying table shows the total commercial traffic for the year.

SUEZ CANAL COMMERCIAL TRAFFIC STATISTICS, YEAR ENDED JUNE 30, 1933

[This statement is compiled from the Suez Canal Bulletin]

Flag	Number of transits	Suez Canal

SUGAR. The 1933 cane sugar production of Louisiana was estimated at 202,000 short tons, a decrease of 21,000 tons below the 1932 production. The cane crop for sugar was placed at 2,655,000 short tons. In addition 225,000 tons were reported as grown for sirup and 245,000 tons for seed cane, or a total sugar cane production of 3,125,000 tons.

Eight southern States including Louisiana reported an area of 125,000 acres of sugar cane grown for sirup and a sirup production of 19,106,000 gallons. The leading State, Louisiana, produced 4,847,000 gallons followed by Georgia with 4,125,000 gallons, Alabama with 3,220,000 gallons and Mississippi with 3,173,000 gallons. Louisiana in addition to the cane sirup produced 15,240,000 gallons of molasses. Sixteen States reported an acreage of 240,000 acres of sorgho, or sweet sorghum and a sorgho sirup production of 14,961,000 gallons. The yield of maple products in 1933 as reported by 10 States was 1,322,000 pounds of maple sugar and 2,175,000 gallons of maple sirup.

During the fiscal year ended June 30, 1933, the United States exported 41,000 short tons of refined sugar, 554,000 gallons of sirup and 665,000 gallons of molasses and imported 2,951,000 short tons of cane sugar including 1,230,000 tons from the Philippine and Virgin Islands, 62,000 pounds of dextrose, lactose, and levulose, 2,542,000 pounds of maple sugar and maple sirup, 10,799,000 gallons of edible molasses and 134,651,000 gallons of molasses for other than human consumption.

The world's raw sugar production in 1932-33 according to estimates published in November by Willett and Gray amounted to 24,278,794 long tons of which 16,496,076 tons were cane sugar and 7,782,718 tons beet sugar. The 1932-33 production was smaller by more than 2,000,000 tons than the production of the preceding year. The cane sugar production of the leading countries was reported as follows: British India 4,651,000 tons, Cuba 1,995,079 tons, Java 1,374,254 tons, Philippine Islands 1,145,341 tons, Brazil 950,000 tons, Hawaii 900,000 tons and Puerto Rico 744,918 tons of 2240 pounds each. The yields of raw beet sugar in the leading European countries were estimated as follows: Germany 1,497,137 tons, France 1,000,000 tons, Soviet Republics 1,070,000 tons, Czechoslovakia 563,086 tons, Great Britain 490,000 tons, and Italy 430,000 tons.

In the United States the beet sugar production in 1933 according to estimates by the Department of Agriculture was 1,629,000 short tons, an increase of 272,000 tons over the production in 1932. The beet sugar production (mostly refined) of the leading States was reported as follows: Colorado 390,000 tons, California 262,000 tons, Michigan 177,000 tons, and Utah 147,000 tons. The yields of sugar beets in the leading States were estimated at 2,624,000 tons for Colorado, 1,568,000 tons for California, 1,236,000 tons for Michigan, and 1,068,000 tons for Nebraska. The average sucrose content of the beets, reported as 16.47 per cent, was above the average and ranged from 15.02 per cent in Nebraska to 18.25 per cent in California. The sugar beet dry pulp production was estimated at 271,000 tons.

SUICIDE. See CRIME.

SULPHUR. Production, shipments, and exports of sulphur in 1933 showed large increases in comparison with 1932 according to the annual report of the U. S. Bureau of Mines. Production was 58 per cent, shipments 48 per cent, and exports 48 per cent higher in 1933 than in 1932, but they were 29 per cent, 9 per cent, and 10 per cent, respectively, below the averages for the 5-year period 1928-32. Shipments exceeded production; consequently, stocks at the mines were reduced. Production of sulphur was reported from California, Louisiana, Texas, and Utah.

Sulphur output amounted to 1,406,063 long tons in 1933, a gain of 58 per cent, compared with the output in 1932 of 890,440 tons. Shipments increased from 1,108,852 tons, valued at about \$20,000,000 in 1932, to 1,637,368 tons, valued at about \$29,500,000 in 1933, or 48 per cent in both quantity and value. Stocks at the mines on Dec. 31, 1933, had decreased to 2,799,950 tons, or 231,310 tons below the reserve at the close of the preceding year. The average quoted price for sulphur as reported by the trade journals was unchanged at \$18 a ton f.o.b. mines throughout the year. Spot prices for car lots were \$21 a ton and prices for sulphur exported were given as \$22-\$25 a ton f.a.s. Atlantic ports. See CHEMISTRY, INDUSTRIAL OR APPLIED.

SUMMER THEATRE. See DRAMA.

SUNDAY SCHOOL UNION, AMERICAN. A nonsectarian society organized in 1817 to establish and maintain Sunday schools in the rural and mountain sections of the United States and to publish and circulate moral and religious literature. Its board of managers and missionary force are composed of men representing many of the Protestant denominations. For the year ending Feb. 28, 1933, 634 schools were organized and 513 reorganized, with a total of 3720 teachers and 38,240 scholars. There were 258 young people's societies established; 138 preaching stations opened; 23 churches of various denominations organized; and 8 churches built. The organization, with schools in every State but two, maintained approximately 4000 Sunday schools.

President, E. Clarence Miller, Ph.D.; vice-presidents, Robert L. Latimer and James F. Shrader; secretary of missions, Elliott D. Parkhill, D.D., editor of publications, Arthur M. Baker, Ph.D.; treasurer, John H. Talley. National headquarters are at 1816 Chestnut Street, Philadelphia, Pa.

SUPREME COURT. See UNITED STATES.

SURETY INSURANCE. See INSURANCE.

SURGEONS, AMERICAN COLLEGE OF. A college or guild (not a teaching institution), organized in 1913 by some 500 surgeons of North America to elevate the standard of surgery. Fellowships in the organization are granted on the basis of merit only, with reference to professional ability and moral and ethical fitness. In 1933 these numbered approximately 11,000 and included representatives from practically every country of the world and from every branch of surgery.

The college's twenty-third annual congress was held in Chicago, Ill., Oct 9-13, 1933, with an attendance of more than 3000 surgeons. Among the important conferences were those on graduate and undergraduate teaching of surgery, cancer clinics, industrial medicine and traumatic surgery, community health, and hospital standardization. The organization's official journal is *Surgery, Gynecology, and Obstetrics*.

The officers elected for 1933-34 were: President, Dr. William D. Haggard, Nashville, Tenn.; president-elect, Dr. Robert B. Greenough, Boston, Mass.; vice-presidents, Dr. Evarts A. Graham, St. Louis, Mo., and Dr. Alexander R. Munroe, Edmonton, Alberta, Canada; and treasurer, Dr. Frederic A. Besley, Waukegan, Ill. Dr. Franklin H. Martin is director-general, and Dr. Malcolm T. MacEachern and Dr. Bowman C. Crowell are associate directors. Headquarters are at 40 East Erie Street, Chicago, Ill.

SURGERY. See MEDICINE AND SURGERY.

SURINAM, soo'ri-nām' (DUTCH GUIANA). A possession of The Netherlands on the north coast of South America. Area, 54,291 square miles; population (1931), 155,888. Paramaribo, the capital, had 48,389 inhabitants.

SUZZALLO, su'za-lō, HENRY. An American educator, died in Seattle, Wash., Sept. 25, 1933. He was born at San Jose, Calif., Aug. 22, 1875. On his graduation from Stanford University in 1899 he was an instructor there for several years and in 1902 was made assistant professor of education. In 1907 he was called to Columbia University (from which he had received the Ph.D. degree in 1905) to serve as adjunct professor of elementary education in its Teachers College. Two years later he became professor of the philosophy of education, the first incumbent of such a chair of educational sociology at any American institution.

Dr. Suzzallo accepted the presidency of the University of Washington in 1915 and succeeded during the next decade in making it one of the principal educational institutions of the Northwest, its enrollment alone increasing from 2850 in the autumn of 1915 to 6850 in the autumn of 1926. In the latter year, however, he was relieved of his duties by the Board of Regents on account of a clash with Gov. Ronald H. Hartley regarding the conduct of the university. Dr. Suzzallo charging political interference with the institution's academic programme. He had served during the World War as chairman of the Washington State Council of Defense and as one of 10 umpires appointed by President Wilson in connection with the controversies investigated by the National War Labor Board, later acting as adviser to the War Labor Policy Board.

Named chairman of the board of trustees of the Carnegie Foundation for the Advancement of Teaching in 1927, Dr. Suzzallo acted also in that year as visiting professor on international relations for the Carnegie Endowment for International Peace at the Universities of Vienna, Budapest, Sofia, Belgrade, Zagreb, Bucharest, Padua, and Constantinople. On his return he was appointed director of the President's National Advisory Committee on Education, which sought the formulation of a national policy for better participation of the government in educational activities, recommending in particular the appointment of a Secretary of Education in the President's Cabinet. In 1930 he succeeded Dr. Henry S. Pritchett as president of the Carnegie Foundation for the Advancement of Teaching.

In addition to serving as an elector of the Hall of Fame after 1920 Dr. Suzzallo had acted as chairman of the committee of selection for the Rhodes Scholarship Trust (1915-26) and as president of the National Association of State Universities (1921-22). He edited the Riverside Educational Monographs after 1909, and from 1930 to 1933 the *National Encyclopedia*.

SVALBARD (SPITSBERGEN). An Arctic archipelago belonging to Norway, situated between 10° and 35° E. and 74° and 81° N. Area, 24,294 square miles. The wintering force in 1931-32 was 436. Coal is the principal mineral—the export of which amounted to 215,952 tons in 1932. The budget for 1933-34 was estimated to balance at 90,000 kroner.

SWARTHMORE COLLEGE. A nonsectarian institution for higher education in Swarthmore, Pa. The 1933-34 enrollment was 583. The teach-

ing staff numbered 84. The total endowment was \$7,000,000. President, Frank Aydelotte, LL.D.

SWEDEN. A constitutional monarchy of Scandinavia. Capital, Stockholm; reigning sovereign in 1933, King Gustaf V.

AREA AND POPULATION. Sweden has a gross area of 173,174 square miles (158,510 square miles of land). The estimated population on Dec. 31, 1932, was 6,190,364, compared with 6,141,571 at the census of 1930. At the end of 1932, 33.25 per cent of the population was urban, as against 29.52 per cent in 1920 and 21.49 per cent in 1900. Males numbered 3,053,528 and females 3,136,836. In 1932, there were 89,733 living births, 71,427 deaths, and 41,556 marriages. The birth rate per 1000 inhabitants in 1932 was 14.53 (15.37 in 1930); death rate, 11.57 (11.71 in 1930). Emigrants in 1932 numbered 2121 (2971 in 1931); immigrants, 8991 (8390 in 1931). Populations of the chief cities at the beginning of 1933 were: Stockholm, 519,711; Göteborg, 251,110; Malmö, 131,249; Norrköping, 62,288; and Hälsingborg, 57,360.

EDUCATION. Primary education is free and compulsory for children from 7 to 14 years of age. In 1931, there were 671,606 pupils in elementary schools, 35,316 pupils in 127 public secondary schools, 4620 students in 54 people's high schools, and about 3800 in 2 high schools and 8 elementary technical schools. The two universities, at Uppsala and Lund, had 3239 and 2706 students, respectively, in the autumn of 1932.

PRODUCTION. Agriculture supports approximately half the population, the remainder being dependent upon fishing, lumbering, commerce, and industry. There were 427,152 farms under cultivation in 1927. The value of all crops in 1932 was estimated at 920,000,000 kronor (1 krona equals \$0.2680 at par), compared with 851,000,000 kronor in 1931. Production of the chief crops, in metric tons, in 1932, with 1931 figures in parentheses, was: Wheat, 721,213 (463,573); rye, 434,215 (283,126); barley, 237,402 (222,903); oats, 1,187,982 (987,850); mixed grain, 580,383 (500,073); peas, beans, and vetches, 49,915 (44,027); potatoes, 2,133,649 (1,481,895); sugar beets, 1,554,039 (876,129); fodder roots, 4,062,597 (3,185,551); hay, 5,774,866 (5,769,198). Livestock in 1932 included 3,120,500 cattle, 607,700 sheep and lambs, 1,542,000 swine, and 659,600 horses. The forests, covering 57,257,000 acres, support the important pulpwood, paper, match, and wood-working industries. Revenue from the state forests in 1931 was 34,638,673 kronor.

The mining industry experienced a sharp depression during the years 1931 and 1932. Production of iron ore declined from 11,230,428 metric tons in 1930 to 7,070,808 in 1931 and 3,298,989 in 1932. Pig iron output was 264,775 metric tons in 1932, 389,236 tons in 1931, and 459,780 in 1930. Preliminary figures for other minerals in 1932, with 1931 figures in parentheses, were (in metric tons): Coal, 33,076 (343,197); silver and lead, 11,086 (14,844); copper, 3553 (3609); manganese, 4728 (8364); pyrites, 71,534 (57,609); zinc, 46,034 (58,972). The production of wrought iron and steel was 537,148 metric tons in 1932 (551,243 in 1931). In 1931, 267 mines were in operation, employing 52,679 workers.

Industrial establishments in 1931 numbered 14,772, with 430,050 employees (323,444 men), and a total effective horse power of 4,257,000.

The volume of industrial production in 1932 was estimated to have fallen 15 to 20 per cent below the 1930 level, due to the restriction of foreign markets and curtailment of credits. However, exports of lumber and of newsprint were higher than in 1931, but prices were generally unsatisfactory. The value of industrial products intended for sale was 4,355,821,000 kronor in 1931, divided as follows: Mining and metallurgical products, 1,165,168,000 kronor; food products, 1,056,105,000 kronor; paper and publishing industry, 609,606,000; textiles and garments, 433,917,000; wood and wood products, 349,203,000; chemicals, 208,246,000; leather, skins and rubber, 191,293,000; stone, clay, and earth products, 153,073,000; machinery 188,210,000. The value of industrial production in 1932 was 4,331,000,000 kronor.

COMMERCE. The decline in Swedish imports and exports of merchandise during the period 1929 to 1932 is shown in the accompanying table from the 1933 *Statistisk Årsbok*.

IMPORTS AND EXPORTS OF MERCHANDISE,
1929-32
[In thousands of kronor]

Year	Imports	Exports	Excess of exports (+) or imports (-)
1929	1,782,584	1,812,307	+ 29,723
1930	1,662,175	1,550,351	- 111,824
1931	1,427,541	1,122,408	- 305,133
1932 *	1,154,864	947,398	- 207,466

* 1932 figures are preliminary.

The leading export classes, by values, in 1932 were: Paper pulp and its manufactures, 290,473,803 kronor (346,721,647 in 1931); wood and cork and their manufactures, 152,726,633 kronor (172,848,721); non-precious metals and their manufactures, 140,317,777 kronor (142,501,204); machines, apparatus and electric plant parts, 88,529,828 kronor (122,673,472); minerals and mineral products, 43,381,127 kronor (77,030,241). The leading import items were textile materials and manufactures, coal and metal products, chemicals, machinery, vegetable products, etc.

Great Britain, Germany, and the United States are the leading countries in Swedish foreign trade. The distribution of exports by countries in 1932 (1931 figures in parentheses) was: Great Britain, 239,858,000 kronor (304,697,000); United States, 99,777,000 kronor (132,964,000); Germany, 90,145,000 kronor (114,042,000); Denmark, 61,165,000 kronor (81,590,000); Norway, 61,376,000 kronor (72,065,000). The chief sources of imports in 1932 and 1931, respectively, were (in kronor): Germany, 338,566,000 (472,464,000); Great Britain, 193,585,000 (200,833,000); United States, 124,842,000 (178,128,000); Denmark, 72,887,000 (87,145,000); the Netherlands, 47,088,000 (60,561,000).

United States statistics for 1933 valued imports from Sweden at \$30,971,288 (\$24,479,716 in 1932) and exports to Sweden at \$18,598,307 (\$17,456,743 in 1932).

FINANCE. For the fiscal year ended June 30, 1932, closed governmental accounts showed revenue of 878,720,587 kronor and expenditure of 893,861,786 kronor, compared with revenue of 840,426,575 kronor and expenses of 818,509,668 kronor in the preceding fiscal year. Of the 1931-32 revenues, ordinary receipts accounted for 617,-

640,102 kronor and loans for 72,805,500 kronor. Actual expenses were 765,781,803 kronor and expenditures for the reduction of debt and improvement of state property were 128,089,983 kronor. Preliminary returns for the 1932-33 fiscal year, published by the National Accounting Office, showed receipts (including loans and capital assets employed) of 870,709,000 kronor and expenditures of 907,587,000 kronor, as compared with budget estimates balancing at 896,087,000 kronor.

The national debt on Aug. 31, 1933, totaled 2,381,790,000 kronor, as against 2,160,000,000 kronor on Aug. 31, 1932. The krona (crown) equals \$0.268 at par. The average exchange rate in 1932 was \$0.1847.

COMMUNICATIONS. On Jan. 1, 1933, there were 16,776 kilometers of railway lines in Sweden, of which 6878 kilometers belonged to the state. According to preliminary figures, total receipts of the railways in 1932 were 274,202,000 kronor (303,818,000 in 1931) and operating receipts exceeded operating expenditures by 17,670,000 kronor (34,261,000 in 1931). Electrification of the state railway has been going forward for a number of years. Electrification of the Stockholm-Malmö line was completed in September, 1933. There were 47,139 miles of highways in 1931. Commercial air lines, partially subsidized by the government, connect Stockholm with Helsinki, Finland, and Malmö with Copenhagen and Amsterdam. Swedish telephone connections were extended during 1933 to include Tunis, Algeria, Colombia, and Peru.

GOVERNMENT. Executive power is vested in the King, who acts through a responsible minister known as the Council of State, at the head of which is the Minister of State, or premier. Legislative power rests with the Diet (Riksdag) of two chambers. The composition of the lower chamber elected Sept. 18, 1932, for four years was: Social Democrats, 104; Conservatives, 58; Agrarians, 36; People's party, 20; Communists, 8; Liberals, 4. Prime Minister in 1933, P. A. Hansson.

HISTORY

RECOVERY MEASURES. The energies of the Swedish government and people during 1933 were directed mainly toward checking the economic depression and liquidating the affairs of the gigantic Kreuger interests, which collapsed following Ivar Kreuger's suicide in 1932. At the opening of the new Riksdag on Jan. 11, 1933, the minority Social Democratic government, formed Sept. 24, 1932, submitted a comprehensive programme designed to stimulate economic recovery. It was based on recommendations of the expansionist school of economics, which later were reflected in the, somewhat similar but far more revolutionary recovery programme of the Roosevelt Administration in the United States. The Swedish programme did not pass the Riksdag until June 21, the interim being devoted to discussion and political negotiations. Its adoption was made possible by an alliance between the Social Democrats and the Agrarians. The latter agreed to support the industrial recovery measures in return for the government's pledge to fix the price of butter, wheat, and rye, place an excise on margarine, and regulate the foreign trade in eggs.

The industrial programme provided for the expenditure of 288,000,000 kronor on public works, direct relief, and the underwriting of private en-

terprises, particularly through direct loans to farmers. Of this sum the national government was to provide 180,000,000 kronor, mostly through borrowing, and the balance was to come from local governmental units in districts directly benefited by the public works. The works measures were expected to provide employment for 74,000 men for one year. Funds for repayment of the short-term bonds issued to finance the scheme were to be raised through sharply increased inheritance taxes.

At the same time the government continued its efforts, inaugurated in 1931, to expand domestic credit and increase price levels through monetary measures. According to Prof. Bertil Ohlin, Swedish economist, the Bank of Sweden up to Oct. 30, 1933, had bought gold and foreign exchange to the value of 400,000,000 kronor. The result was a decline in the gold value of Swedish currency and the maintenance of the Swedish price level, despite falling prices abroad. By the end of the year economic conditions showed some improvement, in spite of an extended strike in the building trades, involving 10,000 men, and the adverse effects of the Krueger episode. However, the government's programme had not succeeded in raising prices or in bringing about a real expansion.

THE KREUGER REPORT. The official auditors of the Krueger enterprises submitted their final report Jan. 9, 1933. It showed that the "match king" had raised \$724,000,000 from June 1, 1918, to Mar. 31, 1932, of which \$560,000,000 was obtained for shares and debentures. Of the total, more than \$250,000,000 was raised in the United States. Krueger's original investments of \$458,280,000 had shrunk to \$207,000,000 by Mar. 31, 1932. The Krueger companies had actually earned about 1½ per cent on their investments, or about a tenth of the profits reported. Reorganization and consolidation of the principal Krueger companies was effected as a result of an agreement among the creditors in September, 1933. Meanwhile, the Swedish authorities had prosecuted 50 of Krueger's associates and convicted 20, including his brother, Torsten, and Nils Ahlstrom, former vice director of Krueger & Toll.

FOREIGN RELATIONS. Economic affairs were to the forefront in Swedish foreign relations during 1933, as well as in domestic politics. The announcement on Jan. 15, 1933, that Sweden's negotiations with Germany for a new trade treaty had broken down inaugurated a period of intense irritation between these two formerly friendly countries and turned Swedish sentiment definitely in favor of closer commercial and political relations with Great Britain. This reorientation was accentuated by subsequent developments in Germany (q.v.) and by Nazi propaganda in Sweden. With the expiration of the Swedish-German treaty on February 15, the German tariff on livestock, meat, and lard was doubled. Sweden in turn raised its tariff on luxuries, imported chiefly from Germany, by 10 to 15 per cent. Swedish fears that Great Britain, its other leading market, might be lost as a result of the Ottawa treaties of 1932 were removed with the signing on May 15 of a British-Swedish trade agreement. Sweden agreed to buy not less than 47 per cent of her coal imports from Britain and to grant tariff concessions on certain British manufactures. In return the Swedes were assured that Great Britain would not increase its tariff on approximately nine-tenths of its imports from Sweden. (See GREAT BRITAIN under *History* for

British commercial policy toward the Scandinavian countries).

Antagonized by the German attitude with respect to commercial and political questions, Premier Hansson and the Swedish press generally expressed active sympathy toward Denmark's efforts to prevent alleged German efforts to recapture North Schleswig. Closer economic and political cooperation among the Scandinavian states was envisaged during a conference between Premier Hansson and the Danish Prime Minister. However, sections of Norwegian opinion, irritated by Denmark's victory in the Greenland controversy, were cold to the suggestion. During the year Sweden concluded a new trade agreement with France and opened negotiations for a similar accord with the United States.

ANTI-COMMUNIST MOVEMENT. The Swedish people emphatically reaffirmed their adherence to democracy and parliamentary government on several occasions during the year. Although attacked by most of the political parties and the press, the Nazi movement made some inroads in the southern province of Skane. Much of the emotional basis for Fascism was furnished by the general revulsion against Communism, which had become increasingly active in Sweden. An unusual anti-Communist demonstration was held in Stockholm May 21, 1933, when some 45,000 persons paraded in protest against Communist infractions of law and order. Criticism of the government's laxity in dealing with the Communists also was implied. This demonstration, however, had no connection with the Fascist movement. As a result of activities of Nazis and Communists, the government on July 21 prohibited the wearing of party uniforms or insignia after July 31 and demanded the registration of all fire arms.

SWEDENBORGIANS. See NEW JERUSALEM, CHURCH OF THE.

SWEDISH LITERATURE. See SCANDINAVIAN LITERATURE.

SWIMMING. Among the water sports highlights of 1933 were the shattering of many world's and national records, the notable feats of the three Spence brothers, and the advent of a worthy successor to Miss Helene Madison as all-around freestyle swimming champion in Miss Lenore Kight of Homestead, Pa. Vouchers for fifty-two record performances, thirty-two by men and twenty by women were presented to the A.A.U. for ratification.

The Spence brothers, Walter, Leonard and Wallace, not only captured one or more individual crowns each, a family achievement unprecedented in swimming, but together they won the 300-yard medley relay in the nationals and scored enough points between them to assure the New York A.C. of the indoor national team title. The twenty-one-year-old Miss Kight fittingly stepped into Miss Madison's shoes by winning all the women's freestyle championships from 100 yards to a mile and bettering several of the listed standards.

Among the year's greatest freestyle feats for men and women may be listed 150 yards in 1:24.7 by James Gilhula of Detroit; 440 yards in 4:42.4 and 1000 meters in 12:43.8 by Jack Medica of Seattle; a mile in 21:12.2 by sixteen-year-old Ralph Flanagan of Miami; 440 yards in 5:33.6 (long course) and 500 meters in 7:02.6 (short course) by Miss Kight. Flanagan's mark lowered the American record, the others clipped registered world marks. The Los Angeles A. C. won the national outdoor team title, and the Women's Swim-

ming Association captured the team crown both indoors and outdoors.

The University of Michigan turned in top team score in the N.C.A.A. championships and won the Western Conference title also. Yale captured team honors in the Intercollegiate Swimming Association and Stanford was supreme on the Pacific Coast. In water polo, Navy, Northwestern, and Stanford topped their respective divisions.

SWITZERLAND. A federated republic of central Europe. Capital, Berne (Bern).

AREA AND POPULATION. With an area of 15,944 square miles, Switzerland had a population estimated at 4,120,000 in 1932 (4,066,400 at the 1930 census). In 1930, 1,672,381 inhabitants lived in towns of 5000 or more population. Living births in 1932 numbered 68,650 (16.7 per 1000 inhabitants); deaths, 49,911 (12.1 per 1000); marriages, 31,959 (7.8 per 1000). Overseas emigrants in 1932 numbered 1301 (1707 in 1931). The estimated population of the chief cities in 1932 (1930 census figures in parentheses) was: Zurich, 261,336 (249,820); Basel, 155,944 (148,063); Geneva, 148,767 (142,812); Berne, 116,692 (111,783); Lausanne, 81,985 (75,915); St. Gall, 63,972 (63,947). In 1930, German was spoken by 2,924,314 Swiss, French by 831,100, Italian by 241,985, Romansch by 44,204, and other languages by 24,797. The same census showed 2,330,336 Protestants, 1,666,317 Roman Catholics, and 17,973 Jews. School enrollment in 1931-32 was: Primary, 471,198; secondary and preparatory, 82,351. In 1932-33 the seven universities had 7756 students. Illiteracy is negligible.

PRODUCTION. In 1931, 12 per cent of Switzerland (1,233,000 acres) was arable land; there were 4,161,000 acres of meadow, 2,372,000 acres of forests, 33,000 acres of orchards and shrubs, and 2,301,000 acres of unproductive land. Livestock (1931) included 1,609,000 cattle, 924,000 swine, 184,000 sheep, 236,000 goats, and 144,000 horses, mules, and asses. The 1932 crop yields (thousands of units, bushels except as indicated), with 1931 figures in parentheses, were: Wheat, mixed grain and spelt, 5647 (5489); rye, 1488 (1402); barley, 597 (565); oats, 2342 (2308); potatoes, 24,688 (28,164); wine (gallons), 10,567 (18,228). Dairy products in 1932 (1931 figures in parentheses) were: Butter, 50,510,000 pounds (35,494,000); cheese, 109,569,000 pounds (112,435,000); powdered and condensed milk, 35,274,000 pounds (88,184,000).

Industrial production in 1931, with 1932 figures in parentheses where available, was: Beer, 69,240,000 gallons; watch cases, 753,000 (358,000); jewelry, 1,055,007 pieces (894,057); silk (conditioned), 859,000 pounds (657,000); manufactured gas, 237,785,000 cubic meters; coke, 388,645 metric tons; salt, 85,016 metric tons. The output of electricity was 4,801,000,000 kilowatt-hours in 1932 (5,057,000,000 in 1931).

COMMERCE. Swiss imports for consumption in 1932 were valued at 1,710,087,000 Swiss francs (\$330,047,000 at par), compared with 2,214,808,000 francs (\$427,458,000) in 1931. Exports of Swiss products amounted to 767,511,000 Swiss francs (\$148,130,000), as against 1,334,916,000 francs (\$257,639,000) in 1931. Leading imports in 1932 were: Coal, coke, and briquets, \$23,174,000; machinery, \$20,815,000; iron and steel, \$19,582,000; wheat, \$13,618,000; chemicals, drugs, and explosives, \$14,943,000; and clothing and millinery, \$10,921,000. Germany supplied 29.1 per cent of the 1932 imports, France 14.6 per cent,

Italy 8.3 per cent, and the United States 6.7 per cent. Of the 1932 exports, France took 14.1 per cent, Germany 13.9, United Kingdom 11.3, Italy 8.9, and the United States 7.2 per cent.

FINANCE. The 1931 budget operations resulted in a surplus of 2,255,000 Swiss francs, with expenditures of 426,146,000 and receipts of 428,400,000 francs. In 1932 there was a deficit of 24,173,000 francs, with expenditures of 444,082,000 francs and receipts of 419,909,000 francs. The 1933 budget estimates called for expenditures of 442,020,000 and receipts of 371,220,000 francs. The public debt on Dec. 31, 1931, was 4,885,585,000 francs, including the railway debt of 2,922,299 francs. The Swiss franc (par value, \$0.1929) exchanged at an average of \$0.1940 in 1931 and 1932 and at \$0.2471 paper in 1933.

COMMUNICATIONS. The Swiss railways (excluding tramways and funiculars) had 3354 miles of line (1931). In that year they carried 172,998,000 passengers and 24,978,000 metric tons of freight, the gross receipts totaling \$90,047,000. In 1932 net operating receipts from traffic of the Federal Railways totaled 342,457,566 francs; operating expenses, 259,202,809 francs. At the end of 1933, 1170 miles of line were electrified. Main highways aggregated about 9300 miles in 1932. During 1932 the Swiss and foreign air lines operating in Switzerland made 10,618 flights and carried 32,404 passengers.

GOVERNMENT. The Federal Assembly delegates chief executive authority to a Federal Council of seven members elected for three years. The chief magistrates are the President of the Confederation and the Vice President of the Council, who are elected by the Federal Assembly for one year. President in 1933, Dr. Edmund Schulthess; Vice President of the Council, Dr. Marcel Pilet-Golaz.

HISTORY. The Nazi sweep in Germany during 1933 roused the Swiss people from their sense of security. The German-speaking Swiss viewed the Hitler movement with considerable favor during its early stages, but were antagonized by Hitler's suppression of democratic institutions, ill-conceived Nazi propaganda, and several irritating frontier incidents arising from Nazi demonstrations held near the Swiss border. Germany's withdrawal from the League of Nations and the announcement of Rudolf Minger, Swiss War Minister, that the German general staff had evolved a plan for the invasion of France by way of Switzerland raised widespread fear that Switzerland would not be able to maintain her neutrality in a new European war. In October and November the government voted large credits for the replenishment of Swiss armaments and war materials and took steps to improve the efficiency of the army.

In the cantonal elections held early in November, 1933, the Social Democrats captured eight seats from the bourgeois parties. The Socialists were led by Léon Nicole, who had just completed a prison sentence imposed in connection with the disorders in Geneva on Nov. 9, 1932. The Communists were entirely eliminated. The Federal Assembly on Dec. 14, 1933, elected Marcel Pilet-Golaz, former Vice President, to serve as President of the Confederation during 1934. War Minister Rudolf Minger was elected Vice President.

In accordance with a judgment of the Permanent Court of International Justice rendered June 6, 1932, and a supplementary decision of Dec. 1, 1933, by three experts, France announced that on Jan. 1, 1934, it would withdraw its customs line along the Franco-Swiss frontier and re-

constitute the free zones of Upper Savoy and the district of Gex, established originally in 1815 and 1816.

SYDENHAM OF COMBE, GEORGE SYDENHAM CLARKE, FIRST BARON. A British soldier and administrator, died in London, Feb. 7, 1933. Born in Lincolnshire, July 4, 1848, he attended the Royal Military Academy and in 1868 joined the Royal Engineers. From 1871 to 1880 he taught at the Engineering College at Cooper's Hill and then saw service in Egypt in 1882 and in the Sudan in 1885. On his return he was assigned to the Intelligence Department of the War Office, serving until 1892 as secretary to the Colonial Defense Committee and publishing in 1890 his great work, *Fortification: Past, Present, and Future*. As secretary to the Royal Commission on Navy and Army Administration he was sent during 1892-94 on special missions to Sweden, Germany, France, Belgium, Rumania, the United States, and Canada. He then became superintendent of the Royal Carriage Factory at Woolwich, and spoke with authority on the maintenance of Great Britain's naval and military supremacy in *The Navy and the Nation* (1897) and *Imperial Defense* (1898). For a time also he was a member of the Committee on War Office Reconstitution.

In 1901 Sydenham was appointed Governor of Victoria, Australia, and during his three-year incumbency of this office was widely respected for his sagacious counsel. On his return to England in 1904 he again became a member of the War Office Reconstitution Committee and was largely responsible for the formation of the Committee of Imperial Defense of which he was secretary. In 1907 he was named Governor of Bombay, but his tenure of this post, on account of his conservative views, was less happy than that of Victoria. Recalled previous to the outbreak of the World War, he held the post of chairman of the Central Appeal Tribunal during 1915-16 and was a member of the Air Board during 1916-17. He served also from 1915 to 1921 as chairman of the executive committee of the British Empire League and was president of the British Science Guild during 1917-20. At the time of his death he was vice-president of the Royal Colonial Institute. Created a Knight Commander of the Order of St. Michael and St. George in 1893 and Knight Grand Commander of the Indian Empire in 1907, Sydenham was raised to the peerage in 1913. His later publications included *My Working Life* (1927) and *Studies of an Imperialist* (1928).

SYRACUSE UNIVERSITY. A nonsectarian institution of higher learning for men and women in Syracuse, N. Y., founded in 1870. The 1933 autumn enrollment was 5045, distributed as follows: Liberal arts, 1565; medicine, 225; fine arts, 700; law, 123; applied science, 332; teachers college, 128; forestry, 480; graduate, 221; agriculture, 31; business administration, 772; home economics, 219; library, 49; oratory, 79; and nursing, 121. The extension school enrollment was 1607, and the summer session enrollment 1663. The faculty numbered 558 for the year 1933-34. The productive funds of the university amounted to \$5,018,354 while the income for the year was \$1,630,461. Chancellor, Charles Wesley Flint, D.D., LL.D.

SYRIA. A mandated territory of France situated north of Palestine on the Mediterranean coast. Capital, Beirut (Beyrouth).

AREA AND POPULATION. The total area of the French mandate was estimated at 60,000 square

miles, divided administratively as follows: State of Syria, 49,200; Republic of Lebanon, 3600; Latakia, 2800; and Jebel Druze, 2400. The population in 1932 was about 2,628,150, divided as follows: Syria (capital, Damascus), 1,696,638; Lebanon (capital, Beirut), 592,812; Latakia (capital, Latakia), 286,920; Jebel Druze (capital, El Suweideh), 51,780. The population of the chief cities was: Damascus, 193,912; Aleppo, 177,313; Beirut, 134,655; Homs, 52,792; Hama, 39,960; Tripolis, 37,260; Antioch, 28,000; Latakia, 21,404. Arabic is the language most widely used.

PRODUCTION. The population is engaged mainly in agriculture and stock raising. About 3,000,000 acres were under cultivation in 1932, the crop yield in that year being (in metric tons): Wheat, 267,400; barley, 199,500; tobacco, 1900; cotton, 800; olive oil, 4200; silk cocoons, 3575; sesame, 2800. Grapes, apricots, and other fruits are extensively grown. In 1931 there were 2,621,000 sheep and 977,000 goats. Mineral resources are limited and manufacturing is on a small scale. Flour, oil, soap, silk thread, wine, and tobacco products are the chief manufactured articles.

COMMERCE. Imports and exports, including transit goods, were equivalent to \$39,596,000 and \$16,378,000, respectively, in 1931. In 1932 imports from France were 6,733,149 Syrian pounds (1 Syrian pound equals 20 French francs); from the United Kingdom, 4,833,047 pounds; Italy, 2,260,907 pounds; Turkey, 2,681,232 pounds; United States, 2,312,977 pounds. United States statistics for 1933 showed exports to Syria of \$1,836,264 (\$1,460,192 in 1932) and imports from Syria of \$1,306,480 (\$806,299 in 1932).

FINANCE. The budget estimates for 1932 balanced at 17,057,489 Syrian pounds, compared with actual receipts and expenditures of 19,413,936 and 18,941,905 pounds, respectively, in 1931. Syria's share of the Ottoman Debt was being paid off in six annual installments of about \$1,280,000 each, the first of which was paid in 1930.

COMMUNICATIONS. There were 548 miles of railway lines in operation in 1931. Surfaced highways extended 2240 miles and dirt and gravel roads about 2750 miles. Several automobile lines were operated across the Syrian Desert between Beirut and Baghdad. An air line connected Beirut and Marseilles. In 1931 the number of vessels entering the ports of Lebanon and Syria was 1665. Beirut was the chief port of call.

GOVERNMENT. The Constitution of the Syrian Republic adopted May 14, 1930, granted the republic powers equivalent to those of an independent state, except that control of foreign relations and similar functions were retained by France as the mandatory power. President in 1933, Mohamed Ali bey el Abed; Prime Minister, Hakky bey el Azm. The Constitution of the Lebanese Republic was suspended in May, 1932, and M. Charles Debas, President, was invested with dictatorial powers by the French High Commissioner. He was assisted by an appointive council. Latakia and Jebel Druze were administered by French governors, assisted by partly nominated and partly elected councils. A French army of 301 officers and 13,371 men was in occupation of the country. Auguste Henri Ponsot, French High Commissioner in Syria since 1926, was replaced in October, 1933 by Count de Martel, former French Ambassador to Tokyo. M. Ponsot became Resident General of Morocco.

HISTORY. On Nov. 16, 1933, the French High Commissioner and the President of the Syrian

Republic signed a Franco-Syrian treaty of friendship and alliance designed to pave the way for the termination of the French mandate and Syria's admission to the League of Nations. The treaty followed closely the terms of the Anglo-Iraqi treaty of 1930, under which Iraq was admitted to the League in 1932 (for terms of this treaty see IRAQ under *History* in 1932 YEAR BOOK). The Franco-Syrian treaty provided for the termination of the French mandate after a four-year transition period and the establishment of an independent Syrian state subject to a 25-year military alliance with France, under which France would guarantee Syria's security and assist in the organization, training and equipment of the Syrian army and gendarmerie.

The terms of the treaty were violently denounced on the one hand by the Syrian Nationalists, who declared that it did not meet their demands for an independent Syria, and on the other hand by the Conservative minority, who felt that it went too far. The Nationalists objected particularly to the fact that the treaty excluded Lebanon, Latakia, and Jebel Druze from the proposed independent state. Retention of the French mandate over the Lebanon Republic and Latakia would give France a strategic base in the Near East. It would also cut off Syria from the Mediterranean and, according to the Nationalists, would prevent the formation of a strong Syrian state. The protest against the treaty was marked by numerous demonstrations, student strikes, and cessation of business. When it came before the Syrian parliament for ratification toward the end of November violent scenes were enacted by the Nationalist deputies. Convinced that its defeat was certain, the High Commissioner withdrew the treaty and prorogued Parliament until March, 1934.

TANGANYIKA, tǎn'gān-yē'kū, **TERRITORY.** An East African territory between Kenya and Mozambique, mandated to Great Britain by the League of Nations. Area, 374,000 square miles; population (1931 census), 5,063,544 including 32,687 Asiatics and 8217 Europeans. Dar-es-Salaam, the capital, had 33,147 inhabitants.

The total area of forests is 4096 square miles, from which is produced pencil cedar, yellow wood, mvule, and ebony. The main exports are sisal fibre, cotton, groundnuts, copra, grains, and beeswax. Livestock (1932): 5,336,412 cattle, 2,281,405 sheep, 3,374,989 goats. In 1932 the value of the chief minerals produced was gold, £149,864; salt, £33,788; tin, £6893; mica, £3808. Imports were valued at £1,871,992 and exports at £2,199,216 for the year 1932. For 1931-32, revenue amounted to £1,522,368; expenditure, £1,820,928. Governor Sir H. MacMichael assumed office during 1933.

TANGIER, tǎn-jēr'. An internationally administered area in northwestern Morocco, near the Strait of Gibraltar. Area, about 225 square miles; population, about 51,000 (35,000 native Moslems, 11,000 Europeans, and 5000 Jews). Most of the inhabitants live in the port city of Tangier. The chief occupations are commerce, the manufacture of cigarettes, farming, fishing, and

preserving. Wheat, barley, and chickpeas are the chief crops. Imports in 1931 were valued at 93,-229,030 francs; exports at 22,276,775 francs. The budget for 1932 was: Revenue, 22,460,000 francs; expenditure, 22,447,000 francs. A railway connects Tangier with Fez in French Morocco. There were 65 miles of highways and air routes connecting with Casablanca, Rabat, and Toulouse. A total of 1426 vessels of 1,666,061 tons entered the port of Tangier in 1930. Under an international protocol of July 25, 1928, Tangier was permanently neutralized and demilitarized. For local government there is an international Assembly of 27 members, whose acts are subject to the veto of a Committee of Control composed of the French, British, Spanish, and Italian Consuls. Native affairs are in the hands of a Mendoub, representing the Sultan of Morocco; he is ex-officio head of the Assembly. Administrator of the Tangier Zone in 1933, M. Le Fur (French); Mendoub, Si Mehemmed Et-Tazi. Consult John R. Tunis, "Tangier: A Test in Internationalism," *Current History*, March, 1933.

TARIFFS. See CANADA, GREAT BRITAIN, IRISH FREE STATE, FRANCE, ITALY, GERMANY, DENMARK, NORWAY, SWEDEN, FINLAND, ETC., under *History*; PAN AMERICAN CONFERENCE; ECONOMIC CONFERENCE, WORLD.

TASMANIA, tǎz-mā'nī-ā. A state of the Australian Commonwealth, consisting of the island of that name and several other smaller islands. Area, 26,215 square miles; population (June 30, 1933 census), 227,605. Hobart, the capital, had 58,750 inhabitants (1933). Births during 1932 numbered 4491; marriages, 1505; deaths, 2022.

In 1931-32 there were 247,353 acres under crops. The wheat production for 1932-33 from 20,-930 acres was estimated to be 431,690 bushels. Livestock (1931) 2,012,055 sheep; 232,434 cattle; 30,659 horses; 41,459 pigs. Wool production for 1932 amounted to 13,875,000 lb. Copper, silver, tin, lead, and coal are the principal minerals produced and the total production of all minerals for 1932 was valued at £739,236. From 891 manufacturing establishments with a total capital investment of £9,230,444, the value of production was £2,808,383. In 1932-33 revenue totaled £2,522,191; expenditure, £2,577,407; public debt, £23,708,532.

Executive power is vested in a governor, acting through a responsible ministry, and legislative power in a legislative council (upper house) of 18 members and a house of assembly (lower house) of 30 members. Governor Sir Ernest Clark assumed office in 1933; Premier, J. C. McPhee. See AUSTRALIA.

TAXATION. Taxation during the year 1933 steadily tended to assume a more and more important place in popular thinking. This was partly the result of the continuous scantiness of revenue, municipal, State, and national, accompanied in many municipalities and some State governments by bankruptcy and open repudiation, but also largely the outcome of the constant demand for adoption of, or reliance upon, taxation as a means of altering the distribution of wealth. Taken together, and resulting as they did, not merely in serious changes of tax burdens throughout the United States, but also in proposals of very far-reaching character, these factors rendered the year 1933 unquestionably a year of marked significance in the fiscal history of the United States.

FEDERAL TAXATION. The outstanding event of the year in the tax field was, in 1933 as in 1932,

found in the readjustment by Congress of the basis of the income tax. The Democratic administration which came into office in March, 1933, found the Treasury exhausted, and public finance in confusion. It had promised to rectify the faults of the régime by which it had been preceded, but speedily found itself unable to do so; and instead of reducing taxation as had been hoped, it set about to increase the load. The result was the adoption of new tax measures whose results were described by the Secretary of the Treasury in his report for the year, submitted at the opening of Congress in January, 1934 as follows:

The uncertainties affecting the estimates of revenues are particularly important under present unusual economic conditions. Estimated receipts from internal revenue and customs for 1934 include the following amounts not covered in estimates presented to Congress last December.

One hundred and fifty million five hundred thousand dollars for taxes levied by the act of Mar. 22, 1933 (chiefly the tax on beer); \$403,000,000 for processing and floor-stock taxes levied by the Secretary of Agriculture; . . . about \$153,700,000 for taxes levied by the national industrial recovery act, exclusive of certain changes in the income tax, and \$174,400,000 for additional receipts from existing internal revenue taxes and customs duties on distilled spirits and fermented liquors as a result of the repeal of the Eighteenth Amendment to the Constitution . . .

Indicated corporation collections in the full calendar year 1933 show a decline of 27 per cent as compared with collections in 1932. An even greater decline in taxable incomes was partially offset by the increased taxes effective on 1932 incomes, due chiefly to the increase in the tax rate from 12 to 13½ per cent, with an additional tax of three-quarters of 1 per cent on net income reported on consolidated returns, and the elimination of specific credit for corporations with small incomes.

Indicated current collections of individual taxes over the full calendar year 1933 show an increase of 30 per cent over the preceding year, the decline in taxable incomes being more than offset by the increased taxes under the revenue act of 1932.

Receipts from miscellaneous internal revenue taxes were \$58,200,000 in the fiscal year 1933 as compared with \$50,700,000 in 1932, an increase of \$34,500,000. In 1933 about 95 per cent of miscellaneous internal revenue came from six sources—tobacco taxes, manufacturers' excise taxes, documentary stamp taxes, the tax on checks, the tax on fermented liquors and the estate tax. . . .

tion of the legislation had, however, increased the revenue of the Treasury. The addition thus accomplished amounted to about 30 per cent of former year's income taxes on persons by the close of December. Taxes on beer and spirits, which were imposed immediately upon the repeal of the 18th amendment to the Constitution, had likewise added somewhat to the current income, though in not nearly the proportions expected. The total thus obtained, during the year, amounted to about \$150,000,000 and the determination to raise the tax on distilled liquors to \$2 per gallon, reached just at the close of the year, bade fair to bring in considerably increased revenue. The short-lived taxes on dividends (5 per cent levied at the source upon corporations which had voted to pay dividends prior to December 31, as well as the capital tax upon corporations) yielded some income, but in an unfair nuisance-form that was galling to investors, already harassed by the inequitable methods of raising revenue which had been installed under previous federal legislation. The Director of the Budget, in a public address just before the close of the calendar year, thought it necessary to warn the "middle class" that it would have to contemplate new sacrifices if it desired to provide for its own preservation. At about the same time, an assistant Secretary of Agriculture likewise thought well to announce in public that the cost of the new measures and "reforms" of the administration at Washington would have to be borne out of the incomes of industrial corporations. These warnings and threats had unquestionably a sobering effect upon many minds; and served as serious forecasts of the danger to which the tax-paying element of the community was subjected by the policies of the national government. Class prejudice and discrimination continued to be exhibited in very high degree by the income tax returns which showed a continuing high concentration upon the shoulders of the saving classes as the accompanying table illustrates:

COMPARISON OF NUMBER OF RETURNS AND INCOME TAX FOR THE CALENDAR YEARS 1930, 1931, AND 1932, INDIVIDUAL RETURNS OF NET INCOME OF \$5,000 AND OVER^a

Net income classes	Number of returns			Income tax (thousand dollars)			Percentage decrease			
	1930	1931	1932	1930	1931	1932	Number of returns 1930 1931 1932	to 1931	to 1932	to 1932
\$5,000—\$10,000	505,715	385,837	237,273	16,590	11,693	34,372	23.7	38.5	29.5	193.9 ^b
10,000—100,000	251,490	167,141	100,347	208,134	114,344	179,164	33.5	39.9	45.1	56.6 ^b
100,000 and over	6,152	3,142	1,787	237,716	107,896	109,009	48.9	43.1	54.6	1.0 ^b
Total	763,357	556,120	339,407	462,440	233,933	322,545	27.1	38.9	49.4	37.8 ^b

^a Preliminary Statistics of Income; returns filed to Aug. 31, 1931, 1932, and 1933, respectively. For sake of comparability with available figures for 1932, preliminary rather than final figures are used for 1930 and 1931.

^b Percentage increase.

Customs receipts declined from \$327,700,000 in the fiscal year 1932 to \$250,800,000 in the fiscal year 1933, or \$76,900,000. . . . This represented the smallest total for any year since 1919.

During the fiscal year \$169,629,609 of additional (income) taxes were made available for collection as compared with \$218,521,219 in the fiscal year 1932. This amount includes \$168,150,762 of assessments and \$1,478,847 of rejected abatement and credit claims.

The measures were thus of very qualified success. The new rates of income taxation were not retroactive; and hence did not take effect as governing the income tax returns of Mar. 15, 1933, which accordingly continued under the old system so that a full trial had not been accomplished during the calendar year. The other elements of taxation coming into effect soon after the adop-

STATE CHANGES IN TAXATION. Legislation on the tax question became during 1933 practically universal in our States. Not a State where the legislature was in session during the year failed to make tax changes. The most general and striking of these changes moreover did not relate to the amounts or rates of the levies but to the conditions of payment by the tax-bearer—showing that tax loads were already too heavy to be borne. In some instances, payment of general property taxes on the installment plan has been omitted, in others delinquent tax penalties have been reduced (in New York City increased), in other cases cancelled, and in still others interest has been reduced. Tax sales have been cancelled or

postponed and bonuses offered for advance payment. Tax limitations have likewise been reduced. The general changes made in specified kinds of State taxes may be summarized as follows (see *Tax Digest*, September-October, 1933).

THE SALES TAX. One of the important developments of the past year in State taxation has been the general attempt to apply the Sales Tax in the several commonwealths. The effort to adopt the Sales Tax as a Federal resource has not thus far succeeded, but the measure has attained a very wide application throughout the several States. During the past year, the matter has been discussed in Arizona, Georgia, Illinois, Indiana, Michigan, New Mexico, New York, North Carolina, North Dakota, Oregon, South Dakota, Utah, Washington, and West Virginia. The measures adopted in these several States have varied considerably, both as to the measure of the tax, the exemptions, and the rate. Gross income or gross receipts have been a favorite basis of measure and are found in a substantial majority of the cases where legislation has been actually adopted. In some other cases, the basis has been the sales price of all goods produced or manufactured, and there has been a difference among the States as to whether the basis to be adopted should be gross sales of personal property alone or should include also real estate, admissions, receipts from services, and the like. Exemptions have also varied considerably, a favorite basis being \$1200 of gross sales; while in other cases (isolated or incidental) actual sales of personal property are freed from the tax. In those States where fairly heavy taxes are already imposed on such special products as gasoline, alcoholic liquors, and the like, exemption of these receipts is frequent; and in a number of States the revenue from sales made to Federal, State, or municipal governments is also provided for. Organizations not created for profit are frequently exempted, and the same is true of insurance companies, while in one or two cases, staples and necessities of life and implements used in primary industries are freed from taxation. In most cases the incidence of the tax is on the consumer, and the rate is usually one-half of 1 per cent; in a few cases higher than the latter figure. The purposes for which the proceeds are to be used are in a good many cases designated as the support of unemployment or the relief of emergency conditions; although in a few cases some specific object is specified as the recipient of the benefits of the tax.

INCOME TAXES. New legislation concerning income taxes has been adopted in some half dozen States including Alabama, Arizona, Kansas, Montana, Minnesota, and New Mexico, while in others the subject was still under advisement. The tendency has been to increase the rate, and in some States it now runs as high as 6 per cent, most commonwealths applying a graduation of rates. Exemptions have been reduced as low as \$750 in Kansas, but the more usual exemption is \$1000 or \$1500. In New York an additional tax of 1 per cent on gross income is made without personal exemption—applicable to those who pay the regular income tax. In other States the proceeds of the income tax are used for education. The taxation of intangible property still continues in twenty-six States, where the personal income tax is measured by net income, but in two States only income from intangible property is so used as a measure. In other States taxation of intangible property is still under consideration and in one

or more States an income tax is levied upon such intangible property at varying rates progressive according to the character of the property so taxed.

CHAIN STORES. Several States have been added to the list of those which impose taxes on chain stores. They include Idaho, Maine, Maryland, Michigan, Minnesota, Montana, and West Virginia, while enactments have been made in three other States; and in still one or two others a so-called "occupational tax" applies to chain stores. The rates vary from one-quarter of 1 per cent to about three-fifths of 1 per cent, according to the amount of the income subject to taxation, the proceeds generally being used for general expenses of the State.

INHERITANCE TAXATION. Inheritance taxation has been less resorted to during the past year than previously. There has been some progress in making adjustments with the Federal government so as to provide a partial exemption on inheritances which paid a Federal tax, and in some States a law uniform with that of the Federal government has been adopted. Some increases have taken place; notably in North Dakota where the rates in some cases now range up to 23 per cent. A rate ranging from about 1 per cent up to about 10 per cent is now much more common. There has been a tendency to eliminate exemptions or refuse them, particularly in the case of life insurance. The excuse is offered that these changes are intended as emergency proposals and will be subject to repeal when the present necessities are over.

BEER TAXES. Taxes on beer have been applied in more than thirty-three States, these taxes taking the form of licenses and excises. The latter run from 50 cents a barrel to \$4.00 a barrel, while licenses in some cases are heavy. The sale of beer is subject to retail sales tax where the latter plan obtains. The beer taxes are also in addition to those of the Federal government and the proceeds are applied to general expenses, except in those instances where they are specifically earmarked for education. The idea of taxes upon beer is also seen reflected in the increase of taxes upon the so-called luxuries, and particularly upon cosmetics, which has been greatly extended in Ohio, while admissions taxes have also been added in the case of public amusements; and severe taxes upon golf club memberships and other associations for amusement have been established. Taxes upon lottery operations and horse races, as well as license fees for race tracks, have reappeared; while in a number of States special taxes on cigarettes, liquors, and other items artificially classed as "luxuries" have also come into vogue. The changes in the rates of taxation upon automobiles including both those used for pleasure and commercial transportation have been noteworthy. Fees for registration have been reduced for pleasure automobiles in a few States, and in a few others readjustments have taken place in the taxes levied upon commercial vehicles; while taxes have been enacted here and there upon freight carried in proportion to weight. A mileage tax is still applicable in a number of States and this year has seen it added by the State of Washington.

Gasoline taxes have continued substantially as heretofore, except for an increase made by the Federal government. Some changes have been made in the use of the proceeds of the tax, a few States specifying its application to the relief of unem-

ployment, while in other cases it is used for schools, or in a few instances for other carefully specified purposes. A few changes of administration have also taken place.

TAX COMMISSIONS. In New York the State Commission for the revision of Tax Laws has been continued for another year, while an investigating committee has been named in Texas and another one in Maine. Connecticut has appointed a commission for the study of taxation, while in two States tax research bodies have been abolished. In Washington an Interstate Commission for the study of conflicting taxation has been set up. Some other minor changes have been introduced. See **LAW** in 1933; **AGRICULTURE**; **PUBLIC FINANCE**.

TAXONOMY. See **BOTANY**.

TAYLOR, SIR WILLIAM. An Irish surgeon, died in Dublin, Jan. 29, 1933. He was born in Co. Donegal, Sept. 21, 1871, and attended the Royal College of Surgeons and Dublin University, being qualified as a licentiate in 1893. At Meath Hospital, Dublin, he served successively as house surgeon (1893-95), assistant surgeon (1898-1900), and full surgeon after 1900. He had also been at different times surgeon to Sir Patrick Dun's Hospital, the National Children's Hospital, and St. Ultan's Infant Hospital and consulting surgeon to the Coombe Lying-in Hospital. During the World War and throughout the period of Civil War in Ireland he was consulting surgeon to the Forces in Ireland, attaining the rank of colonel and assistant military secretary. After 1922 Sir William had held the regius chair of surgery at Dublin University and after 1927 was president of the Royal Academy of Medicine in Ireland. He was also a past president of the Royal College of Surgeons in Ireland (1916) and of the Association of Surgeons of Great Britain and Ireland, and in 1920 was honored by election to the American College of Surgeons. Besides numerous papers upon the surgery of the stomach, for which he had won a European reputation, Sir William wrote on intestinal obstruction, renal surgery, œsophageal diverticulum, and infection of the intracranial sinuses. He was created a Companion of the Bath in 1919 and a Knight Commander of the Order of the British Empire in 1920.

TEASDALE, SARA. An American poet, died in New York City, Jan. 29, 1933. She was born in St. Louis, Mo., Aug. 8, 1884, and was privately educated there. She first attracted attention with *Sonnets to Duse and Other Poems* (1907) and *Helen of Troy and Other Poems* (1911). A further maturity was revealed in *Rivers to the Sea* (1915), and with the publication of *Love Songs* (1917) and *Flame and Shadow* (1920) she was acclaimed the most popular woman poet of the decade. The charming lyric quality and fine rhythmic feeling of her work appealed to an age that still delighted in sentiment, provided that it were translated into sensibility rather than sentimentality. Her later collections were *Dark of the Moon* (1926) and *Stars Tonight* (1930). Miss Teasdale edited *The Answering Voice: One Hundred Love Lyrics by Women* (1917, 2d ed., 1928) and *Rainbow Gold, Poems Old and New* (for children, 1922). In 1918 *Love Songs* won the prize of \$500 awarded by the Poetry Society of America and the Pulitzer Prize presented by Columbia University "for the book of poems deemed the best of the year." At the time of her death she was writing a biography of Christina Rossetti, to whom she had often been compared. Her former husband was Ernst B.

Filsinger. A collection of her unpublished poems appeared posthumously as *Strange Victory*.

TELEGRAPH AND CABLE. The census of the telegraph industry for the five-year period ending with 1932 was published in 1933. It showed that the industry of the United States had 1,956,000 miles of overhead and 310,000 miles of underground wire, an increase of 51 per cent; 96,500 nautical miles of ocean cable, a decrease of 3 per cent; and that 158,000,000 messages were sent during the year, a decrease of 33 per cent as compared to 1927.

A new type of repeater was developed to facilitate repeating multiplex telegraph channels individually into other multiplex circuits without the necessity of maintaining synchronism. Teletypewriter service was provided for the government to distribute all over the country the information for making up the daily weather maps. Teleprinters and typewriters with suitable channels were developed for person to person service and used by many firms for sending information from the main office to sub-offices all over the country. The Western Union improved its new high speed ticker service by increasing the speed from 300 characters per minute (1930) to 500 characters per minute. This will keep up with a four million share day on the New York Stock Exchange. Some of the existing telegraph cables in Great Britain have been "loaded" so that each one now carries from 12 to 18 telegraph channels by carrier current. Carrier current telephone service over underground telegraph cables has been much improved. In Great Britain there have been installed some automatic exchanges which serve some lines having 10-party selective service. The cities of Basel and Zurich now have a common automatic system so that a subscriber in one city may dial for a number in either city.

A new submarine cable was laid between Italy and Sardinia which is 150 miles long, the longest in the world for giving both telephone and telegraph service (cf. Havana-Key West 110 miles). It is loaded by permalloy and has four channels. There are now 16,000 miles of submarine cable loaded with permalloy.

The Mackay Co. opened three more stations, Chicago, New Orleans, and Seattle, in their point to point radio service and also put into operation two new transoceanic radio telegraph services, one to Vatican City and one to Shanghai. Radio telegraph communication with land stations was maintained continuously by the Italian Flying Squadron under General Balbo, during the whole time of the flight. In many municipal fire alarm systems and railway signal systems copper oxide rectifiers are now being used to supply the required direct current from an alternating current power supply.

TELEPHONY. During 1933, world-wide intercommunication by telephone was brought nearer to reality as a result of the extension of the oversea telephone service from the United States to the following places: Panama and the Canal Zone, the city of San José in Costa Rica, the island of Luzon in the Philippines, the cities of Jerusalem, Haifa and Jaffa in Palestine, Guatemala City in Guatemala, the Republic of Nicaragua, and Bombay and several other cities in India. At the end of the year telephone conversations could be carried on between the United States and all continents of the world; in fact, 92 per cent of the 32,400,000 telephones in commercial service throughout the world could be

reached from any Bell System telephone. Ship-to-shore telephone service was extended to five additional liners during 1933, making nineteen in all with which such service was available at the end of the year.

During the year 1933 there was a net loss in the number of telephones in the United States. This loss, however, was only a little more than one-third of the loss experienced during the preceding year. Improvement in general conditions was reflected by a net gain of 53,000 telephones in the Bell System during September, 1933, which was the first monthly gain since September, 1931. On Jan. 1, 1934, there were approximately 16,750,000 telephones in this country, and during 1933 there was a daily average of about seventy-two and one-half million telephone conversations, divided between 70,100,000 local conversations and 2,400,000 toll conversations. Investment in telephone plant and equipment on Jan. 1, 1934 amounted to \$4,700,000,000, representing a slight decrease during the year. There was no material change in the 87,000,000 miles of telephone wire in service a year ago.

The year 1933 showed continued improvement throughout the companies of the Bell System in the efficient maintenance and operation of telephone plant and property. All possible repair work was undertaken, plant troubles were reduced, and operating efficiency reached new high levels. The practice of advancing repair and maintenance work and the continuance of shorter working schedules kept thousands of people employed for whom work would otherwise have been lacking; and during the latter part of the year there was some increase in the number of telephone workers.

Research work was carried on during 1933 at the Bell Telephone Laboratories, as in former years, in order to assure those technical advances in the art which are necessary for added economy and efficiency. Experiments were made with such things as carrier circuits entirely contained in cable, ultra-short wave transmission, one-pair loaded emergency cable for carrier circuits, X-ray examination of telephone equipment, improved Wheatstone bridges for toll test boards, improved radio equipment for transport planes, etc.

The telephone exhibit at the Century of Progress Exposition at Chicago proved to be one of the main attractions of the Fair. It is estimated that more than six million people visited the exhibit. Even the visitor who gave but a casual glance probably obtained some impression of the complexity of the apparatus behind the telephone service, but to those who were willing to "stop, look, and listen" the wonders of the art were explained by personal participation in the demonstrations and by the experts in charge.

Scientists of Bell Telephone Laboratories discovered how to obtain auditory perspective in music transmitted and reproduced electrically, as a result of fundamental investigations in acoustics and telephonic transmission. Auditory perspective is to music what the stereoscope is to photography. It provides a third dimension to give depth and realism to an otherwise flat sound. In April, 1933, a demonstration was given in Constitution Hall, Washington, of long distance transmission and reproduction of symphonic music in full auditory perspective. This demonstration, which marked the completion of several years' work and study, was heartily acclaimed by a distinguished audience of musicians and scientists.

The demonstration gave the illusion of hearing each separate instrument from its proper position on the stage. The tonal effects, from pianissimo passages reproduced at the threshold of hearing to a crashing finale carried in loudness almost to the point where hearing is no longer possible, was greatly superior to the effects when auditory perspective is lacking.

TELETYPEWRITER. See TELEGRAPH AND CABLE.

TELEVISION. The Television Committee of the Radio Manufacturers' Association has asked the Federal Radio Commission to set aside the range of frequencies between 40,000,000 and 110,000,000 cycles (7.5 to 2.7 meters) for television, with wave bands separated by 4,000,000 cycles, thus making room for about 17 stations. As the range of signals in this band is only about 50 miles these bands could be duplicated in cities 100 miles apart. The television broadcasting station W2XBS being built by the National Broadcasting Company which was to have gone into operation Jan. 16, 1934 will not be completed until three months later.

A new method of providing television was announced by the Radio Corporation of America in which cathode ray vacuum tubes are used both for transmitting and receiving. By this means outdoor scenes may be picked up by a device using a lens and photographic image as in a camera. This will operate with as little light as a camera with an f 4.5 lens and is about as portable as the recording mechanism for talking movies. At the receiving end is a mechanism encased in a console of the size of the usual radio receiver or phonograph talking machine. It has a hinged top on the under side of which is a mirror. On opening this top to an angle of 45° there may be seen in the mirror a reflection of the receiving screen which lies in a horizontal plane in the position usually occupied by the revolving table of a talking machine. Thus the scene may be viewed while sitting alongside the set instead of standing over it. The picture is 6½ x 7½ inches, consists of 240 lines per frame and shows 48 frames (pictures) per second. (The usual amateur movie shows 16.)

The picture is picked up for transmitting by throwing the photographic image on a specially prepared plate on the flat end of a cathode ray tube. This plate consists of a large number of very small elements each forming a minute photoelectric cell. This plate is scanned by the moving beam of electrons of the usual cathode ray tube. The beam causes each cell to give a discharge of electricity proportional to the intensity of the illumination on that particular element. Thus the beam sends out the modulated impulses which are amplified and transmitted in the usual way.

At the receiving end is another cathode ray tube whose beam is moved synchronously with that of the transmitter and whose intensity varies in accordance with the modulation produced in the transmitter. This beam produces luminescence in the prepared surface at the flat end of this tube, which luminescence is proportional to the intensity of the beam and thus to the light on each element of the transmitter plate and therefore the original image is reproduced upon the receiving screen.

The two great advantages of this system are:

(a) It does not require a motor nor other moving mechanical parts and thus avoids mechanical inertia; (b) the transmitting screen stores up light energy during a large part of each cycle, and re-

The World's Fast-Growing Network
of Radio-Telephone Communication
1933

leases the stored energy in the very short period during which the beam passes over one element. This latter feature enormously increases the sensitivity or power as in most of the earlier systems the energy per element was not stored but was only that which could be taken from the light as the beam passed a given element.

TELL EL ARMARNA. See **ARCHÆOLOGY.**

TEMPLE UNIVERSITY. A coeducational institution of higher learning in Philadelphia, Pa. The 1933 autumn enrollment was 9495. The faculty had 758 members. The income totaled \$1,820,898.27. President, Charles E. Beury, LL.D.

TENNESSEE. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 2,616,556, as against 2,337,885 in 1920. Memphis, the most populous city, had (1930) 253,143 inhabitants; Nashville, the capital, 153,866; Chattanooga, 119,798; Knoxville, 105,802.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod Bu	Value
Corn	1933	2,810,000	66,035,000	\$32,857,000
	1932	2,927,000	59,418,000	17,231,000
Cotton	1933	898,000	460,000 ^a	21,520,000
	1932	1,064,000	480,000 ^a	12,960,000
Hay (tame)	1933	1,175,000	1,132,000 ^b	11,546,000
	1932	1,187,000	1,039,000 ^b	9,039,000
Tobacco . .	1933	158,000	136,210,000 ^c	14,325,000
	1932	135,000	107,187,000 ^c	10,627,000
Sweet potatoes .	1933	50,000	4,500,000	2,700,000
	1932	75,000	6,600,000	2,112,000
Potatoes . .	1933	57,000	3,762,000	3,800,000
	1932	53,000	3,657,000	2,158,000
Wheat . .	1933	272,000	2,774,000	2,580,000
	1932	272,000	2,584,000	1,395,000

^a Bales ^b Tons ^c Pounds.

MINERAL PRODUCTION. There occurred in 1932 the sharpest decrease in the yearly production of coal since the industrial depression had started in 1929; the mines' output of coal fell to 3,240,000 net tons (1932), from 4,271,548 (1931), or by 31.4 per cent; as compared with the total quantity produced in 1929 that for 1932 was less by 40.1 per cent.

The production of phosphate rock declined sharply to 169,026 long tons (1932), from 343,622 (1931); in value, to \$673,636, from \$1,545,607. The Tennessee Copper Company continued its operations on a somewhat reduced scale in 1932.

EDUCATION. A study of the State's system of public education, conducted by the Tennessee Educational Commission, made progress in 1933. Public schools in the neighborhood of camps of the Civilian Conservation Corps were made available to members of the corps who needed schooling. The State carried about one-third of the expense of operation of the county schools.

There were enrolled in the public schools of the State, in the academic year 1931-32, 641,551 pupils. Of these, 562,387 were in common schools or elementary grades; in high schools, 79,164. The expenditures of the academic year 1932-33 for public-school education totaled \$20,690,065, or less by some 11 per cent than for the year before. Salaries of teachers averaged \$625 by the year, for 1932-33; they were reduced some 20 per cent for 1933-34.

LEGISLATION. A regular session of the Legislature convened on January 2. It dealt with the plight of the State-chartered banking institutions,

involved in the nation-wide banking collapse of March, by passing an emergency act: the Governor was empowered to declare "days of emergency," which would count as legal holidays in respect of payment of obligations; banks that so desired, however, might continue business on such days; but those so continuing were subjected to such restrictions as the superintendent of banking might prescribe, with approval of the Governor.

As to prohibition, a State convention was created, to act for the State, on the proposed repeal of the Federal Eighteenth Amendment. It was to consist of 63 delegates, who were to be elected at large by popular vote on July 20. No action was taken with regard to repealing the existing prohibition law of the State, as a whole, but beer of the alcoholic strength of 3.2 per cent was legalized, with provision for a tax of \$1.20 a barrel; proceeds of this tax were assigned in the proportion of one-third each, to the State school funds, to the counties (equally), and to cities (according to population).

An effort was made to put State finances in order by funding the accumulated deficit of the two-year period then closing, through an issue of State bonds. These bonds were to be secured by the proceeds of 1 cent on the gallon of the State tax on gasoline: the bonds were to take care of some \$10,000,000 in open accounts, a sum incurred almost wholly for State aid to public schools, the State University, and the normal schools. The State budget for the ensuing two years was cut to a total some \$14,000,000 less than that for the two years previous. The date on which unpaid State and county taxes would become delinquent was put off to June 1, from March 1. The State railroad commission was asked by legislative resolution to investigate railroad and utility rates with a view to reducing them by 25 per cent.

POLITICAL AND OTHER EVENTS. The bank panic caused many State banking institutions in February and early March to declare on their own account restrictions on the withdrawal of deposits. The Governor lacked authority to close banks by proclaiming legal holidays; this power was given him by the Legislature only after the general Federal closure of banks had gone into effect. The State Superintendent of Banking took no immediate action against banks that had curtailed, on their own initiative before March 6, payments to their depositors. Governor McAlister declared a series of bank holidays while the banks were still closed by Federal order, making it permissive but not obligatory for institutions not to pay depositors. On March 18 he extended this permission until April 18. Municipal scrip was issued in large amounts early in the year in Nashville and Knoxville in the absence of funds and became current for purchases from merchants in these cities.

At an election on July 20 there were chosen by popular vote 63 delegates-at-large, who favored the repeal of the Federal Eighteenth Amendment; the popular vote was close, the repealist delegates winning by 126,940, against 120,130 votes reported as cast for the candidates opposed to repeal. Delegates met on August 11 in State convention and unanimously voted the State's adoption of repeal through the superseding amendment proposed by Congress. The manufacture and sale of 3.2-per cent beer became lawful on May 1.

Cordell Hull having resigned from the United States Senate to become Secretary of State, Governor McAlister appointed Judge Nathan L. Bachman of Chattanooga on February 28 to succeed him. The Federal Tennessee Valley Authority established its offices in Knoxville on July 6. It proceeded with plans to build a dam, to be called the Norris dam, at Cove Creek on the Clinch River, 20 miles north of Knoxville, to cost \$35,000,000. Knoxville in a popular election on November 25 voted \$3,250,000 of bonds to be issued either to buy out the privately owned electric distribution plant or to build a municipal plant in order to purvey current from the Tennessee Valley Authority.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Hill McAlister; Treasurer, James J. Bean; Comptroller, Roy C. Wallace; Secretary of State, Ernest N. Haston; Auditor, Lyon Childress; Attorney General, Roy H. Beeler; Commissioner of Education, Walter D. Cocking.

Judiciary. Supreme Court: Chief Justice, Gratton Green; Associate Justices, A. W. Chambliss, Colin P. McKinney, W. H. Swiggart, William L. Cook.

TENNESSEE, UNIVERSITY OF. A State institution of higher education, nonsectarian and co-educational, in Knoxville, with colleges of medicine and dentistry and schools of pharmacy and nursing in Memphis and a junior college in Martin, founded in 1794. The total enrollment for 1932-33 was 5174, of whom 1593 were registered in the summer session. The faculty numbered 221. The endowment funds amounted to \$453,000; the income for the year 1932-33 was \$1,855,294. There were 138,945 volumes in the library. Leave of absence was granted President H. A. Morgan so that he might devote his entire time to his duties as a member of the Tennessee Valley Authority. Acting President, James D. Hoskins, LL.D.

TENNESSEE VALLEY AUTHORITY. See UNITED STATES; TENNESSEE under *Political and Other Events*; WATER POWER; RECLAMATION.

TENNIS. For excitement and uncertainty the lawn tennis season of 1933 was unequalled. The tale of the sport is merely a recital, for the most part, of the valiant deeds of players from Great Britain. England herself won the Davis Cup, emblem of international supremacy; Fred Perry, English public courts graduate, and Jack Crawford, Australian, divided in the search for individual laurels.

England's conquest in the Davis Cup play was surprising. If any nation was to take the trophy from the French, who had held it since 1927, it would be the United States team, was the general opinion before the play started. England conquered the United States in the zone final and then downed France in the challenge round at Auteuil. The United States youngsters, led by the two-time national champion, H. Ellsworth Vines, failed to cope with the wizardry of Perry and Bunny Austin, as did the French veterans, Cochet and Brugnon.

The mediocrity of Vines' play all season was one of the features of the lively year. The acknowledged 1932 champion of the world had toured the world since winning in September, 1932, at Forest Hills and his first 1933 championship venture, at Wimbledon, in June, was a failure. He fell before the English later in the Davis Cup play, and in defense of his national

crown at Forest Hills, in September, bowed in an early round to Bryan Grant, from Atlanta, Ga.

With Vines playing below form all year, world honors went to Perry and Crawford. Crawford won the Australian championship before blasting his way to the All-England title at Wimbledon. He then won the French title but fell before Perry in Davis Cup play. In the United States national singles final, Perry and Crawford met, and Perry outlasted his opponent to succeed Vines as titleholder.

Comparable with the surprising triumph of Great Britain's victories in world male tennis, and the collapse of Vines, was the decline of the star of Mrs. Helen Wills Moody, queen of women's tennis for a decade. Mrs. Moody showed signs of slipping down hill at Wimbledon, where Dorothy Round, British girl, pressed her in the final. In the United States national tournament Mrs. Moody pushed to the final round, despite the stiffest opposition from Betty Nuthall of England in the semi-final. Helen Jacobs, winner of the women's title in 1932 when Mrs. Moody did not defend, was the other finalist. After losing the first set and trailing in the second, Mrs. Moody retired, defaulting the match and title to Miss Jacobs. The action, almost unprecedented in major tennis, created a furor. Mrs. Moody gave as her reason for resigning an injured back, which was taped and strapped all week and which had kept her out of the Wightman Cup matches the week previous. Whether she should have continued in a sportsmanlike manner to certain defeat, or whether she was right in retiring when she did and sparing her physical condition was debated at length in the press and wherever people congregated. That Mrs. Moody's physical condition was seriously impaired was brought out later in the year when, after almost two months in a hospital upon her return to San Francisco, her doctor declared that she must refrain from tennis for more than a year.

Vines also lost his national doubles crown and then came his astonishing defeat by Bryan Grant in the singles championship. A few weeks later Vines turned professional and with Henri Cochet, French star, enlisted with William T. Tilden. Almost as surprising as the decline of Vines, omnipotent in 1931 and 1932, was the rise of England, which won the Davis Cup for the first time since 1912.

The outstanding American of the season was Frank Shields, who won every major American singles tournament, with the exception of the national, taking the bowls at Seabright, Southampton, Newport and working his way to the doubles final at Longwood with Frank Parker as partner. In that event George M. Lott and Lester Stocfen won.

Miss Betty Nuthall and Miss Freda James, of England, won the women's national doubles and Vines and Miss Elizabeth Ryan won the national mixed doubles title. Donald Budge of San Francisco was crowned national junior champion and Ben Dey and Gene Mako of Los Angeles won the junior doubles. John Tidball of Southern California won the intercollegiate singles and the University of California team, Joseph Coughlin and Samuel Lee, the doubles. Gregory Mangin, of Newark, won the national indoor title in New York in March and the doubles went to Clifford Sutter and Eugene McCauliffe. Miss Dorrance Chase took the women's indoor crown and Mrs. George Wightman and Miss Sarah Palfrey cap-

tured the doubles. Frank Parker, who entered Lawrenceville School in the fall, won the national clay courts championship and the national indoor junior. Alfred L. Jarvis of Tenafla, N. J. won the boys' indoor singles and doubles laurels with William Winslow. The public parks crown went to Arnold J. Simons, of Louisville, Ky., and the doubles title to W. Schommer and Charles Britzius.

Hans Nusslein of Germany defeated Tilden for the world's professional championship but Tilden and Bruce Barnes took the doubles. The national professional title fell to Vincent Richards who also figured in the doubles title, paired with Charles M. Wood, Jr.

TERRITORY OF NEW GUINEA. See under NEW GUINEA.

TERRY, FRED. A British actor, died Apr. 17, 1933, in London where he was born Nov. 9, 1863. He came of a distinguished theatrical family, four of his sisters, Kate, Ellen, Marion, and Florence, achieving fame on the stage, and likewise his two brothers, George and Charles. He received his education at private schools in Guines, France, and Geneva, Switzerland. After making his debut in *Money* at the Haymarket Theatre, London, in 1880 he joined the company of Mr. and Mrs. Chippendale, which toured the provinces in *The Lady of Lyons*, *The School for Scandal*, and other plays. A period of Shakespearean performances then followed, with Marie de Grey in *Macbeth*, *Twelfth Night*, and *The Merchant of Venice* (1882), with Ben Greet in *Romeo and Juliet* and *Much Ado about Nothing* (1883), and with his sister Ellen and Henry Irving in *Twelfth Night* (1884). While touring the United States in *Dark Days* in 1885 he was engaged by Daniel Frohman to appear in *Gretchen*, *Frou-Frou*, *Moths*, and *Pygmalion and Galatea*. On his return to England he appeared in *Nina* (1887), *The Pompadour* (1888), *King John* (1889), and *Dr. Bull* (1890).

Mr. Terry next joined Beerbohn Tree's company, with which he appeared during 1890-94 in a large repertoire, including *A Village Priest*, *Comedy and Tragedy*, *The Red Lamp*, *Beau Austin*, *Called Back*, *The Dancing Girl*, *Peril*, *A Man's Shadow*, and *The Charlatan*. In *The Dancing Girl* was Julia Neilson, who later became his wife. He subsequently established a reputation as a romantic hero and occasional stage villain in *The Home Secretary* (1895), *His Little Dodge* (1896), *A Court of Honor* (1897), *The Tree of Knowledge* (1897), *The Ambassador* (1898), *The Gipsy Earl* (1898), *Grierson's Way* (1899), *Change Alley* (1899), and *Tess* (1900).

In 1900, with his wife, Mr. Terry assumed the management of the Haymarket Theatre where they appeared together, he as Charles II and she as Nell Gwynn, in *Sweet Nell of Old Drury*. Their joint acting continued thereafter in some of the most distinguished pseudo-historical melodramas, many of which played an annual season of about six months' duration at the New Theatre, London. Among these were *The Heel of Achilles* (1902), *For Sword or Song* (1902), *The Scarlet Pimpernel* (1905), *Dorothy o' the Hall* (1906), *The Popinjay* (1907), *Matt o' Merrymount* (1908), and *Henry of Navarre* (1909).

Mr. Terry again assayed the rôle of actor-manager with the production in 1915 of *Mistress Wilful* at the Strand Theatre, playing Robin Fairfellow to Miss Neilson's Margaret Goodman. Their subsequent productions were *The Borderer* (1921), *The Marlboroughs* (1925), and *The Wooing of*

Katherine Parr (1927). Until 1930 *Sweet Nell of Old Drury*, *The Scarlet Pimpernel*, and *Henry of Navarre* were frequently revived. The acting tradition was carried on by their children, Dennis Neilson-Terry, who died in 1932, and Phyllis Neilson-Terry.

TERRY, MARSHALL ORLANDO. An American soldier-surgeon, died at Coronado, Calif., Oct. 11, 1933. Born at Watervliet Centre, Albany Co., N. Y., June 21, 1848, he was graduated from the Cleveland Homeopathic Hospital in 1872, later studying in New York City at the Ophthalmic and Aural Institute, the Manhattan Eye and Ear Infirmary, and the New York Eye and Ear Infirmary. In 1880 he was appointed surgeon with the rank of major in the National Guard of New York and in 1895 surgeon-general with the rank of brigadier-general. The stretcher and field case, ambulance, and regimental chest which he invented were adopted by the New York National Guard. He presented also conclusive evidence that the house fly is a disseminator of typhoid fever as the result of observations during a typhoid epidemic at Camp Thomas, near Chickamauga, Ga., during the Spanish-American War. After practicing in New York City he served from 1895 until his retirement in 1905 as surgeon-in-chief of the Utica Homeopathic Hospital, Dr. Terry was president of the Association of Medical Officers of the National Guard and Naval Militia of New York. He wrote *The Soldier's Medical Friend*.

TEXAS. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 5,824,715, as against 4,663,228 in 1920. Houston had (1930) 292,352 inhabitants; Dallas, 260,475; San Antonio, 231,542; Fort Worth, 163,447; El Paso, 102,421; Austin, the capital, 53,120.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Cotton ..	1933	11,467,000	4,475,000*	\$205,850,000
	1932	13,334,000	4,500,000*	126,000,000
Corn ...	1933	5,422,000	74,824,000	38,160,000
	1932	5,707,000	102,726,000	23,627,000
Wheat ..	1933	1,973,000	13,022,000	8,985,000
	1932	3,330,000	28,293,000	7,922,000
Gram sorghum	1933	4,228,000	46,508,000	19,068,000
	1932	4,065,000	63,008,000	11,341,000
Oats ...	1933	1,189,000	20,808,000	7,907,000
	1932	1,749,000	41,976,000	5,457,000
Hay (tame) ..	1933	515,000	508,000*	4,013,000
	1932	558,000	642,000*	3,467,000
Rice ...	1933	141,000	7,473,000	6,053,000
	1932	185,000	9,065,000	3,626,000
Potatoes ..	1933	57,000	3,648,000	2,991,000
	1932	62,000	4,154,000	3,199,000
Sweet potatoes	1933	78,000	6,240,000	3,432,000
	1932	100,000	7,600,000	2,432,000

* Bales. † Tons.

MINERAL PRODUCTION. The production of petroleum continued in 1932 to be the greatest in quantity for any of the States of the Union. It declined moderately, by 6 per cent, to 311,069,000 barrels (1932), from 332,437,000 (1931). Declines in the output of six out of the seven main producing districts were partly offset by an increase of 10,528,000 barrels for the East Texas field, to 120,158,000 barrels for 1932, despite strict measures of proration on the part of the Texas Railroad Commission.

There were completed, in 1932, 134 wells yielding natural gas; their combined initial open flow

of gas was 1,940,500 M cu. ft. of gas daily. The railroad commission shut in, for lack of a useful outlet, wells delivering 1,364,750 M cu. ft. There were produced in the State 352,500,000 gallons of gasoline derived from natural gas (1932); the quantity was less by 74,200,000 gallons than that for 1931.

In spite of the obstacles to interrupting the production of sulphur by the Frasch process the production was much curtailed; it totaled 875,947 long tons for 1932. Producers' stocks above ground were sufficient to supply sales at the current (1932) rate of outgo for an extended period. Sales, however, increased materially in the course of 1933.

FINANCE. State expenditures in the year ended August 31, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$68,028,361 (of which \$28,820,034 was for local education); for interest on debt, \$15,976; for permanent improvements, \$32,778,510; total, \$100,822,847 (of which \$39,269,080 was for highways, \$10,716,123 being for maintenance and \$28,552,957 for construction). Revenues were \$101,795,009. Of these, property and special taxes furnished 28.2 per cent; departmental earnings and compensation to the State for officers' services, 3.0; sale of licenses, 44.5 (in which was included a gasoline sale tax that produced \$28,213,021). Funded debt outstanding on Aug. 31, 1932, totaled \$7,583,200. Net of sinking-fund assets, the debt was \$7,560,756. On an assessed valuation of \$3,962,841,346 the State levied in the year ad-valorem taxes of \$27,343,605.

EDUCATION. The State's contribution toward the support of the public schools for the academic year 1933-34 was not reduced. An apportionment was made, on the per-pupil basis, at the same rate as for the year 1932-33. The number of persons of school age in the State was reckoned in 1933 as 1,571,378. For the year 1931-32 the current expenditures of the public schools totaled slightly more than \$60,000,000 and were not quite three-fourths of the total for the year before. Figures for the academic year 1932-33 were not available.

CHARITIES AND CORRECTIONS. Special measures, outside the work of the permanent charitable organization of the State, were taken in 1933 in Texas, as in other States, to aid the great group rendered destitute by adverse economic conditions. The bond issue voted to provide the State's part of the means to be devoted to this purpose from the latter months of the year onward did not find ready sale in December. An improvement in the revenue of cotton-growers, however, tended to limit the need for public aid.

Control and supervision of the chief part of the State's institutions for the care and custody of persons, under the system in force in 1933, rested in the State Board of Control, a body composed of three members serving overlapping terms of six years, by appointment. The board purchased supplies both for these institutions and for the State's governmental departments. Its division of child-welfare examined and licensed local institutions and agencies performing work of this type. State institutions under the board's authority were: Confederate Home (for men), Austin, which had 219 inmates on Aug. 31, 1932; Confederate Women's Home, Austin, 96 inmates; School for the Blind, Austin, 214 pupils; School for the Deaf, Austin, 515 pupils;

Deaf, Dumb, and Blind Institute (for colored youth), Austin, 232; State Orphans' Home, Corsicana, 855 inmates; Home for Dependent and Neglected Children, Waco, 290; Girls' Training School, Gainesville, 229; Juvenile Training School, Gatesville, 809; Austin State School, 1044; Rusk State Hospital, Galveston Psychopathic Hospital, Austin State Hospital, Terrell State Hospital, San Antonio State Hospital, and Wichita Falls State Hospital (all for the insane), an aggregate of 10,241; Abilene State Hospital (epileptics), 962; Tuberculosis Sanatorium, at Sanatorium, 639; State Colored Orphans' Home, Gilmer, 87. The State Prison, at Huntsville, was administered by a prison manager.

LEGISLATION. A regular session of the Legislature convened on January 10. It created a State convention to act for the State on the proposed repeal of the Eighteenth Amendment to the Federal Constitution. This convention was to be composed of 23 delegates, who were to be elected at large by popular vote on August 26. An amendment to the State constitution, to legalize traffic in 3.2-per cent beer, was proposed for popular approval, also in the vote of August 26.

Broad powers were given the Governor and the State banking commissioner, in the height of the nation-wide banking panic of February and March, to take action so that banking institutions under State charter might avoid immediate and full payment of their depositors without incurring bankruptcy. The collapse of local taxation having greatly curtailed the operation of public schools, the Legislature sought for ways to provide State school-aid; it sought also to provide means for contribution from the State to the support of great numbers of the needy unemployed. To raise money, it submitted to popular vote a proposal for a \$20,000,000 State bond issue; placed a tax of 2 cents a barrel on petroleum produced in the State; subjected "intangible assets" of oil pipe-lines (in effect, their earnings capitalized at 6 per cent) to ad-valorem taxation.

The Legislature sent to the voters for their approval a State constitutional amendment to permit counties to exercise great liberty in devising their own forms of government. The State was reapportioned, for the election of Federal Representatives, into 21 districts in place of 18. Procedure with regard to deficiency judgments was greatly modified in favor of foreclosed owners, who were allowed to establish the "actual" value of property at time of sale. The law requiring three days' notice of intent before parties might marry was repealed. Betting at racetracks under the pari-mutuel system was made lawful.

Special Session. The Legislature was called to meet in special session on September 14, chiefly to authorize an issue of bonds to provide means for aiding the indigent unemployed, for which the voters had passed a constitutional amendment on August 26. It authorized the issue of \$5,000,000 such bonds. Compliance with a code approved by the National Recovery Administration was made an admissible defense against prosecution for infringement of the State's anti-trust laws. The sale of machine guns to any but peace officers was prohibited. Kidnaping was rendered a capital offense.

POLITICAL AND OTHER EVENTS. Governor Ferguson dealt with the bank panic by issuing a proclamation on March 2 requiring all banking

institutions to close until the 8th. Reopenings as provided by Federal authority were general in Dallas on March 11 and elsewhere in the next few days. At an election on August 26 there were chosen by a light vote, reported as 304,696 to 191,966, 23 repealist delegates at large, to meet in State convention on November 27 and declare the State's adoption of the repeal of the Federal Eighteenth Amendment through the superseding amendment proposed by Congress. At the election of August 26 voters also adopted an amendment of the State constitution to render lawful the traffic in beer having not over 3.2 per cent of alcohol; an issue of \$20,000,000 of State bonds to meet the cost of public relief for the needy was likewise approved.

A hurricane struck the southern part of the State on September 4; 22 persons were reported killed, some 1500 injured; the damage to property was estimated at \$5,000,000. A movement was carried on for the combination of the northwestern counties of Texas and those of the Oklahoma Panhandle to be erected into a separate State having its capital at Amarillo.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Mrs. Miriam A. Ferguson; Lieutenant-Governor, Edgar E. Witt; Secretary of State, W. W. Heath; Treasurer, Charley Lockhart; Comptroller, George H. Sheppard; Attorney General, James B. Allred; Superintendent of Public Instruction, L. A. Woods.

Judiciary. Supreme Court, Chief Justice, C. M. Cureton; Associate Justices, T. B. Greenwood, William Pierson.

TEXAS, UNIVERSITY OF. A State institution of higher education in Austin, with a medical branch in Galveston; the main university was opened in 1883. For the autumn of 1933 the enrollment at the main university totaled 6050, of

State appropriations amounted to \$324,967, and the income from student fees to approximately \$100,000. The library contained 38,710 catalogued volumes and public documents. Equipment valued at \$5000 was received from the Carnegie Foundation for the Advancement of Teaching for the study of art. President, Bradford Knapp, D.Agr.

TEXTILE INDUSTRY. On the basis of average activity as determined from the normal years 1923-25, the textile industry as a whole showed an activity for the year 1933, 4 per cent above the average and 25 per cent above the activity of 1932, according to the annual review number of *Textile World* on which the accompanying information is largely based. In 1932 the activity of the industry was 17 per cent below the average. The total improvement, however, was effected by a short-lived spurt which, in June, carried production to its highest point in four years and was followed by a decline in activity to a point in December not much better than the low mark of the previous year.

The production of cotton goods followed the curve of general textiles very closely and was about 24 per cent above that of 1932, and approximated the 1923-25 average. Total consumption of American cotton was approximately 14,564,700 running bales of which 8,353,449 bales were exported. The output of rayon goods showed an amazing increase during the year, as recorded under RAYON. Woolen goods shared the upward trend and rose about 35 per cent above 1932 consumption, though remaining about 9 per cent below the 1923-25 average. Silk textiles, in part due to rayon competition and in part to the continued depression, fell in output 15 per cent below that of 1932, although still remaining above the 1923-25 average.

UNITED STATES FOREIGN TRADE IN TEXTILES AND TEXTILE FIBRES

[From U. S. Department of Commerce]

	Exports		Imports	
	1932	1933	1932	1933

whom 4014 were men and 2036 women; the enrollment in the medical branch was 502. The 1933 summer session had an enrollment at the main university of 2809, of whom 1455 were men and 1354 women. There were 357 members on the faculty. The libraries contained 493,155 volumes. President, Harry Yandell Benedict, Ph.D. LL.D.

TEXAS TECHNOLOGICAL COLLEGE. A State coeducational institution at Lubbock, Texas, opened in 1925. The enrollment for the fall semester of 1933-34 was 1952 (agriculture, 187; engineering, 370; home economics, 196; arts and sciences, 1199). Of this number 1171 were men and 781 women. During the summer session there were 531 men and 757 women enrolled. The teaching staff for 1933-34 numbered 106. The

The codes for the entire industry had been approved and became effective by the end of the year, or, in a few instances, within the early months of 1934. The Cotton Textile Code, the earliest of all codes to be approved, became effective July 17. Writing in *Textile World*, George A. Sloan, president of the Cotton-Textile Institute, said, after six months of experience:

The industry has definite knowledge of improvements effected in many directions. Wage and labor situations have been given stability perhaps not equalled, certainly not surpassed at any other time in the industry's history. While improvement and benefits have been chiefly on the side of the working personnel, this stability has not been without advantages for the mills. Over-capacity, for the first time, has been brought under reasonable control, making for a better balancing of production with current market requirements. Influences formerly contributing to

ruinous competition are now held in restraint with a resultant improvement in conditions for the industry and those who deal with it

THAYER, WEBSTER. An American jurist, died in Boston, Mass., Apr. 18, 1933. He was born at Blackstone, Mass., July 7, 1857, and was graduated from Dartmouth College in 1880. Upon his admittance to the Massachusetts bar in 1882, he established a practice in Worcester, in which he was engaged until his appointment in 1917 by Governor McCall as justice of the Superior Court of Massachusetts. He was the presiding judge in the Sacco-Vanzetti case, a murder prosecution which, after extending over seven years, resulted in the execution by the State of Massachusetts on Aug. 23, 1927, of the two defendants, Nicola Sacco and Bartolomeo Vanzetti. Their crime had been the murder at South Braintree, Mass., on Apr. 15, 1920, of Frederick A. Parmenter, paymaster, and Alessandro Berardelli, guard, for the Slater and Morrill Shoe factory.

The Sacco-Vanzetti case aroused international interest and protests, many believing that the defendants, on account of their known radical affiliations, had failed to receive a fair trial. After the rendering of the first verdict of guilty in 1921 there were argued before Judge Thayer seven motions for a new trial and five supplementary motions. The charges of prejudice against the judge became more pronounced after he denied the petition based on the confession of Celestino Madeiros that he, and not Sacco or Vanzetti, had participated in the South Braintree crime. After Governor Fuller's rejection of the defense's plea for clemency and its failure to obtain from the United States Supreme Court a writ or stay of execution, demonstrations were staged by radicals in many American and foreign cities, the most conspicuous being the attempt to bomb the American embassy in Paris. There was another repercussion five years later when the Thayer home in Worcester was completely destroyed by bombing. Despite abuse and condemnation, and even threats to his life, Judge Thayer maintained that he had conscientiously discharged his duty "to God and country" in the decision which he had handed down.

THEOSOPHICAL MOVEMENT, THE. The year 1933 saw a strengthening of the Theosophical Movement, which, though aided by various working organizations, is above them all. Traceable down the centuries wherever thought has struggled to be free, it is visible to-day in the widespread modern reaction against dogmatic creeds on the one hand and scientific materialism on the other. Additional progress has been made in clearing modern Theosophy of the fantastic accretions of the past few years and reviving the study of Madame H. P. Blavatsky's writings.

Her restatement of the truths of Theosophy, which every great teacher has but reiterated in different words, rests upon three fundamental propositions: Deity, or the Absolute, the Rootless Root of all that is, has been, or will be, is an infinite, eternal, and immutable Principle, utterly beyond the powers of human conception; the law of periodicity, of action and reaction, ebb and flow, operates always and everywhere, on the moral no less than on the physical plane; thus the alternation of day and night, inbreathing and

outbreathing, are paralleled by alternate periods of life and death for the universe and every man; and evolution is not alone physical but includes the unfoldment of consciousness through the lower kingdoms and the gradual progress toward perfection of each human soul, a spark of the universal Oversoul.

During 1933 important articles by Madame Blavatsky, long out of print, were made available in pamphlet form, including *Memory in the Dying*, *The Origin of Evil*, *The Fall of Ideals*, and *On the New Year*.

Two old-time Theosophists, prominent in the early days of the Movement, died in 1933—Dr. Annie Besant, widely known defender of unpopular causes and champion of India's political freedom, and G. R. S. Mead, scholar and thinker, the founder of the Quest Society and editor of the quarterly review, *The Quest*.

THEOSOPHICAL SOCIETY, AMERICAN. The American section of the Theosophical Society, a world-wide organization founded in 1875 by Mme. Helena P. Blavatsky and Col. Henry S. Olcott. World Headquarters were later established at Adyar, India, near Madras. In 1933 branches existed in 48 nations, on six continents. The American Theosophical Society had, in 1933, 178 local lodges. The president of the society was Sidney A. Cook. Headquarters are in Wheaton, Ill.

THIRD INTERNATIONAL. See **COMMUNISM.**

THOMPSON TROPHY. See **AERONAUTICS.**

THOMSON, SIR (JOHN) ARTHUR. A British naturalist, died in London, Feb. 12, 1933. Born in East Lothian, July 8, 1861, he was educated at the Universities of Edinburgh, Jena, and Berlin. He was for a time lecturer on zoölogy and biology in the school of medicine of the University of Edinburgh. In 1899 he was called to the University of Aberdeen where until his retirement as professor-emeritus in 1930 he held the regius professorship of natural history. He was also Gifford Lecturer at St. Andrews University in 1915. In 1924 he came to the United States to deliver the Terry Lectures at Yale University and the Morse Lectures at Union Theological Seminary. Among his writings which "popularized" science were: *The Study of Animal Life* (1892); *The Science of Life* (1904); *Progress of Science in the Nineteenth Century* (1904); *Herbert Spencer* (1906); *Heredity* (1908); *Darwinism and Human Life* (1910); *Introduction to Science* (1911); *The Wonder of Life* (1914); *Secrets of Animal Life* (1919); *The Control of Life* (1921); *What Is Man?* (1923); *Science, Old and New* (1924); *The New Natural History* (1925-26); and *Scientific Riddles* (1932).

Sir Arthur was also one of the first compilers of those comprehensive works, known as "outlines," which are a means of bringing to the layman knowledge of a technical subject: *Outlines of Zoölogy* (8th ed., 1929); *Life: Outlines of General Biology* (2 vols., 1931); and *The Outline of Natural History* (1932). In *The Bible of Nature* (1909); *Science and Religion* (1925), and *The Gospel of Evolution* (1925) he contributed toward breaking down the antagonism between science and religion. Knighthood was conferred on him in 1930.

THORNTON, SIR HENRY (WORTH). A British railway expert, died in New York City, Mar. 14, 1933. He was born at Logansport, Ind., Nov. 6, 1871. On his graduation from the University of

Pennsylvania in 1894 he began his career as a draughtsman with the Pennsylvania Railroad. The following year he was promoted to assistant engineer of construction with the Cleveland and Marietta Railroad, a subsidiary of the Pennsylvania. After serving as assistant engineer with the Cincinnati division he became in 1899 engineer of maintenance of way for the Erie and Ashtabula division of the Pennsylvania's Northwest System and in 1901 superintendent of the Cleveland, Akron, and Columbus Railroad. In 1902 he returned to the Erie and Ashtabula division as superintendent and, when the Pennsylvania System bought the Long Island Railroad in 1911, acted first as assistant general superintendent and then as general superintendent. In the latter capacity he was instrumental in the electrification of that line.

Thornton was offered in 1914 the post of general manager of the Great Eastern Railway, which serves principally the eastern counties of England. He succeeded so well in improving the line's efficiency that on the outbreak of the World War he was able to cope with the problem of transporting troops and war materials to Harwich and thence via the company's steamers to Antwerp. He was also appointed a member of the executive committee of general managers which, under the direction of the British government, controlled and operated all railroads. In 1916 he was made deputy director of inland waterways and docks, with the rank of colonel in the Royal Engineers, and the following year assistant director general of movements and railways. Promoted to deputy director-general of movements and railways with the rank of brigadier-general in 1918, he held after the Armistice the office of inspector-general of transportation with the rank of major-general. Naturalized as a British subject in 1919, he was created later in that year a Knight Commander of the Order of the British Empire in recognition of his war services. He received also the decorations of Companion of the French Legion of Honor, Officer of the Order of Leopold of Belgium, and the Distinguished Service Medal of the United States.

On the organization in 1922 of the Canadian National Railway Co. to operate the lines owned by the Dominion government, such as the National Transcontinental Railway, the Intercolonial Railway, and the Prince Edward Island Railway, Sir Henry accepted at the government's request the office of president and general manager. The following year the Grand Trunk Railway Co. became part of the system. Under Thornton's management the operating efficiency of the line's 23,000 miles of tracks was so improved that by 1926 it was receiving a net revenue of almost \$50,000,000. In 1927 there was organized under the auspices of the Canadian National Railways the Canadian National Steamships, comprising the Canadian National Steamships, Ltd., and the Canadian Government Merchant Marine, Ltd. Sir Henry succeeded also in freeing these services to a great extent from political interference. He resigned his position as president and chairman of the board in July, 1932. After 1928 he was a member of the advisory committee of the League of Nations Committee on Transport.

THYROID, REMOVAL OF IN HEART DISEASE. See MEDICINE AND SURGERY.

TIBET, *tí-bét'* or *tib'et*. A central Asian territory extending eastward from the Pamirs to the border of China; nominally under the suzerainty of China. Area, 463,200 square miles; popula-

tion, approximately 2,000,000. Lhasa, the capital, had some 20,000 inhabitants. On Dec. 17, 1933 the temporal ruler of the country, the Dalai Lama (Ngag-Wang Lobsang Thubden Gya-Tsho) died at the age of 57 years. See CHINA under *History*.

TICK FEVER, ERADICATION OF. See VETERINARY MEDICINE.

TIFFANY, LOUIS COMFORT. An American decorative designer and painter, died Jan. 17, 1933, in New York City where he was born Feb. 18, 1848. He studied under George Inness and Samuel Coleman, and in Paris with Léon Bailly, making a special study of the decorative arts in their relation to architecture. After his return to New York City about 1878, he devoted himself to stained glasses, enamels, jewelry, and other decorative work, organizing the company of Louis C. Tiffany and Associate Artists. There was later organized, principally for carrying out ecclesiastical commissions, the Tiffany Studios, of which he became president and art director. With the aid of his assistants, many of whom were master European craftsmen, he revived the artistic production of stained glass in the United States, producing designs of strength and fine decorative quality. His best-known invention was the Tiffany favrile glass, which possesses delicate refracting powers capable of iridescent effects and which for many years was manufactured by the Tiffany Furnaces at Corona, L. I., N. Y.

Mr. Tiffany designed the stained glass windows in Memorial Hall, Harvard, and in the Chittenden Library, Yale, as well as those in numerous churches, such as the Church of the Pilgrims, Brooklyn, and All Angels Church, New York. Good examples of his paintings, principally water colors, are "Algerian Shops," "A Street in Tangiers," "The Pool," "Market Day in Nuremberg," "Grand Canyon of the Colorado," "Cathedral Steps, Morlaix, Brittany," and "Street Scene in Old Chinatown, San Francisco." He was elected an associate of the National Academy of Design in 1871 and an academician in 1880. The French government made him in 1900 a Chevalier of the Legion of Honor. His numerous prizes included gold medals at the expositions in Paris (1900), Buffalo (1901), Dresden (1901), St. Louis (1904), Jamestown (1907), San Francisco (1915), and Philadelphia (1926). At the Chicago exposition (1893) he exhibited a miniature chapel in which glass mosaic formed the principal decorative note and which won several medals. In 1918 he established the Louis Comfort Tiffany Foundation for art students, deeding to it his art collections, Laurelton Hall, an 80-acre estate at Oyster Bay, L. I., N. Y., and a \$1,000,000 maintenance fund.

TIMOR ARCHIPELAGO. See NETHERLAND INDIA.

TIROL, *tê-rôl'*. A former crownland of Austria-Hungary, divided between Italy and the Republic of Austria by the Treaty of St. Germain. See ITALY under *History*.

TOBACCO. The tobacco crop in the United States in 1933 was estimated at 1,396,174,000 pounds, 37 per cent larger than the 1932 crop of 1,022,558,000 pounds but 31 per cent less than the 1931 crop. The harvested acreage totaled 1,753,700 acres, compared with 1,413,800 in 1932, while the 1933 average acre yield was 796 pounds, 73 more than in 1932. Based on the December 1 estimate of the average farm price of 12.9 cents per pound, the farm value of the 1933 crop would total \$180,647,000. The estimated production by types was for flue-cured, 708,488,000 pounds;

fire-cured, 138,455,000; air-cured, light, mostly Burley, 433,962,000; air-cured, dark, 41,801,000; cigar types, 73,150,000, comprising filler 35,010,000, binder 31,987,000, and wrapper 6,153,000; and miscellaneous, 318,000 pounds. Estimates for the cigar types allow for acreage and production removed under contract with the Agricultural Adjustment Administration. North Carolina regained the lead of the producing States with 518,522,000 pounds, and was followed by Kentucky with 369,780,000; Tennessee, 136,210,000; Virginia, 90,725,000; South Carolina, 85,850,000; Georgia, 58,124,000; Pennsylvania, 26,563,000; Ohio, 24,945,000; Maryland, 17,710,000; Connecticut, 15,683,000; Wisconsin, 14,868,000; and Indiana, 12,920,000 pounds.

The Agricultural Adjustment Administration began in the summer of 1933 a tobacco acreage and production reduction plan in the cigar-leaf area with aim of better balance of supply and demand and lifting cigar-leaf prices up to the parity contemplated in the Agricultural Adjustment Act. Farmers cooperating in the plan were to be compensated by the government with funds raised through a processing tax to be applied on all processed cigar-leaf tobacco and collected from the manufacturer. A similar plan for flue-cured tobacco was launched early in the fall, and production adjustment programmes were to be inaugurated for the 1934 crops of the Burley, Maryland, dark air-cured, and dark fire-cured types.

The 1933 crops of tobacco in other important producing countries, as estimated by different official agencies, were for Japan, 139,200,000 pounds; Greece, 107,865,000; China, 130,000,000; Italy, 85,563,000; Cuba, 36,352,032; Bulgaria, 38,612,000; Chosen, 35,634,500; Algeria, 33,069,000; Czechoslovakia, 30,479,000; Puerto Rico, 17,500,000; Spain, 14,330,000; and Belgium, 13,726,000. In 1932-33, Germany produced 62,097,000 pounds, Southern Rhodesia, 14,150,000; Union of South Africa, 10,258,000; and New Zealand, 2,207,100 pounds. The 1932 crop of the Philippine Islands was reported to be 99,511,147 pounds; France 70,112,640; Alsace, 21,547,500; and Mexico, 8,489,000 pounds; and Sumatra, 140,605 bales. Of the 1932 Canadian crop of 54,093,730 pounds, Ontario produced 45,759,390, and Quebec, 7,952,000 pounds.

The collections from internal revenue taxes on tobacco in the United States for the fiscal year 1933 amounted to \$402,739,059.25, an increase of \$4,160,440.69 or 1.04 per cent compared with the previous year. The receipts from taxes on small cigarettes amounted to \$328,418,413.58, which was 81.55 per cent of the total taxes collected on tobacco, and \$10,885,333.56 over 1932. The taxes collected on smoking and chewing tobacco declined to \$55,450,340.99 in 1933 from \$58,030,155.75 in 1932; on large cigars to \$11,304,995.91, a decrease of \$2,902,683.59; and on snuff to \$6,404,999.69, a decrease of \$441,302 compared with 1932. More than 90 per cent of the total tobacco receipts were collected in North Carolina, Virginia, Kentucky, New Jersey, Ohio, and California in the order named. The Commissioner of Internal Revenue reported that in the calendar year 1932, there were manufactured 106,632,433,834 cigarettes weighing less than 3 pounds per 1000, about 10,431,781,000 less than in 1931. Exports of leaf tobacco rose from 411,159,483 pounds in 1932 to 438,936,121 in 1933. Consult also *Tobacco Markets and Conditions Abroad* (weekly, ed. by B. D. Hill, United States Department of Commerce); *American Tobacco Types, Uses, and Markets*; and

TOBAGO. See TRINIDAD.

TOGOLAND, or Togo, tō'gō. A former German protectorate in West Africa; divided between Great Britain and France, Sept. 30, 1920, as mandated territory of the League of Nations.

TOLEDO, UNIVERSITY OF THE CITY OF. A municipal, coeducational institution of higher learning in Toledo, Ohio, founded in 1872. The enrollment for the autumn of 1933 totaled 2026, of whom 1245 were men and 781 women. The 1933 summer session enrollment totaled 250, of whom 112 were men and 138 women. The faculty had 73 fulltime members. The income for the year amounted to approximately \$258,800. The library contained approximately 30,000 volumes. President, Philip Curtis Nash, M.C.E.

TOLEDO MUSEUM OF ART. See ART MUSEUMS.

TONGA (FRIENDLY) ISLANDS. A British protectorate in the South Pacific, some 350 miles east of Fiji. Total area, 385 square miles; population (1932 census), 29,454 of whom 412 were Europeans. Agriculture is practically the only industry of the people. Copra is the chief crop. In 1932, imports were valued at £86,006; exports, £96,103. Revenue amounted to £57,224 and expenditure to £63,986 for 1931-32. Capital, Nukualofa. Queen in 1933, Salote; High Commissioner, Sir A. G. M. Fletcher.

TONGKING (TONKIN). See FRENCH INDO-CHINA.

TORONTO, UNIVERSITY OF. An institution of higher education in Toronto, Ont., Canada, founded in 1827 and supported by the provincial government. The 1933 autumn enrollment was 7103. The faculty numbered 937 members. The total expenditure for the year 1932-33 for salaries and maintenance was \$2,668,251. The library contained 289,128 volumes and 107,291 pamphlets. President, Henry John Cody, M.A., D.D., LL.D.

TORPEDO BOATS. See NAVAL PROGRESS.

TRADE UNIONS, GERMANY. The Nazi régime in Germany effected a number of changes in the labor set-up in the country, the two most important being the creation of a compulsory labor service, and the dissolution of the old line trade unions and the substitution for them of the so-called German Labor Front. The latter was, in effect, a government corporation under the strict surveillance of an official appointee of the Chancellor. The inauguration of the compulsory labor service for all young German men was announced on May 1, 1933 to go into effect on Jan. 1, 1934. It has not as yet been decided whether the class of 1914 or that of 1915 would be the first to be called into service. It was estimated that there were 600,000 young men in the class of 1914, 480,000 in the class of 1915, 390,000 in the class of 1916, and 300,000 in the class of 1917. The plans call for the calling into service of one-half of the first class on January 1, and their retention under orders in labor camps until June 30; upon their discharge on that date they will be replaced by the second half of the class which will also continue in service for six months. Apparently, therefore, from 240,000 to 300,000 men will be in service at one time during 1934. It has been reported that the extension of service in future

years will depend almost entirely upon the budget involved. On the basis of the cost of the voluntary labor service inaugurated by the German Republic, the expenditure per man per year will be about 1000 marks plus 40 pfennigs daily for pocket money. On this basis the total cost for the compulsory labor service in 1934 will be between 240,000,000 and 300,000,000 marks. It was declared by an official of the Ministry of Labor, under whose aegis the labor service was to be conducted, that the only ground for exemption would be physical disability. The plans call for the performance of real manual labor for six hours daily with one or two hours' instruction in political science. Apparently primary attention was to be given to the construction of land and suburban settlements; other work was to consist of general land improvement, water-ways development, road work, and reforestation. No wages were to be paid the men except for the small sum cited above for pocket expenditures. However, clothing, food, shelter, and all necessary equipment were to be furnished by the government.

On May 2, 1933 functionaries of the National Socialist party seized possession of the offices and other properties of the labor unions throughout Germany, arrested the former officers, and abolished the labor press and other educational, cultural, and mutual welfare activities which had heretofore been conducted by the great Socialist and Communism trade unions of the Reich. Before the Nazi counter-revolution, the German trade unions had had a membership of 7,000,000 persons and property worth hundreds of millions of marks. Unquestionably the German trade movement had been the strongest and richest in the world; also, its leaders had occupied important positions in the government and had been among the functionaries and politicians who had ruled Germany during the second Reich (November, 1918–February, 1933). The unions thus seized were originally put under the charge of the National Socialist Shop Cell Organization (*Der National-Sozialistischen Betriebszellen-Organisation*). It was declared that the labor union and the shop cell were two different things, the labor union standing for the economic interests, and the shop cell for the political interests of the wage earner. On May 5, six government ordinances were published having to do with the future status of labor unions, as follows: (1) The management of the entire labor movement in Germany was placed under one person appointed by the government; (2) the money and property of labor unions were placed in the charge of a treasurer appointed by the government; (3) provision was made for a national organizer of labor unions; (4) the entire labor union press was placed under the authority of the press and publicity manager of the "committee of action for the protection of German labor"; (5) the existing collective trade agreements were continued in force until the formation of the "German Labor Front"; (6) independent action of a general character, such as conclusion of collective and economic agreements, without authorization by the "committee of action for the protection of German labor" were prohibited.

Subsequently all wage earners were organized into one body called the German Labor Front under the direct control of the Nationalist Socialist party. The central office of the Labor Front was to include all the existing occupa-

tional organizations in Germany, was to supervise and direct the activities of the Front, and was to decide the disputes that might arise within it. Subordinate to the central office were two labor councils and two main occupational organizations, the General Federation of German Wage Earners, and the General Federation of the German Salaried Employees. The first congress of the German Labor Front was held on May 10 and 11, 1933, in Berlin, with participation of 500 workers' delegates and of representatives of employers and the government. This congress gave formal approval to the steps already taken by the government in regard to labor and to the organization of the German Labor Front. The chairman of the "committee of action for the protection of German Labor" was chosen as the chief of the Labor Front, and two assistant chiefs were chosen, one to head the wage earners' organization, and the other to head the salaried employees' organization.

The General Federation of German Salaried Employees was formed on May 18 and 19 by a congress of salaried employees held in Berlin. It includes the German Commercial Employees' Union (males only), Union of German Technical Workers (engineers, chemists, etc.), Foremen's Union, Union of Office Clerks (public and private, not engaged in commercial work), Union of Agricultural and Forestry Employees and Tenant Farmers, Union of Physicians and Chemists (employed under contract), Union of Maritime Employees, Union of Theatrical Employees, and Union of Woman Salaried Employees. The decree of May 19, 1933, established the office of labor trustee (*Treuhänder der Arbeit*), whose principal duties are the regulation of wages, hours, and other conditions of labor. These functions were formerly exercised by the employers' associations and labor unions. Thus, collective bargaining between employers and their workers was ended. The labor trustees for the various industrial districts in Germany are to be appointed by the federal government, on recommendation of the state or provincial governments or at least in agreement with them. The decisions of these labor trustees are binding on both workers and employers. By this step, the federal government takes upon itself the responsibility of fixing, through the labor trustees, wages and hours of work, and of shaping the nation's general labor policy.

It was also stated that German wage earners repudiate international Marxism. As the Marxian branches in Germany served as a basis for the second and third internationals, these branches will now go out of existence. It was said that relations will be maintained with the workers in other countries as well as with the International Labor Office in Geneva, on the condition, however, of equality and of non-interference in the internal affairs of Germany. Dr. Robert Ley, who had never been a worker but had been an employee of the German Chemical Trust, was named leader of the German Labor Front.

JAPAN. At the beginning of 1933, there were 932 trade unions in Japan, with a membership of 377,625, an increase of 114 unions and 8650 members over the preceding year. The expansion in membership in 1932 was not so great as in 1931—a result of the business slump and the change in the social situation since the campaign in Manchuria. The number of trade unionists constitutes 7.8 per cent of all the workers employed in mines,

factories, transportation, and postal, telephone, and telegraph services, and also casual and other laborers. Trade union statistics for each year, 1930 to 1932, are given in the table following:

TRADE UNIONS IN JAPAN, 1930, 1931, AND 1932

Year	Number of trade unions	Number of trade- union members	Number of workers	Per cent of workers organized
1930 . . .	712	354,312	4,713,002	7.5
1931 . . .	818	368,975	4,670,275	7.9
1932 . . .	932	377,625	4,860,276	7.8

TRANSCAUCASIAN SOCIALIST FEDERATED SOVIET REPUBLIC. One of the seven constituent republics of the Soviet Union, occupying the region between the Caspian and Black seas south of the Caucasian Mountains and north of Persia and Turkey. It is divided into the three republics of Armenia (including the autonomous republic of Nakhichevan); Azerbaijan (including Nagorny Karabakh); and Georgia (including Abkhaz, Adjara, and South Ossetia). See ARMENIA, AZERBAIJAN, GEORGIA, and UNION OF SOVIET SOCIALIST REPUBLICS.

TRANS-JORDAN. An Arab territory in Asia Minor forming a part of the British Mandate of Palestine but which is governed by an independent local Arab administration under Emir Abdullah Ibn Hussein. The area is uncertain; population, approximately 260,000 of whom 220,000 are Arab Moslems. The capital is Amman. Revenue for 1933-34 was estimated to total £P361,595; expenditure, £P352,976; public debt, £P1381. There is a legislative council of six official and 16 elected members. High Commissioner in 1933, Sir A. G. Wauchope who is also High Commissioner for Palestine.

TRINIDAD. A British West Indian Colony near the mouth of the Orinoco River in South America, consisting of the islands of Trinidad and Tobago. Total area, 1976 square miles of which 114 represented Tobago. Population (1931 census), 412,783; estimated (Jan. 1, 1933), 419,559. Port of Spain, the capital, had 70,641 inhabitants (1931).

The chief products are cacao, sugar, coconuts, petroleum, and asphalt. In 1932, imports were valued at £4,695,137; exports, £4,577,211; revenue, £1,694,137; expenditure, £1,698,114. The public debt on Jan. 1, 1933 amounted to £3,032,401. The government is administered by a governor assisted by an executive council and a legislative council. Governor in 1933, Sir A. C. Hollis.

TRINITY COLLEGE. An institution for the higher education of men in Hartford, Conn. For the autumn term of 1933 the enrollment was 453. There were 50 members on the faculty. The endowment fund of the college was \$3,100,000, and the income totaled \$300,000. The library contains 110,000 volumes and 50,000 pamphlets. President, Remsen B. Ogilby, Litt.D., LL.D.

TRIPOLITANIA, trē'pō-lē-tā'nyā. The western district of the Italian colony of Libia on the

north African coast. Area, 347,500 square miles; population (1931 census), 552,663 of whom 29,749 were Europeans. Tripoli, the capital, had 71,793 inhabitants (1931). Governor, Marshal Italo Balbo.

TUFTS COLLEGE. A nonsectarian institution for the higher education of men and women in Medford, Mass., founded in 1852. The registration for the autumn term of 1933 was 2047. There were 511 faculty members. The productive funds of the college amounted to \$7,685,000, and the income for the year was \$880,845. The library contained 107,796 volumes. In October, 1933, the Fletcher School of Law and Diplomacy, for graduate students, was opened. President, John Albert Cousins, LL.D.

TULANE UNIVERSITY OF LOUISIANA, THE. An institution of higher education in New Orleans, founded in 1834. The total enrollment for the autumn of 1933 was 2928, of whom 647 were in the H. Sophie Newcomb College for Women. The distribution in the coeducation departments and professional schools was as follows: Arts and sciences, 549; engineering, 268; graduate, 118, law, 110; medicine, 496; graduate medicine, 18; pharmacy, 5; commerce and business administration, 411; courses for teachers, 193; social work, 113. There were 748 students enrolled in the 1933 summer session. The faculty numbered 402. The productive funds for the fiscal year ending Aug. 31, 1933, amounted to \$10,055,419; the income for the year to \$1,105,777; and gifts and bequests to \$105,393. The library contained 107,912 volumes. President, Albert Bledsoe Dinwiddie, Ph.D., LL.D.

TULAREMIA. See VETERINARY MEDICINE.

TUNISIA. A French protectorate in North Africa. Capital, Tunis.

AREA AND POPULATION. The area is 48,332 square miles and the population in March, 1931, was 2,410,692 (195,293 Europeans and 2,159,151 Arabs and Bedouins). Tunis, the capital city, had 202,405 inhabitants; Sfax, 39,969; Sousse, 25,324; Bizerta, 23,206. The school attendance (1931) was 80,569.

PRODUCTION. Agriculture and stock raising are the chief occupations, although there is considerable mining. Arable land (1931) totaled 7,249,000 acres. The crops in 1932 (thousands of units) were: Wheat, 14,697 bu.; barley, 15,616 bu.; wine (gallons), 45,173; olive oil (gallons), 17,382. Livestock in 1931 included 540,000 cattle, 2,475,000 sheep, 1,404,000 goats, 25,000 swine, 99,000 horses, 299,000 mules and asses, and 162,000 camels. Wool production totaled 5,270,000 pounds in 1932 (4,360,000 in 1931). Mineral production in 1932 (1931 in parentheses) was, in metric tons: Phosphates, 1,678,000 (2,148,000); iron ore, 209,000 (447,000); lead ore, 24,200 in 1931; zinc ore, 800 in 1931.

COMMERCE. General imports of Tunisia in 1931, converted at par, were equivalent to \$73,403,000 (\$82,612,000 in 1930), while general exports were equivalent to \$32,706,000 (\$44,188,000 in 1930). The chief imports were: Cotton piece goods, \$6,634,000; machinery, \$5,209,000; refined sugar,

\$3,193,000; iron manufactures, \$2,910,000. The important exports were: Wheat, \$11,423,000; phosphate rock, \$4,197,000; olive oil, \$2,427,000; wine, \$1,885,000. France purchased 63.3 per cent of the total exports in 1931 and supplied 60.7 per cent of the imports. Imports in 1932 totaled 1,771,517,000 francs, of which the United States supplied 34,915,000 francs.

FINANCE. Budget estimates for the fiscal calendar year 1933 placed revenue at 617,348,130 francs and expenditure at 617,276,579 francs. The public debt at the beginning of 1931 totaled 538,958,000 francs.

COMMUNICATIONS. Railways in 1931 extended 1282 miles (469 miles of broad and 813 miles of narrow gauge). During 1932 the net tonnage of vessels in the overseas trade entering the ports was 4,480,000; net tonnage cleared, 4,354,000.

GOVERNMENT. Government is administered by the French Foreign Office, acting through a French Minister Resident-General who is also Minister of Foreign Affairs for Tunis. There is a ministry of 11 department heads (8 French and 3 Tunisian). The occupant of the throne in 1933 was Sidi Ahmed Bey. French Minister Resident-General, M. Manceron.

TUNNELS. The outstanding tunnel achievement of the year was the completion, one year ahead of schedule, of the Antwerp Tunnels and their opening on September 10. Satisfactory progress was also made during the year on the great Mersey Tunnel. There were several interesting smaller works under way, the 38th Street Tunnel in New York has also been started, and the greatest simultaneous tunneling operation ever attempted has been inaugurated on the Los Angeles-Colorado River Aqueduct. (See **AQUEDUCTS**.)

ANTWERP TUNNEL. Although probably inspired by the success of the Holland Tunnel in New York and also benefiting by the advice of American tunnel experts, this construction under the Scheldt (noted in the 1931 YEAR BOOK) has a number of unique features. The final accepted plans (it will be remembered that combined plans and bids were called for and 60 tenders were received) called for two tunnels—one for vehicular traffic, the location of which was determined by the need for long approach ramps, and a pedestrian tunnel, located at the most convenient point for foot passengers.

The material under the Scheldt consisted of sand deposits to a depth of 85 feet where a firm clay was encountered. Both tunnels were located in this clay. The pedestrian tunnel was constructed entirely through this clay and, with a 10 foot cover, no air pressure was required. The vehicular tunnel was driven by the shield method, using air where necessary, and employing the usual cast iron lining. Interest centres largely in the ramp and ventilator shaft construction.

Work was started on the west side where 1460 feet of approach ramp and tunnel were built in the open. The first lift was 23 feet deep and when an intermediate, impervious layer of clay and peat was encountered, surface drains, supplemented by well points driven back from the cut, were used to prevent the surface water of the upper sands entering the excavation. The second lift, with sloping sides like the first, was confined by steel sheet piling to a depth of 46 feet. Special wells made by driving 20 inch casings with 10 inch inner pipes were used to further lower the ground water.

From the other portal, located at the end of a 560 foot open approach, some 900 feet of tunnel was constructed in open cut and the shield was then erected. In the final stages of the shield work, wells were again used to reduce water pressure and for the first six weeks no compressed air was used in the heading.

The shaft sinking operations, both for the two ventilating shafts of the vehicular tunnel and for the escalator shafts of the pedestrian tunnel, were constructed by the freezing method. This has been noted under **FOUNDATIONS**.

European engineers, particularly in Holland and Belgium (see for example the IJmuiden Lock, 1930 YEAR BOOK under **CANALS**) have had to meet this problem of handling huge volumes of ground water when excavating in the deep coastal sands, and have developed the well and the freezing methods to a high degree of effectiveness. American engineers have had far less experience with this particular problem and, therefore, follow these European developments with great interest.

MERSEY TUNNEL. Although this vehicular tunnel, to connect Liverpool and Birkenhead under the estuary of the Mersey, is the largest shield driven sub-aqueous tunnel (44 feet diameter) ever attempted, the conditions are far different from those usually associated with shield operations. Indeed the use of the shield and of cast iron lining is primarily for the purpose of safety and securing a watertight construction in the heavily water bearing rock. On the Liverpool end the separate drift, 7 feet in diameter and below the tunnel elevation, is used to remove water. It is expected that the tunnel will be completed by the summer of 1934. The 36 foot four lane vehicular traffic deck is being placed and surfaced. Curving "dock-side approaches" are an interesting feature of the approach plans.

HETCH HETCHY WATER TUNNEL. Attention has been called to the difficulties of tunnel operations in water bearing, highly shattered or recent volcanic rocks. The rock encountered in this work (sandstone and shale) is softened by the presence of water, and, in addition, hydrogen sulphide gas is prevalent. Following a serious explosion, work was suspended for 6 months and the U. S. Bureau of Mines recommended changing the ventilating system from a positive pressure to an exhaust type. This plan, combined with the elimination of power and lighting circuits, testing for gas before and after firing, etc., is being used to complete the tunnel.

In combating moving ground various timbering plans were tried but have been abandoned for concrete, using a rapid setting high strength cement.

COLORADO RIVER AQUEDUCT. During the year contracts were let for practically all of the 29 tunnels, totaling about 90 miles, for this great aqueduct which will serve the Metropolitan District of Southern California. In fact the first tunnel, the Wind Canyon No. 2, 790 feet long, was holed through in late September. In spite of the fact that a storm of protest was aroused over the plans of the district to undertake some of the construction work with its own forces, this plan has been followed for ten tunnels aggregating 33.3 miles. The first of the contract jobs was let on March 17, the San Jancinto, a 12.7 mile bore, and the last major contract on June 28, the total being 57.8 miles. While none of the individual tunnels are of record length the entire operation makes a record breaking tunneling programme.

MID-TOWN TUNNEL, NEW YORK. The 38th Street, or Mid-town Tunnel, New York, was held up through lack of funds and failure of the Port of New York Authority to secure cooperation with the City authorities. On August 30, however, the P.W.A. authorized a loan to the Port Authority of \$37,500,000 for this work. The contract was signed on September 1 and, thereafter, matters moved swiftly forward. The first contract, that for the delivery of cast iron tunnel lining, was let September 28.

One tube of the proposed twin tube vehicular tunnel is to be built at present. The New York plaza will be located at 39th Street between 9th and 10th Avenues, while the New Jersey end at Weehawken will have connections to Union City and north and south to the Palisades and to Jersey City and Hoboken.

In spite of protests by shipping interests a permit was granted September 30 by the War Department for a temporary clay blanket to come to a depth of 40 feet and to cover the river bottom during construction.

TURBINES. See STEAM TURBINES.

TURBO-GENERATOR, LARGEST. See ELECTRIC POWER STATIONS.

TURCOMAN REPUBLIC. See SOVIET CENTRAL ASIA.

TURKEY. A republic comprising parts of Asia Minor and the Balkan peninsula as well as Imbros, Tenedos, and the Rabbit Islands in the Aegean Sea. Capital, Ankara (Angora).

AREA AND POPULATION. The estimated area is 294,492 square miles (285,258 square miles in Asia and 9257 in Europe). The population on Jan. 1, 1932, was estimated at 14,700,000 (13,600,000 in Asia), compared with the 1927 census population of 13,648,270 (12,607,601 in Asia). Populations of the chief cities (1927) were: Istanbul (Constantinople), municipality, 490,857 (city proper, 245,982); Izmir (Smyrna), 153,924; Ankara (Angora), 74,553; Adana, 72,577; Bursa (Brusa), 61,690; Konya, 47,596. The population is overwhelmingly Moslem in religion.

EDUCATION. The Turkish people were about 92 per cent illiterate in 1930. School enrollment in 1931 was: Primary, 497,330; secondary, 32,836; higher, 4429. The University of Istanbul had 2312 students.

PRODUCTION. There were 4,368,061 persons engaged in agriculture at the 1927 census. Arable land in 1930 aggregated 14,217,000 acres; woods and forests, 21,783,000 acres. Livestock in 1932 included 5,315,000 cattle, 11,768,000 sheep, 10,825,000 goats, 1,460,000 horses and mules, and 555,000 buffaloes. The crop yields in 1932 (thousands of units, bushels except as indicated), with 1931 figures in parentheses, were: Wheat, 69,344 (102,426); barley, 53,499 (74,877); corn, 14,762 (20,398); oats, 8729 (8095); tobacco (pounds), 46,296 (112,679); olive oil (Aegean region, 1932-33 and 1931-32 seasons, in gallons), 8699 (4336); raisins (Aegean region, in pounds), 112,434 (57,268); figs (Aegean region, pounds), 66,138 (61,729); cotton lint (1932-33 and 1931-32 seasons, pounds), 13,384 (43,398); wool (pounds), 10,150 (14,800); mohair (pounds), 7937 (8207); opium (Aegean region, pounds), 161 (705).

Mineral output (1932) was: Coal, 1,178,000 (metric) tons; emery, 5822 tons; chrome, 55,195 tons; boracite, 4993 tons; meerschaum, 935 cases in 1931; argile, 8475 tons; mercury, 239 flasks in 1931. Industries were relatively unimportant, but

were expanding in 1933 with government aid.

COMMERCE. General imports into Turkey in 1932 were valued at 85,984,000 Turkish pounds (\$40,662,000), compared with £T126,660,000 (\$59,758,000) in 1931. General exports totaled £T101,301,000 (\$47,905,000), as against £T127,275,000 (\$60,048,000) in 1931. The principal 1932 imports, in order of value, were cotton fabrics, iron and steel, machinery, coal and mineral oils. Exports, in order of value, were leaf tobacco, raisins, eggs, shelled filberts, and live animals. Germany supplied 23.2 per cent of the imports in 1932 (21.4 in 1931); Italy, 12.9 (14.6); United Kingdom, 12.4 (11.3); France, 8.4 (10.1). Of the 1932 exports, Italy purchased 16.1 per cent (24.2 per cent in 1931); Germany, 13.5 (10.7); United States, 11.9 (10.0); United Kingdom, 9.8 (8.5). Imports from the United States (1933) were valued at \$1,342,756 (\$1,539,485 in 1932); exports to the United States, \$8,191,379 (\$5,388,150 in 1932).

FINANCE. Budget estimates for the fiscal year 1933-34 (June 1-May 31) balanced at approximately £T170,477,000, compared with estimates balancing at about £T169,354,800 in 1932-33 and at £T186,705,000 in 1931-32. An agreement on the Ottoman public debt was signed April 22, and ratified by the Turkish National Assembly on May 28, 1933. It reduced the debt to 962,636,000 French paper francs (about £T35,000,000 gold) and provided for annual payments of £T700,000, guaranteed by the gross receipts of the Istanbul customs. The Turkish pound (par, \$4.3962 United States currency) exchanged at an average of \$0.4718 in 1931 and \$0.4729 in 1932.

COMMUNICATIONS. Turkey in 1931 had 3552 miles of railway line and about 9867 miles of roads, the latter mostly in bad repair. Air lines connected Istanbul with the most of the European countries. Legislation for the establishment of government commercial air services in Turkey was passed during 1933. The Turkish merchant marine on June 30, 1932, aggregated 178,000 gross tons (vessels of 100 tons and more). In 1931, 6306 ships of 16,222,709 tons called at Istanbul, including those in transit. Also see *History*.

GOVERNMENT. The Constitution, as amended Apr. 20, 1924, vested executive and legislative power in the Grand National Assembly as the sole representative of the people. The Assembly exercised executive power through the President of the Republic elected by itself and through the Council of Ministers chosen by him; it could at any time dismiss the government. The President and the Grand National Assembly members are elected for four years. President in 1933, Mustafa Kemal Pasha, who was reelected May 4, 1931, for a third term. Premier, Gen. Ismet Pasha (People's party). The Grand National Assembly elected Apr. 24, 1931, included 304 representatives of the People's party and 13 Independents.

HISTORY

PROGRESS OF MODERNIZATION. The tenth anniversary of the Turkish republic, celebrated on Oct. 29, 1933, found the process of modernizing Turkey still in full swing under the able and aggressive leadership of President Mustafa Kemal. The year 1933 was marked by notable advances in various fields of activity. The government's energies were devoted particularly to the reorganization and further development of industry. Early in the year a group of American experts, headed by Walker D. Hines, former director general of

American railways, was engaged to make a survey of Turkey's industry and resources and present recommendations for their reorganization and coordination. Other American experts had previously been engaged. In accordance with their recommendations, the President and his Council of Ministers on Dec. 7, 1933, approved a five-year industrial plan. Among other things, it provided for the construction of 14 factories, 12 of them state-owned, for the conversion of Turkish raw materials into coke, yarns, glass bottles, tissue paper, cellulose, and chemical products. The funds required were to be obtained partly through a budget appropriation of 25,000,000 Turkish pounds (about \$11,750,000 at the 1932 exchange rate) and partly through a credit of about \$12,000,000 advanced by the Soviet government for the purchase of Soviet textile and other machinery.

The Turkish government already operated 13 monopolies and had almost monopolistic control of railroads, mines, and coastal shipping. In addition it had advanced more than 50 per cent of the capital for many other industries. The economic theory on which the government was operating was defined as "state capitalism" by Premier Ismet Pasha. It was indicated that eventually the government planned to take over all private industry, transportation, mining, banking, and the general direction of foreign commerce, but that it would not seek to collectivize agriculture or the activities of small merchants and artisans.

Other steps taken toward the development of Turkish industry and transportation were (1) the granting to a purely Turkish capitalist group of the contract for the construction of a 420-mile railway line between Sivas and Erzerum; (2) the oversubscription of the first voluntary internal loan issued by the Kemal régime, an issue of 4,000,000 Turkish pounds for the construction of a 50-mile branch railway line opening up the Argana copper deposits in Central Anatolia; (3) the establishment of a special organization in the Ministry of National Defense for the operation of commercial air lines in Turkey; (4) the renewal by the Grand National Assembly on June 10, 1933, of the Ottoman Bank concession for a period of 20 years; and (5) the adoption of the metric system, effective Jan. 1, 1934. A new import tariff designed to encourage local industry and maintain the balance between imports and exports went into effect May 31, 1933.

In the cultural field, also, important steps toward the westernization of Turkey were taken. Istanbul University was completely reorganized on July 31, 1933, in accordance with a law passed by the Grand National Assembly on May 31. The law embodied recommendations made by M. Albert Malche, a Swiss professor hired by the government to make a study of the Turkish educational system. The old university was abolished and all the faculty members discharged, although about one-third of them were later reengaged by the new institution. The university opened in December, with a faculty which included 36 distinguished foreigners, most of them German-Jewish scientists and educators, who had been expelled from German universities. Three Turkish women scientists were appointed assistant professors. The new institution was organized along the most modern lines. Moslem sensibilities were disregarded in the reorganization of the theological school at Istanbul University in April when it was decided to introduce courses on com-

parative religion and non-Islamic philosophy. By another new rule, English replaced French as the principal foreign language taught in Turkish colleges and schools.

Mustafa Kemal's determination to introduce the Turkish version of the Koran in religious services in place of the Arabic encountered additional opposition. The muezzin of the Ulu mosque in Brusa was attacked by orthodox worshippers when on February 5 he called the faithful to prayer in Turkish for the first time. Two days later the President ordered the use of Turkish in the Istanbul mosques. He made a personal investigation of the disorders at Brusa. The 23 priests and muezzins arrested in connection with the disturbance were tried by a military court and 19 were sentenced to one or two years' imprisonment at hard labor. On Sept. 1, 1933, a government-subsidized Stage Academy, with foreign teachers, opened at Ankara. It provided training in the drama, opera, music, and ballet. Establishment of a National Opera and a State Theatre in connection with the academy was planned.

FOREIGN RELATIONS. Turkish diplomacy achieved no less impressive results during 1933 than did the government's activity at home. Substantial progress was made toward Mustafa Kemal's ideal of a Balkan federation which would end the century-old rôle of the Balkan states as cat's-paws of the great powers. New treaties of friendship were signed with all of the Balkan states except Albania during 1933 and similar pacts with Hungary and the Soviet Union were signed. The most important of these was the ten-year pact of non-aggression signed with Greece at Ankara on September 14. Besides guaranteeing the inviolability of their common frontiers, the two states agreed to follow a common policy in all international questions affecting them. At international conferences where only one of the two states was represented, the delegate would defend the common and individual interests of both. The adherence of other Balkan states to the treaty was invited.

In connection with the visit of the Greek Premier and other officials to Ankara to sign the treaty a settlement of all other outstanding questions between Greece and Turkey was arranged. It was agreed to set up a special mixed commission to coordinate Greek and Turkish economic policies. Premier Ismet Pasha and Tewfik Rushdi Bey, the Foreign Minister, visited Sofia in mid-September and renewed for five years the Turko-Bulgarian treaty of amity which was due to expire in March, 1934. They failed to secure Bulgaria's adherence to the Turko-Greek pact, however. The treaty of friendship with Rumania was signed in Ankara on October 17, with Foreign Minister Titulescu of Rumania acting on behalf of his government. About the same time Premier Gömbös and Foreign Minister Kanya of Hungary visited Ankara and signed a Turko-Hungarian treaty of amity. The Turkish Foreign Minister signed a friendship pact with Yugoslavia in Belgrade toward the end of November. There had previously been a meeting between President Mustafa Kemal and King Alexander at the President's summer palace near Istanbul (October 4), at which the Balkan situation was discussed.

Turkey signed the pact renouncing and defining aggression concluded by the Soviet Union at London on July 3 with seven neighboring countries. This treaty, which was ratified Nov. 24, 1933,

supplemented the Turko-Soviet non-aggression treaty of 1925. Turkey was also a party to a second non-aggression treaty signed at London by the Soviet Union with the Little Entente states. On July 10 Tewfik Rushdi Bey conferred with Premier Mussolini in Rome, apparently to assure him that Turkey's network of treaties signed or under negotiation with the Balkan and Little Entente states was not prejudicial to Italy.

Other developments of the year in the foreign field were (1) the ratification by the Grand National Assembly of the 1931 Geneva Convention for the limitation of manufacture of narcotic drugs; (2) the demand of the Turkish delegate to the Geneva Disarmament Conference for the abolition of those clauses of the Lausanne Treaty which demilitarized the zone along the Dardanelles and Bosphorus Straits; (3) ratification by the Grand National Assembly on May 28 of the Ottoman Debt Agreement (see *Finance* above); and (4) the decree of Jan. 24, 1933, which authorized the importation of American goods free of quota restrictions up to the amount of Turkish exports to the United States. See GREECE, BULGARIA, HUNGARY, RUMANIA, and YUGOSLAVIA under *History*; UNITED STATES OF EUROPE.

TURKS AND CAICOS ISLANDS. See JAMAICA.

TUSKEGEE NORMAL AND INDUSTRIAL INSTITUTE. An institution for the training of colored young men and women in Tuskegee, Ala., founded in 1881 by Booker T. Washington. The enrollment for the term beginning September, 1933, was 1465, of whom 650 were in the high school division and 815 in the college division. There were 228 members on the faculty. The endowment for the year ending May 31, 1933, was \$7,701,520; the income was \$445,027. The library contained 40,000 volumes. Principal, Robert Russa Moton, LL.D., Litt.D.

TUTUILA. See SAMOA.

TWENTY-FIRST AMENDMENT. See PROHIBITION.

UBANGI-SHARI. See FRENCH EQUATORIAL AFRICA.

UGANDA, ō-gān'dā, PROTECTORATE. A British East African protectorate between Tanganyika and the Anglo-Egyptian Sudan. Area, 94,204 square miles (13,616 sq. miles water); total population (1931 census), 3,553,534 of whom 3,536,267 were natives belonging to the Bantu, Nilotic, and Hamitic racial groups. Entebbe is the capital; Kampala is the commercial centre. The principal product is cotton of which the estimated production for 1932-33 was 295,000 bales (400 lb. bales) from a total of 1,071,410 acres. In 1932, imports were valued at £1,326,220; exports, £2,224,878; revenue, £1,402,528; expenditure, £1,298,895. Governor in 1933, Sir B. H. Bourdillon.

UKRAINE. A region in southwestern Russia known officially as the Ukrainian Soviet Socialist Republic. See UNION OF SOVIET SOCIALIST REPUBLICS.

UNEMPLOYMENT. The article on AMERICAN FEDERATION OF LABOR will indicate the nature of the unemployment estimates commonly accepted in the country. There it has been pointed out that on the basis of unemployed trade unionists the A. F. of L. estimated there were at least 13,000,000 people unemployed in the United States during the low point of the depression in March, 1933, and that by October reemployment had absorbed back into industry at least 3,000,000 wage earners.

In addition to the creation of new jobs, with the beginning of the operations of the Civil Works Administration and the Civil Works Service Bureau before the year was over another 2,000,000 to 3,000,000 persons had become reemployed; so that by the end of the year it would not be far from the truth to say that the total of unemployed in the United States was still in the neighborhood of 7,000,000 persons.

WISCONSIN. Attention was called in the YEAR BOOK for 1932 to the passage by Wisconsin of an unemployment insurance law, the first such enactment by an American commonwealth. The Wisconsin legislature, in the passage of the act, indicated its intention that by July 1, 1933 a majority of the employees working for industrial companies in the State were to have some adequate system of unemployment compensation. It was incumbent upon the employers of at least 175,000 employees, before June 1, 1933, to establish voluntarily some unemployment insurance plan which met the standards prescribed by the act. In the event that the employers failed to take such action, the law was to become compulsory automatically on July 1, 1933. However, the legislature of Wisconsin, during the year, postponed indefinitely, the effective date of the law and declared that it was not to be enacted until such time as the State Industrial Commission found that business recovery had sufficiently progressed to permit of a successful operation. The 1933 law described business recovery in these terms: "Until a finding of fact by the industrial commission either that the number of manual employees in Wisconsin manufacturing establishments has for three successive months been at least 20 per cent greater or that the aggregate weekly pay rolls for such employees have for three successive months been at least 50 per cent greater than for December, 1932, as shown by monthly indexes of employment and pay rolls computed by the commission and appearing in its Wisconsin Labor Market Bulletin."

UNEMPLOYMENT IN FOREIGN COUNTRIES. The following figures indicate unemployment in the more important countries of the world on the basis of official reports submitted by the agencies interested. Figures are given for the latest month available during 1933, and are compared with the high point reached during the same year. It will be observed that throughout the world, as the result of increase of industrial activity beginning with the fall of 1932, unemployment seems generally to have decreased in size. In Australia, including only trade unionists unemployed, there were out of work 104,560 persons in September, 1933, as compared with the high for the year, 109,182 persons in March, 1933. In Austria, including only the number of unemployed persons in receipt of benefits under the compulsory insurance law, there were 280,401 persons out of work in October, 1933, as compared with 401,321 in February, 1933. In Belgium, including only the wholly unemployed persons receiving benefits from the unemployment insurance societies, there were 135,105 persons out of work in August, 1933, as compared with 207,136 in January, 1933; also partially unemployed persons receiving such benefits totaled 162,361 in August, 1933, as compared with 196,237 in January, 1933. In Canada, including only per cent of trade unionists unemployed, there were out of work 19.8 per cent in October, 1933, as compared with 25.5 per cent in January, 1933. In Czechoslovakia, including only number

of unemployed persons on the live register, there were out of work 627,121 persons in October, 1933, as compared with 920,182 persons in February, 1933; also unemployed persons in receipt of benefits from trade-union insurance funds totaled 224,375 in August, 1933, as compared with 305,036 in February, 1933. In Danzig, including only number of unemployed persons registered, there were 25,219 persons out of work in September, 1933, as compared with 40,726 in January, 1933. In Denmark, including only unemployed persons receiving trade union unemployment funds, there were 82,300 persons out of work in October, 1933, as compared with 141,354, in January, 1933. In Estonia, including only unemployed persons remaining on live register, there were 3881 persons out of work in September, 1933, as compared with 16,511 persons in January, 1933. In Finland, including only number of unemployed persons registered, there were 17,134 persons out of work in September, 1933, as compared with 23,178 in January, 1933. In France, including only the number of unemployed persons in receipt of benefits, there were 232,632 persons out of work in October, 1933, as compared with 330,874 in February, 1933. In Germany, including only unemployed persons registered, there were 3,744,860 persons out of work in October, 1933, as compared with 6,013,612 in January, 1933; also unemployed trade unionists in receipt of benefits totaled 1,530,452 in August, 1933, as compared with 2,455,428 in February, 1933. In Great Britain and Northern Ireland, including only wholly unemployed persons in receipt of benefits under the compulsory insurance law, there were 1,974,000 persons out of work in October, 1933, as compared with 2,422,808 in January, 1933; also temporary stoppages under compulsory insurance totaled 362,000 in October, 1933, as compared with 536,882 in April, 1933; also, in Great Britain, including only persons registered with unemployment exchanges, there were 2,298,753 unemployed persons in October, 1933, as compared with 2,903,065 in January, 1933. In Hungary, including trade unionists unemployed, there were 938 Christian (Budapest) and 24,881 Social Democratic persons out of work in July, 1933, as compared with 1210 Christian (Budapest) in February, 1933 and 31,431 Social Democrats in February, 1933. In the Irish Free State, including only unemployed persons receiving benefits under the compulsory insurance law, there were 71,586 persons out of work in October, 1933, as compared with 95,577 in January, 1933. In Italy, including only number of unemployed registered, there were 962,868 persons wholly unemployed in October, 1933 as compared with 1,229,387 in February, 1933. In Japan, the official estimates of unemployed persons totaled 418,177 persons in July, 1933, as compared with 444,032 in January, 1933. In Latvia, including only the unemployed persons remaining on live register, there were 3017 persons out of work in September, 1933, as compared with 14,777 in January, 1933. In Netherlands, including only unemployed in unemployment insurance societies, there were 119,092 in October, 1933, as compared with 226,709 in January, 1933. In New Zealand, including the unemployed registered by unemployment exchanges, there were 56,694 persons out of work in September, 1933, as compared with 57,169 in July, 1933. In Norway, including only unemployed trade unionists in ten unions, there were 14,204 persons out of work in August, 1933 as compared with 19,673 in February, 1933; also,

the unemployed remaining on live register totaled 35,223 in October, 1933, as compared with 42,400 in February, 1933. In Poland, including only the unemployed registered with employment offices, there were 211,926 in October, 1933, as compared with 287,219 in February, 1933. In Rumania, including only the unemployed remaining on live register, there were 17,551 in September, 1933, as compared with 45,371 in February, 1933. In Saar Territory, including only unemployed persons registered, there were 35,287 persons out of work in September, 1933, as compared with 45,700 in January, 1933. In Sweden, including only trade unionists unemployed, there were 77,013 persons out of work in September, 1933, as compared with 121,456 in March, 1933. In Switzerland, including only persons receiving benefits from unemployment funds, there were 38,578 persons wholly unemployed in September, 1933, as compared with 83,400 in January, 1933; and 38,400 partially unemployed persons in August, 1933, as compared with 57,400 in February, 1933. In Yugoslavia, including only unemployed persons registered, there were 10,043 persons out of work in September, 1933, as compared with 25,346 in February, 1933.

UNFEDERATED MALAY STATES. A group of five states in the Malay Peninsula which are under British protection but are not included in the Federated Malay States (q.v.). They are divided in area and population as shown in the accompanying table. See **BRITISH MALAYA**.

State	Sq. mi.	Pop (1931)	Capital
Johore	7,678	505,309	Johore Bharu
Kedah	3,648	429,691	Alor Star
Kelantan .	5,713	362,517	Kota Bharu
Perlis	816	49,296	Kangar
Trengganu .	5,000	179,664	Kuala Trengganu
Total . .	22,355	1,526,477	

UNION COLLEGE. A nonsectarian college for men at Schenectady, N. Y., founded in 1795. The 1933 enrollment of regular students totaled 813, included in the following divisions: Arts, 609; electrical engineering, 90; chemistry, 53; civil engineering, 48; and physics, 13. The faculty numbered 73. The amount of endowment and income for the year was more than \$3,000,000. The library contained 84,900 volumes. Acting president, Edward Ellery, Ph.D., Sc.D.

UNION OF SOUTH AFRICA. See **SOUTH AFRICA, UNION OF**.

UNION OF SOVIET SOCIALIST REPUBLICS (U. S. S. R.). A republic comprising the greater part of the former Russian Empire. Capital, Moscow.

AREA AND POPULATION. According to the Soviet Union Information Bureau, which supplied much of the material used in this article, the area of the Union of Soviet Socialist Republics is 8,199,258 square miles, of which 21.6 per cent lies in Europe, 78.4 per cent in Asia. The population in the autumn of 1933 was estimated at 165,700,000. The population was estimated at 162,700,000 on July 1, 1931, it was 147,013,600 by the census of December, 1926, and 138,200,000 in the same territory in 1914. The census of 1926 gave 71,024,300 males, and 75,989,300 females.

The Union of Soviet Socialist Republics in 1931 was composed of seven constituent republics, which in turn included 16 autonomous republics and 17 autonomous areas. The Russian Socialist Federated Soviet Republic contained 94

per cent of the area and 76 per cent of the population of the entire Soviet Union. The estimated area and population of the seven constituent republics on July 1, 1931, is shown in the accompanying table from the *Economic Review of the Soviet Union*. Also see SIBERIA; SOVIET CENTRAL ASIA.

Republic	Area *	Population (thous.)	Cities	Soviets Rural
R.S.F.S.R.	19,662.9	112,181.0	515	50,139
White Russia ...	126.8	5,275.0	29	1,418

* Thousands of square kilometers (1 square kilometer = 0.386 square miles).

Population of cities of over 200,000, by official estimate of 1931: Moscow, 2,781,300; Leningrad, 2,228,300; Baku, 575,200; Kiev, 539,500; Kharkov, 521,500; Odessa, 475,500; Rostov-on-Don, 457,100; Tashkent, 421,800; Nizhni Novgorod (Maksim Gorki), 350,300; Tiflis, 347,900; Dnepropetrovsk, 322,800; Stalingrad, 294,500; Saratov, 277,500; Sverdlovsk, 223,300; Samara, 220,400; Kazan, 202,000.

EDUCATION. Public education in the Soviet Union is a charge against each of the seven constituent republics and of the localities concerned. Expenditures for education during recent years, in rubles: 1928-29, 1,493,000,000; 1929-30, 2,316,000,000; 1931, 4,399,000,000; 1932, 6,508,000,000. (The ruble has a theoretical par value of \$0.514.)

Universal compulsory education for a three-year period (children of 8-10 years) was introduced for the first time in Russian history at the close of 1930. This was being extended to a seven-year period during 1933. At the opening of the school year in the fall of 1933 the number of children registered in elementary and secondary schools was 25,600,000. Attendance for previous years was as follows:

Year	Elementary	Secondary
1914	7,236,000	563,500
1930	11,775,500	1,599,200
1931	17,342,200	1,980,200
1932	19,001,000	4,684,800

In addition there were close to 10,000,000 children in kindergartens at the close of 1932. This pre-school education is a growth of recent years. There were no kindergartens for the general population in Tsarist Russia.

ATTENDANCE IN HIGHER EDUCATIONAL INSTITUTIONS [Thousands]

Institutions	1914	1930	1931	1932
Higher education	109.9	291.4	358.2	501.3
Technicums	46.1	578.7	609.8	1,034.4
Factory training schools		568.9	1,197.8	1,863.0
Workers' faculties		247.5	351.7	500.0

In 1914 the population of Russia was 67 to 70 per cent illiterate. By 1933 illiteracy had been reduced to between 8 and 10 per cent.

PRODUCTION, ETC. In the Soviet Union transport and communications are conducted as federal departments. Banking is centralized in a State Bank under governmental control. Distri-

bution is socialized, conducted partly by the co-operative societies, partly by factory stores. Industrial production is carried on largely by state enterprises under the general direction of three Commissariats or government departments, denominated respectively Heavy Industry, Light Industry, and Lumber. Similarly in the field of agriculture there are Commissariats for Agriculture and for State Farms. A State Planning Commission (Gosplan) plots the objectives for each year and for five-year periods. A Council of Labor and Defense (STO) acts as a coordinative and standardizing body.

State planning is an essential of Soviet economy. The planning system is designed to direct and coordinate the employment of the energies and resources of the country for orderly development. The planning system, however, goes beyond the economic field. It includes development in science, education, public health, and the extensive social services designed to safeguard the comfort and security of the citizenship.

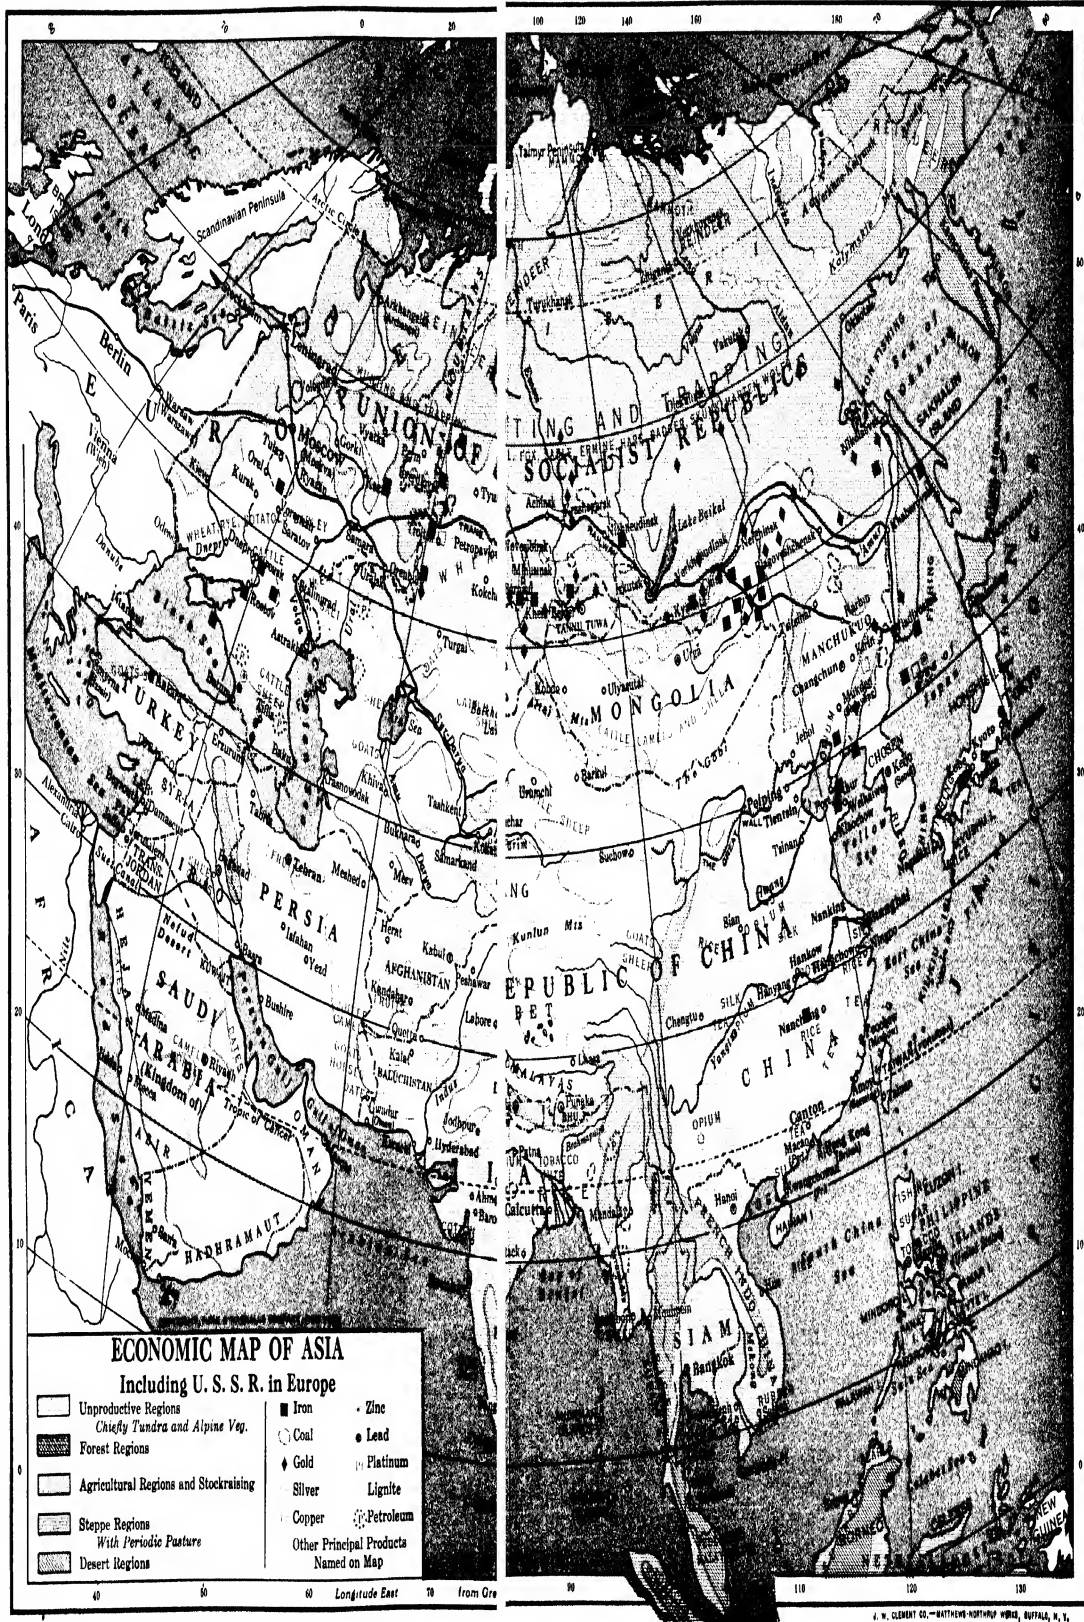

Under the Soviet system the work of Gosplan has assumed a position of primary importance. Its personnel in Moscow includes a considerable body of permanent specialists reinforced by consultants who are authorities in every field. Under the central body each Constituent Republic has its Gosplan, and there are subordinate planning boards in the various cities and districts. Through these bodies and through individual key men in every factory and village Gosplan keeps in intimate touch with developments and needs, and is constantly advised as to the fulfillment of its programme.

The first Five-Year Plan was completed December 31, 1932, in four and a half years. Under it the industrial output was increased by 119 per cent and substantial bases in heavy industry were established. In agriculture the whole set-up was recast and in 80 per cent of the agricultural area the small strip farms of the individual peasant were replaced by large-scale collective farms, in most cases with a high degree of mechanization, and by State farms mechanized in all departments and run on industrial lines.

During the period of the first Five-Year Plan the Soviet Union advanced from fifth to second place among the nations in industrial production. Its share in total world output increased from 4.9 to 17.5 per cent. By 1932 it has taken first place in the world in the output of timber, peat, agricultural machinery and tractors. It held first place in Europe in output of oil, pig iron, steel, and industrial machinery.

A second Five-Year Plan was inaugurated Jan. 1, 1933. Tentative schedules for the second Plan had been drawn up by the close of 1932, but were turned back for thorough revision while the economic organs of the government proceeded with the programme for 1933 as outlined by Gosplan in its control figures for that year. This method enabled Gosplan to make a thorough study of results and tendencies during 1933 before issuing its detailed programme for the five-year period. This programme was being completed toward the close of 1933.

The control figures of Gosplan for 1933 envisaged an increase in the industrial output of 16.5 per cent. The programme embraced new capital investments of 16 billion rubles for industry, transportation, and agriculture. In agriculture the plans called for further mechanization and improvement of methods and processes

under the new socialized set up, but no increase in acreage.

During 1933 many new industrial plants were opened, including such important mass production units as the new machine construction works at Sverdlovsk and the tractor plant at Cheliabinsk which will have an eventual annual capacity of 40,000 high-power caterpillar tractors. The Cheliabinsk works reinforces the big tractor manufactories at Stalingrad and Kharkov which by the autumn of 1933 were producing virtually at full capacity of 4000 tractors per month.

During 1933 the output of large-scale industry increased 8.8 per cent. Particularly good gains, well above the average, were shown in the coal industry (19.5 per cent) and in pig iron and steel production (17.8 and 17.5 per cent respectively). The oil industry registered a small gain of 1 per cent and the electric power output increased nearly 18 per cent. The output of automobiles increased 86 per cent and of tractors 46 per cent.

The output of key indicators in Soviet industry for 1933, with comparison of 1932 and of the fiscal year 1927-28 (the year preceding in the beginning of the first Five-Year Plan) follows:

	1933	1932	1927-28
Coal . . .met. tons	76,700,000	64,000,000	35,400,000
Oildo.	21,432,000	21,381,000	11,600,000
Pig iron . . .do.	7,250,000	6,206,000	3,280,000
Steel ingots . .do.	6,920,000	5,885,000	3,370,000
Power out-			
put . . .mill. kwh	15,800	13,500	5,000
Motor cars			
and trucks units.	49,743	25,000	680
Tractors . . .do.	73,370	50,250	1,490

AGRICULTURE. Small scale individualist farming was disappearing in the Soviet Union in 1933. During the period of the first Five-Year Plan the "socialized" sector of collective and state farms increased from 3,105,000 hectares (hectare = 2.47 acres) in 1928 to 104,879,000 hectares in 1932, or from 2.7 per cent of the total farm area to nearly 80 per cent. In the summer of 1933 there was a further advance to 85 per cent. The individual peasant farmer is expected to become entirely a figure of the past by the end of the second Five-Year Plan.

In 1933 the Soviet leaders made efforts to insure a better coordination of agricultural forces. Marketing rules were liberalized and the farm tax system rationalized, so that both the collective and individual farmers knew from the beginning of the season how much of their yield must be sold to the State, and could count on the surplus to be disposed of at their own wills. The supervisory powers of the machine and tractor stations were increased and their organizations were strengthened in order to put them in a position to assist the individual collectives in improving their technical methods and securing a better integration of effort.

The machine and tractor stations have become a key factor in the new Soviet agriculture. They now furnish the bulk of the draft power, both for the collective and the state farms. At the beginning of 1933 there were 2650 of them scattered through the country, each one of them serving a whole group of collective farms in the surrounding territory. In 1932 they plowed and sowed over half the area of the collective farms. In 1933 they tended close to 70 per cent of the entire collectivized area.

The strengthening of the machine and tractor

stations, as well as the other reformatory measures greatly improved the agricultural picture in 1933. Throughout the whole area of the collectives the work of preparing for and tending the crops was performed more effectively than in previous years.

Gross grain crops in thousands of metric tons were: (1913) 80,100; (1929) 73,796; (1930) 83,743; (1931) 69,480; (1932) 69,870; (1933) 89,800.

LABOR. Membership in labor organizations rose from 10,900,000 in 1928 to 17,260,000 at the beginning of 1933.

An important development of labor autonomy occurred in June, 1933, when the People's Commissariat for labor was abolished and its functions were taken over by the All Union Central Council of Labor Unions. By the close of the first Five-Year Plan industry generally was operated on a six day week with a uniform rest day on the sixth day. The seven hour working day was in general use by 1933.

ELECTRIFICATION. In 1917 there was only one power plant in the country of 20,000 kilowatt capacity. By the end of 1932 there were 10 plants of 100,000 kilowatt capacity or over. In 1928 there were 18 regional power plants with a capacity of 610,000 kilowatts. At the beginning of 1932 there were 43 regional plants with a capacity of 2,624,000 kilowatts. Statistics of power capacity of all plants, and of power output, for the years 1913 and 1928-32, are given in the accompanying table.

SOVIET ELECTRIC POWER OUTPUT

	Capacity of stations (thousand kw.)	Power output (million kw.)
1913	1,098	1,945
1928	1,874	5,003
1929	2,344	6,386
1930	2,894	8,231
1931	3,878	10,433
1932	4,567	13,500

TRANSPORTATION. Total length of railways in 1932 was 83,400 kilometers (51,750 miles), compared with 76,900 kilometers in 1927-28, and 58,500 kilometers in 1913. Freight operations in 1932 were 169.3 billion ton-kilometers, compared with 88.2 billion ton kilometers in 1927-28 and 65.7 billion ton kilometers in 1913. A new railway line of 1200 kilometers, connecting Moscow with the Donetz Basin, was nearing completion in the fall of 1933. In 1933 air lines in regular operation totaled 30,771 miles, over four times the mileage of 1928. Passengers carried in 1932 were 27,200, as compared with 9532 in 1928. Mail and freight carried in 1932 aggregated 1006 metric tons, as compared with 229 metric tons in 1928.

Freight carried on inland waterways in 1932 was 67,000,000 metric tons as compared with 39,900,000 metric tons in 1927-28 and 48,162,000 metric tons in 1913. Two major projects in Soviet water transport were completed in the first half of 1933. One was the canal and lock system around the rapids at the site of the Dnieper River dam. This artificial waterway opened the river to navigation for the first time for 1000 miles, to a point far within the rich black soil region of the Ukraine. The other development was the Baltic-White Sea waterway, linking Leningrad, by way of a series of canals and lakes, with the White Sea port of Archangel. Formerly vessels plying between Leningrad and Archangel were

compelled to circle about the Scandinavian countries and dare the hazards of the northern ocean. The distance was 2840 miles. The new inland waterway shortened the route to 674 miles.

SHIPPING. The Soviet mercantile marine in 1932 was composed of 367 steamships of 502,531 gross tonnage, 79 motor ships of 180,092 gross tonnage, and 3 sailing vessels of 3001 gross tonnage.

COMMERCE. Soviet foreign trade, which held up well during the first two years of the depression, fell off 33 per cent in 1932 and showed a further decline during 1933. Figures for recent years are shown in the accompanying table in millions of rubles (par value of gold ruble is \$0.51455).

SOVIET FOREIGN TRADE
[Millions of rubles]

Year	Exports	Imports	Total
1927-28	799.8	945.5	1,723.3
1928-29	877.6	836.3	1,713.9
1929-30	1,002.8	1,068.7	2,071.5
1931	811.2	1,105.0	1,916.2
1932	563.9	608.7	1,262.6
1933 *	495.7	348.2	843.9

* Figures from U. S. Department of Commerce, in gold rubles.

Exports of gold are not included in Soviet customs figures. The principal Soviet exports in 1932 were: Oil products, \$54,220,000; lumber and lumber products, \$40,420,000; grain, \$26,500,000 (including wheat, \$9,650,000); textiles, \$26,400,000; furs, \$21,460,000. The principal imports were: Industrial machinery and equipment, \$175,000,000; ferrous metals, \$39,490,000; articles manufactured of iron and steel, \$21,970,000; wool, \$13,330,000; cotton, \$9,190,000.

The principal countries taking Soviet exports in 1932 were: England, 23.8 per cent; Germany, 17.4 per cent; Mongolia, 7.3 per cent; France, 5.1 per cent; Italy, 4.6 per cent. Principal countries furnishing Soviet imports were: Germany, 46.4 per cent; England, 13.0 per cent; Persia, 7.1 per cent; United States, 4.5 per cent; Italy, 3.9 per cent.

Trade between the Soviet Union and the United States developed rapidly during the six years up to 1930, despite the handicap attendant on diplomatic non-intercourse. By 1930 the Soviet Union ranked sixth among the foreign customers of the United States and it furnished the principal foreign market for American agricultural and industrial machinery. At this point Germany, England, and Italy began to make extraordinary efforts to secure the Soviet market. Their special trade arrangements included a system of long-term credits guaranteed by the governments, to meet Soviet needs. As a result of this competition American exports to the Soviet Union fell off 88 per cent between 1930 and 1932, while the Soviet imports from Germany, England, and Italy increased 30 per cent. The United States, which furnished 20 per cent of all Soviet imports in 1930, provided only 4.5 per cent of Soviet imports in 1932.

Principal American exports to the Soviet Union in 1932 were: Industrial machinery and equipment, \$5,817,500; automobiles and parts, \$2,690,500; electrical machinery and apparatus, \$2,097,700; aircraft engines and accessories, \$406,700; scientific apparatus, \$200,500. Principal American imports from the Soviet Union were: Furs and skins, \$1,922,400; anthracite coal, \$1,498,000; sausage casings, \$705,700; manganese ore,

\$521,900; pulpwood, \$480,700; caviar, \$450,600.

Figures of the United States Department of Commerce for Soviet-American trade for the years 1925 through 1933 are given in the accompanying table.

SOVIET-AMERICAN TRADE, 1925-33

Year	American exports to U.S.S.R.	American imports from U.S.S.R.	Total
1925	\$ 68,900,000	\$13,200,000	\$ 82,100,000
1926	48,900,000	14,100,000	64,000,000
1927	64,900,000	12,800,000	77,700,000
1928	74,100,000	14,000,000	88,100,000
1929	84,700,000	22,500,000	107,200,000
1930	114,356,000	23,839,000	138,195,000
1931	103,669,000	13,206,000	116,875,000
1932	12,600,000	9,600,000	22,200,000
1933	8,971,465	12,120,000	21,092,000

THE BUDGET. In a country with a high degree of socialization that obtains in the Soviet Union, the growth of the budget reflects to a large extent the degree of economic progress. The first "firm"

SOVIET BUDGET FOR 1932

Revenues:	
Revenues from socialized sector	25.20
Funds provided by population	4.65
of which state loans	2.76
Miscellaneous	0.64
Total revenues	30.49
Expenditures:	
Financing national economy	22.81
of which Industry	11.82
Agriculture	3.62
Transport and Communication	3.85
Financing social and cultural construction	1.79
Administration and Defense	1.84
Miscellaneous	3.72
Total expenditures	30.16

* Expenditures for these purposes are in greater part local and do not figure in the federal budget.

^b Upwards of 40 per cent of the miscellaneous expenditures represent subventions of local budgets.

budget after the stabilization of the currency, that of 1924-25, balanced at 1,400,000,000 rubles. The budget of 1928-29, the initial year of the first Five-Year Plan, was carried out with receipts of 8,020,000,000 rubles. The budget for 1933 envisaged receipts of 35,010,920,000 rubles, with expenditures somewhat below that figure. Over four-fifths of the budgetary revenues are now derived from the "socialized sector." The structure of the budget in 1932 is shown in the accompanying table, in billions of rubles.

During the four and a quarter years covering the first Five-Year Plan actual budgetary revenues were 72.76 billion rubles. Expenditures were 71.96 billion rubles. Actual budgetary receipts and expenditures, in recent years, in billions of rubles, were:

	1928-29	1929-30	1931	1932
Receipts	8.04	12.53	23.76	30.49
Expenditures	8.02	12.25	23.07	30.16

GOVERNMENT. A description of the constitution of the Union of Soviet Socialist Republics will be found in the YEAR BOOK for 1923. In January, 1934, the Council of People's Commissars (executive cabinet of the government) was composed as follows: Chairman of the Council, V. M. Molotov; Vice-Chairman of the Council, J. E. Rudzutak, V. V. Kuibyshev, A. A. Andreyev; Commissar for Foreign Affairs, M. M. Litvinoff;

Army and Navy, K. E. Voroshilov; Internal Supply, A. I. Mikoyan; Foreign Trade, A. Rosenholtz; Transportation, A. A. Andreyev; Water Transportation, N. M. Yanson; Communications, A. I. Rykov; Finance, G. T. Grinko; Workers' and Peasants' Inspection, J. E. Rudzutak; Heavy Industry, G. K. Ordjonikidze; Light Industry, I. E. Liubimov; Lumber Industry, S. S. Lubov; Chairman State Planning Commission (Gosplan), V. V. Kuibyshev; Commissar for Agriculture, Y. A. Yakovlev; State Farms, T. A. Yurkin; Chairmen of the Central Executive Committee, U.S.S.R., M. I. Kalinin, G. I. Petrovsky, A. G. Chervyakov, Gazanfar Mussabekov, Netyrbay Aitakov, Faizulla Khodzhaev, and Maksim Nusratulla.

Joseph Stalin, General Secretary of the Communist party of the Soviet Union, while holding no governmental office beyond membership in the Central Executive Committee or congress, was the most powerful political figure in the country by virtue of his party leadership.

HISTORY

Internal Developments. A distinguished American correspondent who has been stationed in Moscow for over 12 years remarked during a visit to the United States in the autumn of 1933 that news sensations had become so scarce in the U. S. S. R. that his job was no longer interesting. The country had settled down, social and political forms had solidified, and, in a domestic sense, "nothing ever happened."

There is much truth in the observation. It would appear that the critical years of sharp transition ended with the first Five-Year Plan. The socialist forms seem securely established. There is virtually no private industry any longer and no private trade. In the rural regions the collectivist organization has struck deep roots in the soil. There remain grave economic problems, such as the problems of transportation and distribution, but the indications are that these will be solved gradually without tearing the present structure apart. Within its new socialist forms the Soviet Union has evolved formulas for operating large-scale mass production industry and it has adapted a new agricultural set-up to suit its peculiar needs.

During 1933 there were few serious internal changes. The most far-reaching of these were the reorganization and liberalization of the agricultural tax laws and the establishment of "political departments" in connection with the machine-tractor stations which are in effect key motor-power organizations serving the collective farms. The "political departments" have both executive and educational functions. They will increase the local initiative of the machine-tractor stations, improve the leadership in agriculture in their sections and assist in educating the peasants in the technical and social problems involved in the change to large-scale, mechanized farming.

By summer this device had brought such good results in agriculture that it was also adapted to the railroad system, which had lagged behind its rapidly growing tasks for several years. A decree adopted July 4 provided for a complete reorganization of the railroads with the object of eliminating bureaucracy and making more effective use of facilities. The new "political departments" were expected to assist in this work.

Another change adopted during 1933 was the appointment of a federal Public Prosecutor. This

officer has the duty of coordinating court and police procedure throughout the country, and of seeing that local and republican decrees and ordinances are consistent with the constitution and with federal laws, so that he is expected to fulfill an important coordinating function in the legal system.

A decree of greater significance, issued early in December, was designed to attract settlers from European U. S. S. R. to Siberia. The decree provided for special tax exemptions and other favorable discriminations for settlers over a period of from 5 to 10 years and special wage-rates for workers accepting employment in Siberia. It is expected that millions of Russians will take advantage of this offer during the next few years.

FOREIGN RELATIONS. It is probable that future historians will look upon 1933 as the year in which the Soviet Union finally succeeded in normalizing its relations with other countries. It is true that the formalities of normal relations with the more important nations of Europe were accomplished as far back as 1924. It is true that in succeeding years Soviet representatives met with the representatives of other countries at international conferences, shared in formal international debates, and were cosignators of various multilateral agreements. By the diplomatic rules the Soviet Union was a member of the family of nations; in fact the Soviet Union was a nation apart. Its ambassadors abroad usually found themselves in a bleak isolation. The Soviet government lived, it may be said, in amity, but without friends. Its relationship with most other governments was that of an uneasy truce.

This chilly atmosphere gave signs of thawing late in 1932 when the Soviet government signed treaties of non-aggression with Poland and with France. A substantial breach in the ice-dam was made in the summer of 1933, when, in the course of the Economic Conference at London, Mr. Litvinoff, Commissar for Foreign Affairs, signed new non-aggression treaties, one with seven countries bordering on the Soviet Union, one with the countries of the Little Entente, a third with Lithuania.

These treaties differed from those signed previously by the Soviet government, or by other countries, in that they not only renounced aggression as among the contracting nations, but they contained a comprehensive definition of the aggression which the signers agreed to renounce, a definition based on that proposed by Mr. Litvinoff before the Disarmament Conference at Geneva earlier in the year.

At the same time Mr. Litvinoff patched up the differences with England, which for some months had been drifting from bad to worse. The trial and conviction of three British engineers in the Soviet Union at the beginning of the year had resulted in a partial embargo on Soviet goods by Britain. Moscow had retorted by clapping an embargo on British goods and British shipping. There had been threats on both sides of a break in diplomatic relations. After some conversations between Mr. Litvinoff and Sir John Simon, British Foreign Secretary, the disputes were composed, the embargoes were lifted, the imprisoned engineers were set free and negotiations for a new trade treaty were begun. (See GREAT BRITAIN under *History*.)

A few weeks after the compositions in London, Italy signed with the Soviet Union a treaty of

non-aggression similar to that concluded between the Soviet Union and France at the close of 1932. Shortly thereafter Spain opened diplomatic relations with the Soviet Union. Finally, in November, the United States government ended its long policy of non-recognition, that had endured through the administrations of Wilson, Harding, Coolidge, and Hoover, and President Roosevelt announced (November 17) that formal relations with the Soviet government were established.

These were the forms. More significant of the change in Soviet relations with the outside world was the manner. Mr. Roosevelt, who carried on conversations with Mr. Litvinoff in Washington over a period of 10 days prior to the exchange of notes which constituted formal recognition, made it clear that he was inaugurating a cordial friendship between the two countries, as well as an exchange of ambassadors and trade agents. The French government entertained the Soviet Commissar of Foreign Affairs as its honored guest in Paris with every manifestation of friendship. In return M. Herriot, former Premier of France, made a triumphal visit to the Soviet Union, and a French air mission was entertained in Moscow amid popular acclaim. In Italy Mussolini invited M. Litvinoff for a visit and favored him with high personal attentions. In Poland Marshal Pilsudski played host to Soviet officials amidst the most cordial exchanges. There was also a marked secession of the semi-official acerbities which since the formation of the Soviet government had marred its relations with the border states.

By the close of 1933 the Soviet Union had non-aggression pacts with 14 countries, of which conventions with 11 countries included a strict definition of aggression. The treaty with the countries bordering on the Soviet Union, signed in London July 3, 1933, included Afghanistan, Estonia, Latvia, Persia, Poland, Rumania, and Turkey. Finland also acceded to this treaty later in the year. In the case of the treaty signed July 4 with the Little Entente (Czechoslovakia, Rumania, and Yugoslavia), Turkey was also made a party. The non-aggression treaty with Germany dates back to 1926.

American recognition was the most important event of the year in Soviet foreign relations. President Roosevelt took the initiative when he sent a note to President Kalinin October 10 asking him to send a representative "to explore with me personally all questions outstanding between our countries." President Kalinin warmly accepted the overture, and Commissar Litvinoff arrived in Washington November 7, on the day when the people of the Soviet Union were celebrating the sixteenth anniversary of the formation of the Soviet Republic.

Conversations between President Roosevelt and Mr. Litvinoff and between Mr. Litvinoff and officers of the State Department began immediately and continued until shortly before midnight November 17, when diplomatic relations were established after an exchange of notes.

In the exchanges each government agreed to respect the territorial integrity of the other, not to interfere in the internal affairs of the other, to tolerate no group within its territory planning violation of the other, to tolerate within its territory no organization "which has as an aim the overthrow or the preparation for the overthrow of, or bringing about by force of a change in the political or social order" of the other. Mr. Lit-

vinoff on behalf of his government guaranteed the right of American residents in the Soviet Union to worship as they please, assuring them the same right in this respect that is guaranteed to Soviet citizens under the fundamental laws of the Soviet state, and has in practice always been extended to foreign nationals. Each government agreed that in the event of the arrest of an American national in the U.S.S.R. or of a Soviet national in the United States the respective consuls would be promptly notified by the authorities. Mr. Litvinoff, following his examination in the State Department of "certain documents of the years 1918 and 1921 relating to the attitude of the American government toward the expedition into Siberia," waived on behalf of his government all claims for American military activities in the Siberian intervention.

Financial claims and counterclaims generally were left for negotiation after the arrival of the Soviet Ambassador, Mr. A. A. Troyanovsky. Mr. Troyanovsky since the beginning of 1933 had held the important position of vice-chairman of the State Planning Commission, and prior to that he was for five years Soviet Ambassador to Japan. Mr. William C. Bullitt, appointed American Ambassador to Moscow, was sent by President Wilson on a special mission to Lenin as early as 1919. Recently he has served as a special assistant to the Secretary of State. See *UNITED STATES under Administration*.

There were two exceptions to the general rule of improvement in Soviet foreign relations during the year. After the accession of the Nazi government in Germany certain German officials were quoted in the public press as making statements purporting to threaten the integrity of Soviet territory. One such statement, in the form of a memorandum presented by a member of the German delegation at the London Economic Conference, aroused a formal protest from the Soviet government. See *GERMANY under History*.

The other exception was in the East. After the formation by Japan of the state of Manchoukuo the Soviet-owned Chinese Eastern Railway became an increasing cause of friction. In consonance with its policy of avoiding foreign imbrolios the Soviet government in May, 1933, offered to sell the road to Japan. (The road was built by the Russian government in the nineties at a cost of \$225,000,000.) Negotiations for the sale were begun in the summer at Tokyo, with the Manchoukuoan government as the prospective buyer. The negotiations not only dragged fruitlessly, but they were accompanied by increasing harassment of Soviet officials of the road by Japanese-Manchoukuoan authorities. As far back as December, 1931, the Soviet government proposed to the Japanese government the conclusion of a non-aggression pact between the two countries. The proposal had not been accepted by the end of 1933. See *JAPAN under History*.

UNITARIAN CHURCH. A denomination whose name is derived from its belief in one God in one person and, consequently, in the purely human personality of Jesus.

The American Unitarian Association held its one hundred and eighth annual meeting in Tremont Temple, Boston, May 23, 1933. At this meeting the denomination voted to join with the Universalists in the formation of the Free Church of America, in which there would be merged for administrative purposes, by a council of nine representatives from each denomination, the depart-

mental activities of the American Unitarian Association and the Universalist General Convention.

According to the latest available statistics, the denomination has 419 churches, 372 of which are active; 136,204 members; 3170 Sunday school officers and teachers; and 20,823 Sunday school pupils. The official publication is the *Christian Register*, a weekly. The officers of the association in 1933 were: President, the Rev. Louis C. Cornish, D.D.; secretary, the Rev. Walter R. Hunt, D.D.; and treasurer, Parker E. Marean. Headquarters are at 25 Beacon Street, Boston, Mass.

UNITED BRETHREN IN CHRIST, CHURCH OF THE. A denomination which resulted from the religious awakening of Philip William Otterbein and Martin Boehm, and formally organized in Frederick County, Md., in 1800. The church is divided into 33 annual conferences, including those in China, Japan, the Philippines, Puerto Rico, and West Africa. In 1933 there were 1642 charges, 2986 organized churches, 1808 active ministers, 417,433 church members, 2873 Sunday schools with an enrollment of 426,035, including teachers and officers. The amount raised by the church for all purposes in 1933 was \$3,765,051. The net increase in church membership for the year was 3620.

The Evangel is the paper published by the Women's Missionary Association; *The Religious Telescope* is the official paper of the church; and *The Watchword* is the young people's paper. The United Brethren printing establishment and church headquarters are in Dayton, Ohio.

UNITED CHURCH OF CANADA. See CANADA. UNITED CHURCH OF.

UNITED KINGDOM. See GREAT BRITAIN.

UNITED STATES. AREA AND POPULATION. The area of the 48 States and District of Columbia, in 1930, was 3,026,789 square miles, exclusive of ocean areas, the Gulf of Mexico, and the Great Lakes. Non-contiguous lands under the government of the United States (Alaska, Hawaii, the Philippine Islands, the Panama Canal Zone, Puerto Rico, Guam, the Virgin Islands, and American Samoa) had an aggregate area of 711,606 square miles. The total area of the Union and the outlying possessions and territories of the United States was 3,738,395 square miles.

The population of the 48 States and the District of Columbia as determined by the Fifteenth Census was 122,775,046 on Apr. 1, 1930. According to the Fourteenth Census it had been 105,710,620 on Jan. 1, 1920. On July 1, 1933, as estimated by the Census Bureau, it was 125,693,000. The population of the outlying possessions and territories (in most cases as enumerated in 1930 but, for the Philippines, according to an estimate of 1929) was 14,233,389. (For the respective populations of States, territories and possessions see the articles on each.)

AGRICULTURE. See AGRICULTURE; AGRICULTURE, U. S. DEPARTMENT OF; sections on *Agriculture* under the various States; and articles on CORN, WHEAT, ETC.

COMMERCE. Domestic trade made a substantial net improvement in the course of the year. The gain was not uniform: until the middle of March trade was depressed by the banking panic; from April through July it surged forward in many lines, by reason of forward buying due to anticipation of depreciated currency and of higher prices to follow; from August through October the establishment of Federal restrictions on manufac-

tures, merchandising, and agriculture, with attendant labor trouble, checked much of the expansion; thereafter, increasing Federal disbursements and prospects of stabilization for the dollar helped support rising prices and heavier transactions in a wide variety of lines, which included some sorts of capital goods.

Foreign trade (summarized in the table below) exceeded the totals for the previous calendar year (1932) as to both exports and imports; but the rise in the value of imports was the greater.

EXPORTS AND IMPORTS BY MONTHS

Months	Exports	
	1933	1932
January	\$120,589,000	\$150,022,000
February	101,515,000	153,972,000
March	108,014,000	154,876,000
April	105,217,000	135,095,000
May	114,203,000	131,899,000
June	119,790,000	114,148,000
July	144,109,000	106,830,000
August	131,473,000	108,599,000
September	160,119,000	132,037,000

ADMINISTRATION

CLOSE OF THE HOOVER TERM. The influence of President Hoover in the nine weeks of 1933 prior to the inauguration of his successor was not dominant in the course of affairs. A Congress chiefly of the party opposed to his paid little attention to his policies and shaped its course largely with a view to the plans of President-elect Roosevelt. Mr. Hoover sent Congress a special message on February 20 recommending anew the ratification by the Senate of the treaty with Canada for a ship route via the St. Lawrence, the passage of the bankruptcy bill and of the Glass banking bill in its general lines, authoriza-

tion to the Reconstruction Finance Corporation to increase loans to States and municipalities to assist the distressed, rejection of the allotment plan for farm relief, abandonment of publicity for the loans made by the Reconstruction Finance Corporation, and consideration of the need to expand the Federal provisions for loans to home owners.

With regard to the nature of the interview of Premier Laval of France with Mr. Hoover in October of 1931 there was published in the daily press of Jan. 13, 1933, a statement from an unnamed source "in close touch" with the President, representing him as having given M. Laval no encouragement of revision or delay regarding the intergovernmental debt owed by France to the United States government. M. Laval controverted this statement by citing the joint Hoover-Laval communiqué that had been issued at the end of the conference of 1931.

Events incidental to the retirement of Mr. Hoover were the resignation on February 23 of Chairman Stone of the Federal Farm Board, an institution of the Hoover Administration which had been marked for extinction, and the deeding by Mr. Hoover to the State of Virginia of the summer camp that had been built for him on the Rapidan River. The evacuation of Nicaragua was completed on January 2 by the withdrawal of the last detachment of Marines. American experts collaborated at Paris, beginning early in January, with a committee to draw up the agenda of the World Economic Conference to be held later in the year.

The financial position of the government at the close of the Hoover Administration showed some further deterioration. The Treasury's deficit for the period of eight months ended February 28 was reported as \$1,360,279,739, exclusive of service of the statutory retirement of debt and of the Treasury's advances to the Reconstruction Finance Corporation. The public debt, reported as totaling \$20,934,729,209 on February 28, had risen about \$1,448,000,000 in the eight months, despite a reduction of \$505,000,000 from estimates, in the disbursements listed as expenditures. The Reconstruction Finance Corporation had outstanding loans of \$838,651,876 on January 6.

Start of Bank Panic. During the last three weeks of the Hoover Administration there developed a nation-wide banking crisis, starting with a run on two great institutions in Detroit (see MICHIGAN); the Governor of Michigan declared a closure of banking under the guise of a succession of legal holidays; runs followed on banks in other States, which in turn closed their banks, until, with the closing of banks by New York State and several others on the morning of March 4 the suspension of banking throughout the country became practically universal. It was reported that Mr. Hoover, in the last days of his term, had drawn up an order to close all banks under Federal authority, similar in tenor to that later issued by President Roosevelt, but had not issued it, failing to reach an agreement on the subject with his successor.

Proclamation of the Twentieth Amendment. The Twentieth Amendment became formally part of the Constitution on February 6 through proclamation issued by Secretary of State Stimson declaring it adopted by the requisite number of State ratifications. Colorado, the 36th State to ratify, sent notice actually received by the De-

partment of State on February 2. The amendment provided that terms of President and Vice President end at noon on January 20 and terms of Senators and Representatives on January 3 of the terminating years; that the regular session of Congress assemble yearly at noon on January 3 unless Congress set another time by statute; that Presidency and Vice Presidency be filled, respectively, by prescribed means in cases of non-qualification, non-election, or death before inauguration.

INAUGURAL DAY CRISIS. The moment of the inauguration of Franklin Delano Roosevelt as President, at noon of March 4, coincided with a virtually complete suspension of banking operations throughout the country, likewise of the organized markets for securities and commodities and the chief foreign facilities for monetary exchange with the dollar. While banks in some localities were permitted to let depositors draw necessary cash in small sums, currency in considerable quantities became suddenly unprocurable, except to depositors in the Postal Savings system. Even Postal Savings Banks were momentarily, in some cases, drained of ready cash by the rush to withdraw. Checks tendered in the ordinary course of payments became useless for deposit and were commonly accepted "for collection" and not as presumptive payment. Fractional coin momentarily disappeared, its holders evidently fearing that if they gave it up to change bills they would find themselves without means to make necessary petty payments. In a number of areas where monetary stringency had developed before March 4, issues of scrip as a substitute for lawful money had appeared. A great part of the gold coin and bullion held against outstanding paper currency had been drawn from the Federal Reserve banks and Assay Office for hoarding, depleting the Federal Reserve system's gold resources. It became immediately and increasingly difficult to conduct many kinds of ordinary trade. The situation was complicated by the transfer of power between Administrations and between Congresses. Great as was the general dismay, the moment favored the adoption of a strong and authoritative tone by the incoming President.

ADMINISTRATION OF FRANKLIN D. ROOSEVELT. President Roosevelt in his inaugural address spoke with great earnestness. He declared that "this was preeminently the time to speak the truth frankly and boldly"; that "we need not shrink from facing the conditions in our country"; that "the only thing we have to fear is fear itself." He charged the plight of the nation to "the rulers of the exchange of mankind's goods" who had "failed through their own stubbornness and incompetence, had admitted their failure and abdicated." He attacked "the practices of unscrupulous money changers in the temple of civilization," characterized as false the idea of "material wealth as the standard of success" and spoke of "conduct in banking and in business which has too often given to a sacred trust the likeness of callous and selfish wrong-doing." He declared that "the nation calls for action, and action now"; that "the primary task is to put people to work," "treating the task as we would treat the emergency of a war"; that "the cost of Federal, State, and local governments must be drastically reduced." He proposed the calling of Congress into immediate special session, supervision of all banking and credits, provision for

an "ample but sound currency." He asked that the people submit "lives and property to discipline because it makes possible a leadership which aims at a larger good," and gave warning that "an unprecedented demand and need for undelayed action may call for temporary departure from the normal balance of public procedure," announcing that he would ask Congress for "broad executive power to wage war against the emergency."

Proclamation of March 5. President Roosevelt proceeded forthwith to take the awaited Federal action with regard to the collapse of banking and the attendant difficulties as to currency. On the night of March 5 (a Sunday) he issued a proclamation invoking emergency powers under a war-time act of 1917 and declared a "bank holiday" (or closure) to continue through March 9, during which banking institutions must not pay out money, nor in any way facilitate export or transfer of gold or silver coin or bullion or of currency; banks were to be allowed to function, however, to such extent as the Secretary of the Treasury might permit through regulations, and he might permit or require the issuance of clearing-house certificates and the receipt of new deposits in special accounts, subject to withdrawal on demand. The effects of the proclamation were, to render the bank closing uniform and universal, with inclusion of the Federal Reserve banks and Territorial banks; to enable banks to meet inter-bank debts with clearing-house certificates; to stop outward shipments of gold. The Postal Savings Banks alone continued to do business. The proclamation was extended on March 9, to remain in effect until further notice. The law of 1917, invoked in the original proclamation, had meanwhile been re-enacted by Congress, which had been convened.

Call for Special Session. The President issued on March 5 another proclamation, which called Congress to meet in special session on March 9, on the exceptionally short notice of four days. Actually the call had been expected for some time and the members who held over from the Seventy-Second Congress had generally remained in the capital, while new members had come on.

Membership of the Roosevelt Cabinet. The Cabinet, as confirmed by special Senate session on the afternoon of March 4, was composed of Cordell Hull, as Secretary of State; William H. Woodin, Secretary of the Treasury; George H. Dern, Secretary of War; Homer S. Cummings, Attorney General; James A. Farley, Postmaster General; Claude A. Swanson, Secretary of the Navy; Harold C. Ickes, Secretary of the Interior; Henry A. Wallace, Secretary of Agriculture; Daniel C. Roper, Secretary of Commerce; and Miss Frances Perkins, Secretary of Labor. Miss Perkins was the first woman to take a position in the Cabinet. Hull and Swanson had been drawn from the Senate, where they would otherwise have held important places during the balances of their terms in seats from Tennessee and Virginia respectively. Walsh of Montana, who had died suddenly shortly before the inauguration, was to have become Attorney General, and Cummings, former chairman of the Democratic National Committee, hailing from Connecticut, was picked in Walsh's stead at the last moment. Farley had managed the Roosevelt campaign. Woodin, a New Yorker and corporation head with experience in Federal Reserve affairs, had the confidence of financial groups.

Executive Solution of Banking Crisis. The taking of measures to enable banking to resume was necessarily, from the instant need of the situation, almost wholly a matter of executive action. The duty of shaping the details to this end fell upon Secretary Woodin. The situation was four-fold, in that the functioning of credit and the resumption of payments of the larger sort depended on the reopening of the banks; that these had before closing paid out so much of their available currency as to render it exceedingly difficult for them to resume with safety; that a large part of the monetary stock of gold in the financial institutions had been taken out by private parties and put in hiding; and that the supply of essential food commodities, such as meats and vegetables, threatened to run short unless banking facilities were promptly extended. Special provisions for the carrying on of these food transactions were made after a few days. The Secretary of the Treasury issued on March 6 and 7 regulations permitting banks to make change and honor small withdrawals for personal necessity and the like, and allowing the issuance of "clearing-house scrip" so-called, i.e. paper originated and secured in the same manner as clearing-house certificates, but payable to depositors as well as to banks' other creditors. It seemed for a moment that the country would witness great issues of this substitute for statutory currency, and a huge amount of the scrip was actually printed for the New York Clearing House, in particular. But the scrip plan was abandoned within a few days, in favor of new statutory currency to be based on banking assets, as provided by legislation hurried through Congress on March 9, to help banks to reopen (see under *Seventy-Third Congress*, below). Secretary Woodin directed the framing of the necessary statute.

With regard to the flow of gold, steps were taken to influence those who had obtained monetary gold to put it back in the banks. One of these steps was the invocation of the old statute against hoarding, in the President's proclamation of the 5th. This was followed by an order of the Federal Reserve Board on March 8, reportedly at the President's direction, that Federal Reserve and member banks report the names of all withdrawers of gold subsequent to February 1. The combined effect of these moves and of the embargo on gold exports, aided by agitation against holders of gold in popular quarters, was to produce within a few days a return rush of the metal to the Federal Reserve banks. It was estimated that by the 14th as much as \$300,000,000 of gold had been returned; an amount sufficient to back some \$750,000,000 of Federal Reserve notes. Great sums in paper currency were also re-deposited in banks.

Reopening of Banks. Under the act of March 9 it became the duty of the President and, in effect, of the Secretary of the Treasury, to fix the restrictions under which member banks in the Federal Reserve system might reopen for business, and the duty of the Controller of the Currency to put unsound National banks under a newly created type of officers called conservators. There thus devolved on the Treasury a heavy duty of issuing regulations to set the conditions of reopening and (as to National banks) to determine which banks met these conditions. As to State banks in the Federal Reserve system, the details of reopening were left to State banking depart-

ments in great part. The thousands of banks, chiefly small, outside the Federal Reserve system were left to be reopened by the respective State governments under which they were chartered. Licensed banks reopened in the cities having Federal Reserve banks on March 13 and elsewhere shortly thereafter. Thus the period of general and compulsory suspension of banking under Federal authority lasted about 10 days. By March 23, although reopenings were neither immediate in all cases nor universal, about 4 out of 5 of the member banks of the Federal Reserve system were doing unrestricted business.

Continuing Monetary and Gold Problems. While banking had thus been put on its feet again this had been effected at cost of further troubles. The desire to prevent a new exhaustion of the banks' currency led to the enactment of provisions for currency inflation at the President's discretion (see *Seventy-Third Congress*, below) and to the suspension of gold payments. In consequence the dollar depreciated in foreign exchange, while the whole subject of reducing the gold value of the dollar and of thereby raising prices to the desired levels became a matter of agitation among the inflationists. The course was definitely set away from the old gold standard, of which the restoration became as time passed increasingly difficult and unlikely. The immediate effect of the gold embargo and of measures to compel the return of gold from private possession was a movement away from the possession of paper dollars. This took the form of a violent and sustained rise in the prices of shares and active commodities. The rise in these prices in its turn further accentuated the demand for inflation as the effectual means for driving prices up to the points at which they had ruled in prosperous times before the panic of 1929.

Compulsory Return of Gold. Title I, Section 3 of the Emergency Banking Act of March 9 authorized the Secretary of the Treasury, when he deemed it necessary for the protection of the currency system, to order possessors to give up gold coin, bullion, and certificates, against other United States money. No formal order was issued until April 5, when the President, in virtue of the act of Oct. 6, 1917, required all persons holding gold, with minor exceptions, or gold certificates to deliver their holdings to the Federal Reserve system, by May 1, under penalty of \$10,000 fine, 10 years' imprisonment, or both. The ultimate date was extended at successive times during the year. No suits were brought until September, and the number of listed possessors was gradually whittled down. Ex-Senator Thomas of Colorado held out \$120 in gold and, on May 3, publicly challenged the government to prosecute him, but the challenge was not accepted.

Treatment of Gold Obligations. The Treasury did not make payments in gold money upon the public debt subsequently to March 4. In effect, therefore, the government failed to perform an obligation to which it had subscribed on all its outstanding bond issues. Domestic debtors upon obligations carrying a gold clause followed suit, as did the greater part of foreign debtors. Despite the cessation of gold payments according to bond stipulation, the Treasury placed on March 15, and subsequently, new issues bearing the gold clause. No contest was made to compel gold payments on Federal obligations. On June 5 a measure of Congress abolishing all gold clauses in debt contracts became a law, and thereafter

Treasury obligations were issued without bearing such a clause. Domestic gold mines were unable to get the world price for their gold, however, and were obliged for some months to turn their product in to the Federal agencies at the old monetary price of \$20.67 an ounce. In July and August they were permitted by successive Treasury regulations to export ores, concentrates, and amalgams; and by executive order of August 29 the President authorized the Treasury to take domestic new-mined gold on consignment for sale abroad and pay the equivalent in domestic currency, as determined by prevailing rates of exchange. Finally, by executive order of October 25, the Reconstruction Finance Corporation was authorized to buy such gold at a price fixed from time to time; and the Corporation, acting through the Federal Reserve Bank of New York, began on November 2 to buy gold in foreign markets as well, thus purposely depressing the dollar in terms of other currencies.

Sectional demand for the monetization of silver was organized in the course of the autumn, with a view to swaying Congress in January, 1934. The President made a welcome concession on December 21 to this demand by ordering the purchase, yearly, of 24,241,410 ounces of silver newly mined in domestic mines; the old statutory price of \$1.29 an ounce was to be paid, but only ostensibly, for with every ounce for which the government paid, another ounce was to be delivered free, as seigniorage for the coining of standard silver dollars to pay for the bullion. Even so, the payment, in effect, of 64½ cents an ounce for a year's output of domestic silver was a far higher market than the producers could otherwise find.

Policies of the President. President Roosevelt was able by reason of the strength of his popular support and of the gravity of the crisis at the outset of his administration to dominate and greatly to hasten the work of Congress. He rendered his grip the stronger by delaying to make great numbers of the routine Federal appointments, thus holding back the grant of the patronage on which members of Congress relied to keep their influence in their constituencies. While he addressed the general public on a number of occasions by radio, he avoided committing himself to particular groups on the details of possible future policies as to which he sought to keep liberty of action. He brought together, on the other hand, a group of intimate councilors, mainly gathered from university faculties, who were little known to the public and had had no political careers. This group, known to the press as the "Brain Trust," had among its members Raymond C. Moley, who served for a time as Assistant Secretary of State, and Dr. Rexford G. Tugwell. The trend of this group was generally recognized as favorable to the establishment of a controlled economic régime, as opposed to free play for economic influences. Dr. Moley took a strenuous part in the Economic Conference at London (June-July) by going to London as the President's personal representative at the time when Mr. Roosevelt rejected proposals, to which Secretary of State Hull was favorable, for the international stabilization of the dollar. After the adjournment of the conference, he left Washington, in August, to direct a new weekly periodical.

The President virtually initiated in Congress a great part of the legislation of the special session. He recommended the following measures,

Acme

WHEN THE PRESIDENT SIGNED THE RECOVERY ACT

June 16, 1933

Standing behind the President are (left to right), Senators Robinson and Wagner, Congressmen Doughton, Ragon, Hill, and McIntire

Acme

THE PRESIDENT SIGNING THE BEER BILL

Mar. 22, 1933

each in one of a series of messages, delivered at the date specified: emergency banking relief, March 9; Federal economies, March 10; legalization of light beer, March 13; relief of unemployment, March 21; agricultural relief, March 27; regulation of sales of security issues, March 29; relief for mortgages on homes, April 3; development in the Tennessee River valley, April 10; relief of the railroads, May 4; general industrial recovery, May 17. Bills drawn with the aid of the Administration were in each case introduced simultaneously with the messages recommending them. In the earlier instances the President was usually able to obtain for them prompt passage, but celerity to follow his lead diminished later in the session, as the fright of March gave way to a sense of returning security, and some of the later measures were much debated, amended and delayed. All, however, were passed, and only two measures of prime import were sent the President for his signature, outside of those that he had promoted.

In the purely Executive field, the President made early and vigorous use of the Economy Act, reducing about 1,500,000 pensions and other benefits to veterans by a total of some \$400,000,000 a year; merging the Farm Board, Farm Loan Board, and other farm-aiding agencies into the newly formed Farm Credit Administration, for which Henry Morgenthau, Jr., was named governor; reducing Federal employees' pay by an executive order of March 28, to effect saving to the total of some \$125,000,000 a year through a 15-per-cent cut; and eliminating or consolidating many bureaus in the Departments, thus retiring employees in great number. During the summer, reviews of individual cases affected by the reduced benefits to veterans were instituted, under regional boards, the tendency being to restore a part of the total that had been cut from these allowances.

The policy with regard to exterior economic relations was less consistently developed. In advance of the London Economic Conference, which met in June, the Administration agreed to a so-called tariff truce whereby governments were to refrain from raising their tariffs during the Conference. This agreement, made early in May, conformed with an anticipation that the President would seek close economic cooperation at the Conference. At the outset of the Conference itself, other governments' delegates immediately made the demand, which had been foreseen, that the United States take steps to check the decline and violent fluctuations of the dollar in foreign exchange; although Mr. Roosevelt, after a conference with Premier Herriot of France at Washington on April 26, had issued with the latter a joint statement on April 26 containing the phrase, "At no moment has understanding been more necessary between France and the United States for . . . the restoration of stable monetary conditions," Mr. Roosevelt in a public statement addressed to London on July 3 attacked nations seeking dollar stabilization and vetoed any immediate stabilization of the dollar, thus bringing to a stop the efforts of the Conference, which was adjourned.

From the latter part of June well into the autumn the most conspicuous activity of the Administration was the drawing of codes to govern industrial and commercial groups, under provisions of the National Industrial Recovery Act. (NIRA). The President left this work to the

special organization created for the purpose by the act, but intervened occasionally, as in the case of the soft-coal industry, to press industrial interests to meet the Federal demands. After Labor Day there developed dissatisfaction in some quarters with the working of the act; first, on the ground that in adding to the costs of industrial production and marketing it nullified advantages for which agriculture had hoped from the Farm Relief Act; second, because of difficulty encountered in persuading consumers to buy extensively enough to make producers working under the industrial codes cover their higher costs. These difficulties intensified the agitation for immediate inflation of the currency. During September the President adopted the policy of promoting more rapid Federal expenditure and lending in divers directions outside of the regular budget and of pressing the commercial banks to lend more liberally, with a view to putting more money into active use without resort to great new monetary issues.

President Roosevelt employed, in his series of informal talks to the nation over the radio, a powerful means of cultivating popular support. The first of these talks, delivered on March 12, reviewed the banking situation, stated the purposes of the general closure and of the steps for reopening, promised the greatest possible salvage of deposits, explained the need for delay in reopening in some cases, defended the new money to be issued as "not fiat currency" and as "issued only on sound security," attacked hoarding as an "exceedingly unfashionable pastime," and solicited universal popular confidence in the banking policy and support for it. The radio talk of May 7 dealt with legislation up to that time and particularly with departure from the gold standard. "Behind government bonds," said the President, "there is only a promise to pay; behind government currency we have in addition . . . a reserve of gold"; if all holders of debts or currency sought payment in gold at once "24 people out of 25 would be politely told there was no more gold left. . . . We have decided to treat all the 25 people in the same way." The President declared it his objective to "raise commodity prices to such an extent that those who had borrowed money will on the average be able to repay in the same kind of dollar that they borrowed." The talk of July 24 represented the National Industrial Recovery Act as intended to produce "lasting prosperity; . . . we cannot attain that in a nation half boom and half broke." To overcome "the two great obstacles to a normal prosperity . . . low farm prices and the creeping paralysis of unemployment" the President proposed "democratic self-discipline in industry . . . a general increase in wages and shortening of hours," through the National Industrial Recovery Act, providing thus for the industrial workers.

Opposition to President's Course. In the special session of Congress opposition to the policies of President Roosevelt was remarkably slight, being limited to a few spokesmen of the regular Republican minority and to a few declarations of conflicting opinion on particular matters, such as that of Senator Glass. In the autumn, however, opposition developed in several quarters. Senator Thomas of Oklahoma brought together in conference in October advocates of silver inflation, from the silver-mining States, and of greenback inflation, from agricultural States in

which debts and lack of income were most oppressive; the move launched an effort to organize an influential group to compel Federal resort to monetary inflation, a step that the President had steadily avoided. The failure of prices for commodities to continue the swift rise that culminated in the slump of late July in the chief markets, the agricultural resentment at the greater advance conceived to have been made under the National Industrial Recovery Act by the non-agricultural industries, and the failure of business activity in general to make a sweeping, rapid increase after Labor Day coincided to open the way to agitation for more radical measures than the Administration had employed.

President Roosevelt in an address by radio on October 22 said: "I have been amazed by the extraordinary degree of coöperation given to the government by the cotton farmers in the South, the wheat farmers in the West, the tobacco farmers of the Southeast, and I am confident the corn-hog farmers of the Middle West will come through in the same magnificent fashion." Nevertheless Governor Langer of North Dakota proclaimed an embargo (October 16) on the removal of wheat from the State, the Carolinas joined in an embargo on the sale of tobacco in September, and the Governors of Iowa, Wisconsin, Minnesota, North Dakota, and South Dakota went to Mr. Roosevelt in a body on November 3 with a demand that he fix minimum prices for agricultural products and pay off the entire Fourth Liberty Loan with a new currency issue, as Senator Norris had previously urged.

Upon Mr. Roosevelt's rejecting these demands the National Farm Holiday Association called a general farm strike which led, particularly in Iowa, to the destruction of railroad bridges and the seizure of meat animals in transit. Secretary of Agriculture Wallace sought to overcome the farmers' hostility by a vigorous speech at Des Moines on November 11 in defense of the Administration's agricultural policy. The Administration proposed to lend farmers 50 cents a bushel on their holdings of corn and outlined a scheme whereby the processors of wheat were to be induced to unite to pay such a price for it as, with the processing tax, should bring the farmer's return to \$1.01 a bushel. The Administration had already made heavy purchases of wheat and other farm commodities to be used in the dispensation of Federal aid to the destitute. It further sought to maintain the packers' price for swine by the threat to place a heavier processing tax on swine if the packers' price were lowered.

Opposition to the Administration developed in other quarters. The National Recovery Administration sought without success to make Henry Ford subscribe to the Industrial Code for manufacturers of automobiles. He refused, and in consequence the Ford Motor Company was excluded from bidding for a large Federal order for automobiles in October. Ford later agreed to make the reports on employment in his factories, without signing the Code. His Company's status as a bidder in public contracts was still in dispute in December.

The Chamber of Commerce of the State of New York passed resolutions on November 3 in favor of immediate return to a fixed basis of gold for the currency. This demand, which found much conservative support, amounted to asking the abandonment of the Administration's policy of depressing the value of the dollar in foreign ex-

change. This policy had been intensified, by resort to the Federal purchase, at prices above foreign gold parity, of gold from domestic mines, on October 26, and by the commencement of the purchase of gold abroad, through the Federal Reserve system, on October 30, whereby the currency was depreciated farther and rapidly within 10 days to about five-eighths of its old gold value, with accompanying but not corresponding rises in active prices, except for bonds, Federal and other, which declined substantially. At this point President Roosevelt parted with Secretary of the Treasury Woodin, granting him, explicitly for reasons of health, an indefinite leave of absence. As Woodin was reputed a conservative in finance, and as his Under-Secretary of the Treasury, Dean G. Acheson, simultaneously resigned, while Henry Morgenthau, Jr., a close adherent of the Roosevelt policies, was made Acting Secretary, the markets inferred a likelihood of radical monetary measures; the dollar suffered violent unsettlement in foreign exchange, which was checked by tightening the enforcement of restrictions on foreign-exchange dealings, November 17. Woodin resigned definitely on December 13, on the ground of ill-health.

Professor Oliver M. W. Sprague, who had left a similar post with the British government to become financial adviser to the United States Treasury, resigned at the same time that the above changes were made in November; his withdrawal was divulged in his open letter to the President, made public on November 22, in which he condemned the policy of gold purchase as likely to impair the Federal credit, and as insufficient in itself to restore business activity. Ex-Governor Alfred E. Smith of New York, in a letter to the Chamber of Commerce of the State of New York, released on the 24th, declared his belief in the need to return to the gold standard and to cease monetary experimentation. Bernard M. Baruch, in an article in *The Saturday Evening Post*, likewise warned of risks in the Administration's policy. The United States Chamber of Commerce demanded prompt return to gold, and the Federal Reserve Advisory Board issued a warning on the same subject. Thus was formed a body of opinion outside the Administration, the first to offer concerted conservative opposition to its courses.

REPEAL OF 18TH AMENDMENT. A proclamation issued on December 5 by William Phillips, Acting Secretary of State, terminated the Eighteenth Amendment to the Federal Constitution, the basis of the system of Federal prohibition of alcoholic beverages, by certifying the superseding amendment to have been adopted by conventions in 36 States. The repealer, which had been submitted to the States by Congress exactly a year before, by joint resolution of Dec. 5, 1932, thus became the Twenty-first Amendment. See **PROHIBITION; REFERENDUM.**

THE TREASURY. William H. Woodin of New York, who became Secretary of the Treasury on March 4, performed immediately and with great success the task of improvising a plan for reopening the banks of the country. He eliminated the proposal to create a system of banking scrip analogous to clearing-house certificates and designed to supplement the shortage of currency caused by the banking panic. In its place he framed the provision, promptly enacted in the Banking Act of March 9, authorizing the issue of Federal Reserve Bank notes secured by banks'

holdings of notes, drafts, bills of exchange, and bankers' acceptances at 90 per cent of face. Only moderate use of this form of asset currency was required, as money flowed back promptly into deposits after March 12.

Surrender of Gold. The Treasury issued licenses up to the early part of May, for the exportation of gold, but only in particular and restricted cases. The Secretary of the Treasury issued repeated regulations and warnings that hoarded gold be surrendered to the Federal Reserve Banks. However, the listed hoarders, whose names had been obtained by compelling persons who drew gold from the Federal Reserve Banks prior to March 6 to give their names, were not molested with actual prosecutions until the end of September. The issue was finally forced, not by the government, but by Frederick B. Campbell, a New York lawyer; he sued for an order against the Chase National Bank, as custodian of a sum in gold belonging to him, to compel the bank to deliver the gold. This occasioned his prosecution by the government as a hoarder, and other prosecutions were reported to have been started soon after. (See *Judiciary* for events in this litigation).

Deficit. The fiscal year closed on June 30 showing a reported deficit of \$1,775,000,000, approximately, on the year's operations. This was ostensibly about \$1,000,000,000 less than the deficit for the fiscal year 1932. The difference was in part due to the administrative economies effected in late 1932 and early 1933; in part also to new taxes imposed in 1932 and early in 1933. The Federal tax on beer and wine, imposed in connection with the legalization of alcoholic drinks of the potency of 3.2 per cent, was reported to have brought in \$9,139,687 for May, the first full month of its collection. However, while ordinary expenditure for fiscal 1933 was reported to have totaled some \$3,330,000,000, or less by fully \$1,000,000,000 than that for the year before, the public debt had risen in the course of the 12 months by \$3,044,000,000 to \$22,530,000,000 at the end of June, 1933. The excess of the rise in debt over the Treasury's deficit was due to disbursements of the Treasury not reckoned as expenditure. These were essentially for loans and the purchase of securities in aid of semi-governmental agencies through which the Federal money was dispensed for economic rescue work in one direction or another; largely, they were for the purchase of the securities of the Emergency Relief Corporation. The outpouring of Federal funds for the numerous drives toward relieving need and rousing economic activity was much intensified toward the end of the calendar year. In consequence the expenditures for the six months ended on December 31 created a deficit of \$1,152,972,595, for that period, which included a host of extraordinary disbursements; owing to these, the public debt at the end of December, 1933, was \$23,813,790,000, or about \$1,283,000,000 above that on June 30.

Bond Issues. The Treasury made large issues of public debt notes at intervals of a few weeks. These were well taken, up to October. Even an issue of \$800,000,000 of short-term certificates offered for subscription prior to March 15, and while the banks of the country were still closed, was heavily oversubscribed. It was possible in the refunding of June 15 to put out \$1,000,000,000 in 5-year notes bearing only 2½ per cent, with part of which some of the excessively high

total of short-term debt was retired. In October the Treasury proceeded to a move long contemplated, by calling \$1,000,000,000 of the Fourth Liberty Bond issue for retirement at the April interest date, offering in their place the choice of cash or new bonds, callable in 10 years, maturing in 12 and bearing 4¼ per cent for the initial year and 3¼ thereafter. A part of the latter issue, \$500,000,000 offered for cash subscription, was quickly taken, and over \$800,000,000 of the called bonds were presented for exchange within three weeks. Then, however, sentiment was disturbed by the Administration's action in forcing the dollar down in foreign exchange by the purchase of foreign gold. It thus happened that early in November the new bonds were driven below the level at which exchanging the called bonds for them offered an incentive, and the exchange of bonds was halted, leaving about \$1,000,000,000 of the Fourth Liberties to be redeemed within a few months by other means.

Reconstruction Finance Corporation. The Corporation remained closely affiliated with the Treasury, drawing on the latter, against its own securities, for the assistance that it dispensed. Apart from other disbursements, the outstanding loans of the Corporation, as of December 31, stood at \$1,718,596,267, as compared with \$1,298,267,741 for January 28. In addition the Corporation had dispensed money outright for the United States in the purchase of preferred stock and notes of National and other banks needing new capital and in the allotment of money for aid to the destitute, State by State, gold purchases, etc., and had granted over \$1,000,000,000 in loans not yet disbursed. The Corporation, which had set out to be a body initiating its own credit activities in large measure, within bounds set by law, tended during the year to become more and more the paymaster for a considerable number of governmental or governmentally affiliated bodies in which was vested the prosecution of divers measures of Federal origin designed to promote a "managed" economic recovery.

NEW ADMINISTRATIVE MECHANISMS. The chief of these new mechanisms were: the National Recovery Administration, having at its head Hugh S. Johnson, and charged with the work of putting the industries of the country (agriculture and railroads excepted) under Federal discipline through subjection to a system of Federal codes, group by group, and of Federal licenses; the Agricultural Adjustment Administration, headed by George N. Peek, conducting the work of restricting acreage or production of the principal agricultural commodities; the Emergency Relief Administration, headed by Harry L. Hopkins, dispensing Federal money among the States in contribution to their efforts to support the destitute and, later, undertaking the direct dispensation of supplies therefor, and the full direction of relief where a State had failed to provide adequately for its own poor; the Public Works Administration, directed by Secretary of the Interior Ickes, allotting Federal money, part in loans, part in grants, to a total of \$3,300,000,000, to be spent for the construction of public works, Federal and other, intended to provide employment to the idle; the Civilian Conservation Corps, directed by Robert Fechner, maintaining a great body of needy young men under a system of 6-month enlistments, at work in the National forests and similar places of occupation; the Tennessee Valley Power Authority

(A. E. Morgan, chairman of the Board), directing the further development of the Tennessee Valley as well as the operation of the Federal hydroelectric plant at Muscle Shoals. These chief bodies were aided or supplemented by a number of others such as the Farm Credit Administration, Federal Oil Administration, Surplus Relief Corporation, and Industrial Recovery Adjustment Board. The Federal financing of farm mortgage loans was left in the hands of the existing system of Federal land banks, the government guaranteeing interest on bonds to be issued by the banks to provide the necessary funds, but not creating any special means by which the bonds could be floated if not acceptable to private investors. The rehabilitation of home mortgages under the Home Owners' Loan Act of 1933 was promoted by the creation of the Home Owners' Loan Corporation, empowered to sell \$200,000,000 of its capital stock to the Federal Treasury and to issue \$2,000,000,000 of bonds bearing Federal guarantee of interest; but no provision was made for the Federal agencies to take these bonds if private markets failed. The railroads were left without further specific agency for financial aid, but were placed under the special supervision of a Federal Coordinator of Transportation, Joseph B. Eastman, whose power over companies in debt to the Reconstruction Finance Corporation or seeking to borrow from government agencies was in practice more than supervisory.

Control of Industries. The National Recovery Administration began to operate late in July. It conducted an intense drive to bring the manufactures, mines, carriers, utilities, and merchants of the country, group by group according to lines of business, under Federal regulation as subscribers to collective codes approved by the Administration. Popular appeal was generated at the outset by calling upon firms to display the Blue Eagle, an emblem awarded for conformity with preliminary Federal requirements, as to increasing employment, by organizing parades in the cities, and by circulating for popular signature pledges to patronize firms showing the Blue Eagle. The right to show the emblem was given at the outset to firms expressing intention to conform in a general way with the Federal requirements as to limiting employees' working time and paying higher wages for the unit of time of actual work. No actual invocation was made officially that the public avoid patronizing firms that did not comply. The negotiation of actual codes by industries was carried on in August and thereafter. It was found necessary to apply widely different standards as to pay and hours in different industries. The chief difficulty in major industries, however, arose over the issue of recognition for labor unions and over a great number of strikes occasioned by the desire of organized labor to improve its position at the outset of Federal regulation of industry as far as possible. Efforts were made to frame an official interpretation of the collective-bargaining clause of the Industrial Recovery Act that both labor organizations and groups of employers would accept; but President Roosevelt was reported to have directed on September 15 that no interpretation be made at that time. Previously the steel industry had agreed to a code without specific provisions as to the company union, and the automobile industry to a code without definitive formulation of policy as to the open shop.

An effort was made by Administrator Johnson

in September to impel Henry Ford to subscribe to the latter code. The Ford Motor Company announced on September 5 a plan for increasing wages and prepared late in October to submit a report on wages and hours of labor, which the Administrator had required of firms in the industry. The Ford concern, however, did not sign the code, and was excluded as a bidder for a Federal purchase of automobiles; but Comptroller General McCarl ruled to the contrary, November 11, that the Ford bid must be permitted.

Regulation of Petroleum. The task of regulating production and prices in the petroleum industry was vested in a separate authority, the Oil Administrator; Secretary of the Interior Ickes was appointed to the post. He allotted quotas of allowable production *per diem* to the several States, month by month. On October 16, by further extension of his authority he set a minimum price of \$1.11 a barrel for sales of petroleum, with differentials based on grade and region, subject to hearings later held.

Agricultural Adjustment. The agricultural act of May 12 led to the creation of an Agricultural Adjustment Administration, headed by George N. Peek. This body was active in reducing the acreage planted to cotton and preparing processing taxes upon cotton, wheat, and swine, from which to make payments to the farm producer with a view to bringing the farm price up to the desired level. No effort was made to reduce the year's planted acreage of wheat or Indian corn, and indeed an exceptionally bad season kept the corn crop from attaining unusual volume and cut the quantity of the wheat crop to the lowest for many years. A reduction of one-fourth in the acreage planted to cotton, on the contrary, was undertaken at the end of June, when the plant was already in growth. Lands planted to cotton were leased from the individual farmer for the year on condition that the cotton plants upon them be destroyed. A tax of 4 cents a pound was imposed on manufacturers processing cotton, in order to provide the money to be paid the growers for the lease of land. A similar processing tax on wheat, at 30 cents a bushel, went into effect on July 9. Preparations were made in August to reduce the wheat acreage by 15 per cent for 1934. Peek, reportedly in conflict with Secretary of Agriculture Wallace over policies, was transferred to a post in the Department of State on December 11, to promote agricultural exports and was replaced by Chester Davis.

A heavy slump in the market prices of the chief farm commodities late in July wiped out much of the gain that they had made after February. There developed acute dissatisfaction with the Federal measures for farm relief. It became necessary for the Administration to devise further measures. Quantities of swine were bought and slaughtered, particularly sows and young, with a view to reducing the future supply. The government undertook to make loans on corn, wheat, and cotton at practically the full farm price.

Public Works. The Administration's programme for wholesale promotion of public works and other projects of construction was authorized in Title Two of the National Industrial Recovery Act. Secretary of the Interior Ickes was made the head of the Public Works Administration, a body formed to do the work of allotting the \$3,300,000,000 provided by the law for dispensation on projects, in loans and, up to 30 per

cent of the amount supplied, where the President should so decide, in outright grants. The new body became active late in June. Before the end of October it had allocated more than \$2,000,000,000. The disposal of the money was chiefly as follows: Federal aid to highway projects, \$400,000; Civilian Conservation Corps, \$301,037,315; naval construction, \$238,000,000; Tennessee Valley Authority, \$50,000,000; Boulder Dam (the appellation "Hoover Dam" had been dropped), \$38,000,000; Federal public buildings, \$39,094,360; Coast Guard, \$24,833,535; flood control in the Mississippi Basin, \$96,928,108; Army housing, \$57,797,770; river and harbor work, \$98,699,700; coast defenses, \$20,250,000; also, for the Triborough Bridge at New York City, \$44,200,000; Midtown vehicular tunnel under the North River, between New York City and New Jersey, \$37,500,000; forest highways, \$15,000,000; forest roads and trails, \$10,000,000; control of erosion of soil, \$5,000,000; hydroelectric station at Grand Coulee in the Columbia River basin, \$63,000,000; the Caspar-Alcova project in Wyoming, \$22,700,000; Public Health Service, \$39,094,360; naval stations on shore, \$23,602,652; construction of low-cost housing in a number of cities by divers enterprises, \$37,239,958; hospitals and other works of the Navy Department, \$30,118,024; construction for the Department of Commerce, \$8,870,934. Of these chief allotments, capital outlays for the use of the Federal government itself constituted some \$1,070,000,000; capital projects for public use, such as the government would normally have financed out of its own budget, \$136,000,000 or so more; and the works of private enterprises, States, or local governmental bodies, about \$620,000,000, road aid included. In a sense, therefore, the programme mainly amplified normal lines of Federal outlay and lifted them out of the budget. This was conspicuously the case with regard to naval construction and housing for the Army. At the end of the year it appeared that loans to other than Federal borrowers had increased to something like half of the total allotted.

Comparatively little of the money had been expended by the end of the calendar year. The same trouble developed that had delayed the Hoover Administration's plans for public works: the preparation and scrutiny of plans had to be effected before the physical work could start. Much of the effort of Administrator Ickes was expended on urging speed in bringing non-Federal projects forward. Notification was given on September 5 that non-Federal recipients of allotments must start work in 30 days or be regarded as having given ground for the withdrawal of their allocations of Federal money.

In order to hasten the dispensation of money by the Public Works Administration, a subsidiary Civil Works Administration was started in the autumn. The conception of public works was stretched to cover a great variety of "made" employment: artists were set to painting and actors were engaged to give free performances of plays. Reports put the number of persons on the Civil Works payrolls in December as high as 4,000,000. See WELFARE WORK.

FOREIGN AFFAIRS. The most conspicuous event in foreign relations was the message that President Roosevelt sent the International Economic Conference at London on July 3, disapproving the efforts under way toward monetary stability in the international sense, which it had been

thought that the United States would support. The message had the effect of preventing the main purposes of the Conference, which took an indefinite recess after futile efforts to proceed; also, the effect of heightening the instability of the market in foreign exchange, and thus impeding commitments in international trade. On May 12, as a preliminary to the Economic Conference, the United States joined other chief participants in an agreement for a tariff truce from which parties might withdraw only after July 31 and after one month's notice. Several of the parties later withdrew. An international wheat agreement was signed at London on August 25, in which the United States and the other chief wheat-growing nations participated; the United States was bound thereby to limit exports of wheat for the two ensuing crop years in accordance with a general plan. See ECONOMIC CONFERENCE, WORLD.

A delegation headed by Norman H. Davis was sent in May to the Disarmament Conference at Geneva and set forth proposals that included consultation with other powers in the event of a threat to peace and, in the event of concurrence with a judgment that a State had broken the peace, abstention of the United States from opposition to any collective effort against the violator. The conference was later frustrated by the withdrawal of Germany. See DISARMAMENT.

Negotiation with Union of Soviet Socialist Republics. After preliminaries in October, Maxim Litvinoff came to the United States to negotiate for the recognition of the Soviet government by the United States. He was received at the White House on November 7. Recognition was accorded the Soviet government on November 16, without a debt settlement. See UNION OF SOVIET SOCIALIST REPUBLICS.

War Debts. Great Britain made a "token" payment of \$10,000,000 on the installment of inter-governmental debt due the Treasury on June 15; Italy paid \$1,000,000; the sums were but small parts of the full installments. They were paid in silver at 50 cents an ounce, in accordance with permissive legislation passed by Congress. France did not pay, but proposed on May 12 to seek legislative authority to pay an installment of 15 per cent, provided that the United States would agree to a moratorium for the period of the Economic Conference. The proposal was not accepted, and a note critical of French failure to pay either in June or in the previous December was dispatched and later published (June 17). Great Britain sent a delegation to Washington in October to negotiate for a new settlement of her debt. The negotiation failed, but a proposal of Great Britain to make another token payment, this time for \$7,500,000, on December 15 was accepted. See REPARATIONS AND WAR DEBTS.

Latin-American Affairs. By an executive agreement with Haiti, signed at Port au Prince on August 7, the United States undertook to turn over the command of the Garde d'Haiti by Oct. 1, 1934, to Haitian officers and to limit, from Jan. 1, 1934, American control over the Haitian finances; the Marine Brigade, and the American Scientific Mission were to be withdrawn in October, 1934.

At Montevideo, Uruguay, in December, Secretary of State Hull declared to the Pan-American Conference that it was not the intention of the United States to intervene in any of the New-World nations; the United States signed a treaty

CONGRESS

to provide equal rights of nationality for women. See PAN AMERICAN CONFERENCE.

The series of revolutionary disorders in Cuba that started with the overthrow of President Machado at the beginning of August brought to Washington protests from Great Britain and Spain on account of violence to their nationals and the latter's property. Sumner Welles, who had been appointed Ambassador to Cuba on April 21, had attempted mediation between the Cuban parties immediately before Machado's downfall. He sought thereafter to moderate the excesses of civil war. United States warships were sent to Cuba in September, but no armed landing for purposes of intervention was made. After the fall of Machado's immediate successor, Cespedes, Welles became unwelcome to the administration set up by Grau and was withdrawn from Cuba late in November. See CUBA.

WAR DEPARTMENT. There was assigned to the War Department on April 10 the task of receiving the certified recruits to the newly created Civilian Conservation Corps, preparing, organizing, and equipping them, and taking complete and permanent control of them except for the supervision of their technical work in the forests. Regular Army officers, supplemented by some Reserve, Navy, and Marine officers, administered 1450 camps of the Civilian Conservation Corps. It was reported that 300,000 men had been entered in this corps, mobilized, and brought to the sites of projects for conservation work by July 1.

The Federal authorizations for the maintenance of the military establishment during the fiscal year 1933-34 were severely reduced by budgetary cuts made in March. It was then estimated that it would be necessary to retire from 3000 to 4000 Regular officers, discharge from 12,000 to 15,000 Regular enlisted men, eliminate National Guard drill training, drop most of the army's civil technicians, and limit procurement of supplies to food and clothing. The needs of the Civilian Conservation Corps, however, provided duty for thousands of officers and enlisted men who would otherwise have had to go. Citizens' Military Training Camps were held on a limited scale in August.

NAVY. The patrol maintained by the Navy on the Yangtse River in China was actively employed during the year in protecting merchant vessels navigating the river, from attack by parties dominating some parts of the river in the disturbed period of Chinese affairs. All remaining Naval forces were withdrawn from Nicaragua on January 2. The Naval force in Haiti, numbering 948 on June 30, had no disturbances in that country to occupy it during the year. A considerable Naval force was rushed to Cuban waters upon the overthrow (September 5) of President de Cespedes, but did not make a military landing on the island. The Naval airship *Akron* was destroyed, while in flight, on April 4, in a thunderstorm off the New Jersey coast, with a loss of 73 lives, only two of her company being saved.

Under the terms of the National Industrial-Recovery Act the President authorized, without specific appropriation, the construction and equipment of 32 Naval vessels as part of the programme of public works. Secretary of the Navy Swanson, in his annual report dated August 1, urged building up the Navy to full treaty strength.

SEVENTY-SECOND CONGRESS, SECOND SESSION. Resumed on January 3, the session continued until the expiry of the Congress on March 4. Among the matters considered during this period were measures for agricultural relief, for a reform of banking, for the independence of the Philippine Islands, for the repeal of the Eighteenth Amendment to the Constitution, for relief of divers sorts of bankrupts, for executive reorganization, for relief to States, and for tariff modifications.

Glass Banking Bill The banking bill of Glass of Virginia came up for debate in the Senate on January 5. It was opposed by a small group of Senators who sought to champion the local banker against the bill's provisions for wider latitude in branch banking. Long of Louisiana and Thomas of Oklahoma conducted a filibuster that delayed the bill until the 21st. They won a compromise, that branch banking under Federal statute be permitted only in States having laws permitting such banking. The bill passed the Senate on the 25th. It then went to the House, carrying provisions to keep Federal Reserve credit out of speculative markets, divorce security-dealing affiliates from banks under Federal control within five years, permit branch banking by such banks so far as States permitted it, create a liquidating corporation to close the affairs of insolvent banks, authorize the Federal Reserve Board to remove officers and directors of banks unsoundly conducted, within the Federal Reserve system, and license companies holding stocks of banks, limiting such companies' voting power. President Hoover requested of the House's committee on finance on February 20 that it report the bill, but it never reached the floor of the House. After March 4 the supervening crisis made more extensive measures needful.

Agricultural Measures Several minor bills to aid agriculture were passed. Among them were a measure to postpone payment of installments due on loans made by Federal land banks and one extending temporary relief to water users on irrigation projects.

The Smith Bill, a measure to require the Government to acquire possession of all surplus cotton held by Federally controlled agencies, or with credit supplied by the Government, and to resell such cotton to planters who would reduce their cotton acreage by 30 per cent, was passed by both houses near the end of the session, but it was killed by the out-going President's pocket veto. The chief attempt at farm legislation, the Emergency Agricultural Bill of Chairman Jones of the House's committee on agriculture, was passed by the House on January 12, having been reported on the 3rd. It failed to pass the Senate, in the face of disapproval from the Executive. This bill offered a detailed plan for "restoring the parity between agriculture and the other industries" by the device of issuing adjustment certificates to the producers of principal cash crops (wheat, cotton, tobacco, and hogs), on condition of 20 per cent reduction of acreage (or of hog tonnage) below the normal; these certificates were to be redeemed within a year, by the Treasury, for cash in amount proportionate to the ratio of the deficiency of the individual farmer's crop to the deficiency of the whole country's crop, as to value; the latter was to be measured in terms of the cost of farmers' purchases, the parity of crop values and farm costs being determined on the basis of prices for the period 1909-13 (with certain exceptions as to hogs).

Resolution to Repeal XVIIIth Amendment. The Senate's committee on judiciary reported on January 9 a resolution embodying what was generally called "modified repeal" of the Eighteenth Amendment of the Constitution; the purport was, to "amend," not to "repeal" that amendment; to prohibit transportation of intoxicating liquors into any State in violation of the State's laws; to empower Congress to regulate or prohibit sales of intoxicating liquors to be drunk on the premises where sold. The general Federal prohibition of the Eighteenth Amendment, contained in its Section I, was to be repealed. This resolution did not suit the advocates of outright repeal. Eventually the Senate favored the Blaine resolution, which (I) repealed the Eighteenth Amendment; (II) prohibited, like the earlier resolution, the transportation or importation of liquor into any prohibition State, (III) required that ratification, to render the new amendment effective, be "by convention in the several States, as provided in the Constitution, within seven years"; power for Congress to regulate or prohibit sales to drinkers on the vendor's premises was not explicitly given. The Senate adopted this resolution by vote of 63 to 23 on February 16. The House adopted it promptly and without alteration on the 20th, by 289 to 121, and the resolution went to the Secretary of State for submission to the States. Passage through the House was facilitated by a caucus of Democratic members on the 17th, in which most of them pledged themselves to

vote for it. Actually, 179 Democrats voted for the amendment, 82 against; of the Republicans, 109 for it, 89 against. The minority Democrats had refused to be bound by caucus.

Philippine Independence. The bill to provide independence for the Philippine Islands, passed by both houses and sent to the President at the close of the year 1932 for his approval, was vetoed by him on January 13. Mr. Hoover stated his objections to the bill at length in his veto measure. Chiefly they were that the islands could not weather the strain of losing their tariff advantages on shipments to the United States in the 11 transitional years provided and that they could not hold an early vote on the option of independence in full awareness of the consequences for them. The House summarily overrode the veto two hours after receiving it on the 13th. On the 17th the Senate followed suit. The vote in each case was ample to overthrow the veto: in the House, 274 to 94; in the Senate, 68 to 26. Of the Senate majority, 20 were Republicans.

Relief of Bankrupts and Debtors. The trend toward the solution of debtors' embarrassments by way of the bankruptcy courts, later checked by the banking crisis of March 4, but strong in the latter part of 1932, was responsible for the enactment of a law to facilitate relief for those who would otherwise have to go through the exhausting procedure of the old statutory bankruptcy or of Federal equity receivership. The principle of this act was that embarrassed debtors of certain classes might, by applying voluntarily to the courts, obtain means of more readily conceded composition with creditors. This was to be effected by reducing the proportion of creditors that should be deemed necessary for rendering composition effective. Certain safeguards were provided against quick or radical action of a few creditors who might seek to hasten the debtor to his ruin.

The original measure, a combination of bills introduced by Representatives McKeown and LaGuardia, provided facilities toward composition and toward extension of time to mortgaged farmers, to debtor individuals in general, to railroad companies, and to other debtor corporations. President Hoover, in a special message of January 11, urged the immediate need for some such measure. The committee on judiciary reported its measure to the House on January 24. There was some strife over details affecting such matters as the status of commercial credits, of leases to insolvents, and of taxes owed by them. Patman of Texas declared that the bill would do insolvent farmers no good as they could not pay for lawyers so as to avail themselves of its aid. The House suspended the rules and passed the bill without rollcall on January 30. The Senate committee on judiciary already had Hastings' measure of largely the same tenor. The Solicitor General urged that this committee modify portions of the House bill, which was thought to incur Constitutional objections. Hastings wrote a new bill, which he presented on February 9. The committee stripped it of its provisions for the relief of railroad companies and other corporations and reported it on the 13th. The President asked prompt action on the 20th. The Senate reinserted provision for railroads but not for other corporations and passed the bill on the 27th. The House adopted the Senate's bill on March 1; President Hoover signed it on the 3rd. The enacted measure provided, for a natural person, the right to apply for and, with court approval, to obtain extension on "all claims of whatever character" against him, to apply for composition likewise, and to have application confirmed when a definite plan of composition or extension having the approval of a majority as to number and amount of the affected creditors should have the court's approval. For farmers, there were special provisions, along similar lines: notably, that referees of a particular type, to be known as conciliation commissioners, might be appointed by a court in any county where at least 15 farmers intending to seek debt relief should so petition, and that these officers might conduct the proceedings for composition or extension, to be accepted by the debtor and by the majority, as to number and total claims, of debtors, and to be confirmed by the judge if fair in his opinion. Similarly for railroad corporations, the judge having jurisdiction might entertain a petition from the debtor railroad, appoint a trustee from a standing panel to control the debtor's estate temporarily, and might direct proceedings on the part of debtor and creditors looking toward composition and extension; the resulting agreement, required to be approved by the Interstate Commerce Commission and by two-thirds in amount of each class of the affected creditors as classified by priority in accordance with preexisting practice; stockholders were to vote assent also, by two-thirds, in cases where the judge had not held the corporation insolvent; the judge retained the power to give final confirmation to the resulting reorganization or adjustment.

Executive Reorganization. Under the Economy Act of June 30, 1932, the President had been authorized to consolidate Federal bureaus by Executive order subject to review by Congress. He accordingly issued such orders for reorganizing administrative service with a view to

retrenchment and improved efficiency. They were submitted to Congress on Dec. 9, 1932. Put to a vote in the House on January 19, the 11 orders, affecting 58 branches of the Federal service, were disapproved by a vote of 199 Democrats and 3 Republicans, as against 176 Republicans in their favor. This sharply partisan division put on the Democrats the responsibility of dealing with executive reorganization thereafter, for the relief of the straitened budget. The House accordingly voted, in the form of an amendment to the Treasury-Post Office Appropriation Bill, power to the President (necessarily Mr. Hoover's successor) to consolidate, transfer or eliminate any executive agencies save the major departments by executive orders not reviewable by Congress except within 60 days. The Senate accepted this measure, which became a part of the appropriation act.

Appropriation Bills. Disputes over economies and allied matters delayed most of the appropriation measures until the last 10 days of the session. Then independent-offices bill, carrying over \$1,000,000,000, of which \$960,000,000 was for the costs of the Veterans' Administration, was sent to President Hoover, who vetoed it, having recommended a curtailment of some \$127,000,000 in payments to veterans on disabilities not traceable to service in war. A naval appropriation bill carrying \$308,669,562 in direct appropriations was passed and was signed on March 3. There was enacted an appropriation bill of \$100,275,000 for the Department of Agriculture, it did not carry the great road-aid grant of the previous year's bill. In voting the legislative appropriation bill the House rejected a provision for the reduction of its members' salaries to \$5000. The first deficiency bill, tagged with an amendment that every tax refund of as much as \$20,000 go to a joint committee of Congress for approval, was sent to President Hoover, who vetoed it as proposing an unwarrantable use of the legislative power. Thereafter the bill was passed without the amendment as to tax refunds. An effort was made to reduce appropriation for ocean mail and air mail subsidies but was defeated.

Other Enactments. Among other measures enacted were authorization to distribute Government-owned cotton to the American Red Cross and other organizations for the relief of distress, an act repealing some 2000 defunct statutes, an authorization to the Supreme Court to prescribe rules and practices in order to expedite criminal cases on which appeals had been taken after verdict, creation of the Morristown National Historical Park at the site of the encampment of Washington's army in Morristown, New Jersey. The cent-a-gallon Federal tax on gasoline and the permission to the Federal Reserve system to use the Government's securities as collateral for Federal Reserve notes, both about to expire, were continued in force for another year.

Bills Not Passed. The LaFollette-Costigan bill, an effort of a group in the Senate to change the basis of Federal measures of relief for the needy from loans to that of outright grants to State governments, failed to pass the Senate. The measure of Wagner of New York, to authorize the Reconstruction Finance Corporation to lend an additional \$300,000,000 to States, and to remove the existing requirement that the Corporation's loans to States for public works be for self-liquidating projects, passed the Senate but not the House. The Hawley bill to permit the Tariff Commission to put up rates against countries with depreciated currencies was adversely reported in the House, and the Democratic group held firm against other like tariff-lifting proposals. Projects to remonetize silver were introduced in divers forms in both houses but not adopted. The President asked but did not obtain power to declare embargoes on exports of arms as a method of dealing with aggressive foreign belligerents.

Investigation of Security Dealings. An investigation of the New York Stock Exchange had been begun by the Senate's committee on banking and currency in the first session. It was resumed, after long interruption, in January. Ferdinand Pecora was named as its counsel and the field of inquiry was made to include certain large utility companies and financial institutions. Samuel Insull Jr. testified that stock of the Insull Utility Investment Company, allotted to the elder Samuel Insull at prices not above \$15 a share, was first sold on the Chicago stock exchange at \$30 a share in January, 1929, and within a few months at nearly five times that figure. Operations of the National City Bank (of New York) and of its affiliate, the National Security Company, related to security issues and allied matters, were subjected to particularly searching inquiry late in February, although at the time the situation of banks throughout the country was highly sensitive to unfavorable developments, and banks in State after State were actually ceasing business. Charles E. Mitchell, chairman of the boards of both the bank and the affiliate company testified as to methods used in sales of 1,950,000 shares of the bank's stock and of 1,300,000 shares of Anaconda stock some years previously, at prices far above those later obtainable. Loans made by the bank to officers,

without interest, out of a special fund of \$2,400,000, and for the most part not yet repaid, were disclosed. The National City Company's underwriting of \$90,000,000 of bonds of the Peruvian Government in 1927 and 1928, through which bonds American investors had later faced great loss, was represented in evidence put before the committee as having been against previous advice from the company's branch in Lima. Charles E. Mitchell testified to having escaped payment of income tax to the Government by sale in 1929 to his wife of 18,000 shares of stock of the bank, whereby he established a loss of nearly \$2,800,000. Mr. Mitchell resigned the chairmanships of the bank and its affiliate on February 26, five days after testifying.

Louderback Impeachment. The House voted on February 24 the impeachment of Judge Harold Louderback of the District Court for the Northern District of California on charges connected with receivership appointments.

SEVENTY-THIRD CONGRESS, FIRST SESSION. Called on March 5th to convene on the 9th, the new Congress assembled almost in full force. The partisan composition of the Senate was: Democrats, 58; Republicans, 36; Farmer-Labor, 1. That of the House of Representatives was: Democrats, 312; Republicans, 117; Farmer-Labor, 5. The death of Walsh of Montana had left one Democratic seat vacant in the Senate. That in the House was due to former Speaker Garner's having become Vice-President; his constituency in Texas had elected him to the House again, to "take no chance" of his not being at the capital. Douglas of Arizona created a second vacancy by resigning to become Director of the Budget. Pittman of Nevada was elected President *pro tem* of the Senate and Rainey of Illinois became Speaker of the House, by the full Democratic vote. A Democratic "steering committee" including 15 regional appointees was formed, to keep the majority in line with regard to major matters.

There was actually very little difficulty in maintaining majority harmony in the House, as the urgency of the situation, the rapid initiative of the President, and his exceptionally great influence at this stage rendered his behests paramount in most matters. Almost all the major legislation of the session was that recommended by President Roosevelt and introduced in the form of "Administration" bills.

Emergency Banking Act. The first legislation of the session was to pass the Administration measure to provide for the reopening of the closed banks of the country. This act confirmed to the President the powers over credit, currency and gold that he had invoked under the act of 1917; empowered the Secretary of the Treasury to require that all gold and gold certificates be delivered up, against equal face value in paper dollars; authorized the President to set restrictions to the banking activities of members of the Federal Reserve, during such period of emergency as the President might by proclamation prescribe; provided a substitute for receiverships for unsound national banks, by authorizing the Comptroller of the Currency to put such banks in charge of officers to be known as conservators, who should exercise the rights and powers of receivers, and who might permit depositors to withdraw in part, on a *pro-rata* basis; banks under conservators might be permitted by the Comptroller to take new deposits, segregated from the old, and subject to unrestricted withdrawal; reorganizations of insolvent national banks were authorized, subject to approval by the Comptroller, and were made binding on the parties affected, on the basis of consents reduced to 75 per cent by amount as to the affected depositors and to two-thirds by amount as to the affected stockholders; an injection of new resources was made possible by permitting national banks to issue non-assessable 6-per-cent cumulative preferred stock, and by permitting the Reconstruction Finance Corporation to subscribe to preferred stock not only of a National bank but of a State bank or trust company; a new source of bank-asset currency was created by authorizing Federal Reserve banks to issue Federal Reserve Bank notes based, either on security of Government obligations to 100 per cent of the currency notes to these obligations, or on notes, drafts, bills of exchange and acceptances at 90 per cent of the currency notes to such

assets; the Federal Reserve Banks might make advances to member banks in such notes against the latter's satisfactory security, until Mar. 3, 1935. The whole measure was rushed through Congress without change, sent to the President and signed by him (at 8.30 P.M.) within nine hours after Congress had assembled on March 9.

Economy Act. Obedient to a message of the President, dated March 10, calling for cuts in Federal salaries and veterans' benefits, as necessary to maintain the Federal credit, Congress passed the Economy Act. Introduced in the House and sent to the Senate, this measure was passed by the Senate with no radical alteration, was repassed by the House as amended, and was signed March 21. The act reduced the pensions of the generality of veterans of wars prior to 1917 by 10 per cent; limited payments to cases of service-connected disabilities, permanent disabilities not so connected, widows and children of men dead from service-connected injuries, widows and children of other men who served prior to the World War, and Spanish War veterans of 62 years, entitled to pension under previously existing law. Maximum and minimum rates of compensation were provided for disabilities, in wars subsequent to the Civil War, and the President was authorized, within these limits, to set pension rates to be paid, his determination not to be conditional on the approval of Congress. Like power was given him to prescribe the pensionable degree of disability. Salaries of members of Congress were reduced to \$8500 a year, from \$10,000. The President was authorized to reduce Federal salaries in general by as much as 15 per cent, in accordance with the determinable reduction in the cost of living subsequently to 1928. While pension and veterans' benefit reductions were to be permanent, salary reductions were to apply only until June 30, 1934. One of the chief effects of the act was to separate from the rolls some 328,000 men who could not show service connection for disabilities. The act was strongly opposed by veterans' organizations, who forced its modification at a later stage of the session (see INDEPENDENT OFFICES BILL, below).

Civilian Conservation Corps. Embodying the President's recommendation that there be formed a Civilian Conservation Corps of young unemployed men, to work at reforestation and other public work for their sustenance and small cash remuneration, the reforestation act was passed, and was signed March 31. It authorized the President or the head of any department or agency to contract projects or carry on public works of reforestation, prevention of floods or of erosion of the soil, plant control, repair of trails and fire lanes in National parks and other public domain, authorized for this purpose the use of unobligated remainders of moneys appropriated for public works, and provided, further, \$300,000,000 out of the unexpended balance of the appropriation of July 21, 1932, for the relief of distress. It empowered the President to employ men for the stipulated purposes and to fix the amount of their cash allowances, the word "wages" having been stricken from the original bill as offensive to labor interests in its application to payments deemed inadequate to the proper meaning of the term. The act was to have force for two years, from date of signing.

Farm Relief and Monetary Inflation. The agricultural adjustment act, signed by the President on May 12, had three main features: it provided for the refinancing of farm mortgages, undertook to correct the ruinous cheapness of farm products by application of certain modes of Federal intervention, and—quite apart from the immediate matter of agriculture, but in response to a strenuous demand for "cheaper money," from farmers and others—put in the President's hands the power to increase the quantity and decrease the gold value of the currency. Three "Administration" measures, each as a separate bill, were presented at different times: that as to farm mortgages, with a Presidential recommendation, on April 3; that as to elevating farm prices, likewise with a recommendatory message, on March 16; and that as to currency, without Presidential recommendation but reportedly as an Administration bill, April 20. This last was understood in some quarters as the President's endeavor, by concession to the inflationists, to head off more aggressive legislation in the same direction.

The bill to elevate farm prices was passed by the House and sent to the Senate, which added to it an amendment to guarantee to the farmer the cost of the production of his goods. While the bill was still in the Senate, the second measure, that for refinancing farm mortgages, was introduced, and was incorporated with the bill already pending. Thomas of Oklahoma and Frazier of North Dakota at this stage opened a light for the inclusion of monetary inflation—Frazier offering a bill to create an issue of currency for paying off farm mortgages. A week passed, in which other inflation bills were introduced in Congress. The introduction of the "Administration" inflation bill followed on April 20. Thomas presented it as an amendment to the combined bill. The conservative Republicans offered their first real opposition in the course of the session, Reed of Pennsyl-

vania offering an amendment to strike out much of the inflation amendment. Glass of Virginia, Democrat, broke with his party and made an earnest and memorable speech against inflation. Tydings of Maryland, another Democrat, took a like course. The bill was passed, with the Thomas amendment, on April 28, by vote of 64 to 20, not counting four paired. Of the Democrats, 48 voted for the measure and 4 against; of the Republicans, 15 for and 16 against.

The House amended the Senate's bill, chiefly by dropping the provision that prices to farmers be made to cover their cost of production. Republican conservatives vainly sought to delay voting on the inflation provisions and recorded their condemnation of this part of the bill, under the leadership of Snell of New York. Under a special closure rule, adopted by 261 to 113, the bill was brought to a vote. It passed, as amended, by 307 to 86 on May 3, 30 Republicans voting for it. In conference the Senate's cost-of-production amendment was dropped. The bill then went to final passage in both houses. The President signed it on May 12, without expressing his intentions as to its inflationary features.

The act thus adopted provided, as to farm prices, that the Secretary of Agriculture have power to force higher prices for certain farm commodities by the alternatives of limiting and allocating the production of each and of withdrawing land from cultivation by leasing it from the farmer and imposing a tax on the processing of the affected commodity so as to raise the means to pay the cost of the leases; as to farm mortgages, that through the Federal land banks bonds bearing $4\frac{1}{2}$ per cent interest and a Federal guarantee as to interest payments but not as to principal might be issued in exchange for farm mortgages, within two years and to an aggregate of \$2,000,000,000, the Federal land banks giving the farmers more liberal terms of payment on their mortgages, both as to interest and as to principal, with regard to monetary inflation and credit inflation, that the President might direct the Secretary of the Treasury to agree with the Federal Reserve Banks to buy in the open market bonds of the Federal Government and of its corporations, up to an added total of \$3,000,000,000 in holdings, that the Secretary of the Treasury might resume issue of the greenbacks of the act of 1862 for the meeting of maturing Federal obligations, up to a total of \$3,000,000,000, to be retired at the rate of 4 per cent a year, that the President have authority to set a new and lower weight for the gold dollar as low as one-half of the existing statutory weight, and that silver tendered by indebted foreign governments, to an aggregate of \$100,000,000 be accepted by the Treasury at 50 cents an ounce, silver certificates to an equal total being issued against it.

Federal Aid to States. The project of Senator Wagner of New York, unsuccessfully presented in previous sessions, to appropriate Federal money for the direct relief of needy individuals, through the agency of the States, was at last carried to enactment, in the Wagner-Lewis act. This act, signed May 12, created the office of Federal Relief Administrator (salary, \$10,000) the function of which was to direct Federal relief grants to States, according to stipulations largely within the Administrator's decision. The sum of \$500,000,000 was to be provided for his distribution; it was to be made available through the Reconstruction Finance Corporation, which was to act as the paying agent for the Administrator. Half of the appropriation was to be allotted among States at the rate of not more than one-third of the respective amounts expended for relief in the States and at the rate of not more than 15 per cent for any one State; the other half was to apply in States where local, State and ordinary Federal expenditure for relief was insufficient.

Tennessee Valley Authority Act. Largely along the lines of earlier measures offered by Senator Norris for the Federal operation of Muscle Shoals, but broader in scope, was the Norris act creating a Tennessee Valley Authority, invested with power not only to maintain and operate the Federal power plant at Muscle Shoals but also to "improve navigation in the Tennessee River" and control the destructive flood waters in the Tennessee River and Mississippi River basins. The Tennessee Valley Authority was to consist of a board of three directors, who should designate other officials and employees. Directors were to serve terms of 15 years (save initial appointees, two of whom were to serve respectively 5 and 10 years), at salaries of \$9000 and, for the chairman, another \$1000. The Authority was to take the form of a Federal corporation, with a principal office at Muscle Shoals, Alabama. It was to manufacture fixed nitrogen, make and sell fertilizers, alter or build plants, provide the War and Navy departments with nitrates for explosives at cost, distribute surplus electric energy from Muscle Shoals among the localities within transmission distance at prices based on a specified system of cost estimates, and have authority, if the President should direct, to issue bonds in order to pay for that part of any future construction which might be attributed to the production of hydro-electric power. The President was directed to recommend such future legis-

lation as might seem proper to control of floods, better navigation, higher electric generation, reforestation, use of marginal lands, and improved agricultural conditions in the Tennessee drainage basin.

The House passed a measure differing from the Senate's; it provided a plan for leasing the Muscle Shoals plant to private operators. But the Senate rejected the amendment and the House conferees gave it up. The act was signed on May 18.

Regulation of the Sale of Securities. The outgrowth of revelations of conspicuous cases of flotation of questionable securities, including certain issues of foreign governments' obligations, was a message sent by the President to Congress on March 29, recommending an enactment for the supervision of interstate traffic in securities. The resulting statute, as enacted and, on May 27, signed by the President, set up elaborate and detailed regulation of sales of securities, as applying to issuers, guarantors, and underwriters, to be administered by the Federal Trade Commission. President Roosevelt in a message of March 29 recommended statutory provision to the end that "no essentially important element attending the issue [of new securities] shall be concealed from the buying public," and proposed as the principle for such legislation the doctrine, "Let the seller also beware." A bill had been drawn, prior to his message, by experts of the Department of Commerce and of the Attorney General's office, in consultation with leaders in Congress. It was offered on the day the message was delivered. After only moderate alteration the measure passed both houses without roll-call, the House of Representatives on May 5 and the Senate on the 8th. Conference reconciled the houses' respective version of the measure by adopting the Representatives' provision allowing directors who had signed financial statements bearing on security issues to escape criminal and civil responsibility if they could prove that they had exercised due diligence, and by dropping a provision forbidding the use of the mails for the sale of securities in States where the sales in question were forbidden by State laws. The resulting act was sent to the President and was signed on May 27.

This statute, the Securities Act of 1933, regulated the issue and original marketing of stocks and bonds. The Federal Trade Commission was made the regulating agency. Persons were forbidden to use transportation in interstate commerce and the mails in the marketing of issues unless they submitted to the prescribed system of regulation. Exceptions were made as to issues of any domestic public debt, commercial notes and kindred short-term paper, building-loan and like mutual associations, certain railroad issues, receivers' certificates, insurance policies, securities not marketed beyond their own State, and securities issued in exchange for others, without payment of remuneration or compensation. Otherwise, those involved in the issue and marketing of securities, in order to use the mails and transportation in interstate commerce were required to register the issue with the Commission and to file with the Commission statements covering a great variety of material information. A schedule of statements required as to domestic issues covered such matters as officers' and directors' large stock-holdings, vendors in purchases to be made with proceeds of an issue, specific purposes of an issue with amounts of the proceeds to be devoted to each, the price of public offering of an issue, the commissions, discounts and other deductions therefrom, the net proceeds, connection of officers or directors with purchased properties, sums paid within two years to promoters, balance sheets and statements of profits and loss in forms to be standardized by the Commission, and underlying agreements affecting the issue. Another schedule, relating to foreign governments' bond issues, required statements of existing funded and floating debt, acknowledgment of any default within 20 years save as to an intergovernmental debt, and receipts and expenditures of the issuing government in form to be prescribed by the Commission, as well as of price of public offering and amount of underwriting and other costs. Signers of the statements and other documents required were made civilly liable for misstatements and criminally liable to penalties of \$5000 fine and five years' imprisonment, but might in general avoid liability by proving due diligence exercised to avoid misstatement. The act further created a Corporation of Foreign Security Holders having at its head a board of six directors to be appointed by the Commission, and to be authorized to represent the interest of assenting holders of foreign defaulted securities. All information submitted with regard to security issues and in the hands of the Commission was to be made available to the public, save contracts necessarily kept confidential for the welfare of a company affected.

Relief for Mortgaged Home-Owners. The President in a message of April 13 asked for legislation "to protect small home-owners from foreclosure" and to relieve them of the burden of excessive payments on mortgages. An "Administration measure" to that end was introduced. The House passed the bill on April 28, increasing the maximum value for homes within the scope of the pro-

posed benefits to \$15,000, from \$10,000. The Senate passed the measure on June 5, raising the limit of value for a home to \$25,000 and increasing the ratio of permissible cash loans, as distinct from refinancing, to 50 per cent of value, from 30. Both houses finally passed a compromise settled by conference, setting the limit of value for homes within the scope of the measure at \$20,000 and permitting cash loans on homes up to 50 per cent of value. The act was signed on June 13.

This measure, the Home Loan Act of 1933, repealed in great part the Federal Home Loan Bank Act of the previous Congress (providing for direct loans to homeowners) which had not given satisfaction. It retained the Federal Home Loan Bank Board of the earlier act, created a Home-Owners' Loan Corporation, which was to be "an instrumentality of the United States," and placed this corporation under the direction of the Board, which was authorized to call upon the Treasury to subscribe to the Corporation's stock up to a total of \$200,000,000 and was to issue the Corporation's bonds, up to \$2,000,000,000, to run not more than 18 years, bearing interest at 4 per cent guaranteed (interest only) by the Government. The Corporation was authorized for three years after the enactment to acquire home mortgages in exchange for its bonds, at a rate not to exceed either \$14,000 or 80 per cent of the value in the case of any mortgaged home. Interest charged the debtor on a mortgage acquired was not to exceed 5 per cent; the principal of his mortgage was to be reduced to the face value of such amount as the ceding holder of the mortgage, in case of concession by agreement, had received. The debtor was to pay installments toward the gradual extinction of his principal debt within 15 years. Loans in cash might be made to mortgaged owners, within the limit allowed as to their aggregate debt, for divers purposes such as meeting taxes, assessments, maintenance, and repairs; and might for similar purposes be made to unmortgaged owners, up to 50 per cent of the value of property. Bonds or cash might be furnished as a loan in order that a former owner might be helped to redeem a foreclosed home. Loans in cash might be made up to 40 per cent of value to pay a mortgagee who would not accept bonds. The act further permitted the creation of local mutual thrift and home-financing organizations to be known as Federal savings and loan associations, to be chartered by the Board and affiliated with Federal Home Loan Banks of respective districts, the Treasury might subscribe to such associations' preferred shares.

National Industrial Recovery Act. The President sent to Congress on May 17 a message recommending legislation to "provide machinery necessary for a great co-operative movement throughout all industry in order to obtain reemployment, to shorten the work week, to pay decent wages for the shorter week, and to prevent unfair competition and disastrous overproduction." The message also recommended a programme of direct employment backed by Federal credit and the imposition of taxes to support this proposed method of reemployment.

An "Administration bill," the groundwork of what became the National Industrial Recovery Act, was introduced in Congress on the same day, going to the House, as a revenue measure. More than a month had been spent in drafting it, largely under the leadership of Secretary of Labor Perkins, but it adopted earlier ideas of Senator Wagner of New York as to promoting a heavy schedule of public works, and many leaders in Congress and elsewhere had been consulted on other features. The original bill carried no specific provision for raising the revenue that its purposes required. The House occupied itself mainly with devising revenue features to bring in some \$700,000,000 a year in taxes for the purposes of the bill. It defeated a proposal to impose a general sales tax on manufacturers designed to raise \$220,000,000 a year, but voted heavy increases in rates of the "normal" income tax and extended their application to dividends received. The House passed its bill May 26 by vote of 324 to 76; the minority included 50 Republicans. The Senate's committee on finance, receiving the bill, removed from it the provisions to increase rates on the income tax but inserted a uniform tax of 5 per cent on dividends, to be paid at the source, and added provisions increasing the specially accorded powers of the President, particularly with regard to regulating the petroleum industry. The Senate passed the bill on the 9th; on the 13th both houses adopted a conference report giving effect to the Senate's version of the bill, in the main. The President signed the act on the 16th.

The act provided, first for industrial recovery through measures of Federal control over the operation of industries, second, for the prosecution and financing of public works as means of creating employment; third, for taxes made particularly needful by the appropriation for public works.

Title I, dealing with industrial recovery, was to have effect only for two years after enactment. It declared an emergency and the purpose of Congress to deal therewith by promoting organization of industry, cooperation and united action of labor and management under Federal sanctions. It authorized the President to establish such

agencies as he might find necessary thereto. He was to have authority to approve codes submitted by industries or groups of industries to govern the activities of those engaged in them, provided they did not permit monopolistic practices. He was empowered to prescribe a code for any industry failing to offer one and coming under complaint of abuses. He obtained authority, whenever an influx of foreign goods imperiled an industry under code, to call upon the Tariff Commission to investigate with a view to raising the tariff on such foreign goods. Violations of approved codes were made misdemeanors, punishable by fine of \$500 for each day of violation. The further power was given the President, if necessary to make a code effective, to require all persons engaged in any industry to operate under license, which might be suspended or revoked, and without which no person might continue to operate, under penalty of \$500 fine for each day of violation. Section 7, a, required every code to guarantee "that employees shall have the right to organize and bargain collectively through representatives of their own choosing. That no employee and no one seeking employment shall be required as a condition of employment to join any company union or to refrain from joining, organizing or assisting a labor organization of his own choosing; that employers shall comply with the maximum hours of labor, minimum rates of pay, and other conditions of employment" prescribed by the President. As to the petroleum industry, special powers were given the President to bring proceedings before the Interstate Commerce Commission against monopolistic pipe lines and to prevent interstate transportation of petroleum in excess of limits ordered in States of origin.

Title II authorized the creation of a Federal Emergency Administration of Public Works, headed by a single Administrator. This body was to prepare a programme of public works including highways, parkways, public buildings and instrumentalities, works for conservation and development of natural resources, any projects carried on under public authority or with public aid, low-cost housing projects under public regulation, hospitals partly financed from public funds, dry docks, naval vessels, air craft, and army housing. The President was empowered to construct, aid or finance any project included in this programme, to make grants therefor to States, municipalities or other public agencies not in excess of 30 per cent of cost of labor and materials, to aid in financing railroads' maintenance and equipment subject to approval by the Interstate Commerce Commission. Grants to State highway departments for works to eliminate grade crossings were authorized to an amount "not less than \$400,000,000." The Treasury was authorized to borrow sums required under the act.

The taxes imposed by the act were on dividends, 5 per cent, to be collected from the payer corporation, on corporations, \$1 a year for every \$1000 of capital, on corporate net income, 5 per cent on excess over 12½ per cent a year on capital. Appropriations of \$3,300,000,000 was authorized for the purposes of the act.

The tax on dividends and the extra ½ cent a gallon on gasoline imposed in 1932 were to cease at the first of the calendar year after the repeal of the Eighteenth Amendment; that on capital stock, on the July 1 after repeal.

Glass-Steagall Banking Act. This measure, not to be confused with the emergency measure of March 9 (see Glass Banking Act, above), was intended to effect permanent changes in the banking system of the country. It did not spring out of recommendations in a Presidential special message, like other chief acts of the session, although it corresponded in a general way with the intent of the President's allusions to banking in his inaugural address. In large part it was founded on the banking bill that Glass of Virginia had offered in the previous Congress (see 72nd Congress, above). Novel features were added to it, particularly a system for the compulsory insurance of bank deposits at the member banks' expense. A subcommittee of the Senate's committee on banking, under the chairmanship of Glass, prepared the Senate bill in April, including the insurance of deposits, though this feature was reported not to be favored by Glass. The Senate passed the measure on May 25. The House had meanwhile (May 23) passed the largely similar Steagall bank-reform bill, by 262 votes to 19. A conference report reconciling the bills was passed by both houses and the act was signed by the President on June 16.

With regard to insurance of bank deposits, the act made a radical departure in Federal banking legislation. It created for this purpose a Federal Deposit Insurance Corporation, in which every member of the Federal Reserve system must take stock; the Treasury also must subscribe, to the extent of \$150,000,000. The Corporation was authorized to issue notes, debentures and bonds to the amount of thrice its capital. Banks not in the Federal Reserve system might, if approved as to solvency, subscribe to the Corporation's stock and become beneficiaries of the insurance system. Stock subscribed by banks was to be in the amount of 0.5 per cent of each subscriber's deposit liabilities. It must be paid for in

half by July 1, 1934, and the Corporation might thereafter call for the remainder of payments, up to the full price. In addition to obtaining initial assets from stock issue the Corporation, whenever its excess of liabilities attained 0.25 per cent of the total of deposits in all insured banks, might assess the latter in that proportion of the deposits of each one.

The Corporation was to make good, within limits, the deposits in insured banks that failed: each deposit up to \$10,000 in amount, *in toto*; thence up to \$50,000, in the proportion of 75 per cent; on any further amount of a deposit, in the proportion of 50 per cent. This was to be effected by the Corporation's becoming receiver of a closed bank, purchasing the assets, setting up a new National bank in the old one's place, making available to the new bank the sum required to meet the predecessor's liabilities to depositors, to the extent covered by insurance, and liquidating or carrying the assets that it had acquired. The scheme tended to place a great part of the cost of insurance on solid principal banking institutions in which large deposits prevailed, and thus to render these large institutions and their deposit supporters to a great extent of benefits required chiefly by smaller institutions—benefits which, moreover, were not assured in full to large depositors. The plan was to go into effect on July 1, 1934, unless the President should set an earlier date. As an interim measure, the Corporation was to create on Jan. 1, 1934, a temporary insurance fund, to which banks were to subscribe in a manner similar to that provided for the permanent plan. The Corporation was to make good from this fund the losses on deposits, up to \$2500 only, in each case, in insured banks closed during the interim period. Apart from its function in insurance, the Corporation was to have power to purchase assets of closed banks. It was to be directed by a board of two Presidential appointees, at salaries of \$10,000 and the Comptroller of the Currency, serving *ex officio*.

There was created also a Federal Open Market Committee, to consist of 12 members, one representing each Federal Reserve bank. This body was to meet at intervals and advise upon the policy of the Reserve banks with regard to dealings in the open market for securities. It remained permissible for a Reserve bank not to participate in open-market operations under regulations of the Federal Reserve Board, but not otherwise to conduct such operations, if a non-participant, and a bank abstaining from following the Board's directions so to operate was required to file notice of its decision with the Open Market Committee. The Federal Reserve Board was empowered to suspend any Member bank's use of the Federal Reserve System if the Member bank were found to be making undue use of bank credit for carrying speculations in securities, real estate or commodities, or any other purpose inconsistent with sound credit. The Board was authorized to supervise relations between any Federal Reserve bank and any foreign bank or banker, and to set the percentage of resources that might be employed in loans on security collateral in any banking district.

With regard to the practices of the Member banks, the payment of interest on demand deposits was prohibited and that on time deposits was rendered subject to Reserve Board regulation. Member banks were forbidden to act as agents of non-bankers in making security loans. Banks might not make loans to their own executive officers.

As to banking organization, holding-companies were to be allowed to vote their holdings of a bank's stock only by special permit from the Reserve Board and were themselves made subject to examination. Member banks were required to sever within one year their connections with affiliates underwriting or dealing in securities. Companies and firms thus engaged were forbidden to accept deposits subject to check or to withdrawal on presentation of a pass book. Consolidations of National banks were more closely regulated, and the minimum of capital required for newly organized National banks was raised. Branch banking was allowed to National banks within the limits to which State laws allowed it.

Alcoholic Drinks. The President in a special message of March 13 recommended modifying the Volstead act so as to permit "beer and other beverages of such alcoholic content as is permissible under the Constitution" and thus to provide "proper and much-needed revenue." The Cullen act, introduced in the House on the 14th, made lawful the traffic in beer and other fermented malt drinks of alcoholic content not above 3.2 per cent by weight or 4 per cent by volume. There was imposed on these an excise tax of \$5 a barrel; an annual tax of \$1000 on each brewery, was provided; an old requirement that every wholesaler must pay \$50 a year and every retailer \$20 a year for a permit was retained. The Webb-Kenyon law to prevent shipments of beer into prohibition States was to be reenacted. The whole measure was to take effect in 15 days after its enactment. The bill was quickly put through both houses despite a substantial opposing vote and was signed by the President on March 22.

An effort was made to legalize wines of higher alcoholic content than the 3.2 per cent set for beer. It failed of passage. Late in the session the sale of 3.2-per cent beer to Indians in the former Indian Territory was permitted, provided that the State of Oklahoma should approve. The Copeland-Celler medicinal-liquor bill, signed March 31, did away with close restrictions upon the prescription of alcoholic liquors by physicians.

Regulation of Railroads. The President asked in a special message of May 4 for legislation to improve the position of the railroads. An "Administration bill" previously drawn was introduced in both houses. With the Administration's project for creating a new Federal official to supervise and harmonize the railroad companies' operations with a view to eliminating avoidable costs, the bill included measures previously introduced by Representative Rayburn altering the relations of railroads with the Interstate Commerce Commission. The measure incurred opposition from railroad labor interests that feared it might bring about a reduction in the number of men employed in the railroad industry. In the Senate was proposed an amendment to protect labor by requiring a six-hour day for railroad workers, but the amendment was not passed. The Senate did pass an amendment to prevent dismissal of employees at the instance of the Government for the sake of retrenchment, and sent its measure to the House on May 27. The House retained the provision as to dismissals, added an amendment to permit consolidation of telegraph companies and passed the bill June 5. Conference eliminated the latter provision, and the bill was sent to the President, who signed it on June 16.

As enacted, the railroad bill created a Federal Coordinator of Transportation, whose chief function was to be the initiation of policies through which the railroads might effect savings through cooperation. This official, to be appointed by the President, was to divide the railroad lines into three groups, Eastern, Western, and Southern. For each group, he was to create a regional coordinating committee of five members chosen by the companies. Through these committees was to be exercised power "to encourage and promote or to require" measures to avoid unnecessary duplication of services, effect joint use of terminals, control accessorial services, and avoid other preventable expenses. Financial reorganizations of carriers were to be promoted with a view to reducing fixed charges. The committees might recommend compulsion where a carrier would not voluntarily act on its recommendation as to economies, and then the Coordinator was to have power to issue an enforceable order. A company was not to reduce the number of its employees by curtailment of service below the total at time of enactment, except for 5 per cent in vacancies occurring through death, resignation or retirement, which need not be refilled. Companies were required to make good to employees the losses that these should sustain through transfers to other places of work, incidental to curtailments. Regional boards of adjustment were to determine such losses. Companies were required to pay, for expense of administering the law, \$1.50 a year for every mile of line operated. The Interstate Commerce Commission was forbidden to approve any loan from the Reconstruction Finance Corporation to a company declared by the Coordinator to need reorganization. The Interstate Commerce Commission was authorized to consider the need of carriers for revenue sufficient to provide proper service, in setting traffic rates. The Interstate Commerce Act was amended so as to give the Interstate Commerce Commission jurisdiction over railroad holding companies and so as to repeal its provision for the recapture by the Government of railroads' "excess earnings." The repeal was made retroactive. The Coordinator was required to study means for the permanent improvement of conditions in transportation, to be submitted later to the President and to Congress through the Interstate Commerce Commission.

Gold Obligations Voted. Although gold as a medium of payment had been outlawed, in fact, by the President's proclamation of March 5 and his executive order of April 20, existing written obligations to pay debts in gold dollars or in money of value equivalent to the old gold dollars still theoretically subsisted. The Treasury, in particular, continued to issue obligations containing the statutory "gold clause," while failing to make payments in accordance with this clause as expressed in obligations already outstanding. The generality of other public and private bonded debt was obligated by stipulation of the bond to pay in gold or equivalent value, but was unable to perform this obligation. A joint resolution to meet these difficulties was introduced in Congress on May 26, Secretary of the Treasury Woodin declaring in a prepared statement that it had the Administration's support.

This resolution required that every provision in respect of any obligation, stipulating payment in gold or any particular kind of coin or currency or in amount in money of the United States measured thereby, should be discharged upon payment, dollar for dollar, in any coin or currency that was legal tender at the time. The

future making of provisions for payment in gold or in currency of equivalent value was forbidden. The Federal debt was specifically included in these requirements. No exception was made as to other public debt, nor as to payments to be made to creditors outside the country. Though the resolution had the actual effect of increasing the disparity between the statutory gold value of the dollar and the actual value as measured in foreign exchange, it was entitled "a joint resolution to assure uniform value to the coins and currencies of the United States"; it declared provisions as to gold payment to be "inconsistent with the declared policy of Congress to maintain at all times the equal power of every dollar . . . in the payment of debts" and to be against public policy.

The measure was passed by the House on May 29, without amendment, by vote of 283 to 57, and by the Senate on June 3, the Senate's vote being 48 in favor, 20 against and 8 more on either side not voting but paired. In the House, 28 Republicans joined the Democratic majority favoring the measure; in the Senate 4 Republicans voted for it and 2 other Republicans supported it in the pairing; while of the Democratic Senators 2 voted against it and 3 more (Glass, Walsh, and Tydings) opposed it in the pairing.

The conservative Republican opposition in both houses, though feeble in numbers, offered energetic verbal opposition; the Republican minority in the House's committee on banking and currency submitted a report by Luce of Massachusetts, calling the measure the "Reputation bill of 1933," citing circumstances as to the solemnity of the pledge of the United States to repay its debts in the manner undertaken in the bond, and dismissing judicial theories in defense of "reputation" as having "recently perverted the plain meaning of language." Reed of Pennsylvania, heading the Republican opposition in the Senate used quite as vigorous terms of denunciation. The Republican vote in either house, however, was divided along the lines separating conservatives and progressives. The President signed the resolution on June 5.

Revenue Measures. In addition to imposing taxes in the *National Industrial Recovery Act* (see above) Congress prolonged for a year the application of existing "emergency" taxes of one cent a gallon on gasoline and of 3 per cent on the receipts from the sale of electric energy, of the latter, however, the incidence was shifted from the consumer to the electric utility company. Municipally owned electric enterprises were exempted from this tax. The rate of first class postage was reduced, for letters destined to recipients in the same post-office area within which they were mailed, to two cents an ounce, from three cents. The President was authorized later to reduce the rate for other first-class mail provided the volume of mail should increase enough to permit of this without causing further rise in postal deficit.

Appropriation Bills. The chief appropriation measure of the session was the fourth deficiency bill, by reason of its size. It carried appropriations of some \$3,610,000,000. The main item, \$3,300,000,000 was for the program of public works under the Recovery act; \$150,000,000 was for the Treasury's purchase of stock in the Federal Deposit Insurance Corporation, as required in the Banking-reform act. Further amounts were partly for minor loans to be made by the Reconstruction Finance Corporation, notably to restore damage done by earthquake in southern California.

Independent-Offices Act. The appropriation measure carrying grants for the independent offices involved the subject of the Veterans Administration and of the allowances for benefits to veterans, as reduced by the President earlier in the course of the session. A revolt against these reductions had grown. They were made the occasion for obstructing the progress of this bill in the closing days of the session. A compromise was finally reached, by which the names of some 154,000 veterans were to be retained on the rolls, pending further examination of their cases. The measure was passed on June 16.

Other Acts. Among other enactments of the session was the Feser-Wagner bill (signed June 6) creating the United States Employment Service. This body, with an appropriation of \$1,500,000 for the following fiscal year and \$4,000,000 a year thereafter until June 30, 1938, was to absorb the existing Federal employment organization, cooperate with State employment agencies and allot three-fourths of its yearly allowances among States matching these grants. A crop-loan act permitting loans secured by first liens on certain crops harvested in 1934 was sent to the President. The practice of granting unplaced graduates of the Naval Academy one year's sea pay was abolished by statute, and by another statute the Academy was authorized to confer on graduating students the degree of Bachelor of Science. There was enacted a measure to render it punishable for Federal employees or former employees to publish without authority secret-code documents of the United States Government; this measure had been occasioned by alleged disclosures in a book written by a former employee.

Non-Legislative Activities. The Senate tried Federal

Judge Harold Louderback of the Northern District of California on impeachment charges submitted by the House, relating chiefly to favoritism in the appointment of receivers; he was acquitted on all counts, though on one count a majority, short of the two-thirds needed to conviction, voted against him.

The Senate's Committee on Banking carried its investigation of practices in security-dealing and banking into the realm of the large private banking firms. J. P. Morgan and other members of the firm of J. P. Morgan and Company were examined in May and early June; it was elicited that the firm had made loans to many individuals of national prominence; that it had allotted to others, at prices materially below quotations current at the time, shares of the Alleghany Corporation, and of Standard Brands, some privileged thus to purchase being William H. Woodin (later Secretary of the Treasury), Owen J. Roberts (later Associate Justice of the Supreme Court), and Ex-President Calvin Coolidge. It was elicited, further, that the Morgan firm, when admitting S. Parker Gilbert as a member on January 2, 1931, had revalued securities in its possession, thus establishing a loss of \$21,000,000, whereafter no member of the firm paid a Federal income tax for either 1931 or 1932. Although the offsetting of income by capital loss thus incurred was conformable with the Federal law, the testimony occasioned popular outcry against those who had not paid.

The Senate authorized an investigation of ocean-mail contracts, which proceeded during the summer and obtained much information as to the relations of some of the shipping interests with the Shipping Board, in connection with purchases of ships and the granting of contracts to carry mail thereon. An interim sub-committee headed by Copeland of New York was directed to investigate the subject of racketeering.

The House authorized its committee on judiciary to investigate the practices of the Federal District courts as to bankruptcies and receiverships. It also directed its committee on civil service to investigate the Civil Service Commission.

Close of the Session. The session adjourned on June 16. It was remarkable for having passed 12 measures of great importance to the programme initiated by the President, for having left no major measure recommended by him unpassed, and for having exceeded all precedent for a peace-time session by appropriating (as summarized by Representative Snell) \$4,373,252,647.

JUDICIARY

LITIGATION AS TO NEW FEDERAL POLICIES. The first decision as to the validity of Federal proceedings to compel the surrender of privately owned gold to the government was rendered on November 16 by Federal District Judge Woolsey at New York. He sustained in part an indictment brought against Frederick Barber Campbell based on Campbell's alleged failure to surrender a quantity of gold bars. The court sustained the provisions against hoarders of gold in the banking act of March 9, 1933, holding that when emergency demanded, Congress might "control gold in such manner and to such extent as it deems advisable," and denying Campbell's contention of deprivation of property without due process of law; the decision held that by offering paper currency for surrendered gold the Government made the "just compensation for its value determined as of the time and place of taking" as required by the Fifth Amendment. The decision rejected a count of the indictment based on alleged non-compliance with the President's executive order of August 28, holding that the act of March 9 conferred power to require the surrender of gold on the Secretary of the Treasury and not on the President; criticizing the order, further, as having required holders of gold to file a return revealing holdings and thus enabling the Treasury to requisition them without having given the holders the opportunity for a court test.

An indictment was found against a filing station in Brooklyn, in November, under the National Industrial Recovery act, for failure to comply with requirements as to employees, embodied in a code for the control of the members

of this industry. At Tampa, Federal District Judge Akerman held in December that the National Recovery Administration had no power to regulate commerce conducted entirely within the bounds of one State.

SUPREME COURT. By an act of February 25 the Supreme Court was authorized to prescribe rules and practices designed to expedite the appeal of criminal cases in the Federal courts. Among the decisions of the court were: that of March 13, holding the tax of the State of Florida on chain stores to be discriminatory; of March 20, that States and their instrumentalities might not import goods free of duty (in the case of the University of Illinois); April 10, that Federal employees producing patentable articles need not assign patents to the United States (Dubilier Corporation case); in May, denying the Los Angeles Gas and Electric Company's contest against a valuation of its property, set by the California railroad commission, which made reductions on account of recent declines in values; May 22, ordering that the State of Illinois provide funds for the Chicago sanitary district to complete plants for the disposal of sewage.

UNITED STATES MILITARY ACADEMY. A government institution at West Point, N. Y., for the theoretical and practical training of cadets for the military service of the United States, opened in 1802. On Sept. 1, 1933, the total number of cadets was 1282. There were 175 members of the faculty. The academy is a component part of the Regular Army of the United States and is maintained solely by appropriations from the War Department, which in 1933 amounted to \$2,344,584 for salaries and maintenance of public works. The library contained over 180,000 volumes. Superintendent, Maj. Gen. Wm. D. Connor, U. S. A.

UNITED STATES NAVAL ACADEMY. A school for the education and training of midshipmen in Annapolis, Md., founded in 1845. The total number of midshipmen at the beginning of the academic year 1933-34 was 1682. The faculty numbered 250. The library contained 77,386 volumes. Midshipmen, after graduation, are commissioned as ensigns in the U. S. Navy. Superintendent, Rear Admiral Thomas C. Hart, U. S. N.

UNITED STATES OF EUROPE. The concept of a European political union, advanced by Foreign Minister Aristide Briand of France in his famous memorandum of May 1, 1930, had been pigeonholed and almost forgotten by the nations of Europe by 1933. In place of the trend toward mutual coöperation envisaged by M. Briand there was almost everywhere a growth of nationalism, as demonstrated by the failure of the World Economic Conference (see **ECONOMIC CONFERENCE, WORLD**) and the triumph of fascism in Germany and Austria. While European unity seemed farther away than ever, the movement toward regional coöperation made definite progress under the spur of economic necessity. The areas in which the prospects of international economic and political coördination seemed brightest were (1) the Balkans, including Turkey; (2) the Danubian area, comprising the states formerly incorporated in Austria-Hungary; and (3) the newly established Baltic states—Lithuania, Latvia, Estonia.

THE BALKAN CONFERENCE. The fourth unofficial Balkan Conference, attended by representatives of Greece, Turkey, Bulgaria, Rumania, and Yugoslavia was held in Salonika, Greece, from Nov. 5 to 11, 1933. The conference drafted and

adopted a plan for economic coöperation based on a system of preferential tariffs and appointed a commission to elaborate a plan for a limited Balkan customs union. It also declared for an extension of the system of non-aggression pacts which was being built up among the Balkan and other European states. The 1933 conference was noteworthy because the governments of the various nationalities represented evidenced a growing interest in its work. The Greek Chamber of Deputies sent out a circular letter to the other Balkan governments urging them to support the work of the conference and the application of its proposals. Meanwhile the Turko-Greek treaty signed Sept. 14, 1933, and the diplomatic negotiations of the Balkan states during 1933 were all directed toward greater economic coöperation and political unity. See **TURKEY, GREECE, BULGARIA, RUMANIA, and YUGOSLAVIA under History.**

DANUBIAN UNION. The economic vicissitudes of the Danubian states and the threat to the peace of Europe arising therefrom had produced numerous proposals for greater economic collaboration, particularly the Tardieu plan of 1932. The Tardieu proposals and numerous others advanced at the Stresa Conference (see 1932 YEAR BOOK) failed of adoption because of the rivalries of the various powers in central Europe. Toward the end of 1933 Premier Mussolini made new proposals for a Danubian agreement, based upon principles worked out at Stresa, which won the support of France and seemed likely to be adopted. His project called for: (1) Bilateral accords among the Danubian nations; (2) preferential treatment for the agricultural products of Rumania, Yugoslavia, and Hungary and for the industrial products of Austria; (3) the waiving by non-Danubian countries of their most-favored-nation rights if they had favorable balances of payments with the Danubian countries, and (4) concessions by the Danubian states of part of their internal markets to other nations in return for reciprocal tariff concessions.

BALTIC UNION. For the movement toward a customs union and other schemes of collaboration discussed at the Fourth Economic Conference of the Baltic States in Riga, Latvia, Sept. 8-9, 1933, see **LATVIA under History.**

UNIVERSAL CHRISTIAN COUNCIL.

See **INTERNATIONALISM**

UNIVERSALISTS. A denomination which holds as part of its doctrine the universal fatherhood of God and the final harmony of all souls with God. Established in the United States in 1770 by the Rev. John Murray of Good Luck, N. J., it exists chiefly in the United States, Canada, Japan, and Korea.

The Universalist General Convention, organized in 1870, held its biennial meeting in Worcester, Mass., Oct. 19, 1933. At this meeting the denomination voted to join with the Unitarians in the formation of the Free Church of America. (See **UNITARIAN CHURCH.**) In 1933 there were 28 State conventions and two State conferences. The number of churches was 589; ministers in fellowship, including lay licenses, 517; and church members, 50,012. The denomination publishes the *Christian Leader*, a weekly. Victor A. Friend of Melrose, Mass., was president of the general convention in 1933. Headquarters are at 16 Beacon Street, Boston, Mass.

UNIVERSAL LANGUAGES. See **PHILOLOGY, MODERN.**

UNIVERSITIES AND COLLEGES. ATTENDANCE. Those in charge of universities and colleges have been greatly concerned with the number of students who enrolled during 1933. Dr. Raymond Walters has compiled registration statistics for 546 approved institutions as of Nov. 1, 1933, and published the results in *School and Society* for December 16.

It appears that the institutions registered within 5 per cent as many full time students this year as they had in Nov. 1, 1932. The decrease in grand total enrollment is 9 per cent. Dr. Walters traces a large part of this decrease in total enrollment to the marked decrease in summer session attendance at the large institutions.

The five institutions having the largest enrollments of full time students are California, 18,337; Columbia, 13,322; New York University, 12,982; Minnesota, 11,292; and Illinois, 9996. The five institutions having the largest enrollments of resident students are New York University, 25,113; Columbia, 24,357; College of the City of New York, 22,986; California, 21,019; and Minnesota, 14,970.

The report presents an analysis of curricular enrollments in the larger institutions. There were small increases in enrollment in three professional fields: law, medicine, and divinity. The curricular enrollments in fine arts was increased by 274 students, or 15.6 per cent. Enrollments in liberal arts showed small decreases.

The largest decreases were in the fields of graduate study, education, and engineering. The decrease in the schools of education and teachers' colleges in universities was 11.9 per cent. There was even a greater decrease in the number of students in the 37 separate teachers' colleges not associated with universities.

The decrease in engineering students was 9.9 per cent. Departments or schools of architecture, journalism, and music showed decreases of 15.8 per cent, 10.1 per cent, and 8.8 per cent, respectively.

The enrollment in the summer schools for 1933 was about 23 per cent below that for 1932. Enrollments in extension courses have also decreased.

CHANGES IN ORGANIZATION. There is a tendency to try new methods of instruction and organization of subjects. Many of these plans have come to bear the name of the institutions which foster them.

After the opening of college in September, President George B. Cutten of Colgate University announced a gift of \$120,000 from the Carnegie Corporation for the purpose of putting in full operation the "Colgate plan" which was introduced in 1928. The grant will be in four annual installments of \$30,000 each.

As reported in *School and Society*, Dr. Cutten announced that fifteen new men would be added to the faculty and that the scope of the plan would be broadened. He is quoted as follows:

For seven or eight years we have been developing the Colgate plan, which, while somewhat radical, embraces the best features of modern experimentation.

The survey courses did not originate with us, but we have carried them to their logical conclusion. Where many universities have surveys in one subject, for example, Chicago in social sciences, Dartmouth in evolution, and Columbia in contemporary civilization, we have divided our curriculum into six schools.

We have a survey course in each one except that of languages. These schools are physical sciences, biological sciences, social sciences, philosophy and religion, fine arts, and languages. Each student in college takes these survey courses.

There are three advantages of these courses: First,

cultural, in giving the student a general survey of the whole field of knowledge; second, vocational, preparing a student to choose his field of concentration; third, the psychological effect of having a radical change in college that re-arouses the enthusiasm of the student.

The preceptorial plan, devised to develop the student intellectually as a whole, is working out satisfactorily, for the records show that students working with preceptors have higher grades than others.

Since the Colgate plan was introduced, we have been confident that we were operating along the right lines and teaching students to think, rather than merely to memorize. This recognition by the Carnegie Corporation adds credence to our belief.

The "Chicago plan" has been in operation for two years. The authorities at the University seem to regard the results as satisfactory. The depression has had the effect of limiting the expansion of the plan to the extent that was contemplated. The results of the examinations in the four comprehensive examinations at the end of the first year showed a proportion of failures ranging from 8 per cent to 12 per cent. Some of those who passed the examinations completed the work in less than a year. Some who have passed the examinations have not pursued the work in college. For the distinguishing features of the plan see CHICAGO, UNIVERSITY OF, in 1930 YEAR BOOK.

The faculty of the University of Kansas City have announced the adoption of a plan which is designed to give the student the opportunity to secure an education on his own initiative. No one course is required but students will be helped to plan their education.

While there are no restrictions on the courses taken, there are restrictions on the groups of courses followed by the student. All the courses offered by the College are divided into four groups as follows: (1) The humanities, including such departments as classical languages, philosophy and art; (2) the social sciences, including economics and business, sociology, history, political science, and other related courses; (3) the biological sciences; and (4) mathematics and the physical sciences.

The student is required to take 50 of his 120 hours of college work in one division, and at least 30 of those hours in one specific department. He is required to take at least 10 hours in each of the other three main divisions. The remaining 40 hours may be taken wherever he chooses.

At the end, the student will receive a degree only when he has proved by a comprehensive examination that he has mastered the courses of his choice.

Stanford University has removed its restrictions on the number of women students. Until this change, the women who might be received was limited to 500. There are between three and four qualified applicants to each one that could be received.

The University of Pennsylvania has established a College of Liberal Arts for women. The general plan of the college is described in *School and Society* as follows:

The new college offers a complete curriculum in the Liberal Arts and pre-professional curricula for two or more years for those preparing to enter medical, dental, or law schools. Women who are planning to engage in teaching and allied activities will enrol in the college for their freshman and sophomore years and, if their academic and personal qualifications warrant, will be admitted at the beginning of the third year to the School of Education, in which they will receive their professional training during the remainder of their course. Such students will receive the degree of bachelor of science in education at the end of their fourth year, but they will not be eligible for professional certification until the completion of a post-graduate year, admission to which will also be on a selective basis. Under this

plan the teacher-training programme will cover five years instead of four.

The student who is interested in the fine arts, music, journalism, or the broader phases of economics and business, but who wishes to pursue a general college course rather than enter a technical or professional school, will find it possible to take a certain amount of work in these fields.

Union College put into effect this year a plan which is the result of a survey of educational practices of colleges in the United States as well as the experiences of Union College during the past 138 years. The plan is described in *School and Society* as follows:

The college proposes hereafter to admit and to place boys in a curriculum on the basis of proficiency as exhibited in secondary school. For this purpose subjects of study in the college will be grouped into four divisions: engineering (civil and electrical), language and literature (English, French, German, Greek, and Latin); mathematics and science (biology, chemistry, geology, mathematics, physics, and psychology); and social studies (economics, history, political science, philosophy and religion). Each division will be presided over by one of the professors of the college and associated with him in the work of the division will be a group of professors in charge of particular fields of study.

For admission into a curriculum in one of these divisions, 15 units of secondary school work will be required. Three of these units will be in English, the remaining 12 may be made up from subjects that the applicant has pursued in school. The college will no longer demand that secondary schools train their students in some special way to qualify them for entrance. English will be required because it is believed to be of paramount importance that a student speak and write well in his native language.

The curriculum will henceforth be adapted to each boy admitted. The division in which a boy will begin his college work will be determined by his school record. An applicant who has done well in school language may be admitted to the language and literature division, even if he has not done well in mathematics. What is more, he will not be required to take mathematics in college, although he must choose some other science, either biology or chemistry. In the same way, an applicant, proficient in mathematics or science, may begin his college work in the engineering or science division even if he has not studied a language in high school.

Once in a division, the freshman will be directed toward pursuing a "topical major" instead of the present "subject-major." Specialization will be left to the university. The aim will be to fit men for intelligent citizenship, business, the professional schools of law, medicine, dentistry, secondary school teaching, industrial work, or study in the graduate school.

The fifth point of the plan is the responsibility now placed upon the professor to aid seniors in coordinating their pregraduation with their future careers. It is planned that instead of the usual mechanical placement bureau, professors place seniors after graduation.

Many colleges and universities have offered special courses to the unemployed. Such offerings vary with the needs of the students concerned. Rutgers University admits unemployed male residents of New Jersey to the regular courses in its Men's College. There is no tuition charge but the candidates have been required to provide themselves with necessary books and supplies and to be subject to the same rules that govern other students.

Unemployed Wisconsin citizens who can profit from further educational training may take university correspondence and extension courses at the expense of the State. In March, Haverford College announced that "it would accept any qualified student for regular classes during the remainder of the year without charge if the applicants was over twenty-five years of age, unemployed and unable to pay tuition charges."

Temple University gave free tuition to full-time day students who were graduating and who were unable to find employment and might otherwise be idle.

In New York State, emergency college courses were established for high school graduates who

were unable because of financial conditions to enter college. Centres were established at White Plains and Garden City, in cooperation with the College of the City of New York; at the State Teachers Colleges in Albany and Buffalo; and at Syracuse and Rochester, in cooperation with the New York State College of Forestry at Syracuse University.

The University of North Carolina conducted an institute for college graduates. The purpose of the institute was to provide worthwhile intellectual and cultural development for those who because of enforced leisure or for other reasons desired to return to college and improve their educational qualifications.

GIFTS AND BENEFACTIONS. The year has not been noteworthy either for the size or for the number of gifts to colleges and universities. The following gifts and bequests have been announced: Brown University received \$100,000 by the will of the late C. Prescott Knight. Connecticut College received a gift of \$150,000 from Mrs. Edward S. Harkness for the construction of a dormitory. Harvard University received \$805,000 by the will of the late James Loeb. New York University received \$402,213 from the estate of the late Emma Baker Kennedy. By the will of the late John B. Anderson Princeton University will receive the principal sum of \$900,000 after the death of survivors who are to receive the income during their lifetime.

The University of Chicago will receive \$479,000 by the will of the late Gertrude Dun Hicks. Washington College at Chestertown, Maryland is to receive an estate estimated at \$150,000 by the will of the late Charles F. Harley. The estate is left in trust to Mrs. Harley during her lifetime. Washington University at St. Louis received a gift of \$700,000 from two anonymous donors.

EDUCATIONAL BOARDS AND FOUNDATIONS. *The American Council of Learned Societies.* In March, the committee on fellowships and grants of the American Council of Learned Societies announced the award of 16 fellowships and 41 grants in aid of research. The fellowships are for \$1800 each, to which allowances for travel and other expenses may be added. The grants are in two classes: those that do not exceed \$500 and those that do not exceed \$1000.

Nine received the larger grants, ranging in value from \$600 to \$1000, and thirty-two received the smaller grants, ranging from \$100 to \$500. Applicants for grants must possess the doctorate or its equivalent and present specific needs.

Commission for Relief in Belgium Educational Foundation. Awards of Advanced Fellowships to Americans for study in Belgium for the year 1933-34 were given seven Americans.

The Commonwealth Fund. The report of this Fund for the year ending Sept. 20, 1932, shows an expenditure of \$1,573,838.09. Of this amount, \$808,457.03 was spent for public health and better medical and hospital service in rural areas, and for medical research. Child guidance, the training of psychiatrists and psychiatric social workers and mental hygiene in the United States and Great Britain cost \$334,252.17. Fellowships for British students in American universities cost \$250,500. Legal research and miscellaneous grants amounted to \$180,228.69.

General Education Board. The report showed an appropriation of \$10,816,149 for the support of education for the year ending June 30, 1932. The book value of the investments was \$74,733,270.

The income for the year was \$3,650,683, a decrease of about 14 per cent from the previous year.

The John Simon Guggenheim Memorial Foundation. The purpose of this foundation is to assist scholars and artists to carry on original research and creative work.

For the year 1933-34 a total of 38 fellowships were awarded. Of these, 29 were granted to scholars and artists from the United States, and nine to scholars from Latin America who came to the United States to carry on their work. Those appointed from the United States went to other parts of the world.

The Julius Roscwald Fund. During the year the Fund reported on its activities for the two year period ending June 30, 1933. The Fund was established in 1913; consequently the report gives a report for the entire twenty years of its existence.

For the year ending June 30, 1933 the Fund appropriated the following:

Negro Welfare	
Southern school programme	\$ 34,527
Higher education	82,761
Fellowships to 184 individuals	33,074
Health	40,362
Other activities in Negro welfare	23,545
Studies and demonstrations in Medical Economics	76,780
General Education and Medical Sciences	45,769
Social studies	75,183
Library service	105,105
Administration	57,000
Total	\$524,106

The Report states that the Fund of necessity curtailed its expenditures and avoided new commitments during the past two years.

For the educational activities of the Carnegie Foundation for the Advancement of Teaching and the Rockefeller Foundation, see separate articles on each.

FOREIGN LECTURERS IN AMERICAN EDUCATIONAL INSTITUTIONS. The Institute of International Education announced that eleven European scholars would lecture in American institutions during the academic year. During the past five years the Institute has made arrangements for the visiting of 86 foreign lecturers in American institutions.

Educational groups in the United States have viewed with alarm the condition of distinguished scholars in Germany who have been dismissed from their positions because of political conditions. In various ways, those who are interested in education have sought to assist these unfortunate men. Some of those who were dismissed have been employed as visiting professors by different universities, and efforts have been made to provide the means for them to continue their researches and studies.

The most noteworthy attempt at assistance was made by the New School for Social Research in New York City. Through gifts and subscriptions this institution raised \$60,000 and by means of this fund it employed 14 of the dismissed German professors who are now giving courses in the New School for Social Research. This section of the school has been characterized as "the University in Exile."

UNWIN, WILLIAM CAWTHORNE. A British engineer, died in London, Mar. 17, 1933. Born at Coggeshall, Essex, Dec. 12, 1838, he attended the City of London School and from 1868 to 1872 was

an instructor at the Royal School of Naval Architecture and Marine Engineering. His next appointment was that of professor of hydraulic engineering at the Royal Indian Engineering College at Coopers Hill. In 1884 he became professor of engineering at the Central Technical College of the Guilds of London. Six years later he was named secretary of the International Commission on the Utilization of Niagara and as one of the consulting engineers aided in the solution of problems connected with the development of power at Niagara Falls.

After his resignation from the Central Technical College in 1904 Dr. Unwin served as president of the Institute of Civil Engineers (1911) and of the Institute of Mechanical Engineers (1915-16). He was a member of the Senate of London University from 1900 to 1905 and again from 1911 to 1928. In 1921 he was chosen the first recipient of the Kelvin Medal, awarded by the Institute of Civil Engineers.

URAL AREA. See SIBERIA.

URBAN, ur'ban, JOSEPH. An American architect and scenic designer, died in New York City, July 10, 1933. He was born in Vienna, Austria, May 26, 1872, and attended the Academy of Fine Arts and the Polytechnicum there. Starting as an interior decorator about 1895, he was commissioned two years later by the Khedive of Egypt to decorate and furnish the Abdin Palace in Cairo. During the next 10 years he was employed in a similar capacity by the Austrian and Hungarian nobility, the most perfect examples of his work being the three castles which he erected and decorated for Count Carl Esterhazy. He designed also the Rathskellar in the Vienna City Hall, erected the Czar Bridge spanning the Neva River in St. Petersburg (later Leningrad), and laid out several large parks.

Urban's entrance into the field of scenic designing was accidental. At an art exhibition in Vienna there were shown some of his illustrations for the Grimm Brothers' and Hans Christian Andersen's fairy tales. These aroused the enthusiasm of several theatrical producers and resulted in his employment from 1904 to 1912 as scenic designer for some of the leading European opera houses and theatres. He was also for several years chief artistic adviser to the Imperial Opera House in Vienna. In 1912 he was secured by Henry Russell to design scenery for the Boston Opera Company in connection with its production of *Pelléus and Mélisande*, *Hansel and Gretel*, and *Tristan and Isolde*. Subsequently he settled in New York City, and in 1917 became a naturalized American citizen.

For the Metropolitan Opera Company Urban created settings, characterized by originality, beauty, and imaginative power that verged on the impressionistic. Outstanding among the plays for which he designed the scenery were James K. Hackett's productions of *Macbeth* and *The Merry Wives of Windsor*, and Percy MacKaye's masque *Caliban*. He was also for a time general production manager for the International Film Studio of New York City, carrying over into this medium his feeling for significant backgrounds and surroundings and substituting imagination and simplicity for the prevailing mode of realism. Later, he added to his interior and stage art work the

notable buildings in New York City the Ziegfeld Theatre and the New School for Social Research. His last important commission was choosing the color scheme of the buildings erected at the Century of Progress Exposition in Chicago.

UROLOGY. See MEDICINE AND SURGERY.

URUGUAY. The smallest republic of South America. Capital, Montevideo.

AREA AND POPULATION. With an area of 72,153 square miles, Uruguay had a population on Jan. 1, 1932, estimated at 1,941,398. Of this total about one-third resided in the City of Montevideo, which had a population of 655,972 on July 31, 1932. The population of the other principal cities was: Salto, 30,000; Paysandu, 26,000; Mercedes, 23,000. The population is mainly of Spanish origin, with a large admixture of Italians, Brazilians and Argentinians.

PRODUCTION. Stock raising is the predominant industry of Uruguay, furnishing over 80 per cent of the value of all exports and supporting the bulk of the population. About 60 per cent of the total area is devoted to stock raising, 20 per cent to mixed stock and farm crops, and about 7 per cent primarily to crop-raising farms. The agricultural crops, with the exception of linseed, are mainly for local consumption; they account for only about 10 per cent of all exports. The restriction of foreign markets for meat products and the decline of 50 per cent or more in prices during the world depression reacted disastrously upon the country's economic structure. The value of livestock exports declined 71 per cent from \$77,377,000 in 1929 to \$22,581,000 in 1932. Of the value of the 1932 livestock exports, wool contributed \$8,787,000; meat and meat extracts, \$8,817,000; hides, \$3,543,000; and other products, \$2,683,000. Further restriction of the principal export market (Great Britain) was reported in 1933, as a result of the Ottawa Agreements. Livestock in the country in 1931 included 7,372,000 cattle, 15,406,000 sheep, and about 309,000 swine. Production, in bushels, of the chief crops in 1931-32 was: Wheat, 11,246,000; corn, 5,759,000; oats, 3,107,000; barley, 148,000; linseed, 4,837,000; potatoes, 884,00; beans, 122,000.

COMMERCE. Imports during 1932 amounted to 53,214,072 pesos (customs values) and exports to 58,266,044 pesos (real values). Corresponding figures for 1931 were 81,981,729 pesos and 78,242,055 pesos, respectively. If the real value of imports is calculated on the basis of a 24 per cent increase over customs valuations, as recommended by an official Uruguayan commission, the real value of imports in 1932 was 65,985,449 pesos, making an adverse trade balance of 7,719,405 pesos, and the real value of imports in 1931 was 101,657,344 pesos, leaving an adverse trade balance of 23,415,289 pesos. (The par value of the peso is \$1.0342 U. S. currency.) The value of all foreign trade in 1932 was approximately one-third that of 1928. Calculated in U. S. dollars at average annual rates of exchange, imports in 1932 amounted to \$31,306,000 (\$63,178,000 in 1931) and exports to \$28,215,000 (\$43,313,000 in 1931).

The United States, which was the chief source of Uruguayan imports in 1931, fell to fourth place in 1932, being surpassed by Great Britain, Argentina, and Germany. It retained seventh place among the countries to which Uruguay exported, both in 1931 and 1932. Imports, in customs values, from the United States were 5,349,636 pesos in 1932 (15,733,906 pesos in 1931),

while exports to the United States, in real values, were 2,417,833 pesos in 1932 and 3,503,501 pesos in 1931. United States statistics showed exports to Uruguay (1933) of \$3,614,194 (\$3,217,417 in 1932); imports from Uruguay, \$3,772,861 (\$2,103,595 in 1932).

FINANCE. Prior to the world economic depression the budget showed a surplus for six consecutive years (fiscal years 1923-24 to 1928-29). Thereafter an annual deficit was reported, as shown in the accompanying table compiled by the Institute of International Finance. The figures exclude a number of special accounts.

URUGUAY: REVENUES AND EXPENDITURES [In Uruguayan pesos]

Fiscal years, ended June 30	Revenues	Expenditures	Surplus or deficit (—)
1928-29 . . .	59,955,418	56,366,523	3,588,895
1929-30	58,916,880	59,702,624	— 785,744
1930-31 . . .	55,735,890	63,166,926	— 7,431,036
1931-32 . . .	57,910,885	62,456,902	— 4,546,017
1933 * . .	59,233,699	58,888,075	345,624

* Beginning Jan. 1, 1933, the fiscal year was changed to coincide with the calendar year. ^b Estimates.

The public debt as of June 30, 1933, totaled 282,167,000 pesos, as compared with 257,054,000 pesos on Dec. 31, 1932. Less than 100,000,000 pesos was held abroad. For suspension of interest payments on the foreign debt in 1933, see under *History*.

COMMUNICATIONS. Uruguay's four main railway systems are British owned. There are in addition 205 miles of state lines, making a total mileage open for traffic of about 1729 miles. There were (1932) 2760 miles of national highways, including some 800 miles of macadam and concrete, and about 5900 miles of departmental roads. Montevideo is linked with the other countries and capitals of North and South America by air mail and passenger lines. A total of 11,130 vessels of 12,971,411 tons entered the ports of Uruguay in 1931.

GOVERNMENT. The Constitution of 1919 divided executive power between the President, elected for four years by popular vote, and a national administrative council of nine members, elected for six years. Legislative power was vested in a parliament of two houses—the Chamber of Representatives of 123 members, elected by male suffrage, and the Senate of 19 members, chosen by an electoral college which was elected by popular vote. Women were authorized to vote and hold office in national and municipal government by a law passed by the General Assembly and approved by the National Council Dec. 16, 1932. President in 1933, Dr. Gabriel Terra, who assumed office Mar. 1, 1931. For changes in the government in 1933, see *History*.

HISTORY

THE TERRA DICTATORSHIP. The conflict between President Terra and the National Council reached a climax early in 1933. Holding that the division of executive authority between President and Council rendered the government ineffective in dealing with the exigencies of the economic depression, Dr. Terra urged constitutional reforms designed to abolish the Council. On February 10 the Socialist Deputies in the National Assembly voted to impeach the President. A threatened civil war was temporarily averted when on February 15 Luis Alberto de Herrera, leader of Dr. Terra's Nationalist opponents, rejected proposals for armed reprisals against the Terra adherents.

Tension continued until March 30, when the

President suddenly took preventive measures against a counter revolt by placing troops in occupation of strategic points in the capital, including the waterworks, power houses, penitentiaries, etc. The Administrative Council and Congress were dissolved the following day, after they had voted to disapprove these measures. Dr. Terra assumed dictatorial powers, called a Constituent Assembly to revise the Constitution, and appointed an advisory junta of eight members to aid him in administering the country pending a return to constitutionalism. A rigorous press censorship was established, federal "interventors" were appointed to replace the elected provincial governors, and the members of the Administrative Council were imprisoned or forced to flee the country. Among them was Dr. Baltasar Brum, a world-renowned jurist and former President, who committed suicide rather than submit to arrest.

The Electoral Court, which supervises elections, was dissolved when it declared to be illegal President Terra's call for the election on June 25 of a Constituent Assembly. Pending the election the junta appointed a deliberative assembly of 99 members, who met on May 3 to consider the President's legislative proposals. About the same time the President issued a series of decrees designed to reduce expenditures, relieve unemployment, and generally improve the economic situation. Among these was the decree of May 16 which provided for the compulsory cultivation of real estate and the compulsory planting of trees according to a schedule varying with the four different zones into which the country was divided. It further provided that persons owning more than 7400 acres must build a dwelling within each 7400-acre sector and must maintain individuals with families in such dwellings. A 20 per cent reduction in the land tax for 10 years was offered for compliance with the decree within 30 months. Various other government bodies and enterprises were reorganized. According to reports from Uruguay, the Terra administration was endorsed by a majority of the voters at the June 25 election.

While President Terra continued his dictatorship to the end of the year, he called elections for a constituent assembly to meet early in 1934 for the purpose of drafting a new constitution. By the law of August 19 his government extended its unemployment relief programme by voting funds for additional immediate public works. A committee of 11 members was appointed to study a permanent solution of the unemployment problem.

FOREIGN DEBT MORATORIUM. The problem of finding sufficient foreign exchange to meet the country's requirements reached a critical stage in 1933. The unfavorable trade balance in 1931 and 1932 and the almost complete stoppage of the influx of foreign capital resulted in an alarming decrease in foreign exchange and gold holdings of the central bank. The exchange value of the peso fell from par of \$1.0340 to \$0.5536 in 1931 and \$0.4706 in 1932, and then rose with relation to the U. S. dollar when the latter country abandoned the gold standard in 1933. On July 3, 1933, the government announced the suspension of all interest payments on the foreign debt in foreign currency; the equivalent in pesos, at par of exchange, was to be deposited in Montevideo and transferred abroad from time to time to coupon holders consenting to accept these funds, at the rate of exchange prevailing at the time of transfer. Meanwhile the city of Montevideo continued

its defaults, commenced June 1, 1932, upon two dollar loans and one sterling loan, in spite of the protests of the bankers.

A decree of Dec. 13, 1933, provided that during 1934 interest on external bonds should be paid in the currency called for, up to 3½ per cent per annum. Another decree of Dec. 15, 1933, provided that holders in Uruguay of Uruguayan bonds issued in the United States must report their holdings to the office of Public Credit by Dec. 30, 1933, after which date coupons of unreported bonds would not be paid in Uruguay. The purpose of this decree was to prevent sale of such bonds in Uruguay, where they were bringing higher prices than abroad, and to diminish operations in boot-leg exchange.

At the end of 1933 the Autonomous Amortization Bureau announced that the issue of autonomous amortization bonds authorized July 15, 1932, for the purpose of funding block peso accounts in Uruguay, had been over subscribed. The bonds were authorized in the amount of 15,000,000 Uruguayan gold pesos (32,670,000 paper pesos) and were payable in American dollars, English pounds, French francs, or Uruguayan gold pesos, over a period of five years. They were issued against payment of the equivalent amount in Uruguayan currency at the current official rate. See PAN AMERICAN CONFERENCE; ARGENTINA, BOLIVIA, and BRAZIL under *History*.

UTAH. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 507,847, as against 448,396 in 1920, Salt Lake City, the capital, had (1930) 140,267 inhabitants.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod Bu.	Value
Hay (tame) .	1933	643,000	1,249,000 ^a	\$7,494,000
	1932	650,000	1,268,000 ^a	7,101,000
Sugar beets ..	1933	73,000	878,000 ^a
	1932	56,000	846,000 ^a	4,032,000
Wheat ...	1933	254,000	4,079,000	2,512,000
	1932	260,000	5,332,000	1,933,000
Potatoes	1933	14,000	2,100,000	1,029,000
	1932	15,000	2,250,000	450,000

^a Tons.

MINERAL PRODUCTION. The value of the product of the five metals gold, silver, copper, lead, and zinc fell by more than one-half, to \$14,398,593. (1932), from \$28,970,974 (1931). The decrease, except for gold, occurred through declines in price as well as in quantity. In the case of gold (still at the statutory price of \$20.67 an ounce in 1932), there occurred a sharp decline in the quantity of the mines' production; the output consequently attained the value of only \$2,795,997 (1932), as against \$4,108,323 (1931). This decline as to gold was against the general current of higher production elsewhere caused by increased incentive due to lower costs and a stable market. The decline in the case of Utah was attributed to the curtailment of copper mining, which normally furnished, as a by-product of copper ore, much of the output of gold; the gold output of mines of the Tintic district was reported to have decreased.

The mines' production of silver fell to 6,962,097 fine ounces (1932), from 8,290,966 (1931); of copper, to 64,964,111 pounds (1932), from 151,236,505 (1931); of lead, to 125,552,966 pounds (1932), from 158,423,453 (1931); of zinc, to 59,331,888 pounds (1932), from 74,581,072 (1931).

The estimated production of gold, silver, copper, lead, and zinc, for 1933, attained the value of \$15,842,196. To this total, 108,841 ounces of gold (reckoned at \$20.67 an ounce, though some of it brought much more) supplied \$2,249,943; 5,658,000 ounces of silver; \$1,952,010; 73,046,000 pounds of copper, \$4,674,944; 114,762,000 pounds of lead, \$4,246,194; 63,235,000 pounds of zinc, \$2,719,105.

There were mined 2,850,000 tons of coal (1932), as against 3,350,044 (1931).

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$9,579,297 (of which \$3,318,463 was for local education); for interest on debt, \$489,975; for permanent improvements, \$3,730,285; total, \$13,799,557 (of which \$5,324,772 was for highways, \$2,115,393 being for maintenance and \$3,209,379 for construction). Revenues were \$14,322,853. Of these, property and special taxes furnished 35.9 per cent; departmental earnings and compensation to the State for officers' services, 8.5; sale of licenses, 28.1 (in which was included a gasoline sale tax that produced \$2,552,954). Funded debt outstanding on June 30, 1932, totaled \$10,525,000, of which \$7,000,000 was for highways. Net of sinking-fund assets, the debt was \$4,774,427. On an assessed valuation of \$618,461,005 the State levied in the year ad-valorem taxes of \$5,125,839.

EDUCATION. Efforts were made, because of the prevalence of unemployment, to promote the continuance of education among high-school graduates in the unemployed class. These efforts included enrollment at nominal tuition in the University of Utah and other educational institutions of the State, for high-school graduates whose parents were unemployed, and also the creation, in the high schools of Salt Lake City, of postgraduate departments open to unemployed graduates of these schools.

The school population, as of Oct. 31, 1933, was reckoned as 149,068. There were enrolled in the public schools of the State, in the academic year 1932-33, 142,280 pupils. Of these, 87,493 were in common schools or elementary grades; while those enrolled in the high schools and junior high schools attained the proportionately very high total of 54,787. The year's expenditures for public-school education totaled \$9,433,445. Salaries of teachers (principals included) averaged, by the year, \$1129.21.

LEGISLATION. A regular session of the Legislature convened on January 9. To provide for the State's action on the proposed repeal of the Federal Eighteenth Amendment, it created a State convention of 14 delegates, to be elected at large by popular vote, either at a date in 1933 to be set by the Governor or, otherwise, at the general election in November, 1934. The Twentieth Amendment to the Federal Constitution received the State's ratification by the Legislature's own vote. A law permitting the manufacture of beer not exceeding 3.05 per cent in alcoholic content was enacted, but the prohibitions against alcoholic drinks, fixed in the State constitution, were not repealed.

A tax of $\frac{3}{4}$ per cent of all retail sales was imposed, with intention to raise \$500,000 a year for State relief to the needy unemployed. The crime of kidnaping for ransom was rendered punishable by death, as alternative to imprisonment for life. A freak law was passed, requiring

that the State and all its subdivisions should pay employees in gold coin; this measure, enacted on March 12, was reported to have been designed, not to be enforced, but to draw attention to the inadequacy of gold as a monetary base, an argument strongly maintained in this silver-producing State. Subdivisions were authorized to issue "revenue-refunding" bonds to meet the cost of self-paying public works.

A special session of the Legislature convened on July 10, principally to provide more revenue for State purposes, including the support of high schools.

POLITICAL AND OTHER EVENTS. Payments by banks were suspended on March 2 by resort to the device of declaring a legal holiday period of four days, to which the Federal closure of banks supervened. At the election of November 7 the voters selected 14 delegates, favorable to the repeal of the Federal Eighteenth Amendment, who were to meet in State convention on December 5 to vote the State's adoption of repeal through the superseding amendment proposed by Congress. The popular vote was cast for the repealist delegates in the approximate proportion of 5 to 3. At the same election the repeal of the State constitution's provisions to prohibit alcoholic intoxicants was ratified.

Rioters stopped the public sales of property for taxes at the City and County Building in Salt Lake City on February 23. A provision of the year's session of the Legislature, that subdivisions of the State might cover the cost of building remunerative public works by issuing bonds repayable only from the revenue of such works was held unconstitutional by the State supreme court, but the ruling was later admitted to review. The discovery of a prehistoric cliff-dwellers' structure of several hundred rooms in a hidden canyon of the San Juan River district in southern Utah was reported in July. See **ARCHAEOLOGY**.

In Salt Lake City the popular vote rejected on November 7 a proposed ordinance to authorize the issuance of \$18,000,000 in bonds for a municipal electric plant.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Henry H. Blood; Secretary of State, Milton H. Welling; Auditor, Julius C. Andersen; Treasurer, Charles A. Stain and (later) Enos Hoge; Attorney General, Joseph Chez; Superintendent of Public Instruction, Charles A. Skidmore.

Judiciary. Supreme Court: Chief Justice, David W. Moffat; Associate Justices, Elias Hansen, William H. Folland, Ephraim Hansen, Daniel N. Straup.

UTAH, UNIVERSITY OF. A State institution of higher education in Salt Lake City, founded in 1850. The total enrollment for the autumn quarter of 1933 was 3041, and for the regular school year of 1932-33, 3547; for the summer of 1933, 584, number of students in extension courses, 2292. The faculty numbered 186. The income for 1932-33 was \$795,531. The library contains 113,916 volumes and 31,129 pamphlets. A new library building to cost \$550,000 was under construction. President, George Thomas, Ph.D.

UZBEK S.S.R. See **SOVIET CENTRAL ASIA**.

VAIHINGER, vi'hing-ër, HANS. A German philosophical critic, died in Halle, Dec. 19, 1933. He was born at Nehren near Tübingen, Sept. 25, 1852, and was educated at the Universities of Tübingen, Leipzig, and Berlin. After serving as

docent at the University of Strassburg from 1877 to 1883, he was called to the University of Halle where he held the chair of philosophy and pedagogy until his retirement in 1906. One of the foremost critics of Kant, he founded the Kant Society, edited *Kantstudien* after 1896, and wrote *Kommentar zu Kants Kritik der reinen Vernunft* (2 vols., 1881-92); *Kant—ein Metaphysiker?* (1889); *Die transcendente Deduktion der Kategorien* (1902); and *Pessimismus und Optimismus vom Kantischen Standpunkt aus* (1924). His other works included: *Goethe als Ideal universeller Bildung* (1875); *Hartmann, Dühring und Lange* (1876); *Nietzsche als Philosoph* (1902); and *Die Philosophie in der Staatsprüfung* (1906).

The "as if" philosophy, which Vaihinger formulated during 1875-78 and gave to the world in 1911 under the title of *Die Philosophie des Als Ob—System der theoretischen, praktischen, und religiösen Fiktionen der Menschheit auf Grund eines idealistischen Positivismus*, was destined to become one of the leading war and post-war philosophies of Germany. Based on the conviction that all human concepts are relative, it maintained that all knowledge in the realm of science, philosophy, religion, etc., is fictitious. Man acts, however, as if these concepts existed, that is, "as if" there were a God, "as if" time and space were actual, and "as if" there were a tangible force in nature such as electricity, because only with their aid can he arrive at definite knowledge or even make his existence tolerable. The system was further developed by Vaihinger in *Wie die Philosophie des Als Ob Entstand* (1921) and *Der Mythos und das Als Ob* (1927).

VANCOUVER TUNNEL. See FOUNDATIONS.

VANDERBILT UNIVERSITY. A nonsectarian institution of higher learning for men and women in Nashville, Tenn. The enrollment for the autumn term of 1933 was 1276. The faculty numbered 369. The annual income was \$1,541,000. Volumes in the library numbered 143,000. Chancellor, James Hampton Kirkland, LL.D., D.C.L., Ph.D.

VAN DYKE, HENRY. An American clergyman, author, and scholar, died at Princeton, N. J., Apr. 10, 1933. Born at Germantown, Pa., Nov. 10, 1852, he was graduated from the Brooklyn Polytechnic Institute in 1869, the College of New Jersey (later Princeton University) in 1873, and the Princeton Theological Seminary in 1877. After further study at the University of Berlin he was ordained in 1879 to the ministry of the Presbyterian Church, but assumed as his first charge the United Congregational Church of Newport, R. I. In 1882 he was called to the Brick Presbyterian Church in New York City, where over a period of almost 20 years he acquired a reputation as one of the leading "liberal" clergymen of the United States.

Dr. van Dyke retired in 1900 to become professor of English literature at Princeton University, but after the death of his successor in 1902 returned to the pulpit of the Brick Church for a brief period. He was also elected in that year moderator of the General Assembly of the Presbyterian Church in the United States of America. The simplified confession of faith which he had drawn up was adopted by this assembly, and during the next three years (1903-06) he was engaged in compiling for it a *Book of Common Worship*. Although he occupied the pulpit of the Brick Church once again for only a few months in 1911, he was a frequent guest preacher there. Among students of the various educational institutions of

the United States he was one of the best loved preachers of his generation. On his own campus he was an inspiring teacher, especially to those interested in a literary career.

In 1913 Dr. van Dyke was appointed by President Wilson Minister to the Netherlands and Luxembourg, but after the outbreak of the World War he often found it difficult to maintain a proper neutral attitude. The report which he submitted to the Secretary of State on alleged German atrocities in Belgium caused a sensation on its release after the entry of the United States into that conflict. After his resignation and return to the United States in 1917 he accepted an appointment as chaplain in the United States Naval Reserve, with the rank of lieutenant-commander, and from the pulpit and in the press vehemently attacked "the Potsdam gang" which had thrown the world into such a maelstrom. The French government made him in 1918 a commander of the Legion of Honor. He was also a member of the American Academy of Arts and Letters and during 1910-11 had served as president of the National Institute of Arts and Letters.

Dr. van Dyke resigned his chair at Princeton in 1923 so as to devote his entire time to literature. His most effective medium was the essay, but he also wrote considerable verse and short stories. Those of his works devoted to nature became especially popular for their refreshing viewpoint: *Little Rivers* (1895); *The Blue Flower* (1902); *The Open Door* (1903); *Days Off* (1907); *Golden Stars* (1919); and *Camp Fires and Guide Posts* (1921). Of a religious or semi-religious nature were: *The Reality of Religion* (1884); *The Story of the Psalms* (1887); *Sermons to Young Men* (1893); *The Christ-Child in Art* (1894); *The Other Wise Man* (1896); *The Gospel for an Age of Doubt* (1896); *The Gospel for a World of Sin* (1899); *The Poetry of the Psalms* (1900); and *Even Unto Bethlehem* (1928). In *Fisherman's Luck* (1899) and *Travel Diary of an Angler* (1929) he recounted his passion for fishing. Among his miscellaneous works were: *The Poetry of Tennyson* (1889); *The Builders and Other Poems* (1897); *Ships and Havens* (1897); *The Taming of Felix* (1900); *Music and Other Poems* (1904); *Out-of-Doors in the Holy Land* (1908).

VAN DYKE, PAUL. An American historian, brother of Henry van Dyke (q.v.), died at Washington, Conn., Aug. 30, 1933. He was born in Brooklyn, N. Y., Mar. 25, 1859 and was graduated from the College of New Jersey (later Princeton University) in 1881 and from Princeton Theological Seminary in 1884. Ordained to the Presbyterian ministry, he served as pastor of the North Church at Geneva, N. Y., during 1887-89 and then became an instructor in church history at the Princeton Theological Seminary. From 1892 to 1898 he once again held a pastorate, that of the Edwards Congregational Church at Northampton, Mass. Called to Princeton University as professor of modern European history, he held that chair until shortly before his death.

During 1921-23 and again during 1928-29 Dr. van Dyke was director of the American University Union in Paris. He had previously served during the War as secretary of the Union and lecturer with the Y. M. C. A. The French government made him an officer of the Legion of Honor. He was also a member of the National Institute of Arts and Letters. In his researches Dr. van Dyke was particularly interested in the Renaissance period, publishing *The Age of the Renaissance* (1897);

Renaissance Portraits (1905); *Catherine de Medici* (2 vols., 1923); and *Ignatius Loyola* (1926). He wrote also *The Story of France* (1928) and *George Washington, the Son of His Country* (1931).

VASSAR COLLEGE. A nonsectarian institution for the higher education of women in Poughkeepsie, N. Y., founded in 1861. The enrollment for the autumn of 1933 was 1224. The faculty in 1932-33 had 167 members. The endowment amounted to \$7,727,988; the income from funds was approximately \$399,333. The Helen Kenyon Hall of Physical Education was under construction. President, Henry Noble MacCracken, Ph.D., LL.D., L.H.D.

VATICAN CITY. A sovereign state, officially known as the State of Vatican City, established within the city of Rome as the seat of the Papacy on June 10, 1929, in accordance with the Italo-Vatican (Lateran) treaty of Feb. 11, 1929. Ruler in 1933, Pope Pius XI (Achille Ratti).

Vatican City comprises 108.7 acres, including St. Peter's Square, and has its own coinage, import duties, railway station, postal, telegraph, radio-telegraph, and radio facilities. The census of Dec. 31, 1932, showed 1025 inhabitants, including 853 Italians and 121 Swiss. Under the Constitution of June 7, 1929, the Pope exercises full legal, judicial, and executive powers. The territory is policed by a papal gendarmerie of 120 persons. The civil government was delegated by the Pope on Jan. 13, 1933, to a commission of four, presided over by his nephew, Count Franco Ratti. Executive authority was exercised on behalf of the Pope by a governor appointed by him. Governor in 1933, Marquis C. Serafini. A bomb exploded at the central gate of St. Peter's Basilica on June 25, 1933, when the church and piazza were crowded with Holy Year Pilgrims. Four persons were injured. It was the third bomb attempt in less than two years. The authorities accordingly issued regulations requiring all visitors to St. Peter's and to the Vatican Museum to check their valises, packages, and handbags before entering. See ROMAN CATHOLIC CHURCH; ITALY, SPAIN, MEXICO, CZECHOSLOVAKIA, and GERMANY under *History*.

VENEZUELA, vèn'è-zwè'la; *Amcr. Sp. pron.*, vā'nā-swā'lā. A republic on the north coast of South America. Capital, Carácas.

AREA AND POPULATION. Venezuela has an area of about 393,976 square miles and a population estimated in 1932 at 3,261,734 (3,026,878 at 1926 census). The estimated population of Carácas in 1932 was 141,349 (135,253 in 1926), and that of the other chief cities at the 1926 census was: Maracaibo, 74,767 (105,000 in 1931); Valencia, 36,804; Barquisimeto, 23,109; Cumaná, 18,737; Bolívar, 16,702; San Cristóbal, 15,295.

PRODUCTION. Agriculture is the main industry and coffee, sugar, and cacao are the chief crops. Tobacco, cotton, corn, beans, and wheat are grown, largely for domestic consumption. Mining, livestock raising, pearl fishing, and manufacturing are secondary industries. The forests produce balata, tonka beans, divi-divi, hardwoods, and medicinal plants. Livestock in 1929 included 2,750,000 cattle, 550,000 swine, 125,000 sheep, and 500,000 horses, mules, and burros. Production of the chief minerals in 1932 was: Petroleum, 116,565,000 barrels (118,770,000 in 1931 and 118,420,000, estimated, in 1933); gold, 2,847,084 grams; asphalt, 6732 metric tons; coal, 5745 metric tons. Exports of coffee in 1932 were 108,504,000 pounds;

cacao beans, 35,110,000 pounds; sugar, 1,904,000 pounds; pearls, 14,053 troy ounces; divi-divi, 3,080,000 pounds.

COMMERCE. Including bullion and specie, general imports in 1932 totaled 153,458,000 bolívares (\$23,157,000), compared with 210,758,000 bolívares (\$35,913,000) in 1931. Exports amounted to 628,260,000 bolívares (\$94,804,000), as against 651,618,000 bolívares (\$111,036,000) in 1931. The chief exports, by value, in 1932 were: Crude petroleum, \$72,601,000; green coffee, \$8,798,000; gasoline, \$3,223,000; fuel oil, \$2,952,000; cacao beans, \$1,832,000; gold, \$1,582,000; gas oil, \$1,444,000; pearls, \$664,000. Cotton fabrics, iron and steel, drugs, and automobiles were the leading import items. In 1932, the United States supplied 45.6 per cent of the total imports (47.8 in 1931); United Kingdom, 14.4 (12.0); Germany, 12.4 (11.7). Of the 1932 exports, the United States took 21.3 per cent (21.8 in 1931); Germany, 2.1 (3.0); and the United Kingdom, 0.9 (2.1). Merchandise imports from the United States (1933) were valued at \$13,114,810 (\$10,229,138 in 1932); exports to the United States, \$13,450,636 (\$20,293,648 in 1932).

FINANCE. Actual governmental revenues in the calendar year 1932 were 175,366,000 bolívares and expenditures 168,091,000 bolívares. This compared with actual receipts of 188,933,000 bolívares and expenditures of 172,399,000 bolívares in 1931. For the fiscal year beginning July 1, 1933, revenues were estimated at 150,000,000 bolívares and expenditures at 141,596,120 bolívares. The external debt was retired in 1930. The internal debt was decreased from 26,488,000 bolívares on Dec. 31, 1930 to 22,700,000 bolívares on Dec. 31, 1932. In addition to reducing the public debt, the government had a treasury balance of nearly 61,000,000 bolívares (about \$12,200,000) on July 30, 1933. The unit of currency is the bolívar (par value, \$0.1929), which exchanged at an average of \$0.1509 in 1932.

COMMUNICATIONS. Railway lines in 1932 extended 746 miles, of which 68 miles were government owned; all lines carried 1,867,000 passengers and 373,646 metric tons of freight in the year. Highways suitable for motor traffic extended 4064 miles. Air mail and passenger lines were operated in Venezuela by Pan American Airways and Cie Generale Aeropostale; the government operated postal lines also. During 1932 the Cie Generale Aeropostale, a French company, carried 1989 passengers, 18,610 pounds of mail, and 34,382 pounds of express over the Maracay-Maracaibo and Maracay-Tumeremo routes. Radiotelephone service between Bogotá, Colombia, and Carácas was inaugurated late in 1933. In conformity with a Presidential decree of Jan. 9, 1933, construction was begun on a free port at Turiamo and on a highway connecting the port with the Maracay-Valencia highway at or near Guacara. Turiamo lies 20 miles east of Puerto Cabello and 20 miles northwest of Maracay.

HISTORY. President Gomez celebrated the 25th anniversary of his dictatorship on Dec. 23, 1933, with the country as firmly under his control as in the days of his prime. An army of spies and secret police enabled him to nip every attempt at revolution in the bud and a strict censorship of all domestic and foreign newspapers, periodicals, and books prevented the spread of revolutionary ideas. The anniversary was the occasion of numerous tributes to the aged president (then 76 years old). It was pointed out that Venezuela was

practically the only South American country which had escaped serious revolutionary disturbances, which had a balanced budget, and which had not defaulted on its obligations. However the General's health was reported to be failing and since he had eliminated the ballot box during his régime it was predicted that his successor would win the office by the accustomed method of revolution. Consult Robert Neville, "Gomez: Dictator of Venezuela," *Current History*, July, 1933.

VERMONT. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 359,611, as against 352,428 in 1920. Burlington, the most populous city, had (1930) 24,789 inhabitants; Montpelier, the capital, 7837.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame)	1933	916,000	962,000*	\$12,987,000
	1932	916,000	1,104,000*	10,819,000
Corn	1933	63,000	2,520,000	1,638,000
	1932	64,000	2,624,000	1,312,000
Potatoes	1933	15,000	1,950,000	1,755,000
	1932	16,000	2,320,000	1,114,000
Apples	1933	1,027,000	770,000
	1932	1,090,000	763,000

* Tons.

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$6,249,163 (of which \$623,021 was for local education); for interest on debt, \$434,188; for permanent improvements, \$3,576,321; total, \$10,259,672 (of which \$5,476,860 was for highways, \$2,184,607 being for maintenance and \$3,292,523 for construction). Revenues were \$10,883,879. Of these, property and special taxes furnished 33.6 per cent; departmental earnings and compensation to the State for officers' services, 4.7; sale of licenses, 44.8 (in which was included a gasoline sale tax that produced \$2,072,555). Funded debt outstanding on June 30, 1932, totaled \$8,710,032, of which no part was offset by sinking-fund assets. On an assessed valuation of \$347,008,045 the State levied in the year ad-valorem taxes of \$1,266,935.

EDUCATION. It was reported at the end of 1933 that the budgets of nearly all the public-school systems in the State had been reduced, but that no schools had been obliged to close. The standards for admittance to normal schools were raised, and a third year of course was added in two of the normal schools. For the academic year 1932-33 the number of persons of school age in the State was reckoned as 79,098. There were enrolled in the public schools 66,770 pupils. Of these, 53,392 were in common schools or elementary grades; in high schools, 13,378. The year's expenditures for public-school education totaled \$4,542,070. Salaries of teachers averaged \$1537.69 by the year for high schools, \$1008.08 for graded schools, and \$20.10 by the week for rural schools.

LEGISLATION. A regular session of the Legislature convened on January 4. It created a State convention of 14 delegates, to be elected at large by popular vote on September 5, to act for the State on the proposed repeal of the Eighteenth Amendment of the Federal Constitution. Permission was enacted, to sell beer of the alcoholic strength of 3.2 per cent in towns and cities voting, at their local option, to allow the traffic;

regulation of sales was to be by local officials, but the State prohibited sales of beer over a bar or in a saloon; licenses were required, costing \$200 for a bottler, \$100 for a wholesaler, \$50 for a hotel of more than 50 sleeping rooms, \$10 for a retailer; a tax of \$1 a barrel was also imposed.

To prevent bankruptcy for banks under State charter caught in the general banking panic, powers were given the State banking commissioner to make regulations restricting payment on all kinds of deposits. A system was provided for the supply of new banking capital where the margin of solvency was insufficient. An advisory State banking commission of five members was created. Power was given debtors on mortgage to apply for delay of foreclosure through courts of chancery.

A tax was imposed on the sales of chain stores, on a sliding scale running from 1/8 per cent on gross retail sales between \$50,000 and \$100,000 a year up to 4 per cent on sales exceeding \$2,000,000. A sharply increased appropriation of \$675,000 was made for State tests to condemn cattle having tuberculosis. The appropriations for the ensuing two-year period were cut by some 25 per cent of the total for the previous like period, to \$14,074,396. Reductions were effected partly by a cut of about one-half in highway appropriations and partly by cuts in all State salaries in excess of \$800 a year.

POLITICAL AND OTHER EVENTS. In the course of the bank panic Governor Wilson closed the banks in the State by the declaration of legal holidays beginning with March 4. The State banks reopened, under prescribed restrictions, on March 15 in most cases. Voting on September 5 the people of the State chose 14 delegates at large, favorable to the repeal of the Federal Eighteenth Amendment, who met in State convention on September 18 and voted the State's adoption of repeal through the superseding amendment proposed by Congress. The popular vote indicated a preference for repeal in the approximate proportion of 2 to 1. A special master for the Federal Supreme Court, after hearing arguments in the boundary dispute between Vermont and New Hampshire recommended on March 30 that the boundary run along the low-water mark on Vermont's side of the Connecticut River. Outbreaks of violence in connection with a strike of granite workers in the area of Barre caused Governor Wilson to call out certain of the National Guard to keep order there in May.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Stanley C. Wilson; Lieutenant-Governor, Charles M. Smith; Secretary of State, Rawson C. Myrick; Treasurer, Thomas H. Cave; Auditor, Benjamin Gates; Attorney General, Lawrence C. Jones; Commissioner of Education, Francis Bailey.

Judiciary. Supreme Court: Chief Justice, George M. Powers; Associate Justices, Leighton P. Slack, Sherman R. Moulton, Frank D. Thompson, Warner A. Graham.

VERMONT, UNIVERSITY OF. An endowed institution of higher education in Burlington, Vt., receiving some State aid. The 1933 autumn enrollment was 1262; the summer school enrollment, 616. The faculty numbered 191. The endowment amounted to \$1,679,825, while the income for the year was \$826,312. The library contained 135,391 volumes. President, Guy W. Bailey, LL.D.

VETERINARY MEDICINE. In the field of comparative medicine the year 1933 was marked by the continued progress in the eradication and control work with the more important diseases of livestock. The year saw no new invasion of the country by any plague from abroad.

LIVESTOCK TUBERCULOSIS ERADICATION. The co-operative campaign to eradicate tuberculosis from the livestock of the country resulted in the release of the States of Nevada, New Hampshire, Utah, Kentucky, and West Virginia. Thirteen States and the District of Columbia are now practically free from tuberculosis in their herds. In the work of the year 13,073,894 cattle were given the tuberculin test with 2.0 per cent reacting and removed. At the close of the fiscal year ended June 30 there were 3,926,645 herds with 35,736,707 animals under supervision. The interest taken in the work was indicated by the waiting list of more than 2,087,328 head of cattle. Opponents in Iowa of tuberculosis eradication attempted to abolish all legislation having anything to do with carrying on this activity. Public sentiment was aroused and the attempt was defeated in the legislature, the work proceeding in a satisfactory manner. In control and eradication work with the avian type of tuberculosis 29,161 farms were visited and 4,253,000 fowls inspected. The disease was detected on 9419 farms on which a considerable number of swine were found affected with this type of the disease. In the educational work owners of the infected flocks were informed that the swine became infected through water and feed contaminated with the droppings of tuberculous fowls. In the survey of farm poultry flocks during the year, made in connection with the testing of cattle, which had been underway for several years, 168,286 flocks containing approximately 15,741,500 fowls in 21 States were inspected. Of these flocks 5999 were found to be infected with tuberculosis as indicated by cases of the disease present.

PARATUBERCULOSIS OR JOHNE'S DISEASE. In tests made of cattle with either johnin or avian tuberculin for paratuberculosis the disease was found to occur in a slight degree in twelve States.

TICK FEVER AND CATTLE TICK ERADICATION. The continuation of the campaign against the cattle-fever tick that has been underway since 1906 led to the freeing during the year of the eight counties that had remained under quarantine for the cattle tick in Arkansas. This resulted in the complete release of that State, of seven counties and parts of two in Florida and of eleven counties in Texas. In the course of the work of the year 25,328,261 inspections or dippings of cattle and 2,368,581 of horses and mules were conducted requiring the use of more than 10,000 dipping vats. With the release of 20,290 square miles of territory the area remaining under Federal quarantine in continental United States was reduced to 12 per cent of its original size, and included only 101 of the 985 counties quarantined at the commencement of the work. With funds provided by a tick-eradication law recently enacted in Louisiana the work was commenced in three parishes of that State after several years of inactivity. The Australian variety of the cattle-fever tick which is thought to have a somewhat wider host range was found to occur quite generally in the infested area of Florida. In the enforcement of the regulations governing interstate movement of cattle and horses from the quarantined area 144,166 cattle were inspected or dipped and inspected and cer-

tificates issued authorizing their movement from such area.

INFECTIOUS ABORTION. The control work with infectious abortion went on and considerable progress was made by a number of States. There were reported to be 1000 certified abortion free herds in the United States on July 1 with Pennsylvania leading in the work, followed by Wisconsin and Illinois. Wisconsin increased its number of abortion-free herds to 500 during the year, about 300 veterinarians in the State having qualified to take part in conducting the tests. In Illinois there were 991 voluntary co-operating herd owners with 20,000 cattle under test in the project control of the disease, 110 veterinarians having been accredited to make the preliminary tests. In experiments conducted the causative organism, *Brucella abortus*, was transmitted to pregnant cattle through the intact as well as the abraded skin.

ANAPLASMOSIS IN CATTLE. In Florida the virus of anaplasmosis of cattle was found to be transmitted by adults of the common American dog tick, *Dermacentor variabilis*, when it has engorged in the larval and nymphal stages on clinical cases of the disease. The disease was transmitted mechanically in a mild form under favorable conditions by the horse fly *Tabanus fumipennis* and the stable fly, *Stomoxys calcitrans*.

MASTITIS OF DAIRY CATTLE. The activity in investigational work with mastitis of the cow due to streptococcus infection and more commonly known as garget was continued. Public health officials and owners of dairy cattle are becoming awakened to its importance. While the economic loss caused cannot be estimated it is thought to exceed that of either tuberculosis or infectious abortion. Encouraging results were obtained in work in Michigan where by use of both the autogenous vaccines and lactovaccines a definite protection was afforded all non-infected animals of lactation age in an infected herd.

DOURINE ERADICATION. The campaign to eradicate dourine from the San Carlos Indian Reservation in Arizona resulted in its complete elimination from that area. In the only area now known to harbor dourine infection which includes parts of Oregon, Idaho, and Nevada, now under State quarantines, it exists to a slight degree only.

EQUINE ENCEPHALOMYELITIS. This disease of the horse appeared in epizootic form along the Chesapeake Bay in Maryland and also in Delaware and caused the loss of a large number of animals. Studies in Nevada where the disease appeared in epizootic form in 1931 and 1932 suggest that virus carriers may occur among otherwise healthy horses. The work in that State led to the manufacture of a serum that has marked value as a therapeutic agent. When given early in an attack the death rate is lowered, convalescence is shortened and the percentage of animals showing permanent damage is greatly reduced. Preliminary trials indicate that its value for immunizing purposes is limited. Investigations have shown that the yellow fever mosquito may transmit the infection under natural conditions and indicate that other species of mosquitoes having a wider distribution in the area where the disease is enzootic may play a part.

SCABIES ERADICATION. In May the Federal quarantines on sheep scabies were released from areas that originally covered two million square miles in the western States. Eleven States are now entirely free from sheep scabies and in most of the others in the range country there are only occa-

sional cases, principally in feedlots where sheep have come in from infected districts. It is thought that the final eradication of isolated cases should not be difficult. In the eradication work with sheep carried on in coöperation with the State livestock sanitary authorities 19,366,650 inspections were made and 2,264,555 dippings supervised. In the eradication work with cattle scabies 2,697,251 inspections were made and 435,673 dippings supervised by Federal employees. Practically all the infection in cattle is now in four States.

INFECTIOUS LARYNGOTRACHEITIS. A method of vaccination against this disease was employed on poultry farms in New Jersey and California with considerable success. It consists in intracloacal inoculation with an exudate, obtained from the tracheas of infected chickens, which has been preserved by drying or mixing with a solution of glycerine. A plan has been developed in Massachusetts for its eradication and control which consists in the destruction of acute cases and chronic carriers, the destruction of the virus in the houses and yards occupied by flocks in which carriers are suspected and the prevention of reintroduction of the virus into clean flocks.

FOWL POX. Work that has been carried on in New Hampshire for several years has shown that birds can be vaccinated by the so-called stick method with as favorable results as with the follicle method and that (1) they can be vaccinated three times as fast; (2) one-third the amount of vaccine is required; (3) the reaction is less, and (4) the number of head lesions is substantially reduced. Work in Texas has led to the conclusion that healthy and vigorous day-old chicks and poults can be safely and successfully vaccinated against fowl pox by using the fowl pox virus vaccine without causing any apparent constitutional disturbance.

PULLORUM DISEASE. The control and eradication work with this disease of poultry was actively pressed in many of the States. The results that may be obtained when control work is consistently practiced is strikingly illustrated by the outcome in Massachusetts where it has been underway since 1919. During the year 1932-33, 296,093 birds in 335 flocks were tested with but .45 per cent reacting, the lowest attained in testing history. It was found that the rapid whole-blood test using stained antigen was about equal to the tube agglutination test in diagnostic value.

AVIAN COCCIDIOSIS. In the treatment of coccidiosis the use of vinegar in which the acetic acid content ran from 4 to 5 per cent reduced the mortality among infected chickens when used at a strength of 1 part to 79 of water. The amount of hemorrhage was decreased and the mass formation in the ceca of infected chickens was prevented.

TULAREMIA IN THE SAGE HEN. Investigations conducted in Montana during a localized epizootic in sage hens resulted in the recovery of the tularemia organism, *Bacterium tularense*, from both dead and killed sage hens and from infesting bird ticks. This finding adds further evidence that gallinaceous game birds constitute a potential source of human infection. The evidence secured indicates that this tick, *Haemaphysalis cinnabara*, is a natural carrier of the infection.

VIADUCTS. See BRIDGES.

VICTORIA. A southeasterly state of the Commonwealth of Australia. Area, 87,884 square miles; population (1933 census), 1,820,360. Melbourne, the capital, had 992,048 inhabitants (1933); other important cities were Geelong, 42,-

760; Ballarat, 41,750; Bendigo, 33,720. In 1931, there were 261,673 students enrolled in the various primary schools; in the 505 secondary schools 73,342 students were in attendance.

Wheat production for 1932-33 was estimated to be 47,843,129 bushels from a total of 3,230,955 acres. The production of wine in 1931-32 amounted to 1,530,061 gallons. Livestock (1932): 17,512,394 sheep; 1,900,922 cattle; 372,907 horses; and 287,627 pigs. The production of wool (greasy) for 1932 amounted to 159,275,416 lbs. Coal, kaolin, tin, gypsum, and gold are the principal minerals produced. Gold production for 1932 totaled 47,745 oz. valued at £284,823. From 8204 manufacturing establishments employing 128,265 employees the net value of production totaled \$37,819,628 for 1931-32.

Preliminary figures for 1932-33 show revenue amounting to £24,077,526; expenditure, £24,919,027; public debt, £171,399,027. Executive power is vested in a governor, acting through a responsible ministry, and legislative power in a parliament of two houses. Lord Huntingfield was appointed governor in 1933; Premier, Sir S. S. Argyle.

VILLA-URRUTIA, vél'yá-oor-roo'tyá, WENCESLAO RAMÍREZ, MARQUÉS DE. A Spanish diplomat, statesman, and scholar, died in Madrid about Apr. 21, 1933. Born in Havana, Cuba, in 1850, he studied law at the University of Madrid and entered the Spanish diplomatic service in 1868. After serving as attaché and secretary of various legations and embassies, including those in Washington, Berlin, London, Lisbon, and Paris, he was named Minister Resident at Caracas and then at The Hague. After being recalled to Madrid to act as Under-Secretary of State for Foreign Affairs, he was appointed Minister to Turkey. At the time of negotiating the Peace Treaty at Paris between Spain and the United States (1898) he was Spain's plenipotentiary. He was also a delegate for Spain at The Hague Peace Conferences of 1899 and 1907. Afterward he served as Ambassador to Austria and in 1905, as Minister of Foreign Affairs, accompanied King Alfonso on his first official visit to England and France.

Villa-Urrutia filled with distinction the posts of Ambassador to England (1906-13), to France (1913-14), and to Italy (1916-23). He published several works on history and diplomacy.

VILNA. See POLAND and LITHUANIA under Area and Population.

VIRGINIA. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 2,421,851, as against 2,309,187 in 1920; Richmond, the capital, had (1930) 182,929 inhabitants; Norfolk, 129,710.

AGRICULTURE. The table on page 833 shows the acreage, production, and value of the principal crops for 1933 and 1932.

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$31,071,256 (of which \$7,304,067 was for local education); for interest on debt, \$942,724; for permanent improvements, \$10,479,054; total, \$42,493,034 (of which \$15,889,639 was for highways, \$6,890,953 being for maintenance and \$3,998,686 for construction). Revenues were \$42,198,545. Of these, property and special taxes furnished 18.9 per cent; departmental earnings and compensation to the State for officers' services, 12.4; sale of licenses, 53.1 (in which was included a gasoline

Crop	Year	Acres	Prod. Bu.	Value
Corn	1933	1,571,000	86,918,000	\$20,674,000
	1932	1,496,000	26,928,000	11,040,000
Hay (tame)	1933	875,000	992,000	11,110,000
	1932	882,000	757,000	7,797,000
Potatoes	1933	93,000	8,649,000	10,033,000
	1932	94,000	9,882,000	5,616,000

^a Tons. ^b Pounds. ^c Bales.

sale tax that produced \$8,067,659). Funded debt outstanding on June 30, 1932, totaled \$26,343,219, of which \$5,428,000 was for highways. Net of sinking-fund assets, the debt was \$24,024,084.

EDUCATION. In the face of difficulty in meeting expenses for local school systems, schools were kept open during the academic year 1932-33 for eight months, in all but four counties, according to the *Journal* of the National Education Association; while in the latter four, the white schools remained open for eight months and the colored schools for seven. In a few counties some teachers gave time without pay in order that the eight months might be filled out; with these exceptions all teachers' salaries were reported to have been paid on time. Provision made by the extra session of the Legislature in 1933 helped render this possible.

For the academic year ending in 1933 there was a moderate increase of enrollment in the secondary grades, and a diminution of expenditures for the public schools as a whole. There were enrolled in the public schools 586,886 pupils. Of these, 485,998 were in common schools and elementary grades; in high schools, 100,898. The year's expenditures for public-school education were: for operation, \$17,826,198; for capital outlay and debt service, \$3,664,706. Salaries of teachers averaged \$743, as against \$877 for the year before.

LEGISLATION. A special session of the Legislature was convened in August. It created a State convention, to be composed of delegates elected by popular vote on November 7, who should act for the State on the proposed repeal of the Federal Eighteenth Amendment. It also passed an act to legalize the sale of beer of an alcoholic content not stronger than 3.2 per cent.

In anticipation of the coming into effect of the Federal Hawes-Cooper act as to interstate commerce in prison-made goods the prison commission was authorized to buy machinery for the manufacture of goods at the penal institutions of the State. For conformity with the requirements of the National recovery act the anti-trust laws of the State were temporarily suspended; State penalties were enacted against violations of industrial codes under the National Recovery Administration.

POLITICAL AND OTHER EVENTS. To prevent the wrecking of banks in the State by the withdrawals of deposits in the course of the Nation-wide banking panic, a two-day mandatory holiday period was proclaimed on March 4. After the end of the subsequent period of Federal closure the banks of the State were able generally to resume,

320 being reported open on the 15th, of which number two were subject to restriction as to the percentage of withdrawals.

Governor Pollard at first declined to summon an extra session of the Legislature to submit the choice of members for a State convention on the repeal of the Federal Eighteenth Amendment to a popular vote. The extra session was forced by petition of two-thirds of both the houses. The General Assembly having met and provided for the election of delegates to hold a convention, the voters gave a majority "for repeal," the vote being approximately 96,000 to 54,000. The vote was a referendum, but the ballots "for repeal" automatically elected a slate of 30 delegates at large, pledged to repeal, who met in State convention on October 25 and voted the State's adoption of the superseding amendment proposed by Congress. At the election of October 3, likewise, the popular vote approved the proposal to set up a system of State control of the liquor trade, in case it should again become permissible under Federal law, instead of retaining the State's old liquor laws.

Former Gov. Harry F. Byrd was appointed United States Senator on March 1 to succeed Senator Swanson, who had resigned to become Secretary of the Navy. George C. Peery won the Democratic nomination for Governor at the primary election of August 1 and was duly elected Governor at the general election of November 7; Senator Byrd was likewise elected then to the seat to which he had previously succeeded by nomination.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, John Garland Pollard; Lieutenant-Governor, James H. Price; Secretary of the Commonwealth, Peter Saunders; State Treasurer, John M. Purcell; Auditor, S. McCarthy Downs; Attorney General, John R. Saunders; Superintendent of Public Instruction, Dr. Sidney B. Hall.

Judiciary. Supreme Court of Appeals: President, Preston W. Campbell; Associate Justices, Louis E. Epes, H. W. Holt, E. W. Hudgins, H. B. Gregory, George L. Browning, Joseph W. Chinn.

VIRGINIA, UNIVERSITY OF. A nonsectarian institution of higher education at Charlottesville, Va., founded in 1819. The enrollment for the autumn session of 1933 was 2256, distributed as follows: College, 1330; medicine, 231; law, 260; engineering, 144; education, 61; graduate studies, 230. For the summer session of 1933 there was an enrollment of 1163. The faculty numbered 148. The productive endowment amounted to \$10,000,000. The library contained 216,000 volumes. President, John Lloyd Newcomb.

VIRGIN ISLANDS. An insular possession of the United States, consisting of 50 small islands lying about 60 miles east of Puerto Rico in the Caribbean. The chief islands are St. Thomas (area, 28 square miles; population, 9834 in 1930); St. Croix (area, 84 square miles; population, 11,413 in 1930); and St. John (area, 20 square miles; population, 765). Total area, 132 square miles; population in 1930, 22,012. St. Thomas, the capital, had 7036 inhabitants in 1930. Negroes comprised 78 per cent of the 1930 population; mixed, 12 per cent; whites, 9 per cent. The death rate was 20.6 per thousand during the fiscal year ended June 30, 1933. The population decreased 15 per cent, largely through emigration to the United States, between 1917 and 1930. Public schools in 1932-33 had 120 teachers and 3411 pupils; private schools, 1208 pupils.

PRODUCTION, ETC. Cultivation of sugar cane and cattle growing are the chief industries. Eighty per cent of the area of St. Croix is devoted to cattle raising (total, about 3000 head in 1933) and is owned by a score of men. Sugar exports in 1932-33 were valued at \$305,794 (\$171,123 in 1931-32); bay rum (78,803 gallons), \$43,568; cattle (1957 head), \$43,335. Imports into the Virgin Islands in 1932-33 were valued at \$1,350,319 (\$1,415,915 in 1931-32) and exports were \$597,146 (\$458,694 in 1931-32). In the calendar year 1932 imports from the United States totaled \$929,980 and exports to the United States \$405,163; respective figures for 1933 were \$1,075,512 and \$516,846. During 1932-33, 472 vessels of over 100 registered tons called at the port of St. Thomas.

Federal appropriations expended in the islands during the 1932-33 fiscal year totaled \$556,773, a reduction from the \$637,971 originally appropriated. Administration of the islands was transferred from the Navy to the Interior Department effective Feb. 27, 1931, and a civil régime was established. Governor in 1933, Paul M. Pearson.

The United States Congress had before it in 1933 identical bills (H. R. 14319 and S. 5457) to provide a permanent form of civil government for the Virgin Islands. No action was taken up to the end of the year. The insular government during the year put into effect its plans for placing more people on the land. Tracts in St. Thomas and St. Croix were purchased, subdivided into parcels of from 2 to 10 acres, connected by roads, and distributed to homesteaders who were to pay for them by a small annual installment.

VITAL STATISTICS. In the death registration area of continental United States (exclusive of the State of Utah for which figures were not received) there were 1,304,109 deaths from all causes in 1932, representing a mortality rate of 10.9 per 1000 estimated population, according to the Bureau of Census. This is the lowest rate since the annual collection of mortality statistics was begun in 1900. It is estimated that 90.3 per cent of the total population of the United States was included in the registration area for the year 1932.

The total deaths from all causes in 1932, exclusive of Utah, were 1,304,109; in 1931, 1,318,109; and in 1930, 1,338,292. The table on page 835 gives the number of deaths from the larger number of causes and the death-rate per 100,000 of the estimated population for the years 1930, 1931, and 1932. The table is divided into the eighteen major classifications, and under them are included the larger groups. Space does not permit the tabulation of groups in which the death-rate was less than 5 per 100,000, except in cases of notable increase or decrease. The large decrease of over 9000 deaths from tuberculosis (all forms), and the drop in the death rate from 71.7 in 1930 to 63.0 in 1932 is most noteworthy.

The smaller number of violent and accidental deaths is due, principally to the decreased number of deaths from motor vehicles, which dropped from 29,885 in 1931, or 25.1 per 100,000 of population to 26,235 in 1932, or 21.9 per 100,000. In 1930 the deaths from this cause were 28,950, or 24.5 per 100,000. It is also interesting to note that, despite the depression, accidental deaths due to hunger and thirst totaled only 27, or less than one per 100,000 of the estimated population, throughout the whole United States; 33 in 1931, and 27 in 1930.

The outstanding groups in which large increases

were shown were cancers and other malignant tumors and diseases of the circulatory system.

Deaths due to diseases of the circulatory system increased numerically from 280,403 in 1930 to 294,596 in 1932, equivalent to death rates of 237.5 and 246.2, respectively. This large increase was due, principally, to diseases of the myocardium and of the coronary arteries, angina pectoris; chronic endocarditis, valvular diseases being the only cause in this group for which there was a considerable decrease in 1932 from 1930.

BIRTHS. The Bureau of Census reported that in the birth registration area of continental United States (exclusive of Massachusetts and Utah) during the calendar year 1932 there were 1,901,618 births, 113,061 deaths of infants under one year of age, and 75,105 stillbirths. These figures are equivalent to a birth rate of 17.3 per 1000 population, an infant mortality rate of 57.9 per 1000 live births, and a stillbirth rate of 3.8 per 100 live births. The corresponding final rates for 1931 for the same area were 18.0, 61.9, and 3.8, respectively.

The birth rate of 17.3 for the 44 States and the District of Columbia covered by the report is the lowest since the establishment of the Federal birth registration area in 1915. The infant mortality rate (57.9) was also lower than for any previous year. The stillbirth rate (3.8) was the same as for 1931 and has varied but very little since 1922, in which year the annual collection of stillbirth records was begun.

The urban part of the birth registration area of 1932, except Massachusetts and Utah, includes 864 cities, towns, and townships, with an estimated total population of 54,979,000 on July 1, 1932. In this urban area there were 896,334 births, 51,136 deaths of infants under one year of age, and 35,317 stillbirths. The rural part had an estimated population of 58,367,000, among which there were 1,065,284 births, 62,525 infant deaths, and 39,858 stillbirths. In the urban portion of the area the birth rate was 16.3 per 1000 population, the infant mortality rate 57.1 per 1000 live births, and the stillbirth rate 3.9 per 100 live births. The corresponding rates for the rural portion of the area were 18.3, 58.7, and 3.7, respectively.

The highest birth rates were for New Mexico, 28.0, North and South Carolina, each 23.7, and Alabama, 23.5. Nevada, Wyoming, and Delaware had the smallest number of births, but the States having the lowest birth rates were California and Oregon, each with 13.1, Nevada and Washington, each with 13.4, and Illinois, with a rate of 14.4. The highest infant mortality rate was for New Mexico (113.6), which was the only State with a rate higher than 100. Other States with high infant mortality rates were Arizona, Colorado, District of Columbia, South Carolina, and West Virginia. See CHILD WELFARE.

VITAMINS. See CHEMISTRY under *Other Developments*.

VONNOH, ROBERT (WILLIAM). An American portrait, figure, and landscape painter, died at Nice, France, Dec. 28, 1933. He was born in Hartford, Conn., Sept. 17, 1858, and studied at the Massachusetts Normal Art School in Boston and at the Julian Academy in Paris under Boulanger and Lefebvre. After his return to the United States in 1883 he served as principal of the East Boston Evening Drawing School (1883-85), instructor in painting at the Cowles Art School (1884-85), and principal instructor in portrait and figure painting at the School of the Boston

DEATHS AND DEATH RATES IN THE UNITED STATES REGISTRATION AREA, 1932, 1931, 1930

Cause of death	Number of deaths			Rate per 100,000 estimated population		
	1932	1931	1930	1932	1931	1930
Total deaths (all causes)	1,304,109	1,318,109	1,338,292	1090.0	1108.5	1132.6

Museum of Fine Arts (1885-87). After another four-year sojourn abroad, during which he exhibited in London, Paris, and Munich, he became principal instructor in portrait and figure painting at the Pennsylvania Academy of Fine Arts in Philadelphia.

On relinquishing the latter post in 1896 Mr. Vonnoh devoted most of his time to portraiture, displaying skillful characterization, able technique, and warm agreeable color. Good examples include: "La Mère Adèle (Metropolitan Museum of Art, New York City); "Bessie Potter Vonnoh" (Brooklyn Museum); "Portrait of the Artist"

(Pennsylvania Academy of Fine Arts, Philadelphia); "Dr. S. Weir Mitchell" (College of Physicians, Philadelphia); "John G. Milburn" (Buffalo Club, Buffalo, N. Y.); "Attorney General Griggs" (Department of Justice, Washington).

Mr. Vonnoh was elected an associate of the National Academy of Design in 1900 and an academician six years later. In 1906 his wife, Bessie Potter Vonnoh, the sculptor, was elected an associate, and for many years they were the only husband and wife so honored by the Academy.

WALSH, THOMAS JAMES. An American lawyer and legislator, died enroute to Washington, D. C., Mar. 2, 1933. Born at Two Rivers, Wis., June 12, 1859, he received a public school education there. He taught school for several years at Sturgeon Bay and other towns in Wisconsin before entering the University of Wisconsin from which he obtained the LL.B. degree in 1884. His early practice was at Redfield, S. D., in association with his brother, Henry C. Walsh. Removing to Helena, Mont., in 1890, he thereafter made his home there, becoming interested, in addition to his law practice, in sheep raising. His protection of the rights of the employees of the great land and cattle companies cost him his election to Congress as Democratic Representative in 1906 and again as Senator in 1910. In 1912, however, he was successful in his campaign for the Senate, receiving the largest number of votes of any of the candidates, and through successive reelections in 1918, 1924, and 1930 was to have served until 1937.

In the Senate Mr. Walsh continued his championship of the cause of the weak and unprotected, advocating especially enactment of the child-labor amendment. He was also largely responsible for the passage in the Senate of the Anti-Injunction Act of 1932, forbidding issuance of Federal injunctions in labor troubles save on evidence produced before the court to the effect that irreparable damage to persons or property might ensue in the absence of the injunction; jury trials were to be granted to persons accused of violating such injunctions. His greatest service, however, was rendered in 1924 when, as acting chairman of a subcommittee of the Senate committee on public lands, he conducted a searching investigation of the leasing of oil fields by the Navy and Interior Departments. The scandal arose from the transfer of government oil reserves in California and Wyoming from the Navy Department to the Department of the Interior and their ensuing lease by Albert B. Fall, then Secretary of the Interior, to the Edward L. Doheny and Harry F. Sinclair oil interests. In spite of his friendship with Mr. Doheny Senator Walsh continued the investigation, revealing that Fall had been the recipient of a \$100,000 "loan" from Doheny. This exposure resulted in Fall's conviction on a charge of bribery in 1929.

Senator Walsh had been chairman of the Democratic National Conventions of 1924 and 1932 and had been rewarded for his warm support of President-elect Roosevelt by appointment as United States Attorney-General. He had been married five days previous to his death to Señora Mina Perez Chaumont de Truffin of Havana, Cuba, and was returning to Washington with his bride when death occurred.

WASHBURN COLLEGE. A coeducational institution in Topeka, Kansas. The enrollment for the autumn session of 1933 was 859. There were 69 faculty members. Endowment was \$1,363,293. The income for the year was \$169,482. The library has approximately 40,000 volumes. President, Philip C. King, A.M., B.D.

WASHINGTON. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 1,563,396, as against 1,356,621 in 1920. Seattle had (1930) 365,583 inhabitants; Spokane, 115,514; Tacoma, 106,817; Olympia, the capital, 11,733.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Apples . . .	1933	29,240,000		\$17,544,000
	1932	30,960,000		18,318,000
Wheat	1933 2,136,000	46,249,000		26,562,000
	1932 2,203,000	40,348,000		13,057,000
Hay (tame) .	1933 822,000	1,443,000 ^a		15,296,000
	1932 848,000	1,717,000 ^a		12,362,000
Potatoes . . .	1933 41,000	7,380,000		4,428,000
	1932 40,000	6,400,000		1,984,000
Oats	1933 179,000	9,487,000		3,131,000
	1932 166,000	8,300,000		2,158,000
Hops	1933 8,100	6,324,000 ^b		2,024,000
	1932 2,500	4,438,000 ^b		799,000
Corn	1933 41,000	1,558,000		779,000
	1932 38,000	1,311,000		498,000
Barley	1933 74,000	2,590,000		958,000
	1932 64,000	1,920,000		576,000

^a Tons. ^b Pounds.

FINANCE. State expenditures in the year ended Mar. 31, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$22,922,724 (of which \$8,530,863 was for local education); for interest on debt, \$539,800; for permanent improvements, \$15,512,726; total, \$38,975,340 (of which \$19,079,833 was for highways, \$4,420,394 being for maintenance and \$14,659,439 for construction). Revenues were \$40,265,584. Of these, property and special taxes furnished 34.1 per cent; departmental earnings and compensation to the State for officers' services, 6.1; sale of licenses, 42.1 (in which was included a gasoline sale tax that produced \$11,501,215). Funded debt outstanding on Mar. 31, 1932, totaled \$7,350,000, of which no part was offset by sinking-fund assets. On an assessed valuation of \$1,251,178,215 the State levied in the year ad-valorem taxes of \$12.-007,554.

EDUCATION. The State undertook, by legislation, to furnish a greater proportion of the total yearly cost of the public-school system. Its proportion, according to the *Journal* of the National Education Association, was raised to about one-half of that total. The apportionment of State aid, however, was made to rest not on the costs of the several school districts but on the numbers of pupils attending. Revenue for the consequent requirements on the State funds was provided by imposing a system of taxes on occupations.

The number of persons of school age in the State was reckoned for 1932 as 434,778. There were enrolled in the public schools, in the academic year ending with June, 1933, 342,077 pupils. Of these, 4381 were in kindergartens, 238,293 in elementary grades, and 100,003 (post-graduates included) in high schools. The year's expenditures for public-school education were: current, \$21,739,160; total (debt service and outlay included), \$24,065,702. The current total was about four-fifths of the corresponding figure for the year before. Teachers' salaries, for the year, averaged \$1388.35, which was about 14 per cent less than the figure for the year previous.

LEGISLATION. A regular session of the Legislature convened on January 9. It created a State convention of 99 delegates, to be elected by

popular vote on August 29, who should act for the State on the proposed repeal of the Eighteenth Amendment of the Federal Constitution. A tax on chain stores was voted by the Legislature but was vetoed by Governor Martin. A classified tax on occupations was enacted. Provision was made for the issuance of \$10,000,000 of State bonds to furnish the means with which to afford relief to the State's needy unemployed persons; to give the issue the color of conformity with the State constitution the law authorizing the issue represented it as needed to suppress an incipient insurrection arising out of widespread unemployment, hardship, and suffering. The Legislature voted the State's ratification of the proposed Federal constitutional amendment to limit child labor. A system of pensions for needy aged inhabitants of the State was created. Betting on horse races was rendered lawful under the pari-mutuel system.

POLITICAL AND OTHER EVENTS. A State banking holiday period of three days was declared on March 2 to prevent the insolvency of banks overwhelmed with withdrawals during the banking panic. The Federal closure of banks followed. When banks began to resume, 20 of those in the State were reported to have opened by the 15th. At an election on August 29 the voters, favoring repeal of the Federal Eighteenth Amendment by more than 2 to 1, chose delegates who met in State convention on October 3 and voted the State's adoption of repeal through the superseding amendment proposed by Congress.

The State's tax on incomes, which had been adopted by popular vote in November, 1932, was found unconstitutional by the State supreme court in September, in that it failed to conform with the State constitution's requirement that taxes be uniform on the same class of property. At the same time the court declared the State's law of 1933 taxing occupations and sales to be constitutional. In June the State supreme court affirmed the constitutionality of the measure of 1933 providing for the issuance of \$10,000,000 of State bonds without previous popular assent through referendum; the majority of the court upheld the theory that the State constitution permitted the State government to issue bonds without referendum in order to quell an insurrection, and that widespread distress and unemployment might be taken to create an "incipient insurrection." Allotment was made by the Federal public-works administration for the construction of a \$63,000,000 dam and hydroelectric station at Grande Coulee on the Columbia River.

At Seattle several thousand persons rioting because of discontent with the lack of greater provision for the relief of the needy forcibly seized the county and city building on February 14 and held possession of it for several days. The mob had gathered from many parts of the State to protest against a change from the distribution of doles through a public commissary to provision for the needy by the issue of vouchers.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Clarence D. Martin; Lieutenant-Governor, Victor A. Meyers; Secretary of State, Dr. Ernest N. Hutchinson; Auditor, Cliff Yelle; Treasurer, Otto A. Case; Attorney General, G. W. Hamilton; Superintendent of Public Instruction, N. D. Showalter.

Judiciary. Supreme Court: Chief Justice, Walter B. Beals; Associate Justices, Warren W. Tolman, John R. Mitchell, John F. Main, O. R. Hol-

comb, W. J. Millard, W. J. Steinert, Bruce Blake, and James M. Geraghty.

WASHINGTON, THE STATE COLLEGE OF. A coeducational institution for higher learning at Pullman, Wash., founded in 1890 by an act of the State Legislature. The enrollment for the autumn of 1933 was 2591. The summer session had an attendance of 575. There were 323 faculty members. The land grant endowment amounted to \$3,199,497; the total income for the year was \$1,514,761. The library contained 245,000 volumes, President, Ernest O. Holland, Ph.D.

WASHINGTON, UNIVERSITY OF. A State institution of higher education in Seattle, Washington, founded in 1861. The enrollment for the summer term of 1933 was 1975; autumn quarter, 7255. The faculty numbered 339 members. For biennium (Apr. 1, 1933 to Mar. 31, 1935) the estimated amount of endowment and income combined was \$3,301,924. The John T. Condon Hall for the Law School, erected at a cost of \$376,565, was dedicated during the year. Volumes in the University Library numbered 270,819. There are also 69,575 volumes in the Law Library. Acting President, Hugo Winkenwerder.

WASHINGTON AND JEFFERSON COLLEGE. An institution for the higher education of men, located in Washington, Pa. Enrollment for the fall semester of 1933-34 totaled 426 undergraduates and 22 graduate students. The 1933 summer enrollment was 128. The faculty for 1933-34 numbered 33. The productive funds of the college amounted to \$1,545,441 and the income from all sources was approximately \$183,406. The library contained 51,561 volumes. President, Ralph Cooper Hutchison, Ph.D., D.D.

WASHINGTON AND LEE UNIVERSITY. A nonsectarian institution for the higher education of men in Lexington, Va., founded in 1749. The enrollment for the autumn of 1933 was 814. There were 53 members on the faculty. The productive funds of the university amounted to \$1,495,288, and the income for the year was \$293,230. The number of volumes in the library was approximately 70,000. President, Francis Pendleton Gaines, Ph.D., Litt.D., LL.D.

WASHINGTON UNIVERSITY. A nonsectarian institution of higher learning for men and women in St. Louis, Mo., founded in 1853. The enrollment on Nov. 1, 1933, was 6478. The faculty for 1932-33 numbered 597. The income for the year was \$2,452,974. Chancellor, George R. Throop, Ph.D., LL.D.

WATER POWER. The outstanding event of the year in the field of water power was the creation, by Congress, of the Tennessee Valley Authority, charged with a comprehensive social and power development of that section. As stated by David E. Lilienthal, one of the commissioners, the power policy involves two main objectives, namely, "more effective protection of the public interest, by setting up a measure of public operation of power as a yardstick, and greatly increased use of electricity in the homes, the farms and the factories." To this end, construction has already started on the Norris Dam and the Joe Wheeler Dam to supplement the power already available at Wilson Dam, and contracts have been entered into with several municipalities for the supply of power. With the completion of the two dams now under construction the total primary power available, including that at Wilson Dam, will be over 600,000 horsepower.

The treaty with Canada for the development of

St. Lawrence River power along the International Section is still pending ratification by Canada and by the United States Senate.

As a part of the Public Works programme, the Federal government recently provided funds for two large water-power developments on the Columbia River. One, the Grand Coulee in Washington, will have a capacity of 700,000 horsepower and the other, the Bonneville, 40 miles from Portland, Ore., will have 90,000 horsepower installed initially and 540,000 horsepower ultimately.

Work progressed during the year on the Boulder Dam (formerly called Hoover Dam) on the Colorado River. Four 115,000 horsepower and two 55,000 horsepower units have been ordered to date, the former being the largest capacity water turbines in existence. Owing to the immensity of the project, its location and the size of its components, a large fabricating plant has been erected on the site in which X-ray apparatus is employed to examine the welded penstocks and other parts subject to high pressures.

Abroad there is being built in Switzerland the Dixence Development of 157,000 kilowatts capacity which will establish a record for high-head plants as it will contain five Pelton-type water wheels operating under a head of 5740 feet. The Zappello Development in Italy, which was completed about a year ago, holds the record for the Francis type turbine as it operates under 1100 feet head.

Pumped storage has been used much more extensively in Europe than in the United States and several plants of that type are now under construction in Germany and Switzerland. In this connection turbine runners have been so designed that the units can be used alternately as water-turbine generators or motor-driven pumps.

In England, after seven years of study, the Severn Barrage Committee of the Economic Advisory Council recently made its final report on the large tidal-power development of the Severn River. The project involves two power stations, one at the barrage to utilize the tides directly and the other, a high-head, pumped-storage development on the River Wyre, about ten miles above. The tides on the Severn range from 15 to 50 feet and it is estimated that a maximum of 1,224,000 horsepower could be made available in seventy-two units. Construction has not yet started but a 50-foot model has been built and is to be seen at Manchester University.

According to the latest figures of the Edison Electric Institute the present hydro-electric generating capacity installed in central stations in the United States is 9,002,800 kilowatts out of a total capacity of 33,517,300 kilowatts. The proportion of utility power generated by water power for the first eleven months of 1933 was 40.2 per cent.

WATER TURBINES. See ELECTRIC LIGHT AND POWER INDUSTRY.

WATERWORKS AND WATER TREATMENT. Under its first five-year plan (see UNION OF SOVIET SOCIALIST REPUBLICS) Russia increased its number of waterworks from 293 in 1927 to 379 in 1932. It had 227 waterworks in 1917 and 151 in 1908 (see SEWERAGE). During the year work was continued on a number of large American and Canadian projects which have been described in earlier YEAR BOOKS: *Boston* and vicinity, by the *Metropolitan District Water Supply Commission*, ultimately 194,000,000 gallons

from the Ware and Swift rivers, including an immense storage reservoir on the Swift, formed by two large earth dams, and 24.6 miles of aqueduct in tunnel, both reservoir and aqueduct named Quabbin; the easterly 14 miles of the aqueduct, leading from a diverting dam on the Ware to the existing Wachusett Reservoir on the Nashua River, has been in use since 1931. *New York City*, a second deep under-pressure tunnel from the terminal reservoir of the Catskill Aqueduct to connections with various feeder mains in the distribution system; virtually completed except for gates and connections. *Chicago*, work well advanced on 11½ miles of tunnel from a new intake crib in Lake Michigan to a pumping station ten miles inland; also a new pumping station with six 50,000,000-gallon electrically-driven centrifugal pumps. *Denver*, bringing water from Fraser River and Jim Creek by way of the pioneer bore for the Moffat railway tunnel beneath the Continental Divide. *San Francisco*, Hetch Hetchy Aqueduct from the O'Shaughnessy Reservoir on the Tuolumne River in the Sierras, including the Coast Range Tunnel 28.6 miles long. *Los Angeles* and other cities forming the *Metropolitan Water District* of Southern California, several tunnel contracts let in 1933 for the construction of the Los Angeles—Colorado River Aqueduct.

WATER TANKS. A 6,000,000-gallon covered steel tank, resting on the ground, was completed for *Milwaukee*. It is 165 ft. in diameter and has a water depth of 37½ ft. It has electrically-welded joints (see *Engineering News-Record*, May 11, 1933; *Water Works and Sewerage*, July, 1933). At *Sheboygan*, Wis., there was completed in July a 4,000,000-gallon elevated covered steel tank, 185 ft. in diameter, with a water depth of 20 ft. Its bottom and roof plates have welded joints, and its side plates have riveted joints. The tank rests on a 16-in. concrete slab, projecting a few feet beyond the tank to support a pilastered and window-pierced brick wall for architectural effect. The elevated portion of the structure rests on reinforced-concrete columns and piers (see *American City* and also *Water Works and Sewerage*, September issues). An elevated steel water tank and aerator, an unusual combination, was built at *Garden City*, N. Y. The aerator consists of trays, hung from the roof trusses. Water is pumped to the trays and cascades into the tank, which has a capacity of 1,000,000 gallons. The tank and aerator are supported by steel columns 100 ft. high.

WATER TREATMENT. A census published during the year showed 3106 water treatment plants in the United States. Of these, 1722 employed various combinations of processes, generally including coagulation, sedimentation, filtration and chlorination, while 1384 used chlorination alone. Most of the 1722 plants are used for clarification and bacterial reduction, some for color removal. Several score plants soften the water; a few remove both iron and manganese. The population supplied with treated water totaled 58,500,000. The *Chicago* experimental water treatment station, operated from 1928 to 1932, was continued in use for special studies. The city engineering department, in November, recommended as a start toward the treatment of the billion gallons a day Chicago consumes and wastes a 304,000,000-gallon rapid filtration plant for the southern third of the city; also complete metering for that section; estimated cost, \$165,000,000. On No-

venber 14, the city council voted to request a loan for filters from the P.W.A. (q.v.) but took no action on meters. Both filters and meters were included in the United States Supreme Court decision of Jan. 14, 1929, in the suit against the Sanitary District of Chicago (see SEWERAGE in this and earlier YEAR BOOKS). Canada had 125 water filtration plants at the beginning of 1933. Chlorination was practiced in 180 cities, in 75 of which it was the only treatment given. A 48,000,000-gallon (U. S.) rapid filter plant was completed at Hamilton, Ont., and a 31,600,000-gallon (U. S.) plant at Calgary, Alta. Poland: An American company completed a 60,000,000-gallon rapid filter plant for Warsaw, where, a half century ago, slow sand filters, designed by a British engineer, were installed.

Consult Thomas, *Sanitation of Water Supplies* (Springfield, Ill.); Streeter, committee chairman, *Census of Municipal Water Purification Plants in the United States* (New York); and for Canada, "Water Works Statistics" in the *Canadian Engineer*, Mar. 23, 1933.

WAUTERS, EMILE CHARLES MARIE. A Belgian painter, died in Paris, France, Dec. 11, 1933. Born in Brussels, Nov. 29, 1846, he received his art education at the Academy of Fine Arts there, later entering the ateliers of Portaels, the Belgian painter, and Gérôme, the French master. Under such tutelage Wauters was destined to become one of the foremost historic painters of the latter part of the nineteenth century. At the age of 22 he exhibited at the Brussels Salon "The Battle of Hastings: The Finding of the Body of Harold by Edith" and "The Great Nave of the Church of St. Mark in Venice." The former was purchased by King Leopold II for the Belgian Royal Collection, while the latter secured for Wauters the commission from the Minister of Fine Arts of artist-delegate to the opening of the Suez Canal in November, 1869. The following year he created another sensation at the Brussels Salon with "Mary of Burgundy Entreating the Sheriffs of Ghent to Pardon Her Councilors Hugonet and Humbercourt" (now in the Liège Museum).

"The Madness of Hugo van der Goes," which Wauters exhibited in 1872, led to the conferring on him of further honors. Not only was the picture purchased by the State for the Brussels Museum but he was commissioned by the municipal government to decorate the Lions' Staircase of the Hôtel de Ville in Brussels with two murals, representing "Mary of Burgundy Swearing to Respect the Communal Rights of Brussels" and "The Armed Citizens of Brussels Demanding the Charta from Duke John IV of Brabant." At exhibitions in Brussels, Vienna, Munich, and The Hague there was displayed during the '80s his vast panorama, 380 feet long by 49 feet high, entitled "Cairo and the Banks of the Nile"; its final home was the Cinquantenaire Museum in Brussels.

About 1900 Wauters established his studio in Paris and there became known, with Boldini and Sargent, as one of the greatest portrait painters of the period. Among the distinguished persons who sat for him were the Princess Clémentine of Belgium, Baron Rothschild, General Wrangel, Madame Melba, Baron and Baroness Goffinet.

WELFARE WORK. FEDERAL EMERGENCY RE-

LIEF. According to Mr. Harry L. Hopkins, Federal Emergency Relief Administrator, writing in September, there were 3,530,000 families receiving relief from public funds in the United States. He pointed out that while the number was large, it represented the decline of 1,000,000 from the 4,530,000 families who were receiving relief in March, 1933. These 3,530,000 families included approximately 15,850,000 persons, about 6,000,000 of whom were children under 16 years of age.

The Federal Emergency Relief Act was approved May 12, 1933. That act made available \$500,000,000 to be expended through the States for the assistance of the unemployed through either direct relief or work relief. Of this sum, half was to be allotted to the various States on a basis of \$1 of Federal funds for \$3 of local money, while the other half was to be expended in direct grants to States whose relief needs were too great or whose financial resources too inadequate to enable them to meet the situation. At the time the administrator provided for under the act took office (May 22, 1933) it was estimated that some 4,000,000 families, representing 18,000,000 persons, were receiving relief from public funds. Of the \$100,253,444 of Federal money disbursed under the relief act during the period ending July 31, all but \$6,937,459 was on the "matched-funds" basis. Since the latter part of July, 1932, the Federal government spent \$464,000,000 on unemployment relief. Of this sum \$300,000,000 was expended by the Reconstruction Finance Corporation's emergency relief division and \$164,000,000 by the Federal Emergency Relief Administration, which began to function as an independent organization on May 22 of the year. States and municipalities, during the first seven months of 1933—January to July inclusive—spent approximately \$190,000,000 for relief and the Federal government expended \$290,000,000 for that purpose. On September 18 the Relief Administration had a balance of \$336,000,000 in the Treasury for relief work. The decline of a million in the number of families who were on relief in March resulted from three causes, according to Mr. Hopkins: "First—Tightening up of administrative machinery throughout the United States. This, in substance, meant careful investigation of all families on relief and a more thorough scrutiny of the needs of new applicants. Second—A seasonal decline which always occurs in the summer months. Third—The first favorable results of the recovery programme." In projecting the extent of relief to be resumed during the winter, three things were to be borne in mind, according to Mr. Hopkins. First, that practically all of the unemployed were on relief rolls, together with a very large proportion of the old people. Second, far more of the new jobs would in all probability go to the self-sustaining unemployed who had never been on the relief rolls than to those who were cared for through public funds. This was because those employees who were last to be discharged were likely to be returned to employment first. Finally, a great many of the unemployed who, though they had been able to maintain themselves without relief up to the present time, would find it increasingly difficult to do so; the result would be that there would still be in every community new applicants for relief, a great majority of whom upon investigation were found eligible for assistance. Assistance to the three and a half million families was furnished largely by work relief; that is, work on public projects such as

buildings of parks, swimming pools, roads, and so forth, under the supervision of local agencies. This work was paid for at the minimum rate of 35 cents an hour and enough hours per month were given to each family to assure its members the necessities of life. The actual sum was determined by the size of the family and the cost of living in the region in which it lived. One of the most serious problems which confronted officials was the non-family group, the single men and women, in particular those who had no legal residence and who are known by relief workers as transients. A programme was being developed throughout the country, the primary purpose of which would be to provide for them and to discourage their wandering about seeking work in areas where there was little or no chance of their getting it.

FEDERAL CIVIL WORKS ADMINISTRATION. On Nov. 9, 1933, the President created the Civil Works Administration and appointed Harry L. Hopkins Federal Emergency Relief Administrator to act as administrator of the new agency. The purpose of the Civil Works Administration is to provide immediately "regular work at regular wages" for able-bodied unemployed persons now on work relief. To this end the administrator was to finance local civil works projects. In order to insure speed, local relief administrations were to be designated as civil works administrations and were to be given authority to pass upon projects submitted for approval up to a certain amount. Beyond that sum the matter was to be referred to the State Civil Works Administration. Under this procedure, only in unusual cases would reference have to be made to Washington for decision.

Before the year was over it was roughly estimated that at least 2,000,000 persons were working under the Civil Works programme and the Civil Works Service Bureau programme, which had been set up to provide employment for white collar workers. Prevailing wages under Civil Works projects went up as high as \$60 a week for the supervisory staff. On the other hand under the Civil Works Service Bureau projects, wages for white collar workers did not exceed \$35 a week for supervisors. The minimum wage rates under the C.W.A. were 40 cents to 50 cents an hour for unskilled and \$1 to \$1.20 an hour for skilled labor in terms of a thirty-hour week. It was indicated originally that the Civil Works programme was to continue until about the middle of February, 1934, in the hope that industry and trade by that time would have sufficiently improved and that the Public Works programme would be in a position to help absorb those who would be unemployed. However, before the year was over, the President declared it his intention to ask Congress for supplementary appropriations to make possible the continuance of the C.W.A. programme at least until the first of May. According to the Civil Works Administration its programme was based on the recognition that "relief is not enough." This statement went on to say: "Relief as a method of alleviating physical hardship has been unavoidable. It has served as a stop gap until we could devise a better way. It has maintained existence for millions but contributed nothing toward the recovery of human values. . . . It is the purpose of the C.W.A. to take all able-bodied persons now receiving relief and put them at work on regular jobs at regular wages. . . . This programme lifts millions of workers and their families from the low level of relief to the real

way of social and economic recovery, not only for individuals, but for the nation. It raises their manner of living from charity to self-sustaining consumers of goods earned by their own labor." It was estimated that the creation of jobs under the C.W.A. would involve the expenditure of approximately \$700,000,000, at least by the end of February. Of this sum, \$400,000,000 was to come from the Public Works Administration funds, \$100,000,000 from Federal Emergency Relief funds, and about \$200,000,000 from local jurisdictions.

COMMUNITY CHEST DRIVE. Despite the heroic efforts made by the government to cope with the problem of unemployment and distress, it was plain that the continuance of private agencies was still necessary, certainly to take care of case work problems, if not of outdoor relief. Private agencies providing medical care for the sick, homes for the crippled, orphans, aged, places of shelter for vagrants and transients, vocational instruction, institutions for rehabilitation and the like, were finding themselves particularly hard pressed for funds. Because of the existence of the national emergency the Federal government continued to express its interest in the financial drives of the local community chests and in the autumn gave its support for the third year to this campaign. In 1933 the campaign was called the "Mobilization for Human Needs" and was headed by Mr. Newton D. Baker, Secretary of War in President Wilson's Cabinet. Mr. Baker, pointing to the needs of the private welfare agencies, said:

Institutions which work in fair weather, but break down in times of stress, find no permanent allegiance united in their support. In this view our response to this crisis may in some degree measure the confidence with which we build upon democracy as a permanent form of social organization.

The combined community chest drive by the end of the year had collected \$50,299,875 in 195 community chest campaigns. According to Mr. Baker, in a New Year's letter which he sent to Mr. Roosevelt, there were still to be heard from 155 community chest campaigns and the 70 cities which made their appeals in the winter and spring. The funds gathered by these organizations were expected to increase the total to approximately \$64,000,000; also reports from joint campaigns in non-chest cities would further swell the amount to over \$80,000,000. Mr. Baker declared that one-half of the 195 cities that had completed their drives reached 86.5 per cent of their goals. Fifty-five reached or exceeded their goals and 25 raised more money than the year before. In 1932 the total amount raised by 394 chests reached the sum of \$101,181,949. In 1933, 397 chests, due largely to the advent of Federal relief, succeeded in raising only \$77,646,714.

WELLESLEY COLLEGE. A nonsectarian institution for the higher education of women in Wellesley, Mass. The enrollment for the academic year 1933-34 was 1505. The teaching staff numbered 173. The current income for the year 1932-33 was \$8,236,147. The library contained 154,000 volumes. President, Ellen F. Pendleton, Litt.D., LL.D.

WELLS COLLEGE. An institution of higher learning for women in Aurora, N. Y., founded in 1868. The enrollment for the autumn of 1933 was 228. The faculty numbered 43 members. The endowment amounted to \$1,552,761, and the income for the year from invested funds, tuition, etc., was \$344,112. There were approximately 74,158 volumes in the library. A new administration

building, containing offices, classrooms, departmental rooms, psychological laboratories, and a convocation hall, was completed during 1933; the total cost was about \$513,194. President, Kerr Duncan Macmillan, S.T.D.

WESLEYAN UNIVERSITY. An institution for the higher education of men in Middletown, Conn., founded in 1831. The 1933 autumn enrollment was 653. The faculty numbered 75. The productive funds of the university for 1933 were \$5,060,885, and the income for the year was \$609,390. President, James L. McConaughy, Ph.D.

WEST, MAE. See MOTION PICTURES.

WESTERN AUSTRALIA. The westerly state of the Australian Commonwealth, having a total area of 975,920 square miles and a population (1933 census) of 438,948. Perth, the capital city, had 207,464 inhabitants (1933). In 1932, births totaled 4115; marriages, 2904; deaths, 3715. There were a total of 4,259,000 acres under crop during 1932-33; wheat accounted for 3,387,940 acres from which the production amounted to 41,655,000 bushels.

In the fiscal year ending June 30, 1933, revenue amounted to £8,332,153; expenditure, £9,196,234; public debt, £83,514,698. Executive power is vested in a governor, acting through a responsible ministry, and legislative power in a parliament of two houses. Governor (vacant); Sir J. Mitchell was appointed in July, 1933 to succeed Sir J. A. Northmore as lieutenant-governor; Premier, Philip Collier. See AUSTRALIA under *History*.

WESTERN RESERVE UNIVERSITY. A nonsectarian institution for the higher education of men and women in Cleveland, O., chartered in 1826. The enrollment in thirteen colleges and schools for the autumn of 1933, excluding duplicates, was: full-time students 3357, part-time students 3277. Enrollment in 1933 summer session was 1147. The faculty numbered 612. The endowment amounted to \$11,877,576, and the income for the year 1932-33 was \$2,065,143. President, Robert E. Vinson, D.D., LL.D., L.H.D.

WESTERN SAMOA. See SAMOA.

WESTER WEMYSS, wester wēmz, ROSSLYN ERSKINE WEMYSS, FIRST BARON. A British naval officer, died at Cannes, France, May 24, 1933. Born Apr. 12, 1864, he entered the navy in 1877, being promoted to lieutenant in 1887 and commander in 1898. In 1901 he commanded the *Ophir*, on which the Duke and Duchess of Cornwall and York (later King George and Queen Mary) visited the British colonies and dominions, and on his return was made a member of the Royal Victorian Order and was promoted to the rank of captain. After serving as commodore during 1911-12 of the Royal Naval barracks, he was promoted to rear admiral in command of the Second Battle Squadron, his flag ship being the *Orion*. During the early part of the World War he commanded a cruiser squadron which patrolled the English Channel and acted as convoy in the transportation of British troops to France. Four of the cruisers acted also as convoys to the first contingent of the expeditionary forces sent by Canada. From the island of Lemnos, in the double capacity of governor and senior naval officer, he directed in April, 1915, the landing of troops in Gallipoli and the later withdrawal in December, when evacuation of the peninsula had been decided upon.

In 1916 Admiral Wemyss was made commander-in-chief of the East Indies and Egypt, but the following year was recalled by the Admiralty to

serve as deputy first sea lord. He succeeded Jellicoe as first sea lord in January, 1918, and in that capacity concentrated on the direction of anti-submarine operations. He was present with Marshal Foch, General Weygand, and Rear Admiral George Hope as the Allied representatives at the signing of the Armistice on Nov. 11, 1918.

On his retirement as first sea Lord in 1919 he was promoted to Admiral of the Fleet and was made Baron Wester Wemyss of Wemyss. He wrote *The Navy in the Dardanelles Campaign* (1924).

WEST POINT. See UNITED STATES MILITARY ACADEMY.

WEST VIRGINIA. POPULATION. The population of the State on Apr. 1, 1933, according to the Fifteenth Census, was 1,729,205; in 1933 (Federal estimate) it was 1,774,000. Wheeling had (1930) 61,659 inhabitants; Huntington, 75,572; Charleston, the capital, 60,408.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod Bu	Value
Hay (tame)	1933	626,000	690,000*	\$7,728,000
	1932	620,000	558,000*	5,636,000
Corn	1933	464,000	13,920,000	8,352,000
	1932	446,000	11,150,000	5,018,000
Apples	1933	4,200,000	2,940,000
	1932	4,191,000	2,515,000
Potatoes	1933	37,000	2,331,000	2,331,000
	1932	41,000	3,485,000	2,091,000
Oats	1933	124,000	2,356,000	1,013,000
	1932	138,000	3,036,000	941,000
Wheat	1933	124,000	1,798,000	1,546,000
	1932	116,000	1,276,000	727,000

* Tons

MINERAL PRODUCTION. The State ranked as the Union's leading producer of bituminous coal in 1932, moderately increasing its lead over Pennsylvania. With regard to the volume of its production, however, it receded, the gain over Pennsylvania being only relative and due to heavier recession in Pennsylvania's case. West Virginia's production of coal fell to 83,765,000 net tons (1932), from 101,473,172 (1931).

The smelting of iron from extraneous ores was much reduced, to 224,032 gross tons of pig iron (1932), from 605,634 (1931). The production of coke, of which about 95 per cent was in by-product ovens, attained the quantity of 950,514 net tons (1932) and the value of \$2,144,187. Petroleum production totaled 3,882,000 barrels (1932), as against 4,472,000 for 1931. The output of natural gas was restricted in 1932 by reduced domestic demand. There were produced 46,363,000 gallons (1932) of gasoline derived from natural gas, as against 52,844,000 (1931).

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$14,306,676 (of which \$1,710,964 was for local education); for interest on debt, \$3,599,956; for permanent improvements, \$13,716,448; total, \$31,623,080 (of which \$16,144,049 was for highways, \$4,048,923 being for maintenance and \$12,095,126 for construction). Revenues were \$24,118,342. Of these, property and special taxes furnished 20.5 per cent; departmental earnings and compensation to the State for officers' services, 7.9; sale of licenses, 55.2 (in which was included a gasoline sale tax that produced \$5,497,667). Funded debt outstanding on June 30, 1932, totaled \$86,070,400, of which \$81,730,000 was for

highways. Net of sinking-fund assets, the debt was \$82,843,930. On an assessed valuation of \$1,877,968,467 the State levied in the year ad-valorem taxes of \$3,568,140.

EDUCATION. The State was conspicuous for having, in the adverse year 1933, fundamentally reorganized its system of public schools. The old magisterial and independent districts, numbering 385, were abolished; in their place were created 55 county districts. Consolidations of schools, in connection with this change, reduced the number of teachers employed and, at the same time, rendered it possible to elevate the requirements for teachers' certificates. The State became contributor of nearly one-third of the current expenditures of the elementary and high schools.

The number of persons of school age in the State, as reckoned for the academic year 1931-32, was 541,545. There were enrolled in the public schools, in September, 1933, 432,949 pupils. Of these, 334,000 were in common schools or elementary grades; in high schools, 98,949. The expenditures of the year 1932-33 for public-school education totaled \$23,258,925. Salaries of teachers averaged \$1088.

LEGISLATION. A regular session of the Legislature convened on January 11. To act for the State on the proposed repeal of the Eighteenth Amendment to the Federal Constitution, it created a State convention to be composed of 20 delegates, who were to be elected at large by popular vote on June 27. In spite of strict prohibitory provisions in the State constitution, the sale of beer of an alcoholic strength not over 3.05 per cent was allowed by law and subjected to a tax of \$1 a barrel. Provision was made for submitting the question of repealing State prohibition to popular vote at the general election in November, 1934.

To save from bankruptcy banking institutions under State charter, at the time of the nationwide banking panic, a law was passed permitting State banks to be relieved of obligation to meet demands immediately, through the declaration of bank holidays. By another act, the Governor and the State banking commissioner were empowered to limit operations of individual banks, which might thus remain open for business without need to meet all demands in full or, alternatively, to suspend.

State, county, and local public pay was reduced, by a law affecting non-statutory salaries in excess of \$1200, at the rate of 10 per cent of pay above that figure, rising to 15 per cent for excess over \$2000 and to 20 per cent for excess over \$3000. Appropriations for the fiscal year current were reduced. Further reductions of State salaries, where non-statutory and non-contractual, were authorized to be made by the Governor. The system of local public school organization was recast, the duties of some 400 district bodies being transferred to 55 county boards of education. The three-man highway commission was abolished, and its functions were assigned to a single commissioner assisted by an advisory board of four members. To a conservation department were assigned the duties of the abolished game, fish, and forestry commission and also that of employing young men, with Federal aid, on a great State scheme of reforestation. A law affecting small loans gave fuller powers of regulation to the banking commissioner and reduced the lawful rates on such loans to 2½ per cent a month for amount of principal in excess of \$150.

A special session in May voted revenue measures. These included an act legalizing racetrack betting under the pari-mutuel system and levying, for the State school fund, a tax of 3½ per cent on the gross total of bets. One of the main features of the legislative plan to raise new revenue was a comprehensive tax on production, occupation, business, and incomes.

POLITICAL AND OTHER EVENTS. At the end of the period of Federal closure of banks which followed the nation-wide banking panic, all banks under State charter were reopened, by March 15, without State restriction on depositors' privilege of withdrawal. On June 27, by a popular vote in the approximate proportion of 5 to 3, were chosen 20 delegates favoring the repeal of the Federal Eighteenth Amendment, who met in State convention on July 25 and voted the State's adoption of repeal through the superseding amendment proposed by Congress.

The question of the validity of the State's beer law of 1933 was brought into the Federal courts; United States District Judge McClintic at Charleston instructed a grand jury to return indictments in cases where evidence showed beer to have been transported into the State, and asserted that the prohibitive feature of the State constitution not having been repealed, a Federal act to prevent the ingress of beer applied.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, H. G. Kump; Secretary of State, William S. O'Brien; Auditor, Edgar B. Simms; Treasurer, Richard E. Talbott; Superintendent of Free Schools, W. W. Trant; Attorney General, Homer A. Holt; Commissioner of Agriculture, J. B. McLaughlin.

Judiciary. Supreme Court of Appeals: President, Jo N. Kenna; Associate Judges, John H. Hatcher, Homer B. Woods, Raymond Maxwell.

WEST VIRGINIA UNIVERSITY. An institution for the higher education of men and women in Morgantown, W. Va., founded in 1867. In the autumn of 1933 the enrollment was 2303. The faculty numbered more than 220. President, John Roscoe Turner, Ph.D.

WHEAT. On the basis of early estimates the world's wheat production in 1933 was the smallest since 1926 and the production of the wheat exporting countries was the lowest and of the wheat importing countries the highest since the World War. The world's production exclusive of the Soviet Republics, China, Turkey, Persia, and Iraq was placed at 3,470,000,000 bushels as compared with 3,710,000,000 bushels in 1932. The total production for the year of 43 countries reporting to the International Institute of Agriculture, not including the Soviet Republics, was estimated at 3,516,718,000 bushels, a reduction of 5.8 per cent from the preceding year's yield and of 4.5 per cent from the average annual yield for the five years 1927-1931. The crops of the leading countries not including the United States were reported as follows: India 352,875,000 bushels, France 338,663,000 bushels, Italy 297,631,000 bushels, Canada 268,729,000 bushels, Germany 205,920,000 bushels, Spain 131,937,000 bushels, and Rumania 119,085,000 bushels. The Soviet Republics have reported an estimated yield of 1,018,893,000 bushels. Argentina reported a yield of 235,378,000 bushels in the crop year 1932-33 and estimated its production in 1933-34 at 256,173,000 bushels; Australia, 213,288,000 and 190,612,000 bushels for the two crop years, respectively. The world's exportable supplies for

the commercial year 1933-34 as estimated by the International Institute of Agriculture, amounted to 1,105,000,000 bushels to meet requirements of 525,000,000 bushels.

The total wheat production of the United States according to estimates published by the Department of Agriculture was 527,413,000 bushels harvested on 47,493,000 acres at an average yield of 11.1 bushels per acre. The production in 1933 was 29 per cent less than the 1932 crop of 744,076,000 bushels and 43 per cent less than the crop of 1931. The acreage harvested in 1933 was about 10,000,000 acres less than the acreage in each of the two preceding years. The low acreage and production were due to unfavorable weather and a heavy abandonment in both winter wheat and spring wheat sections. The yields of the leading States were estimated as follows: North Dakota 65,386,000 bushels, Kansas 57,504,000 bushels, Washington 46,249,000 bushels, Ohio 34,812,000 bushels, Oklahoma 33,095,000 bushels, and Nebraska 29,206,000 bushels. Of these States North Dakota reported only spring wheat and Oklahoma only winter wheat production, and Kansas produced only 52,000 bushels of spring wheat. The average farm price on Dec. 1, 1933, was reported at 67.8 cent per bushel and the total farm value of the crop on that date as \$357,525,000. These values compared with 32 cents per bushel and a corresponding total farm value of \$238,305,000 the preceding year.

The production of winter wheat in 38 reporting States was estimated at 351,030,000 bushels, the acreage at 28,420,000 acres and the average yield per acre at 12.4 bushels.

The 1933 production of spring wheat including durum wheat in 25 reporting States was estimated at 176,383,000 bushels grown on 19,073,000 acres at the rate of 9.2 bushels per acre.

The durum wheat production in 1933 was estimated at 16,109,000 bushels, the harvested acreage 2,310,000 acres, and the average yield at 7 bushels per acre.

During the fiscal year ended June 30, 1933, the United States exported only 20,887,000 bushels of wheat, 4,324,000 barrels of wheat flour, and 1,199,000 pounds of breakfast foods and other edible wheat products. The imports included 6,623,000 bushels for grinding in bond, 2,745,000 bushels for export to Cuba, 134,000 pounds of flour and 67,000 long tons of bran, shorts and other by-products and feeds of wheat of which 26,000 tons was withdrawn from bonded mills. The importation of macaroni and similar products totaled 1,956,000 pounds. As reported by the Department of Agriculture the aggregate volume of trading in wheat futures on the 12 grain exchanges designated as contract markets amounted to 10,890,295,000 bushels.

WILBERFORCE, WILLIAM, CENTENARY. See CENTENARIES.

WILLIAM AND MARY, COLLEGE OF. An institution for the higher education of men and women at Williamsburg, Va., founded in 1693. The enrollment for the autumn of 1933 was 1232, of whom 569 were men and 663 women. The 1933 summer session had an attendance of 659 students, of whom 285 were men and 374 women. The faculty numbered 75 at the college, 17 in the Richmond division, and 13 in the Norfolk division. The endowment amounted to \$850,000, while the gross income for the year 1932-33 was \$809,009. The library contained 79,870 volumes.

President, Julian Alvin Carroll Chandler, Ph.D.
WILLIAMS COLLEGE. A nonsectarian college for men in Williamstown, Mass., founded in 1793. The enrollment for the autumn of 1933 totaled 748. There were 83 members on the faculty. The income for the year ending June 30, 1933, was \$752,513. The number of volumes in the library was 155,300. President, Harry Augustus Garfield, LL.D.

WIND. See METEOROLOGY.

WINDWARD ISLANDS. A group of British owned islands in the West Indies, consisting of Grenada, St. Lucia, and St. Vincent, together with the Grenadines. The seat of the government is in Grenada. Each of the islands is under its own government, but they are united for certain purposes which include a common court of appeal. Governor and Commander-in-Chief in 1933, Sir T. A. V. Best. See BRITISH WEST INDIES; GRENADA; ST. LUCIA; ST. VINCENT.

WISCONSIN. POPULATION. The population of the State on Apr. 1, 1932, according to the Fifteenth Census, was 2,939,006; in 1933 (Federal estimate) it was 2,992,000. Milwaukee had (1930) 578,249 inhabitants; Madison, the capital, 57,899.

AGRICULTURE. The following table shows the acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu	Value
Hay (tame)	1933	2,949,000	3,685,000 ^a	\$37,218,000
	1932	2,881,000	3,633,000 ^a	36,603,000
Corn	1933	2,228,000	77,980,000	31,972,000
	1932	2,184,000	80,808,000	21,010,000
Oats	1933	2,457,000	63,882,000	19,803,000
	1932	2,533,000	88,655,000	15,958,000
Potatoes	1933	239,000	16,730,000	9,202,000
	1932	260,000	22,620,000	5,203,000
Barley	1933	805,000	17,710,000	9,209,000
	1932	789,000	23,670,000	7,101,000
Tobacco	1933	12,600	14,868,000 ^b	530,000
	1932	28,000	36,180,000 ^b	1,228,000
Wheat	1933	104,000	1,616,000	1,229,000
	1932	110,000	2,109,000	970,000
Rye	1933	228,000	2,260,000	1,288,000
	1932	254,000	3,048,000	914,000

^a Tons. ^b Pounds.

FINANCE. State expenditures in the year ended June 30, 1932, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$43,414,279 (of which \$8,198,630 was for local education); for interest on debt, \$88,459; for permanent improvements, \$29,366,944; total, \$72,869,682 (of which \$35,256,442 was for highways, \$7,802,342 being for maintenance and \$27,454,100 for construction). Revenues were \$65,016,140. Of these, property and special taxes furnished 29.5 per cent; departmental earnings and compensation to the State for officers' services, 9.0; sale of licenses, 48.4 (in which was included a gasoline sale tax that produced \$16,493,806). Funded debt outstanding on June 30, 1932, totaled \$1,183,700, of which no part was offset by sinking-fund assets. On an assessed valuation of \$5,952,939,506 the State levied in the year ad-valorem taxes of \$7,810,574.

EDUCATION. Acts of the Legislative session of 1933, according to report in the *Journal* of the National Education Association, had the effect of reducing the State's aid for elementary public schools by about 28 per cent. The minimum for teachers' salaries was reduced to \$65 a month, from \$75. The system of supervising teachers, however, and the teachers'-retirement law survived efforts to abolish them. There was reported

an inflow of high-school graduates back into the high schools; unemployed, they sought additional training.

For the academic year 1931-32, the latest for which the statistics had been tabulated, the number of persons of school age in the State was reckoned as 886,860. There were enrolled in the public schools 548,386 pupils. Of these, 427,291 were in common schools or elementary grades; in high schools, 121,095. The year's expenditures for public-school education totaled \$55,139,733. Salaries of teachers averaged \$1400 by the year.

LEGISLATION. A regular session of the Legislature convened on January 11. To act for the State on the proposed repeal of the Eighteenth Amendment to the Federal Constitution, it created a State convention of 15 members, to be elected at large by popular vote on April 4. To prevent general bankruptcy among banking institutions under State charter, at the time of the nation-wide banking panic of February and March, authority was given the State banking commissioner and the banking board of review to remove incompetent bank officers and directors of operating banks, to have full authority over banks' stabilizing and readjustment agreements, to extend the double liability of holders of bank stocks to one year after they had disposed of their stock, and the commissioner and board of review were empowered to limit withdrawals and cause the segregation of new deposits in banks still operating.

A proposal approved by the previous Legislature, to establish in the State the system of legislation by popular initiative and referendum, was rejected; it thus failed of the constitutionally required second consecutive approval and was lost. The payment of State bonds and interest was required by act to be made in priority to payments of general and operating expenses; but a statute requiring the Governor to levy a State tax on property whenever the State's balance in treasury fell below \$2,000,000 was repealed; and the maximum rate of direct tax for all purposes, requirement for bonds and interest included, was left at 1 per cent. The existing statutory time of grace in which foreclosed farmers and homestead owners might redeem their property was extended to three years, from one year; by another act, courts were required to order foreclosures only in conformity with a fair rental value of farm property. Milk was classed as a public utility, and the department of agriculture and markets was authorized to fix prices to be paid for milk.

POLITICAL AND OTHER EVENTS. Banks in the State, threatened with insolvency by the rush of depositors to withdraw in the course of the nation-wide banking panic, were relieved of the necessity to pay immediately, by the Governor's proclamation of a series of legal holidays starting with March 3. The majority of the State and of the National banks reopened on March 15.

At an election on April 4 there were chosen by popular vote 14 delegates, all committed to the repeal of the Federal Eighteenth Amendment, who met in State convention on April 25 and voted the State's adoption of repeal through the superseding amendment proposed by Congress. The popular vote was reported as 648,031 in favor of Federal repeal and 141,548 opposed.

The difficulties of farmers had produced among them great unrest, which took a violent form in a milk strike that began on May 10, in connection

with the National farm-holiday movement. Mobs seized milk in transit on the highways in divers part of the State and spilled the milk in order to prevent its reaching creameries and collecting stations. Governor Schmedeman issued on May 11 a proclamation closing all these places but undertaking that the State authority would open them and protect milk deliveries wherever a majority of the producers affected so petitioned. Many places were thus reopened, National Guard troops being called out to give protection. The strikers ceased opposition to milk deliveries on May 19 on assurance from the Governor that he would appoint a committee to study the farmers' problems.

The State conservation commissioner reported in April that the State had provided relief in the previous year to 12,790 men with some 40,000 dependents by employing them on conservation work, largely on the State's extensive forest lands, paying the men out of a \$500,000 fund supplied by legislative act.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, A. G. Schmedeman; Lieutenant-Governor, Thomas J. O'Malley; Secretary of State, Theodore Dammann; Treasurer, Robert K. Henry; Attorney General, James E. Finnegan; State Superintendent of Schools, John Callahan.

Judiciary. Supreme Court: Chief Justice, Marvin B. Rosenberry; Associate Justices, Walter C. Owen, Chester A. Fowler, Oscar M. Fritz, Edward T. Fairchild, John D. Wickham, George B. Nelson.

WISCONSIN, THE UNIVERSITY OF. A State institution of higher education in Madison, founded in 1848. The enrollment for the autumn term of 1933 was 7375, distributed as follows: Letters and science, 4243; engineering, 893; agriculture, 694; law, 361; medicine, 317; nursing, 131; library school, 42; and school of education, 694. In the 1933 summer session the enrollment was 3059. The faculty numbered 1287. The endowment as of June 30, 1933, was \$1,535,765, while the net income for 1932-33 was \$7,384,608. Gifts received during the fiscal year amounted to \$177,576. The library contained approximately 923,000 volumes and 430,000 pamphlets. President, Glenn Frank, Litt.D., L.H.D., LL.D.

WOLLE, wŏl'ě, J(OHN) FRED(ERICK). An American organist and conductor, died Jan. 12, 1933, in Bethlehem, Pa., where he was born Apr. 4, 1863. He began his musical education with David D. Wood in Philadelphia. In 1884 he went to Germany, where he studied under Josef Rheinberger at the Royal Conservatory in Munich. On his return the following year he became organist of the Moravian Church in Bethlehem and two years later of the Packer Memorial Church at Lehigh University. He held both these positions until 1905 when he was called to the newly-created chair of music at the University of California. While at Berkeley he served also as organist of the First Congregational Church (1907-09) and conducted in the Greek Theatre the concerts given by the university's symphony orchestra and during 1909-10 those of the California Bach Choir.

On his return to his former activity in Bethlehem in 1911 Dr. Wölle reestablished the annual Bach Festival, which he had organized in 1898 to be given by the Bethlehem Bach Choir. This choir, in turn, was an outgrowth of the Bethlehem Choral Union, which his enthusiasm for Bach's

music had led him to establish on his return from Germany and which in 1888 gave the first complete American performance of the *Passion* according to St. John. At the first Bach Festival, held in March, 1900, was given the *Mass in B-Minor*, which was to serve thereafter as the culmination of the three-day programme. There were later added to the choir's repertoire the *Passion* according to St. Matthew, the *Art of Fugue*, the *Christmas Oratorio*, and various chorals, for the singing of which a large children's chorus was recruited.

For almost a quarter of a century the Bethlehem Bach Choir was recognized as one of the most important forces in community choral music in the United States, its membership increasing from 110 in 1912 to more than 300 in 1933. Dr. Wolle, through his animated reading of Bach's works, made its spring performances at Lehigh University an event of the first magnitude among American music festivals. He was also responsible for the establishment of choral or oratorio societies in other Pennsylvania cities, such as Harrisburg, York, and Lancaster. As one of the foremost concert organists of the United States, he participated in the formation of the American Guild of Organists. He was the composer of numerous anthems and songs.

WOMAN'S CHRISTIAN TEMPERANCE UNION, NATIONAL. An all-partisan and all-sectarian movement which has as its purpose the protection of the home through the abolition of the liquor traffic. It is comprised of 10,000 local unions with an approximate membership of 600,000, and is organized in every State, territory, and dependency of the United States. President in 1933-34, Mrs. Ida B. Wise Smith. A legislative headquarters is maintained at the Methodist Building, 100 Maryland Ave., N. E., Washington, D. C. National headquarters, administrative offices, and a publishing house are in Evanston, Ill. See PROHIBITION.

WOMEN IN INDUSTRY. In her annual report for the year to her Chief, Secretary of Labor Perkins, Miss Mary Anderson, director of the Women's Bureau, points out justly that too much reliance must not be placed in the National Industrial Recovery Act to improve the position of women in industry. The act, after all, is only a two-year emergency measure while the safeguarding of minimum standards, the abolition of the double-wage and improvement in hours, require continual vigilance on the part of public authorities. As Miss Anderson said: "There is needed also a long-range programme including as one of its principal features the standard of a living wage for every man and woman at work and sufficient to enable them to maintain their dependents in health and comfort."

Miss Anderson also insisted that another need of the times was the abolition of a double-wage standard that countenanced one set of rates for men and a lower level of pay for women doing practically the same quantity and quality of work. A double-wage standard cut in two ways, spelling injustice to women by forcing them to accept less for their services, and causing hardships to men by tending to depress their wage whenever they came in direct competition with women. This resulted in the vicious circle of lower rates for women pulling down men's rates, which in turn necessitated more women joining the breadwinning ranks to supplement men's inadequate incomes. In the matter of standards to

safeguard workers from accidents and occupational diseases, Miss Anderson called for more rapid progress, particularly from the viewpoint of women. Women were paid less than men when injured at work, even when their disabilities were as severe as men's. This was due to the fact that such compensation ordinarily was based on wage, and women's earnings as a rule were less than men's. Women's lower wages also made the accumulation of savings for emergencies difficult, if not impossible.

The following are descriptions of the more important studies completed by the Women's Bureau during the year ended June 30, 1933:

Employment fluctuations and unemployment of women, 1928-31. This report covers data from six large industrial States receiving periodic employment reports, Illinois, New York, and Ohio furnishing these by sex, and Massachusetts, Pennsylvania, and Wisconsin, which, though not publishing data by sex, report upon certain industries important in woman employment; and material from other sources. The data obtained give overwhelming testimony to the severe extent to which women, in comparison with men, are affected by fluctuations in employment in every year in industries that are large employers of women, and to the extent to which women, as compared to men, are the sufferers from employment decline.

Hours, earnings, and employment in cotton mills. In this study pay-roll and other data were secured in 1932 from 132 establishments in South Carolina, 14 in Maine, and 13 in Texas, the numbers of women employees reported upon being respectively 16,678, 3143, and 941. The hours most commonly worked were 55 in South Carolina and Texas and 54 in Maine. The medians of a week's earnings were \$7.70 in South Carolina, \$7.60 in Texas, and \$11.10 in Maine. Night work was required of women in 44 of the 132 South Carolina mills, 3 of the 13 Texas mills, and none of the 14 Maine mills.

A study of a change from eight to six hours of work. This report describes the means by which, as much as two years ago, a well known food plant shortened its hours from eight to six and ran four six-hour shifts a day. By this plan it was possible to increase employment—one of the main reasons for the change—by 39 per cent. Through home visits made by agents of the Bureau to some 400 women, the workers' opinion of the shorter-hour shift, with its slightly lower earnings, was ascertained. The great majority of the women liked the six-hour shift. Of about 250 who had worked on both shifts, somewhat over three-fourths preferred the shorter hours, giving the following reasons for their preference: More time for home duties, more leisure, less fatigue, and increased leisure and less fatigue. The small group who preferred the eight-hour shift—almost one-fourth—gave more pay and less fatigue as their reasons.

Household employment in Chicago. Questionnaires returned by 250 housewives and by 250 household employees in Chicago in 1930-31 are the basis of this detailed analysis of working conditions, employment relations, and other matters in domestic service. In view of the fact that the 1930 Census of Occupations reports for the United States a 62 per cent increase since 1920 in the number of women household servants, and the further fact that even such low standards as existed have declined shockingly in the depression, this study is a distinct contribution to the scant literature on the subject.

Women workers in the third year of the depression. The industrial experience of 109 women and girls in the year ended June 1, 1932, is described in this study made by a group of students under the direction of Professor Amey Hewes at the Bryn Mawr summer school in 1932. Only 10 workers had known no unemployment during the past year; the remainder had been entirely without work for longer or shorter periods or had worked on short weeks, or both. Two women had been unemployed the entire year. The median of the year's earnings of the group was only \$480. More than three-fifths of the women earned less than \$600. If this median is compared with those of the 609 women workers in attendance at Bryn Mawr and three other summer schools in 1928, 1929, or 1930, it is found to be from \$313 to \$407 less than these, and it is \$216 less than that of students attending Bryn Mawr in the summer of 1931.

Besides writing several of the major reports of the Bureau, the research division has collected and analyzed material in response to large numbers of requests for information on matters connected with the employment of women.

Age and marital status of employed women. Within the past year the census of occupations has completed its reports showing the age and marital status of employed women. The youth of many gainfully occupied women is indicated in the fact that 15.5 per cent are under 20, and 87.3 per cent are under 25, while the respective figures for men are only 7.9 and 20.5 per cent. That more than 3¼ million employed women are 18 and under 25 years of age gives especial emphasis to the need for installation and maintenance of healthful working conditions and for hours of work sufficiently short to be consistent with health.

Effects of minimum-wage provisions. In this year when the general depression has stimulated the passage of minimum-wage legislation, the inquiry frequently made in the past has been renewed—as to the effects produced by such provisions—and a large number of such requests have been responded to for this type of information and considerable information compiled showing the real effects of such laws in raising and maintaining women's wages.

Wages of women in cotton mills. According to biennial reports of the Bureau of Labor Statistics, the decline in average full-time weekly earnings of women from 1924 to 1928 was nearly 13 per cent. This decline continued steadily, full-time earnings in 1932 being the lowest in the five biennial reports from 1924 to date. In 1932 this average was \$12.40 for women. It was \$15.25 for men. Average actual earnings in the week taken were higher in 1924 than in any subsequent year reported. From 1924 to 1932 such earnings declined 26 per cent for men and 31.5 per cent for women. At each biennial date reported, wages in this industry were lower than in the preceding report (with one exception for men's wages). The greatest decline was between 1930 and 1932, amounting to nearly 18 per cent for women and 15 per cent for men. Average actual earnings in the week taken in 1932 were only \$9.87 for women, \$12.91 for men. At the same time it should be noted that the average actual week's hours of women reported were 40.9 in 1930 but had increased to 42.2 in 1932.

WOMEN'S CLUBS. GENERAL FEDERATION OF. An organization founded in 1889 and chartered by act of Congress in 1901 for "the promotion of movements looking toward the betterment of life." In 1933 the General Federation was composed of approximately 14,500 clubs in the United States, having also a membership of 40,000 Juniors, and 72 clubs outside the United States; affiliated with it were 16 national and international organizations. The official publication is *The Clubwoman GFWC*. At the June, 1932, Convention in Seattle, Wash., Mrs. Grace Morrison Poole was elected President for the ensuing triennial period. Headquarters are at 1734 N Street, N. W., Washington, D. C.

WOOL. Wool showed the greatest price increase in 1933 of any of the principal livestock products. It was estimated by the Secretary of Agriculture that the farm price of wool in October showed a gain of 237 per cent over the price at the time of the low point in the depression.

Preliminary estimates by the United States Bureau of Agricultural Economics placed the total 1933 wool production in 19 countries which produce over four-fifths of the world's supply, exclusive of Russia and China, at 2,561,000,000 pounds, which was a reduction of 8 per cent as compared with 1932, and 5 per cent as compared with the 5-year average, 1928-1932. The decrease in the 1933 wool clip resulted almost entirely from a decreased production in Australia, New Zealand, and the Union of South Africa. The other important wool producing countries in the Southern Hemisphere, Argentina, and Uruguay, showed increases of 5 and 10 per cent, respectively. The decreased production from the five Southern Hemisphere countries as a whole was 11 per cent.

There were approximately 348,194,000 pounds of wool shorn in the United States in 1933, which was about 4,000,000 pounds more than was shorn in 1932. The increased wool production resulted from a greater average fleece weight which in

1933 was 7.90 pounds as compared with 7.75 pounds in 1932. The numbers of sheep shorn decreased slightly from 44,431,000 head in 1932 to 44,087,000 in 1933.

Wool imports into the United States were much heavier, there being but 56,000,000 pounds of combing, clothing, and carpet wools imported during 1932, as contrasted with 174,000,000 pounds imported during 1933. Further indication of the activity in wool marketing is obtained from the increase of 25 per cent in the receipts of domestic wool at Boston in 1933, as compared with 1932. The 1933 receipts were nearly 15 per cent above the 5-year average from 1928-1932.

WORCESTER ART MUSEUM. See ART MUSEUMS.

WORCESTER POLYTECHNIC INSTITUTE. A nonsectarian institution for the technical education of men in Worcester, Mass., founded in 1865. The enrollment for the fall semester of 1933 totaled 579. The faculty numbered 73. The productive funds of the Institute amounted to \$3,419,978, and the income for the year was \$324,216. There were about 24,000 volumes in the library. President, Ralph Earle, D.Sc., D.Eng., LL.D., Rear Admiral, U. S. N., ret.

WORKMEN'S COMPENSATION. ACCIDENT STATISTICS OF THE NATIONAL SAFETY COUNCIL, 1932. According to figures compiled by the National Safety Council, the accident-prevention movement in the United States can be credited with saving 175,000 lives since it was started in 1913, when the accidental death rate was 85.5 per 100,000 population. The succeeding years, with the exception of 1917, show lower though variable rates, with the estimated rate for 1932 at the lowest point for the period. The total number of accidental deaths of all types during the twenty years, 1913 to 1932, was 1,720,857, but would have been 175,000 larger if the 1913 death rate had continued. It is pointed out that the reduction would have been far greater except for the enormous increase in motor-vehicle fatalities, which rose steadily from 4.4 per 100,000 population in 1913 to 27.1 in 1931 and dropped, for the first time, in 1932 to 23.6. Separate rates are not available for accidental deaths in gainful occupations for the period, but combined rates in all except motor-vehicles fatalities show a reduction from 81.1 per 100,000 population in 1913 to 46.9 in 1932. The National Safety Council estimates that the total number of accidental deaths in the United States in 1932 was approximately 88,000, as compared with 97,415 in 1931. Accidental non-fatal injuries are estimated at 8,312,000 for 1932, as against 9,403,000 for 1931, and the wage loss, medical expense, and overhead insurance cost involved in all deaths and non-fatal injuries at approximately \$2,000,000,000 for 1932, as compared with \$2,308,000,000 for 1931. An approximate distribution of the estimated number of in-

TABLE I—DISTRIBUTION OF ACCIDENTAL INJURIES IN THE UNITED STATES IN 1932

Type of accident	Number of injuries Extent of disability			
	Death	Permanent	Temporary	Total
Occupational	15,000	45,000	1,155,000	1,215,000
Motor vehicle	29,500	85,000	945,000	1,059,500
Home	28,000	125,000	4,070,000	4,223,000
Other public	18,000	60,000	2,100,000	2,178,000
Total *	88,000	312,000	8,000,000	8,400,000

* Items are adjusted to eliminate duplications in figures for industrial and motor-vehicle deaths and injuries.

juries in 1932, by type of accident and extent of disability, is shown in Table I. It is estimated that 2500 of the occupational deaths and a proportionate number of non-fatal injuries occurred in accidents involving motor vehicles, so these appear under both types of accidents, but the duplication is eliminated in the totals. Temporary injuries shown in the table include only those causing disability extending beyond the day of injury.

The combined wage loss, medical expense, and overhead cost of insurance for the accidental deaths and injuries in 1932 is given as \$2,000,000,000. An approximate distribution of this amount, by type of cost and type of accident, is shown in Table II.

TABLE II—DISTRIBUTION OF ACCIDENTAL INJURIES IN THE UNITED STATES WITH SPECIFIED COSTS IN 1932, BY TYPE OF ACCIDENT [With 000 omitted]

Type of accident	Type of cost			Total
	Wage loss	Medical expense	Overhead cost of insurance	
Occupational	\$370,000	\$30,000	\$90,000	\$490,000
Motor vehicle	500,000	60,000	60,000	620,000
Home	390,000	120,000	10,000	520,000
Other public	360,000	80,000	10,000	450,000
Total *	1,560,000	285,000	155,000	2,000,000

* Items are adjusted to eliminate duplications in figures for industrial and motor-vehicle deaths and injuries

TABLE III—INJURY FREQUENCY AND SEVERITY RATES FOR ALL ESTABLISHMENTS REPORTING FOR 1932, BY INDUSTRY

Industry	Number of units	Man-hours worked	Frequency rates (per 1,000,000 hours exposure)	Severity rates (per 1,000 hours' exposure)
Automobile	69	129,442,000	13.19	1.10
Cement	112	27,939,000	4.65	1.80
Chemical	266	174,908,000	10.53	1.92
Clay products . . .	30	7,308,000	23.40	.38
Construction . . .	61	22,157,000	57.90	4.44
Electric railway . .	67	152,162,000	19.20	2.09
Food	283	242,022,000	15.27	1.15
Foundry	108	33,998,000	23.12	2.46
Glass	49	51,588,000	8.76	.73
Laundry	41	8,470,000	4.25	.06
Lumber	48	13,157,000	47.96	5.43
Machinery	282	247,976,000	7.76	.84
Marine	56	106,379,000	17.24	2.14
Meat packing . . .	74	138,684,000	25.50	1.13
Metal products, miscellaneous	200	81,901,000	13.25	.97
Mining	138	42,045,000	56.68	9.51
Nonferrous metals .	58	59,772,000	9.44	1.58
Paper and pulp . .	241	136,034,000	17.77	1.92
Petroleum	101	565,760,000	12.28	1.91
Printing and publishing	43	23,444,000	6.87	.25
Public utilities . .	621	694,808,000	9.32	1.83
Quarry	118	7,849,000	16.56	3.53
Railway car and equipment	36	21,669,000	11.12	1.05
Refrigeration . . .	69	26,259,000	23.58	2.04
Rubber	53	113,442,000	9.86	.71
Sheet metal	204	97,620,000	13.13	.88
Steel	121	212,884,000	10.19	1.81
Tanning and leather	57	45,270,000	10.60	.30
Textile	189	163,107,000	9.14	.45
Tobacco	13	18,481,000	1.89	.07
Woodworking . . .	109	28,290,000	15.77	1.71
Total *	8,937	3,754,481,000	13.20	1.59

* Totals include miscellaneous industries, not shown separately, and eliminate duplications between marine and petroleum industries.

The 15,000 accidental deaths estimated to have occurred in 1932 during the course of gainful employment, including all employees and self-employed persons and classified by the National Safety Council as "occupational" deaths, are distributed provisionally as follows: manufacturing, 2000; mines and quarries, 1800; building and construction, 1300; public utilities (gas and electric), 300; steam and electric railways, 800; seamen and stevedores, 300; agriculture, 3500; and all others, 5000. Based on 80 non-fatal injuries for each death, a total of 1,200,000 non-fatal injuries is determined for 1932. Actual rates for 1932, based on data from all establishments reporting, are also shown. These are presented by industry in Table III. The tobacco and laundry industries present the lowest frequency rates and also the lowest severity rates. Construction, mining, and the lumber industry have the worst records in both frequency and severity rates. Some of the other industries show great variation in the ranking of the two rates; thus, the cement industry, which has comparatively few accidents and is the third lowest in frequency, has a proportionately high death rate and ranks eighteenth in severity.

ACCIDENTS IN MANUFACTURING INDUSTRIES, 1926 to 1932. Figures collected and compiled by the Bureau of Labor Statistics in its annual survey of accidents in manufacturing industries showed an increase for 1932 in both frequency and severity rates. An average of 19.55 injuries were sustained in the combined industries during 1932 for every 1,000,000 man-hours worked, as against 18.85 in 1931, an increase in the frequency rate of 3.7 per cent. An average of 2.86 days was lost through the injuries received in 1932, as against 2.59 in 1931, an increase in the severity rate of 10.4 per cent.

WORLD ALLIANCE FOR INTERNATIONAL FRIENDSHIP THROUGH THE CHURCHES. See INTERNATIONALISM.

WORLD COURT. The World Court has handed down 20 judgments and 25 advisory opinions. In addition to the 19 judgments summarized in the book the American Foundation issued in 1933, the Court, on Apr. 5, 1933, handed down its judgment on the case regarding the legal status of Eastern Greenland, which is described as "pending" on pages 46 and 47 of the booklet.

The second "pending" case described in the booklet, on the legal status of southeastern Greenland, was withdrawn by the parties after the Court rendered its judgment upon the first Greenland case. The following cases were pending on Dec. 31, 1933:

Application of the Polish agrarian reform to certain members of the German minority group in Poland.

Franco-Grecian dispute concerning certain lighthouses.

Appeal from the judgment of the Hungaro-Czechoslovak Mixed Arbitral Tribunal regarding the Royal Hungarian University.

On Apr. 5, 1933, the World Court gave an important judgment upholding Denmark's claim to certain territory in Eastern Greenland. The judgment marks the close of a long-standing dispute between Denmark and Norway, and Norway's prompt acceptance of it, according to Prof. Manley O. Hudson, is a fresh reminder of the gain that the world has made in international organization since the War. This was the first judgment to be given in exercise of the Court's

compulsory jurisdiction under the so-called "optional clause," and the case may be viewed as a test of the value of such jurisdiction.

Forty-eight public sittings were devoted to the hearings of agents and counsel, which continued from Nov. 21, 1932 to Feb. 7, 1933. Literally hundreds of documents, including numerous maps, were filed by each of the parties; though it was confronted with a very voluminous record, the Court's judgment was handed down within two months after the conclusion of the oral proceedings.

The Court's judgment, reached by twelve votes to two, was "that the declaration of occupation promulgated by the Norwegian government on July 10, 1931, and any steps taken in this respect by that government, constitute a violation of the existing legal situation and are accordingly unlawful and invalid." Each party had asked the Court to order the other to pay costs, but the Court refrained from making any order as to costs.

In separate observations, Judge Schucking and Judge Wang expressed the opinion that Denmark did not have sovereignty prior to the overtures of 1915-1921, but they agreed with the majority of the Court that the Norwegian occupation was unlawful and invalid. Judge Anzilotti and M. Vogt, who sat as Judge *ad hoc* for Norway, dissented. Judge Anzilotti thought that the overtures made by Denmark from 1915 to 1921 showed conclusively that Denmark was raising merely a question of extending her sovereignty. With reference to the declaration by the Norwegian Minister for Foreign Affairs in 1919, Judge Anzilotti found that an agreement was concluded between the two governments "by means of purely verbal declarations" and that "declarations of this kind are binding upon the State." Though this agreement was made with a view to settlement of the Greenland question by the Peace Conference, the fact that Denmark was not permitted to raise the question at the Peace Conference did not invalidate the agreement. Judge Anzilotti concluded that the Norwegian occupation in 1931 was effected in violation of an undertaking validly assumed and was therefore unlawful. M. Vogt stressed the legal consequences of the overtures made by Denmark between 1915 and 1921, and concluded that they contained an admission by Denmark that sovereignty was not therefore possessed over all Greenland. He concluded that while Denmark had the *animus possedendi* she did not have the *corpus possessionis* for the period since 1921. He regarded the Ihlen declaration as made under a fundamental and excusable misapprehension, and thought that its effect was entirely obliterated by the rupture of the negotiations between Denmark and Norway.

The judgment of the Court was received with great public rejoicing in Denmark, and with corresponding disappointment in Norway. The government of Norway promptly announced its intention to abide by the judgment, however, and it proceeded to revoke the declarations of occupation of July 10, 1931, and July 13, 1932. On Apr. 18, 1933, the Norwegian Agent joined with the Danish Agent in informing the Court that the two governments desired to discontinue the proceedings instituted before the Court on July 18, 1932, with reference to Southeastern Greenland. The decision as to Eastern Greenland had indicated that Norway could entertain no hope of

winning the case as to Southeastern Greenland.

A triumph for the judicial determination of international conflicts through the World Court is to be noted in the settlement of the customs zones dispute between France and Switzerland. In accordance with a judgment of the Permanent Court of International Justice and a supplementary decision by three experts, France withdrew its customs line along the Franco-Swiss frontier on Jan. 1, 1934, and reconstituted the free zones of Upper Savoy and the district of Gex which had been established originally in 1815 and 1816. Availing itself of provisions in the Treaty of Versailles declaring the customs régime "no longer consistent with present conditions," France abolished the free zones in 1923 without the consent of the Swiss government. This action aroused resentment in Switzerland and was protested as illegal. Although the two governments agreed in 1924 to refer the question to the Permanent Court, it was not actually submitted until 1928. In an order of Aug. 19, 1929 the Court gave a preliminary opinion, fixing at the same time a period for further negotiations between the two countries. Negotiations having proved fruitless, the Court gave judgment on June 6, 1932 in favor of Switzerland. Since the Swiss, under the old régime, had been able to export their products free of duty to the zones without incurring a similar obligation to permit the free importation into Switzerland of the produce of these zones, the Court directed that a new régime, based on reciprocity, be worked out. Such an arrangement has now been inaugurated by the decision of three experts rendered on Dec. 1, 1933.

After interviews in Washington, the American Foundation reported that it could truthfully be said that the possibility of action on the Court is an open question. The general feeling in pro-Court Administration circles may be described as follows according to the Foundation:

"Action on the Court treaties should be had in a friendly atmosphere. The Court should not, on the one hand, be brought to the fore, at a time when, by launching a new controversy, it will stimulate cleavage that may react adversely on the domestic legislative programme. Nor on the other hand, should the Court be complicated with other international issues such as the war debts, as to which feeling is high and counsels divided. Ratification, when it occurs, should seem to be an entirely logical development, a natural confirmation of the present desires and feeling of the country."

This position, the Foundation declared, is logical, but it rests upon the premise that the Court issue has no pressing importance and is therefore "cold." The country, from the American Bar Association to the American Federation of Labor, from the press to the pulpit wants the Court and understands its vital present relation to war and peace. The strength of this public conviction, however, is perhaps underestimated at Washington. Hence (in spite of the fact that the two-thirds vote is, according to careful surveys, available) the tendency continually to put the Court over until that impossible time when no controversial measures, foreign or domestic, are pressing.

WORLD'S FAIR. See CENTURY OF PROGRESS EXPOSITION.

WORLD LEAGUE AGAINST ALCOHOLISM. An organization established in Washington,

D. C., in 1919 by temperance and prohibition workers from 11 different countries, including England, Canada, and the United States, whose object is the total suppression throughout the world of alcoholism. Its processes are entirely educational. The membership in 1933 comprised 61 national temperance organizations in 35 of the leading countries of the world. The work is carried on from offices at Westerville, Ohio; the Scientific Temperance Federation in Boston; and the Intercollegiate Association for Education on the Alcohol Problem in Washington. Branch Offices are maintained in London, England, and Lausanne, Switzerland. All the activities of the League are under the direction of the general secretary, Ernest H. Cherrington.

WRECKS. See SAFETY AT SEA.

WRESTLING. The professional heavyweight wrestling muddle still existed at the close of 1933 with no less than five world's champions reigning in different parts of the world. In the United States, Jim Browning, Jim Londos, Ed. Don George, and John Pesek claimed the title and the claim of Yussif Mahmoud of Turkey was generally recognized in Europe. Browning, who pinned Ed (Strangler) Lewis in New York in January, was considered champion in New York State and in twenty-two other States whose athletic commissions have a working agreement with the New York board. Londos, former champion in New York, was regarded as titleholder in Pennsylvania and several States further west. George's claim was called bona fide in Canada and in New England, and Pesek was rated champion by the Ohio commission.

Near the end of the year the various wrestling trusts of the United States appeared to amalgamate but when a pair of champions, George and Browning, wrestled in New York in mid-December, the outcome was a draw. Although the muddle and the every-other-day title defenses of the various champions bordered on the ridiculous, wrestling fans throughout the country still continued to crowd the arenas to watch the giants display their histrionic skill. The gates were not as large as the year previous and did not come up to the standards set in 1929 and 1930, but professional wrestling remained big business.

In the amateur wrestling rings Bob Hess of Iowa State College had the most distinguished record. Working in the 165-pound class Hess won a championship in the A.A.U. National tournament in Chicago and another in the 175-pound class in the National Collegiate A.A. tournament held at Lehigh. He was defending champion in the latter class. Gordon Ellison of Cornell was crowned A.A.U. National heavyweight titleholder. The teams of Oklahoma A. and M. and Iowa State tied for the N.C.A.A. championship. Lehigh's wrestlers won the Eastern Intercollegiate Association title, with Princeton second and Penn State third.

The New York Athletic Club dominated the Metropolitan A.A.U. championships. Harvard took the New England intercollegiates and the Big Ten Conference championship went to Indiana rather easily.

WÜRTTEMBERG. See GERMANY.

WYOMING. POPULATION. The population of the State on Apr. 1, 1930, according to the Fifteenth Census, was 225,565; in 1933 (Federal estimate) it was 231,000. Cheyenne, the capital, had (1930) 17,361 inhabitants.

AGRICULTURE. The following table shows the

acreage, production, and value of the principal crops for 1933 and 1932:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame) .	1933	874,000	1,023,000*	\$6,756,000
	1932	828,000	1,005,000*	6,180,000
Sugar beets ..	1933	53,000	609,000*
	1932	40,000	506,000*	2,515,000
Potatoes	1933	31,000	3,007,000	1,654,000
	1932	33,000	1,485,000	505,000
Wheat	1933	234,000	2,138,000	1,191,000
	1932	277,000	3,102,000	837,000
Corn	1933	219,000	2,080,000	874,000
	1932	228,000	2,052,000	575,000
Barley	1933	91,000	1,720,000	588,000
	1932	127,000	2,540,000	635,000
Oats	1933	151,000	3,246,000	1,039,000
	1932	154,000	3,465,000	797,000

* Tons.

MINERAL PRODUCTION. The quantity of coal mined in the State fell to 4,140,000 net tons for 1932, from 4,993,686 for 1931. There was a moderate decline in the production of petroleum, to 13,359,000 barrels, for 1932, from 14,834,000 for 1931. The Salt Creek field contributed 8,006,000 barrels to the production of 1932; it produced about 9 per cent less than it had produced in 1931. The re-injection of natural gas, stripped of its content of gasoline, into some producing wells was practiced to increase their flow. At the end of June, 1932, 194 natural-gas wells were reported to be operating under this process, thus consuming some 20,000 M cu. ft. a day of re-injected gas. Nevertheless the extraction of natural-gas gasoline declined to 44,211,000 gallons (1932), from 51,523,000 (1931).

EDUCATION. As in many other States, the lack of gainful employment for graduates of the public-school system led during the year to the return of many of them to the high schools for further education, and the demand upon the service of the high schools was thus augmented in the face of increased difficulty in providing these institutions' revenue. The number of returning postgraduates in the high schools was reported for the academic year 1932-33 as exceeding by 46 per cent the corresponding number for the year before. A State-wide system of testing was carried on during the year in the rural schools.

The number of persons of school age in the State, as of April, 1933, was reckoned at 70,090. There were enrolled in the public schools, in the academic year 1932-33, 56,425 pupils. Of these, 14,321 were in the rural common schools, 27,893 in elementary grades, and 14,211 in high schools. The year's expenditures for public-school education, falling about 14 per cent below those of the year before, totaled \$4,883,652. Salaries of teachers reflected much of the reduction, their average falling by some 10 per cent to \$1163 for the year 1932-33.

LEGISLATION. A regular session of the Legislature convened on January 11. To act for the State on the proposed repeal of the Eighteenth Amendment to the Federal Constitution, it created a State convention of 65 members, to be elected by popular vote on May 15, by counties on a basis of population. Provision was made for a popular vote in November, 1936, on whether to repeal the prohibition laws of the State. The traffic in beer of alcoholic content not over 4 per cent was made permissible under State laws. The Twentieth Amendment to the Federal Constitution received the State's ratification. Appropriations for State expenditure during the ensuing two fiscal years

were reduced below those for the previous like period, by rather more than one-fourth, to a total that, after the inclusion of proceeds from the mill levies, was estimated at \$3,244,661. The appropriations included \$200,000 for reimbursing counties for sums of which they had been deprived in the period 1931-33 by operation of a tax exemption for soldiers.

POLITICAL AND OTHER EVENTS. Governor Clark, to save banks from ruin in the banking panic, issued a proclamation on March 3 ordering that the banks pay not more than 5 per cent upon any depositor's credit balance. After the general Federal closure most banks reopened on March 16.

The State's action to repeal the Federal Eighteenth Amendment was taken in three stages. A popular vote was taken by 667 precincts on May 15. These so-called precinct conventions elected delegates, mainly committed to repeal, to county conventions, which in turn chose 65 delegates to a State convention, held on May 25; the State convention unanimously voted repeal through adoption by the State of the superseding amendment proposed by Congress. United States Senator John B. Kendrick died on November 3.

OFFICERS. The chief officers of the State, serving in 1933, were: Governor, Leslie A. Miller; Secretary of State, A. M. Clark; Treasurer, H. R. Weston; Auditor, Roscoe Alcorn; Superintendent of Public Instruction, Katharine A. Morton; Attorney General, Ray E. Lee.

Judiciary. Supreme Court: Chief Justice, Ralph Kimball; Associate Judges, Fred H. Blume and W. A. Riner.

WYOMING, UNIVERSITY OF. A State institution of higher education at Laramie, founded in 1886. The enrollment for the autumn term of 1933 was 1024. The faculty numbered 100. The income for the year from State and local funds was \$862,450, and from Federal and State grants for agricultural extension, \$119,315. The library contained 78,997 volumes. President, Arthur Griswold Crane, Ph.D.

YACHTING. While the 1933 yachting season, in United States waters and abroad, was unusually active, in view of the economic situation, there was no particularly outstanding event and it was difficult to single out any individual boat, skipper or race as the highlight. Perhaps the event that most stirred the yachtsmen of the world was the challenge that came in the fall to the New York Yacht Club for the ancient America's Cup, for three quarters of a century symbol of supremacy on the seas. The newest challenge for the cup, challenged for unsuccessfully five times in a row over a span of thirty years, by the late Sir Thomas Lipton, came from T. O. M. Sopwith, Briton, who named his yacht *Endeavor*. This presaged an unusually active season in 1934 and a New York Yacht Club syndicate, headed by Harold S. Vanderbilt, immediately placed an order with Herreshoff for a new Class J sloop, *Vanitie*, built for defense of the cup in 1914, when war curtailed activities, and *Weetamoe*, one of the unsuccessful candidates for rôle of defender in 1930, will sail against the new Vanderbilt boat for the honor of defending against *Endeavor* in September off Newport.

Dorada, small yawl already famous for deeds in United States and English waters, performed the outstanding feat of the year. Sailed by Roderick Stephens, Jr. and a crew of five, she crossed the Atlantic in twenty-five days, won for the second time the perilous Fastnet race, sailed back

across the North Atlantic in 22 days, 15 hours.

E. E. Dupont's *High Tide*, a schooner, won the Gibson Island ocean race from Newport to the upper Chesapeake in late June, leading a record fleet of forty-two boats. F. H. Prince's *Weetamoe* and Gerard B. Lambert's *Vanitie* were the only two America's Cup boats sailing and the pair staged a long series of match races on Long Island Sound and off Marblehead, Mass. *Weetamoe*, with her time allowance, won most of the contests but *Vanitie* finished first, boat for boat, in a good share of the races and also captured the coveted King's Cup at Newport R. I.

The International Star Class championships were sailed off Long Beach, Calif., and the title went to the San Francisco Bay yacht, *Three Point Two*, owned by Glen Waterhouse. Dartmouth captured the Intercollegiate championship for the first time. Williams was second, and Harvard, 1932 winner, finished third.

YAKUTSK REPUBLIC. See SIBERIA.

YALE UNIVERSITY. A nonsectarian institution for higher education in New Haven, Conn., founded in 1701. The enrollment for the autumn of 1933 was 5475. Of the candidates for degrees or certificates, 708 were in the graduate school, 1599 in Yale College, 425 in the Sheffield Scientific School, 204 in the school of engineering, 218 in the school of medicine, 218 in the divinity school, 329 in the school of law, 393 in the school of the fine arts, 92 in the school of music, 28 in the school of forestry, and 111 in the school of nursing.

The faculty numbered 1512. The following professors retired from active service at the close of the year 1932-33: George Pierce Baker, Charles M. Bakewell, Robert N. Corwin, Harry B. Ferris, William Lyon Phelps, and Charles F. Scott. Al-lardyce Nicoll was appointed professor of the history of the drama and dramatic criticism; Edgar Allen, professor of anatomy; Harvey Cushing, Sterling professor of neurology; and Einar Hille, professor of mathematics. The total endowment of the university amounted to \$95,574,096, and the income for the year was \$7,347,640. The libraries contained more than 2,130,000 volumes.

A significant change was made in undergraduate life during the year by putting into operation seven (Brandford, Calhoun, Davenport, Jonathan Edwards, Pierson, Saybrook, and Trumbull) of the contemplated 10 residential colleges, a procedure which recognizes the social and educational values inherent in small groups. In the life of the colleges every undergraduate has opportunities for membership in a social unit, for participation in informal college games, and for frequent meetings with members of the faculty. Surrounded by the resources of a large university, the colleges offer the advantages of small student bodies and the directness of social relationship which characterized Yale a generation ago, before the advent of large and unwieldy classes. The colleges co-operate with the undergraduate schools of the university to evolve whatever combinations of formal and informal instruction will make the work of each undergraduate most interesting and effective.

The residential college plan was made possible through gifts from Edward Stephen Harkness, B.A., 1897. Physically the colleges are self-contained, each with its own library, dining hall, kitchen, common rooms, squash courts, and accommodations for 160 to 200 students. Each college has at its head a master who lives in the

college. Associated with him as active fellows are 10 or 12 members of the faculty, some of whom reside in the college, and all of whom have rooms there in which to meet students. Attached to each college is a group of associate fellows who have a share in its life. Freshmen may apply in the spring of their first year for admission to the colleges in the following September. A student admitted to a college normally continues residence there during the balance of his undergraduate course. President, James Rowland Angell, Ph.D., Litt.D., LL.D.

YAMAMOTO, GOMBEL, COUNT. A Japanese naval officer and statesman, died in Tokyo, Dec. 8, 1933. He was born at Kagoshima, Satsuma Province, in October, 1852, and while attending the Naval Academy fought in the War of Restoration which insured the creation of a new Japan on Occidental lines. On his promotion to rear-admiral in 1895 he was made Director of the Naval Bureau, and the following year became Deputy Minister of the Navy with the rank of vice-admiral.

As Minister of the Navy from 1898 to 1906 Count Yamamoto became known as the founder of Japan's modern navy. On the outbreak of the Russo-Japanese War in 1904 the Japanese fleet was in such first-class condition that Admiral Togo was able seriously to cripple the Russian fleet in the two engagements at Port Arthur. From the war Japan emerged as one of the great naval and military powers. Yamamoto was honored by being promoted to full admiral in 1904 and by being raised to the peerage as a baron in 1902 and as a count in 1907. On the strength of his popularity as head of the Navy he was appointed Premier in 1913 to succeed Prince Katsura. His promises of economy and reform, however, were not fulfilled, and the following year he was obliged to resign on account of the scandals in the purchase of armament supplies.

After the death of Baron Kato in August, 1923, Yamamoto was again asked to become Premier. His ministry was charged with the work of reconstruction after the great earthquake but resigned in January, 1924, on account of the disgrace brought on it through the attempted assassination of the Crown Prince Hirohito.

YOUNG MEN'S CHRISTIAN ASSOCIATION. An educational, social, physical, and spiritual movement for men and boys, which originated in London in 1844 under the leadership of George Williams. In 1933 there were in 54 countries of the world 10,619 local associations, unions, or fellowships with a membership of 1,442,315. These associations employed 5907 officers and owned and occupied 2212 buildings. The largest number of Y.M.C.A.'s were found in Germany, where there were more than 3600 associations. The United States, however, had the largest membership (857,241) and the largest number of Y.M.C.A. buildings, representing a net property value of \$193,221,000. Local associations numbered 1143, with 3416 employed officers and 151,669 directors and committee men.

The general board of the associations in the United States is the National Council of the Young Men's Christian Associations, with headquarters at 347 Madison Avenue, New York City. Frederic W. Smith was president in 1933; John E. Manley was general secretary. The National Council is one of 36 national movements of fed-

erated local associations which constitute the World Alliance of Young Men's Christian Associations, with headquarters at 2 Rue de Montchoisy, Geneva, Switzerland. Dr. John R. Mott, of New York City, was president in 1933; W. W. Gethman, of Geneva, was general secretary.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION. An organization whose purpose is to advance the physical, social, intellectual, and spiritual interests of young women. The first association was formed in New York City in 1858. By 1933 there were throughout the United States 1015 associations, affiliated in a national organization whose active body is the National Board of the Young Women's Christian Associations. Of these, 259 were in cities, 132 in towns, 45 in rural districts, and 579 on college and university campuses. There were also 64 branches for colored girls and women and 50 International Institutes or centres for work among foreign-born girls and women. The total membership was about 600,000, of whom 100,000 were student members.

The organization employed, in 1933, 2106 professional workers, of whom 1976 were connected with local associations, 97 were on the national staff, and 33 were American secretaries serving in foreign countries. Working as volunteers, as board and committee members, and as advisers in local associations, were 55,026 women. At the association's biennial convention, held in Minneapolis, Minn., May 5-11, 1932, Mrs. Frederic M. Paist of Wayne, Pa., was reelected president of the national board, to which is entrusted the work of the national body during the interim of conventions. Headquarters of the national board are at 600 Lexington Avenue, New York City, with Miss Anna V. Rice as general secretary and Miss Emma P. Hirth as associate secretary.

YUGOSLAVIA. A Balkan state, formerly known as the *Kingdom of the Serbs, Croats, and Slovenes*. Capital, Belgrade (Beograd); sovereign in 1933, King Alexander I.

AREA AND POPULATION. At the census of Mar. 31, 1931, Yugoslavia had an area of 96,010 square miles and a population of 13,930,918 (12,017,323 at the census of 1921). The population of the chief cities in 1931 was: Belgrade, 241,542; Zagreb (Agram), 185,581; Subotica, 100,058; Sarajevo, 78,182; Skopljje, 64,807; Novi Sad, 63,966; and Ljubljana, 59,768.

PRODUCTION. Agriculture supports about 85 per cent of the population, the remainder being engaged principally in manufacturing, mining, lumbering, and cattle raising. Of a total area of 24,866,500 hectares (hectare = 2.47 acres), 13,792,995 hectares were under cultivation in 1931. Live-stock on Jan. 1, 1932, included 1,168,768 horses, 3,871,556 cattle, 8,425,634 sheep, 3,129,164 swine, and 1,928,224 goats. Production of the chief crops in 1932 with 1931 figures in parentheses, was (in metric tons): Corn, 4,392,965 (3,203,393); wheat, 1,454,532 (2,688,627); barley, 391,514 (391,891); rye, 211,534 (193,396); oats, 269,228 (264,782); potatoes, 1,371,446 (1,110,831); fodder beets, 414,524 (348,065); sugar beets, 733,460 (707,424). Yields of the chief crops in 1933 were (in metric tons): Wheat, 2,628,600; corn, 3,655,600; barley, 463,000; rye, 245,300; oats, 371,000.

Mining and metallurgical production in 1932, with 1931 figures in parentheses, was (in metric tons): Coal, 3,536,385 (3,929,333); lignite, 1,116,115 (1,033,519); iron ore, 26,636 (133,413); copper ore, 278,713 (456,931); pyrite, 15,729 (26,835); bauxite, 67,087 (62,018); lead ore, 554,-

504 (371,156); chrome ore, 43,925 (57,140); salt, 52,955 (52,682); cast iron, 9972 (37,735); copper, 30,159 (24,351); lead, 8321 (7931); zinc, 2530 (4508).

COMMERCE. Yugoslav imports and exports in 1932 were valued at 2,859,699,000 dinars and 3,055,576,000 dinars, respectively (the dinar, equal to \$0.0176 at par, exchanged at an average of \$0.0164 in 1932). The favorable balance of trade was 195,907,000 dinars. In 1931, imports totaled 4,800,281,000 dinars and exports 4,800,966,000 dinars, while in 1929 imports were 7,594,750,000 dinars and exports 7,921,708,000 dinars. Leading export items in 1932 were (in 1000 dinars): Timber, 419,746; crude copper, 247,158; leaf tobacco, 237,458; swine, 236,629; eggs, 182,183; wheat, 163,314; fresh meat, 153,540; fresh fruits, 149,056; corn, 135,971. Leading import items (in 1000 dinars) were: Cotton fabrics, 203,921; cotton yarn, 198,345; various iron goods, 177,094; machines, instruments, and apparatus, 138,154; woolen fabrics, 128,067; raw cotton, 117,004; electrotechnical articles, 107,138. Italy took 23.07 per cent of the value of all Yugoslav exports in 1932; Austria, 22.13 per cent; Germany, 11.28 per cent; Czechoslovakia, 13.17.

Preliminary 1933 trade returns showed imports of 2,883,000,000 dinars and exports of 3,378,000,000 dinars. Imports from the United States were valued at \$297,325 (\$444,652 in 1932); exports to the United States, \$1,495,003 (\$438,351 in 1932).

FINANCE. According to the *Quarterly Bulletin* of the National Bank of Yugoslavia, provisional budget returns for the fiscal year ended Mar. 31, 1933, showed revenues of 9,267,856,000 dinars and expenditures of 9,491,306,000 dinars, the deficit being 223,450,000 dinars. In the 1931-32 fiscal year, revenues amounted to 10,725,933,000 dinars and expenditures to 10,301,234,000 dinars, leaving a surplus of 424,699,000 dinars. The budget estimates for the fiscal year 1933-34 balanced at 10,438,300,000 dinars, or 7.8 per cent less than the estimates for 1932-33. At the end of 1932, the external debt was equivalent to \$619,362,538 and the internal debt to \$80,672,221. The service of part of the foreign debt was defaulted in 1932.

COMMUNICATIONS. The Yugoslav railways extended 5728 miles in 1931 (4263 miles of standard and 1465 miles of narrow gauge). Of the total, 3624 miles were under state operation. Wagon and truck loadings on the state railways in 1932 numbered 1,427,782, as against 1,608,778 in 1931. There were 24,695 miles of highways, roads, and paved streets at the beginning of 1932. Air lines connect Belgrade with Zagreb and Skopje and with the capitals of Europe. In 1932, 91,118 vessels, of 15,788,000 tons, entered the ports of Yugoslavia, against 100,962 vessels of 16,702,000 tons in 1931.

GOVERNMENT. Under the Constitution of Sept. 3, 1931, Yugoslavia is a hereditary and constitutional monarchy, in which legislative power is exercised conjointly by the King and the National Congress and executive power by the King through his responsible Ministers. The national parliament (Skupshtina) consists of a Senate of 76 members (47 elected and 29 appointed by the Crown) holding office for six years and a lower chamber of 305 members elected for four years. At the Chamber election of Nov. 8, 1931, and the Senate election of Jan. 3, 1932, only the list of nominees of the National party was presented to the voters. The royal decree of Jan. 6, 1929, dissolved all the old political parties and the Con-

stitution prohibited their reconstitution. The Ministry in 1933 was headed by Dr. Milan Srškić.

HISTORY

FOREIGN RELATIONS. King Alexander's dictatorship, which appeared to be tottering at the end of 1932, received a new lease of life in 1933 due to menacing developments in Europe which led his people to support their government despite its unpopularity. Chief among the disturbing new elements was the Hitler revolution in Germany, with its threat against the peace treaties by which Yugoslavia had so greatly benefited. Another alarming development was the signing by France of the Four-Power Pact, initiated by Premier Mussolini. Fearful that this move indicated France's intention to make peace with Italy and abandon her allies of Eastern and Southern Europe, Yugoslavia and the other members of the Little Entente (Czechoslovakia and Rumania) formed a more closely knit union to defend their mutual interests (see *LITTLE ENTENTE*). The weakening of the League of Nations through the withdrawal of Japan and Germany and the threatened withdrawal of Italy increased the sense of impending danger in Yugoslavia.

Relations between Yugoslavia and Italy were in a state of high tension at the beginning of 1933. The Hirtenberg arms affair (see *AUSTRIA under History*) and reports that Italy was encouraging schemes for Croat secession from Yugoslavia greatly excited the government. Then it was learned that Italy was attempting to force Albania to consent to an Italian-Albanian customs union. The Belgrade government immediately informed the British Foreign Office on Jan. 2, 1933, that it would prevent such a union by force, if necessary. The Yugoslavs were convinced that the customs union plan was another step in preparation for an Italian attack upon them, with Albania as a base. However, King Zog of Albania was unresponsive to the Italian suggestion and the subsequent friction between Italy and its Balkan protégé (see *ALBANIA under History*) temporarily eased Yugoslav apprehension.

The Yugoslav government, and particularly King Alexander, played an active part in the incessant diplomatic negotiations carried on by the Little Entente powers during 1933. These negotiations sought not only to forge a closer union among the Little Entente states but also to detach Bulgaria from Italy, to preserve Austrian independence as against Hitler's Germany, and to lessen the influence of the great powers in Central and Southeastern Europe. King Alexander visited his brother-in-law, King Carol of Rumania, in January and was reported to have received Carol's pledge to assist Yugoslavia in case of an Italian attack. Carol returned the visit later in the year.

The intense bitterness which had marked relations between Yugoslavia and Bulgaria since the second Balkan War was to a considerable degree dispelled during 1933. The first quarter of the year was marked by new raids of Moldavian and Macedonian revolutionaries into Yugoslavia from the Bulgarian border and the declaration of war against Yugoslavia by a Macedonian congress at Gorna Jumaja, Bulgaria. The Yugoslav Foreign Office vigorously protested but received non-committal replies from Sofia. The atmosphere improved when the Little Entente, led by Yugoslavia, offered concessions to Bulgaria to secure her inclusion in their group or else her neutrality in

the event of a European war. King Alexander made a conciliatory gesture by paying a short visit to King Boris at Varna, Bulgaria, on October 3 and Boris and Queen Giovanna returned the visit in Belgrade, commencing December 10. Meanwhile, the Bulgarian Premier had announced that his country was prepared to cooperate economically and politically with its neighbors, but not to enter the Little Entente or any Balkan alliance. In return for this cooperation, Bulgaria asked territorial concessions and the application of the minorities treaty for the protection of her nationals in neighboring counties, particularly Yugoslavia. King Alexander also conferred with President Mustapha Kemal of Turkey at Istanbul on October 4. In November a treaty of friendship and non-aggression with Turkey was signed at Belgrade.

INTERNAL DEVELOPMENTS. The demand for abandonment of the unitary state established under the dictatorship in 1929 had reached major proportions among Croats, Slovenes, and even a strong section of the Serbs toward the end of 1932. The Zagreb Manifesto of the Croatian party, headed by Dr. Vlatko Matčeh, had been issued in November, 1932. Its demand for a federation of autonomous states was approved by the leader of the Serb Democrats, L. Davidovitch, and most of the leaders of the other dissolved party groups. The dictatorship met this challenge toward the end of January, 1933, when all opposition political leaders except the Serbs were arrested or exiled. Among those arrested and banished to remote parts of the Kingdom were Father Anton Koroshetz, leader, and Dr. Marko Natlacen, vice president, of the Slovenian People's party; Dr. Matčeh, Dr. Anton Ogrisek, and Dr. Kulovetch, a former Minister of Agriculture. The Serb Radical Democrats and Serb Farmers parties protested against the banishment of Father Koroshetz and Dr. Matčeh. On June 2, a petition signed by 250,000 Croats in North America and some 60,000 in South America, demanding independence of the Croatian provinces of Yugoslavia, was presented to the League of Nations and to the Disarmament Conference at Geneva.

ECONOMIC DEVELOPMENTS. The repercussions of the world depression upon Yugoslav economy had caused the government in April, 1932, to declare a partial moratorium on public debt payments, to extend the term of payment of agricultural debts, and to lend financial assistance to the banks. During 1933, the government took a number of steps calculated to improve the economic and financial position. The new pact signed by the Little Entente states Feb. 16, 1933, contained provisions for strengthening economic relations between them.

In March, the government concluded an agreement with French holders of Yugoslav foreign loans, to which other foreign bondholders consented in July. The agreement provided for suspension of the redemption of these loans during a period of three years as from October, 1932. During this period interest payments falling due were to be paid in currency bills up to an equivalent of 10 per cent, the balance of 90 per cent being settled by the issuance, in favor of the holders, of so-called long-term "funding" bills bearing 5 per cent interest. The foreign loans were divided into four groups, the agreements varying somewhat for each group.

New trade agreements were concluded on May 15 with Hungary, on June 10 with France, on

July 20 with Greece, and on July 29 with Germany. Negotiations for a new Yugoslav-Italian commercial treaty were begun. On July 29, the government moderated the monopoly which it had established over wheat exports.

See FRANCE, ITALY, GERMANY, BULGARIA, CZECHOSLOVAKIA, RUMANIA, and TURKEY under *History*; LITTLE ENTENTE; LEAGUE OF NATIONS; REPARATIONS AND WAR DEBTS.

YUKON, yook'kōn. A territory occupying the extreme northwest part of the Dominion of Canada. Area, 207,076 square miles; population (1931 census), 4230. Dawson, the capital, had 819 inhabitants (1931). The mining of gold, silver, coal, copper, and lead is the principal occupation of the population. For the year ending Dec. 31, 1932 the production of gold was valued at \$839,421; silver, \$967,303. Pelts of fur-bearing animals taken in 1931-32 were valued at \$132,268. The territory is governed by a comptroller and a territorial council of three elective members and is represented in the Dominion Parliament at Ottawa by one member in the House of Commons.

ZANZIBAR PROTECTORATE. A British protectorate off the east coast of Africa, consisting of the islands of Zanzibar (640 sq. miles; population 137,741 in 1931), and Pemba (380 sq. miles; population 97,687). Total population (1931 census), 234,428. Zanzibar produces approximately 85 per cent of the world's supply of cloves from an area of 16,000 acres on the island of Zanzibar and 32,000 acres on the island of Pemba. Clove exports in 1932 amounted to 8100 tons valued at £488,000. The area devoted to coconut production in the same year totaled 55,000 acres from which was produced for export 11,800 tons of copra valued at £144,000. For 1932, total imports were valued at 12,598,000 rupees (rupee averaged \$0.2635 for 1932); total exports, 12,137,000 rupees (including reexports of 3,213,000 rupees). Revenue for 1932 amounted to £456,000; expenditure, £459,000; public debt—nil. The nominal ruler in 1933 was Sultan Syyyid Khalifa bin Harub. Actual control rested with the British Resident. Resident in 1933, Sir R. Rankine.

ZINC. Primary metallic zinc output from domestic and foreign sources in 1933 was nearly 49 per cent higher than in 1932 and was 5 per cent larger than the output of 1931, according to a preliminary summary of the U. S. Bureau of Mines. Apparent deliveries to domestic consumers were about 58 per cent higher than in 1932. Stocks at smelters and electrolytic refineries were reduced and on November 30 were 23 per cent lower than those on hand at the beginning of the year.

The output of primary metallic zinc from domestic ores in 1933, as reported by producers from figures of actual production for eleven months and estimates for December, was about 307,200 short tons, an increase of 48 per cent over the 207,148 tons produced in 1932. Nearly 800 tons of zinc were produced from foreign ores in 1933. No foreign zinc was reported at domestic plants in 1932 or 1931. In addition to the output of primary zinc, about 19,300 tons of redistilled secondary zinc was produced, as compared with 14,718 tons in 1932. Thus the total supply of distilled and electrolytic zinc in 1933 was about 327,300 tons, composed of 103,700 tons of high grade, 24,000 tons of intermediate, 66,100 tons of select and brass special, and 133,500 tons of prime western zinc.

According to statistics in trade journals, the

average monthly price of prime western zinc at St. Louis was 3.02 cents a pound in January. From this figure the average declined to 2.67 cents a pound in February, the lowest monthly average for the year, and then rose to 4.92 cents a pound in August, the highest monthly average for the year. From this level the price receded to close the year at 4.47 cents. The lowest daily price was 2.575 cents a pound in mid-February and the highest daily price was 5 cents a pound, which held for about a month beginning July 17.

ZONING. See CITY AND REGIONAL PLANNING.

ZONTA INTERNATIONAL. An organization of executive women in business and the professions, established in Buffalo, N. Y., in 1919 to encourage high ideals and ethical standards in business and the professions, to quicken the interest of each member in the welfare of her community, and to cooperate with others in its civic, social, and commercial development. Its name is derived from the Sioux word meaning "Trustworthy and Honest." In 1933 there were 115 clubs in the United States, Hawaii, Canada, and Europe with a membership of 3100. Membership is limited to one outstanding representative for each business or profession, who is devoting at least two-thirds of her time to that business or profession. The universal service project is the sponsoring of a constructive, educational programme so as to work for the advancement of understanding, good will, and peace through a world fellowship of executive women. The official monthly publication is *The Zontian*. Headquarters are at 59 East Van Buren Street, Chicago, Ill.

ZOOLOGY. The American Society of Zoölogy met with affiliated societies from December 28 to 30 at Cambridge, Mass. The British Zoölogists met as a section of the British Association for the Advancement of Science in September at Leicester.

The Silliman Memorial Lectures at Yale University were given in October by Dr. Hans Speman of Freiberg on "Embryonic Development and Induction." The Nobel prize in medicine for the year was awarded to T. H. Morgan of the California Institute of Technology, for his researches on heredity. Following the International Genetics Congress held at Ithaca in 1932 the press announced that the sex of human offspring can be predetermined by treatment which varies the acidity of the vaginal contents. In answer to inquiries Cole and Johanssen (*Jour. Hered.* 24, p. 263) discussed the treatment and exposed fallacies underlying the claims made for it. It seems certain that while sex ratios may be modified by factors which at present are mostly unknown, sex determination itself is brought about by the action of the X chromosome. (See YEAR BOOK for 1929.)

Contrasting interpretations of life activities are the mechanistic, which asserts that they are merely manifestations of complex chemical and physical forces, and the vitalistic, which claims that in addition to these mechanical forces there is some regulative mechanism not to be discovered by laboratory analysis, but which coordinates and regulates the distribution of energy set free mechanically. At the annual meeting of the British Association for the Advancement of Science both the president of the Association, Sir F. G. Hopkins and J. Gray, president of the zoölogical section, discussed this problem. The former concluded that such processes as growth, differentiation, reproduction,

etc. "are based upon organization which is in some sense higher than the chemical level." The latter held that the intrinsic properties of living matter are as mysterious and fundamental as those of an inanimate atom or electron, and it seems more logical to accept these properties as fundamental concepts than to assume that they can be defined in terms of purely physical laws. This was not intended as an argument for vitalism but as a plea against too great reliance on mechanism.

Rau (see INSECTS), in connection with his report on the behavior of jungle bees and wasps, concluded that all observations made on these animals indicate that psychic evolution has preceded organic evolution. He thought that there is first a mental "adventure" which by repetition becomes habit and finally is crystallized into instinct. This new instinct with its resulting mode of life places the animal into new relationship with its environment. In time, morphological variations appear which through the action of natural selection eventually give rise to adaptations. Earlier Allee had shown that many animals will live longer in a definite environment if they are present in considerable numbers than if they are solitary. This was the case with the flatworm *Procerodes* which lived longest in fresh water if moderately crowded, or if the water were some in which the same species had previously been living. Repetition of these experiments (*Phys. Zool.* 6, p. 1) corroborated these results and showed that a cane sugar solution, but not a number of other solutions, would give the same result. The reason for this reaction is not clear.

HEREDITY. It is now believed that identical (as opposed to fraternal) twins are produced as the result of the division into two of a single embryo at an early stage of development. Newman who based his conclusions on observations on the Texas armadillo in which quadruple births are the rule, thought that this division is due to the fact that for some reason there had been a temporary stoppage of the development processes which led to a loss of axial definition and when the development started up again it went on from two centres. Hamlett (*Quart. Rev. of Biol.* 8, p. 348) discussing this point brought forward evidence that such arrests of development are not necessarily followed by multiple births. It had been assumed that unfavorable physiological conditions arising during the delay were the immediate cause of the deformity, but Hamlett argued that similar physiological conditions arise elsewhere, and are not followed by abnormalities. He concluded that a definite genetic factor is responsible for the result, a belief which is generally held with respect to ordinary or fraternal twins. Detweiler (*Jour. Hered.* 24, p. 139) studied the records of 1333 descendants of Jean Bertolet, among whom there were 22 sets of twins. Adequate data concerning the female descendants were not available, but it seemed probable that if they had been, more twins would have been reported. The data seemed to indicate that twinning in this case was due to an inherited tendency transmitted through the male line. Hornboch and de Garis (*Jour. Morph.* 54, p. 37) reported on a human family history in which cataract appeared for several generations. In 59 individuals whose characteristics could be determined, 30 were affected. They decided that the gene for cataract is located on an autosome and

is irregularly dominant though in some cases it appears only under special conditions. These conditions may be endocrine or nutritional disturbances. Schultz (*Genetics* 18, p. 254) found that after treatment with X rays the next generation of the fruit fly *Drosophila pseudo-obscura* show as much as 66 per cent of deficiency of females as compared with controls. In *D. melanogaster* Muller got similar results except that the deficiencies are fewer in the latter species. It seems probable that treatment with X rays induces dominant lethal genes in the X chromosome and the fact that this chromosome is longer in the first of the above species explains why the per cent of deficiencies is greater in it. Hanson and Heys experimented extensively on the effect of irradiation on fruit flies. They found (*Am. Nat.* 67, p. 127) that, if the flies are starved before treatment, the death rate will increase but the per cent of sterility and rate of lethal mutation will decrease. It was suggested that as a result of starvation the cells are less active and hence less affected by irradiation. In a later paper (*l. c.*, p. 419), they stated that if flies are irradiated while under the influence of an anæsthetic the per cent of lethal genes increases, indicating that the physical condition of the animal is important in determining the effect of the treatment.

On the results of a study of 6000 relatively high grade Jersey cattle Gowen (*Genetics* 18, p. 415) reported that heredity accounts for most of the variations in size, environmental conditions having very little to do with it. His conclusion was that breeders have now utilized to a very high degree all of the naturally appearing hereditary characters. In the first edition of the *Origin of Species*, Darwin stated that in cats there is a correlation such that white cats with blue eyes are always deaf. In later editions the admission was made that there are many exceptions to this rule. Bamber (*Genetics* 27, p. 407) stated that whiteness in cats is either a dominant white or albinism. If dominant white occurs with blue eyes the animal is deaf. If the white is due to albinism this is not always the case. Geneticists designate as the "gene" the hypothetical thing that carries hereditary qualities from one generation to the next, and determines the appropriate differentiations in the cells of the developing body. Morgan decided that a gene is somewhat larger than a molecule. Also, it has been suggested that they are organic entities representing the most primitive forms of life. Holmes (*Science* 78, p. 309) offered as an alternative explanation the theory that they have arisen as the result of "crossing over" carried on through long series of generation of chromosomes. In mating, the chromosomes of egg and sperm come in contact and, later, either separate or exchange material, the latter process being known as crossing over. If the two chromosomes are not exactly alike at the beginning, it is evident that this exchange of material would produce variety in chromosomal composition, and this increased complexity carried on through millions of generations, has been the cause of diversifications in structure which have made evolution possible. Repeated crossing over throughout these millions of generations would have reduced the particles which cross to the smallest dimensions compatible with their perpetuation as individual units, and then they are genes. Without sex reproduction evolution could

not have gone beyond the production of simple organisms.

The nature of the gene was discussed by Demerec (*Jour. Hered.* 24, p. 369). He defined it as a minute organic particle capable of reproduction, located on the chromosome, and responsible for the transmission of hereditary qualities. Its size has been variously estimated at from 10 to 70 millimicrons. Probably it is a single organic molecule rather than a combination of molecules, and reproduces by forming a new gene by the side of the old one, rather than by a division of the latter. The chemical constitution of the gene may vary though some are more stable than others and there is generally a particular period in the life of the cell when changes are most apt to occur. The elimination of a gene, or its loss of power, probably would have a lethal effect on the body and for this reason gene changes which lead to mutations are not likely to have much effect on evolution unless they happen to coincide with favorable environmental conditions. The primary function of the gene is to regulate life processes of the cell.

If, as it is believed, identical twins develop from a single egg, which divides at an early stage of development, and because of this mode of origin, receive identical hereditary equipment, the study of identical twins, who were separated early in life and reared under different environmental conditions, should indicate whether environment or heredity plays the greater part in determining the adult personality. Newman (*Am. Nat.* 67, p. 193) reviewed the evidence collected by himself and others but called attention to the fact that environmental differences between twins reared apart might be much greater in some cases than in others. He decided, however, that the evidence indicates that hereditary influences are about twice as efficient as environmental. Later he recorded observations (*Am. Nat.* 67, p. 209), on twins now 13 years old who had lived apart from the age of one month. In this case the twin who had had the more varied and harder life showed more positive traits of character though this may have been due to slower development in the other. He found fewer differences between these twins than in other pairs but this may have been due to the fact that these twins were younger.

ANIMAL COLORATION. A much discussed problem is that of the meaning of animal coloration. From an examination of the contents of the stomachs of 80,000 birds McAtee concluded (see *YEAR BOOK* for 1932) that neither warning nor concealing coloration has any protective value, since insects possessing such coloration were found in the birds' stomachs in approximately the proportion in which they occur in the general population, and not in fewer numbers as would be expected if they were protected by their coloration. As a result of a study of the mammals in the Tularosa Basin, in southern New Mexico, Benson (*Univ. of Cal. Pub. in Zoology* 40) came to opposite conclusions. In this region there are two distinct areas, one of white sand dunes and one of lava beds which are very dark in color. The ground living small mammals, such as ground squirrels, mice, etc., in each locality are colored to catch their backgrounds, very light on the sand dunes and very dark on the lava. Benson was unable to discover any other environmental differences to which these colors could be referred as causal agencies, and concluded that they could

only be explained on the assumption of natural selection, the mammals being protected from their enemies by their coloration. McAtee's conclusions were criticized as not necessarily following from his observations.

Arguments for and against the protective value of concealing and warning coloration are based on the assumption that this coloration has the same appearance to the enemies of the animal that it has to man. So far as insects are concerned this is not an accurate assumption. Insects respond to the ultra-violet region of the spectrum in a way that indicates that this is the brightest part of the spectrum to them though it has no effect on the human retina. Lutz (*Nat. Hist.* 33, p. 565) recorded experiments showing that homing bees will be guided by the ultra-violet rays and also that such rays occur in the markings of many insects and flowers. From this it follows in many cases what an insect sees and what we see would be very different. Photographs taken so as to demonstrate the ultra violet areas on insects demonstrate that there are as many resemblances in these respects as there are in the colors which we see. Since it has not been shown that birds and reptiles are affected by these rays, it is questionable if such resemblances can have protective value. If these do not, it is doubtful if those that we see can have. A yellow spider sitting on a yellow flower is said to be concealed by this coloration from the vision of insects which approach and are caught. Photographs show that the flower has the ultra violet rays and the spider not, hence to insect vision there is no concealment.

PROTOZOA. While it has been customary to speak of protozoa as unicellular and metazoa as many-celled animals, some recent writers have argued that the original definition of cellular indicated that the body of an animal is divided into many definitely bounded areas or "cells," and since the body of a protozoon is not so divided it cannot be correctly termed cellular. Nowikoff (*Biol. Zent.*, in 53, p. 239) combating this notion, asserted that the older custom of referring to protozoa as unicellular is the correct one.

MOLLUSCA. In the oyster, action of cilia on the mantle and gills keeps up a flow of water through the shell which brings food and oxygen to the animal and carries wastes away. By means of a special apparatus Hopkins (*Jour. Exp. Zool.* 64, p. 469) was able to measure the rate of this flow under different conditions.

AMPHIBIA. Bacteria make up the food of some Protozoa but it has not been generally recognized that higher animals may also get their nourishment from these organisms. Burke (*Science* 78, p. 194) recorded results of experiments showing that tadpoles may live entirely on them.

INSECTS. Wheeler (Harvard Univ. Press) presented a suggestion as to the primitive method of colony formation in ants. His study was made on some Ponerine ants in Australia, this family of ants being regarded as primitive. Here the female founds the colony by digging a hole under a log or stone, thus making a cell in which the eggs are laid. From this nest she goes out for food for herself, and also after the larvæ appear, to get soft bodied insects for their food. In the higher ants the females have substituted such morphological specializations as large size, fat, etc., for the primitive foraging habits and the young are nourished at the expense of the materials of the female body.

Familiar insect pests are the "locusts" which in various parts of the world swarm in great numbers at irregular intervals and do an immense amount of damage to vegetation. It was thought by Uvarov (see *YEAR BOOK* for 1930) that the swarming individuals are a different variety from those that do not swarm, and differ from them in structural characters which have arisen in consequence of crowded conditions. Faure (*Bull. Ent. Res.* 23, p. 3) has experimental proof that the swarming can be transformed into the solitary phase and vice versa. Crowding of many individuals into limited space causes restlessness and perpetual activity on the part of the animals, and this results in rise of bodily temperature comparable to fever in higher animals. The final results are the peculiar structural changes and swarming.

BIRDS. The annual meeting of the American Ornithologists' Union was held in November at the American Museum of Natural History in New York City. At this meeting it was stated that an outstanding biological phenomenon is the recent disappearance of eel grass along the eastern border of North America and the consequent effect on bird life. Similar difficulties have arisen on the English coasts. By the end of 1931 fully 99 per cent of the eel grass along the Atlantic coast of the United States had disappeared and since it formed 80 per cent of the food of the brant the effect on the latter is disastrous. Other eel grass feeders, such as the Canada goose, are able to shift to other food and the mortality among them has not been so great.

While much is known concerning the facts of bird migration two questions are largely unsolved. One is why birds migrate when they do, and the other is, how do they find their way, often over very great distances. As to the first of these there is considerable evidence that the immediate stimulus is the condition of the sex organs. Increase in size of these organs due to ripening sex cells in the spring, and decrease due to ending of the sex phase in the autumn, afford internal stimuli for the northern and southern migration respectively. Cole (*Auk*, 50, p. 264) recorded results of experiments to test the theory that length of daylight hours determines the time of ripening of the sex cells. Cole kept a female mourning dove which in five previous years had never laid before April, in a room where under artificial light she was subjected to 19½ hours of daylight out of the 24. Control birds had only 10½ hours. The first bird laid eggs on Feb. 4, 5, 24, 25, while the first laid by the control was on March 15. The mourning dove breeds from Texas to Canada and Cole suggested that there are different geographical races, each of which is attuned to some particular length of day and, in its northern migration, stops where its appropriate length of daylight is found.

MAMMALS. Baker and Ranson (*Proc. Roy. Soc. Ser. B* 784, p. 486) reported on a study of the factors affecting the breeding of field mice *Microtus agrestis*.

ZUIDER ZEE. See RECLAMATION.

ZULULAND, zool'loo-land'. The northeastern portion of the Province of Natal, in the Union of South Africa, to which it was annexed Dec. 30, 1897. Area, 10,427 square miles; population (1921), 3985 Europeans and 254,371 non-Europeans. The European population at the 1931 census was 5790.
